A splendid example of the modern WHITE HOUSE Kitchen in the home of J. L. Jardon, Kansas City, Mo. Bryant Fleming, Arch't. Cabinets in kitchen and pantry are golden yellow, and in silvery pantry wallnut brown. Included in this installation are flour bins, closeted towel drier, and special enclosure for refrigerator motor.

The exceptionally attractive pantry equipment includes silver and linen drawers, half-shelves in glassware cupboard for small glasses, and electric plate warmer cupboard connecting with kitchen.

From Coast to Coast...
The Finest Homes are WHITE HOUSE Equipped

Architects, builders and home owners know that for any climate STEEL is the one, perfectly adapted material for equipping modern kitchens and pantries. They specify WHITE HOUSE STEEL UNITS, because this beautiful, scientifically-made, complete line of dressers, closets, side units, tables and kindred pieces provides year after year of enduring service and absolute sanitation. Electric plate warmers, silver and linen drawers, tray and plate racks, cup hooks and Monel Metal pantry sinks are included in WHITE HOUSE Installations.

No matter what the style of architecture and size of the house, WHITE HOUSE Units—in spotless white or attractive colors—are the only logical choice for the modern kitchen and pantry. Write for gray catalog.

The Lovely "Duchess of Sutherland" Service

There is something about the lovely "Duchess of Sutherland" Service that is charmingly reminiscent of soft candle lights, silks, satins, merry laughter, gala gatherings. The charm of personality has a curious way of attaching itself to material things—especially to things that seem to be a tangible expression of grace and loveliness.

Duchess of Sutherland was a favorite in both British and Continental Society. She entertained Royalty. Her hospitality was as regal as her guests. She commanded that renowned craftsman, Spode, to make for her a special Sutherland Service—expressive of her individuality, and worthy of her table and the brilliant company which met there.

Spode, with his genius thus challenged, sought inspiration in the beautiful hand wrought designs of the great Georgian Period, as then fashioned by the London Silversmiths. He created for Duchess of Sutherland a replica of these same charming "silver shapes," but in his exquisite Bone Porcelain. Deftly, too, he wove an oak leaf from the Sutherland Coat of Arms into a royal blue and gold border. The Sutherland Service thus became an artistic triumph, and a perpetual monument to the creative skill of Spode's genius.

A Spode Service becomes a cherished possession. With each succeeding generation, it passes into the category of family heirlooms. The years add to its sentimental and intrinsic value. The store privileged to sell Spode is a good store to know. May we tell you the name of the Spode dealer nearest you?

Have you ever worn a flying suit? Among the fascinating new ones shown by Marshall Field & Company is the cleverest little invention you ever saw... as feminine as curls, but much less bother. Nothing so adorable should be called efficient, but it's admirably fitted for its purpose. Thus it expresses perfectly the bright, modern spirit of every costume in the new Sports Apparel Room at Field's. Each is so exactly right, and flattering, and fashionable, that one can think only of the short French word for smartness to describe it.

All the different, delightful clothes to fly, drive, ride, swim, play tennis, sail, golf, shoot, ski, or skate in are exceptionally well represented in the Sports Apparel Room. Here, too, is shown a complete selection of those charming necessities, "spectator" frocks and ensembles. You are invited to visit this tremendously enlarged section at Field's.
Hospitable charm
in an 18th Century
Dining Room

Beauty and Comfort
for every Interior

An INTERIOR that reflects the personality and taste of the owner is always the result our decorating staff wishes to achieve. It is always a pleasure to submit estimates for the entire or partial furnishing of residences, apartments, single rooms, showrooms, hotels, clubrooms. Consultation does not obligate you in any way.

If YOUR home needs a new chair, table, curtains or draperies to put it in tune with Spring and Summer, you'll find these things on the Fourth Floor. And on this floor, too, you'll discover those other accessories such as vases, candlesticks and the like that do so much for the livable charm of a room.

In the dining room shown above, arranged by our interior decorating staff, furniture of the 18th Century is used. This room shows the affinity between furniture created by Hepplewhite, Sheraton and Duncan Phyfe—furniture designers whose vogue is constantly increasing.

Walls in Adam green, glazed, carry out the spirit of the period, a Kurdistan Rug with a rare cream ground and draperies in flame grosgrain over imported net glass curtains provide welcome notes of contrast. The accessories, a Lovestofl punch bowl, decanters of Waterford glass and Sheffield Lyre candlesticks are in harmony with the furnishings.

An antique ivory satin damask cloth in a McCutcheon design serves as a lovely background for the rock crystal with green hocks and green and gold service plates.

A New Bedroom Suite of Pilgrim

A NOther inheritance from our Pilgrim ancestors is reflected in "The Standish"... newest of Kittinger bedroom groups.

Its inspiration is found in the famous Connecticut or "Sunflower" Chest now enshrined in the American wing of the Metropolitan Museum. Each of these impressive Kittinger pieces... quaint and ruggedly expressive of Colonial romance.... shows the sunflower and tulip motifs interestingly carved in solid walnut.

There are many patterns in this suite planned for practical present-day needs... including a "Standish" dressing table group that will delight any woman... the single or full sized beds... all in solid American Walnut or White Oak. The rich beauty of selected woods and carvings is enhanced by present-day lacquer finish... softly high-lighted, antiqued and waxed as only Kittinger can fashion and finish.

"The Standish"... particularly well suited to bedrooms of Early American, Colonial or Early English architecture... is but one of a large number of suites for bedroom and dining room... The Kittinger Line also embraces over six hundred occasional pieces and groups for living room, hall, breakfast room, library and the fine executive office. Such furniture cannot be measured by price comparison; yet Kittinger methods of production make it available at prices that are surprisingly low.

You will be well repaid with a visit to one of our larger showrooms for selections, or write for booklets showing representative pieces and the names of Kittinger dealers near you who display these reproductions or who will be glad to help you select from our large general catalog. WALLPAPERS
OF YESTERDAY
AND TOMORROW

Thomas Strahan's forty years of experience make possible an unlimited scope of design. Look for Strahan papers wherever fine wallpapers are shown.

How alike—yet how totally different—these two wallpaper designs! The one "diamond and the rose" adapted from the French of a hundred and fifty years ago... the other a sprightly "line and floral motif" created by a famous European artist in the mood of tomorrow! Yet both—by virtue of their crispness, their fresh, light simplicity—are equally adaptable to the gay insouciance of modern American living.

THOMAS STRAHAN COMPANY
FACTORY, CHELSEA
Established 1886
MASSACHUSETTS

NEW YORK SHOWROOM • 417 FIFTH AVENUE
CHICAGO SHOWROOM • 6 NORTH MICHIGAN BLVD.
The French, far back in the Middle Ages and beyond, were famed for the beauty and artistry of their decorative fabrics—and this prestige has grown steadily to the present time. Many of Johnson & Faulkner’s finest importations of Brocades, Damasks, Velours, Taffetas, Plain and Figured Velvets, Tapestries, Chintzes, Cretonnes, Toiles de Jouy, and other choice materials, are from France. These, as well as a comprehensive display from other European countries, assure an almost unlimited selection for one who visits the Johnson & Faulkner Showrooms.

Châteaudun was built for the most part in the 13th Century by the famous Jean, Count of Dunois, who valiantly defended Orleans until the siege was raised by Joan of Arc, and later achieved many military and diplomatic triumphs.
WALLPAPER

W OULDN'T you like to come back this autumn to a younger, gayer house? You needn't refurnih, just have your walls redecorated—give your beautiful old pieces a fresher, less conventional background—and the whole place will be redated.

Summer's the time to have it done—while you're away. Choose your wallpapers before you go—frankly modern papers—papers that cut a livable compromise between yesterday and tomorrow—or classic papers so lovely that even the rebels against tradition have to recognize their chic.

If you need assistance, write to the Consulting Decorators' Bureau, maintained by The Wallpaper Association. They don't charge for advice, but if you want actual samples, send fifty cents and you'll get a portfolio of 50 large sized actual wallpaper samples—the pick of the new season's stock—together with two booklets, "How to Modernize your Home" and "Which Wallpaper and Why." Ask to see the new papers (guaranteed against fading).

FISHER designs, engineers, and builds motor car bodies of such surpassing beauty, comfort, durability and value as to win for Fisher Bodies almost universal preference. The superiorities of Body by Fisher include such important features as the Fisher Non-Glare Vision and Ventilating Windshield which affords all the advantages of clear vision, adequate ventilation and reduces annoying windshield reflection; the adjustable front seat and form fitting cushions which add so much to riding and driving comfort; the Fisher wood-and-steel construction which makes a motor car body so strong and so satisfactory; the clarity and beauty of the genuine plate glass; the Protectalok door handles; the convenience of the appointments; and many other advantages of equal significance. The final result is value so much greater as to be unmistakably plain to everyone. This Fisher Body value establishes a leadership in every price field for General Motors cars, which are the only cars that enjoy the advantages of Body by Fisher. Make certain of these Fisher Body attributes by selecting a General Motors car.
A New Achievement for the Home
Fantom—The Recessed Radiator

The new "American" Fantom Radiator has been characterized as "the recessed radiator with the retiring disposition."

As illustrated above, the Fantom becomes an integral part of your room. Recessed beneath the window, its simple, straight, unobtrusive lines merge into the interior as part of the architectural scheme. Nothing is sacrificed in heating, for its unshielded surface radiates heat—pure, stimulating, radiant heat like that from the sun—while the warmed air rises in a gentle flow through the grill work at the top, bringing warmth to every nook and corner of the room. The Fantom is a modern radiator of high efficiency and low visibility. It may be painted to match anything from a chair to a chintz.

Here is new beauty and efficiency in heating, combined with the fidelity and reliability of an old servant.

Architects know and specify the Fantom for the most select new homes, but it can be installed in old homes as well...and paid for conveniently.

With an American Radiator Boiler in the basement—Fantom Radiators upstairs—your home is known to be equipped with the most modern and best that can be made; and you are assured of a lifetime of genial warmth with the utmost in economy...a postcard will bring full particulars.

AMERICAN RADIATOR COMPANY
40 WEST 40th STREET, NEW YORK
DIVISION OF
AMERICAN RADIATOR & STANDARD SANITARY CORPORATION
There it is, the Chippendale bathtub, in many a fine old home. You can distinguish it by its claw and ball feet. And since it is distinguished by nothing else, there's no other one-word description for it.

Prize Chippendale models as you will, they have no place in that modern interior, the bathroom. The later models of the Master Potters and Enamelers of the Standard Sanitary Manufacturing Company are much to be preferred.

These potters and enamelers are creating the new ceramic and enameled furniture for the bathroom, the new American interior. Because they have an innate feeling for the material with which they work, the new "Standard" Lavatories and Baths are characterized by the beauty of simplicity and perfect proportion.

Not content with beauty of form, they have drawn upon the ceramic art of all the ages to produce colors of exquisite beauty for plumbing fixtures. All "Standard" designs are now available in Ming Green, T'ang Red, Clair de Lune Blue, St. Porchaire Brown, Rose du Barry, Ivoire de Medici, Orchid of Vincennes, Royal Copenhagen Blue and Ionian Black.

It isn't possible that there is a Chippendale bathtub in your bathroom, but perhaps the plumbing fixtures belong to the middle period of 1914 and should be replaced. In that case, if you will write for it, a copy of the interesting book, "Color and Style in Bathroom Furnishing and Decoration" will be mailed to you. Details of an easy financing plan will be sent upon request.

106 Sixth Street, Pittsburgh

Division of American Radiator & Standard Sanitary Corporation
Eleven years elapsed between the painting of the two Pierce-Arrow portraits on this page, both by the same artist, both the same scene, both portraying America's Finest Motor Car.

The Tyranny of Tradition

ONLY the stern mandate of very great pride...and no lesser legislation on earth...may command always the finest a man or an organization has to give. Such is the tradition which governs the creation of America's finest motor car.

No rules ever conceived could be more exacting than the set of ideals which freely operate in every phase of Pierce-Arrow manufacture.

There is in Pierce-Arrow precincts an always-burning fire of determination never to depart from a principle which puts fineness eternally first.

In every car of this patrician line is expressed a courage which scorns the accepted standards of excellence as commonplace, compared with Pierce-Arrow's own.

And there is ever present a pardonable disdain of any process less fine than the hand-craftsmanship which has always distinguished Pierce-Arrow motor cars.

It would be far easier to build Pierce-Arrows of average quality, and infinitely more profitable to produce them in greater numbers. But the tyranny of tradition forbids.

THE PIERCE-ARROW MOTOR CAR COMPANY • BUFFALO, N.Y.

PIERCE-ARROW
The Delightfully Livable Quality of 17th Century English Oak Furniture—and its Appropriateness in the American Home

The delightfully livable quality of 17th Century English oak furniture gives it a well-nigh universal appeal. No more practical piece was ever designed than the long, low dresser which meets adequately the requirements for both sideboard and side-table, while the draw-top refectory table is the perfect expression of convenience and hospitality.

Traditional interest gives this early English oak furniture, so expressive of Anglo-Saxon character, a natural place in our American homes. As the illustration indicates, plain wall surfaces and the simplest kind of decorative treatment set off as effectively as the richest panelling its delightfully picturesque character.

Kensington Furniture in the style is authentic in every detail of design and is made of the solid oak by hand throughout in antique construction in a manner to retain the character and the decorative quality of old work. Long years of service only increase its charm.

Kensington Furniture is made in all the decorative styles appropriate for American homes.

The purchase of Kensington Furniture may be arranged through your decorator or furniture dealer.

Write for illustrated booklets H and pamphlets, "How Kensington Furniture May Be Purchased".
There is a decidedly homelike charm in this group of Sheraton, Hepplewhite, and Duncan Phyfe pieces.

150 YEARS of uninterrupted service devoted to the creation of Fine Furniture, under the continuous supervision of men trained from generation to generation by their predecessors (as shown in the "family tree"), is a record that probably cannot be duplicated in the history of the furniture industry in America. It is quite natural, therefore, that Shaw Furniture is sought by those who will accept only the highest quality of workmanship and artistic merit.

Seventeen years before the frigate "Constitution" was launched at Charlestown, Jacob Forster founded there what is now the oldest furniture manufacture in America. Following strictly the precepts of that master craftsman of Colonial Days—to make only furniture of the finest quality—his successors have carried on his work without intermission for a century and a half. The reader is cordially invited to inspect Shaw Furniture at the Showrooms or, if that is inconvenient, to send for a copy of the Shaw booklet "H".

YOU NEVER DREAMED OF SUCH BEAUTY ON WALLS

Thibaut in their display rooms are showing a glorious new fabric for wall-covering. Imagine walls that glow with the lustrous sheen of satin—rich colors and designs harmonizing with the color scheme of furniture and draperies in the new ensemble idea... beauty that is decidedly out of the ordinary.

PERMATEX, the perfect glazed fabric, is washable and waterproof—and sun-resistant, too! Let your decorator tell you of the charm PERMATEX will lend to your home.

For wall coverings, upholstery, draperies and pillows, this lovely adaptable fabric is unusually distinctive. Yet its beautiful surface is permanent—the lustrous sheen restored merely by wiping with a damp cloth.

No woman who loves beauty can resist PERMATEX. Examine it in your favorite department store.

PERMATEX for Wall Covering is exclusively displayed by Richard E. Thibaut, Inc., 24 West 40th Street, N. Y. C., New Haven, Conn., Newark, N. J., Buffalo, N. Y., Utica, N. Y., Brooklyn, N. Y., Boston, Mass.

GRAND RAPIDS, MICH.
Realism and idealism apparently are conspiring together for beautifying the American home! Never has there been such a demand for really fine old mantels. This House is particularly aware of it because in so many of the homes now being built, or remodeled, architectural plans specify "a Jackson Antique Mantel". Architects recognize our century-old experience in acquiring really worth-while treasures of the Old World. When you buy an Antique Mantel, you want to know beyond any question of doubt that it is not only genuine, but exactly as represented. An unblemished record of over one hundred years of service to America's socially prominent families is our most priceless possession.

Louis XVI Mantel of Sienna Marble with mounts of bronze gilt. $1000.
We invite you to come and see the many beautiful mantels that make up the Jackson Collection—sculptured loveliness of a kind that seems to have perished with the past. Some belonged to Kings—others came from manor houses of medieval times.

Come and bring your architect or decorator with you. You may have some particular Period in mind—and Periods, of course, begin with the mantel.

Perhaps we can proffer some suggestions as to this very important decorative motif of the home.

If unable to call, correspondence is invited. We will be very happy to send photographs, descriptions and prices. Address us at Dept. H-G, New York.

Very finely carved old statuary marble mantel from a mansion at Chelsea, England, Adam Period, $1850.

Prominent Families in the Social Register
Imagine!... it tells Hamilton Watch Time yet you never wind it!

We suspect that your eyes were so busy saying, "Lovely, lovely!" when you saw these Hamilton-Sangamo electric clocks that you missed two rather important points.

First, the makers of the Hamilton Watch now offer a clock that tells Hamilton Watch time... the same uncannily accurate time that guides our country's fastest trains. More, they use electricity to keep it fully wound all the time.

You never need wind it. Or level it. Or wheedle it into correct time. Storms, blown fuses, or freakish current irregularities simply do not affect the Hamilton-Sangamo. It actually tells railroad-accurate time for hours even with the current off!

No American manufacturer has a greater wealth of experience and craftsmanship in building railroad-accurate watches than Hamilton. No other timepiece can bring the Hamilton standard of railroad-accurate time to your home.

Won't you let any fine jeweler show you his variety of lovely models—if not today—very soon? (Or when you're in New York, drop into our showroom in the Chanin Building on East 42nd Street.) We believe you'll find one unusually well suited to that living room, that entrance hall, that sun porch, or that bedroom of yours.

And do let us send you "Telling Time"—a beautifully illustrated little book, showing 45 new Hamilton-Sangamo models, many of them in full color. Address Hamilton-Sangamo Corporation, 105 Race Ave., Lancaster, Pa., or our Canadian Distributors, Sangamo Electric Company of Canada, Ltd., Toronto. Write today.

HAMILTON SANGAMO

The electrically wound CLOCK of Railroad Accuracy
The choice of many of America's finest families

The superb
132-inch
Buick
models

An ever-increasing number of men and women who formerly purchased more expensive cars now are turning to the 132-inch Buick models.

The trend to these de luxe Buicks with Body by Fisher is apparent in every section of the country. Many of America's finest families are making Buick their choice and many own from two to five Buick models.

Naturally, Buick value is one reason. But these discriminating buyers are not influenced nearly so much by Buick prices as by the conviction that Buick provides beauty, performance and comfort fully on a par with costly cars.

The seven de luxe Buick models—a Limousine Sedan, two Coupes, a Phaeton, two Sedans and a Sport Roadster—are, from every standpoint, ultra-luxurious cars.

Inspect these body types at the nearest Buick showroom. You will readily understand why more than twice as many people purchase Buicks as any other fine car, when you see how much more Buick offers in value and in real motoring satisfaction.

WHEN BETTER AUTOMOBILES ARE BUILT, BUICK WILL BUILD THEM
Pine fashioned the beautiful colonial cottage at North Oxford, Massachusetts, where Clara Barton, founder of the American Red Cross, was born in 1821 and pine is again proving its enduring charm in modern cottages similar to the one illustrated here at Kingsport, Tennessee. Clinton MacKenzie, Architect.

"PINE HOMES AND PINE INTERIORS"

DOES YOUR HOME REPRESENT YOU

The priceless privilege of inviting your friends to your own home is matched only by the knowledge that your home adequately represents you. In social standing, community prestige, even in your business—your home moulds public opinion as to what you are.

For many Americans tired of temporary living, a white cottage with green blinds similar to the one illustrated, is answering the need for a substantial home at a reasonable investment. From its Colonial doorway to its shuttered windows this pine cottage is dignified, well proportioned, beautiful.

The use of Shevlin Narrow Bevel Siding will help you to build this cottage quite reasonably.

Shevlin Pine is genuine. It is not a substitute for anything. Here is a point to remember when you choose the material for your home. Pine is the traditional building material for American dwellings. In order to build within your means you need not accept a cheap, flimsy substitute. There is plenty of Shevlin Pine available.

Your dealer can easily obtain Shevlin grade-marked and trade-marked pine from the nearest office: Chicago: 1866—208 South La Salle Street Building; New York: N. H. Morgan, Sales Agent, 1205 Graybar Building; San Francisco: 1030 Monadnock Building; Toronto, Ontario: 606 Royal Bank Building.

AND RADIATORS
EXPERIENCE has taught many home owners that gutters and rain-pipes of rustable metal are not economical.

In fact, the use of rustable sheet metal, anywhere on a house, is always expensive because its replacement is inevitable. When rustable metal is used for roof valleys and flashings, serious leaks often occur, damaging walls and ceilings. Then shingles must be removed and relaid. New shingles must sometimes be bought. Copper always costs less in the end.

Make sure that the house you build or buy will be free from costly rust. Insist on gutters, rain-pipes, valleys and flashings of Anaconda sheet copper... they cannot rust and leak.

For your protection, every sheet of Anaconda copper is trade-marked. Your sheet metal contractor may obtain gutters and rain-pipes bearing the Anaconda trade-mark and the words “Standard 16 oz.” from leading fabricators.

A single organization of more than a century's experience is responsible for every step in the production of Anaconda metals...uniform, high-quality results.

The gutters and rain-pipes have rusted out. This could not have happened if Anaconda Copper had been used.

Send 25 cents for this valuable book: "The Home Owner's Fact Book," by Roger Whitman, not only tells you how to rust-proof your house, but it deals with important facts concerning planning, financing and maintenance cost. Address: The American Brass Company, General Offices, Waterbury, Conn.

A roof's ability to protect depends considerably on the durability of its flashings and valleys. Seven years is the average service life of rustable metals. Anaconda Copper cannot rust and lasts indefinitely.

The use of durable copper nails for attaching the roofing material is important. With rust-weakened nails the shingles become loose...as a result the roof leaks. Copper nails prevent this, for copper can't rust.
"Will you build them into your home—or out?"

Sturdy Permanent Walls

that shield you from colds and ills... that safeguard health

FAR-SEEING home owners prefer Celotex insulation because it does more than insulate... it builds stronger, sturdier houses... makes them permanent.

When used as sheathing on outside walls, Celotex adds bracing strength... provides tighter surfaces for stopping cold winds, for decreasing infiltration.

And for inside walls and ceilings, there is Celotex Lath... a plaster-base that is designed to reinforce against cracks and eliminate lath marks... that gives finer, smoother plastered surfaces.

Besides being used as sheathing and plaster-base, Celotex is just the material for insulating roofs in old houses; for lining basements, attics and garages; for making comfortable extra rooms out of waste spaces.

Think how Celotex increases home comfort all year 'round by shutting out unkind weather... how it saves fuel bills by retarding heat leakage through walls and ceilings... how it protects health by keeping rooms free from dampness, chills and draughts!

Ask your contractor, builder or architect for further information on Celotex—and write us for our interesting new booklet, "Celotex Cane Fibre Insulation."

THE CELOTEX COMPANY
919 N. Michigan Ave., Chicago, Ill.

The word

CELOTEX

(Reg. U. S. Pat. Off.) is the trademark of and includes manufacture by The Celotex Company, Chicago, Ill.

Celotex Standard Building Board is 4 feet wide, 7/16 inch thick, and 7/16 inch long. Celotex Lath is 18 inches wide, 80 inches long, 7/16 and 7/8 inch thick.

When you buy a new house, look for the Celotex sign. It is your assurance of greater home comfort.
Zenitherm flooring in the Southampton home of Mr. and Mrs. John W. Kiser.

Elsie Sloan Farley, New York, Interior Decorator.

Zenitherm’s twenty-one color tones range from the most subdued to the most vivid. For the Zenitherm flooring in Mrs. Kiser’s game room, Mrs. Farley selected a Tangerine shade with a rich Dark Brown border. Zenitherm’s colorings harmonize with any decorative scheme.
smart, new floors?

IT IS ZENITHERM—a fabricated material that looks like marble, wears like marble, yet is pleasantly resilient under foot, "warm" to the touch.

Zenitherm is a flooring that harmonizes perfectly with present day expressions of beauty in the home—and beyond the home, for Zenitherm is also being used for interior and exterior embellishment of prominent hotels, clubs, banks, and public buildings.

Zenitherm's colorings, are soft, vivid or contrasting, as the decorative ensemble may demand. It expresses individuality. The floor is, after all, the foundation for all good interiors!

Zenitherm is as correct for Old World Periods as for Modern Motifs. Indeed, its adaptability is one of its greatest charms. In squares or oblongs it is as conventional as the Period for which it is chosen. Or, if you prefer, Zenitherm may be put down in interesting irregular effects with all the abandon of the most charming of modernistic treatments.

Is it hard to install? Not at all. Any carpenter can lay it. Zenitherm is sawed, nailed and worked like wood!

Another point! Soap and water keep it spotlessly clean.

Your architect or decorator can tell you about Zenitherm. Or perhaps you would rather write us direct. We shall be happy to send complete information.

COMPANY, Inc.
110 East 42nd Street, New York, N.Y.
When you are ready for your new car, Nash is ready to show you the best that money can buy. Nash engineering has created three new cars which demonstrate their superiority in a single ride. The new Twin-Ignition Straight-Eight motor, with its 9-bearing, integrally counterweighted, hollow-crankpin crankshaft, aluminum pistons and connecting rods, is so superior to other straight-eight and V-eight motors you will recognize it instantly. Likewise, the Twin-Ignition Six motor surpasses anything in its particular field. And the Single Six, high compression, 7-bearing motor is far superior to any other motor in the low priced field. Each of these cars—even the very moderately priced Single Six—has centralized chassis lubrication, built-in, automatic radiator shutters and the world’s easiest steering. The Twin-Ignition Eight and Six introduce lifetime-lubricated springs with steel spring covers. And the Twin-Ignition Eight has Duplate non-shatterable plate glass in every door, window and windshield—priceless protection at no extra cost! Any Nash dealer can show you still more reasons why there is more value and superior performance in a Nash “400.” Any model you select may be purchased on the convenient Nash monthly payment plan.
ONE of the most striking aspects of the modern mode is the increasing vogue of ostrich skin. . . C. F. Rumpp & Sons, Inc., enjoy the distinction of having been the first to adapt this luxurious leather to practical use. Today one sees an ample affirmation of its influence when a smart bag is clasped against a supple black kasha suit . . . when cigarettes are proffered from a monogrammed case . . . when a bill is removed from a soft, tawny folder.

It is perhaps not generally known that articles of ostrich skin are most difficult to manufacture. Only men with years of experience can be entrusted with this slow and tedious work . . . only those few who have a thorough understanding of this delicate, yet stubborn, material. In the very nature of things, ostrich skin is frankly expensive.

But to people of taste and judgment, quality and not cost must be the ruling consideration. And to such people, the presence of the tiny golden keystone R on every article of ostrich skin governs their careful selection. That imprint is placed upon each piece of fine leather manufactured by C. F. Rumpp & Sons, Inc.

It was the insistent wish of the founder, eighty years ago, that later development of the business should be based upon foundations of uncompromising quality, of fair and honest dealing, of straightforward relationship between this establishment and its customers . . . And today, members of the family actively maintain that gracious tradition.

C. F. Rumpp & Sons, Inc., manufacture fine leather articles of every description, excepting luggage. They may be had at the better leather goods stores, department stores, jewelers, and stationers.

A smart bag, in ostrich, lined with calfskin, which includes a divided change compartment and a mirror.

A billfold for the new currency, a cigarette case, and a cigarette lighter, all in ostrich, gold mounted. They may also be had in black seal, pigskin, and other leathers, in varying sizes.

A man’s shirt case, in ostrich, lined with moire silk. The case, which accommodates six shirts, is available in goatskin, and in pigskin.

A man’s collar box, in ostrich, lined with moire silk. The clamp, though firm, may be easily and quickly released. The box comes also in pigskin, and in goatskin.
The successful bridge hostess doesn't subject the eyes of her guests alternately to harsh direct rays and dark shadows. Instead, she fills the entire room with soft, shadowless light by means of Luminator... the first portable light of its kind.

Luminator throws its rays against the ceiling, which gently reflects them to every corner of the room and causes it actually to glow with a mellow, beautifying light. A single Luminator, under test, provided light sufficient for six tables of bridge, every player being able to read his or her hand with ease.

Eye irritation is impossible with Luminator because it makes it unnecessary to read, write or play cards under sharp direct rays. One doesn't have to move it about like a bridge lamp, as it diffuses ample light to every part of rooms as large as twenty by thirty feet.

We guarantee Luminator to satisfy you completely or the purchase price will be promptly refunded. Write for Catalog B, which pictures other Luminator floor and table models of smart design and fine workmanship. LUMINATOR, INC. (Albert L. Arenberg, President), 851 West Washington Boulevard, Chicago. New York Branch: 11 West 42nd Street. In Europe: Luminator Licht, G. M. B. H., Linkstrasse 1, Berlin, W. 8, Germany.

If Luminators are not carried by your interior decorator or gift shop, order direct from us.
THE CLEVER HOSTESS
PLANS... a Background of Well
Chosen Music for the Pleasure of her Dinner
Guests... Crystal and silver sparkling beneath tall,
stately tapers... the sheen of snow white linen... evening
dress... and as a background for the hum of conversation
the lightest strains of modern music. • • • Demi-tasse and
cigarettes... and as the banter of the dinner table wanes,
a lovely concert, perhaps a symphony by Brahms. • • •
Bridge next has its hour... a low accompaniment of tuneful
melody. • • • Then dancing... to the syncopations of
a popular "jazz band." • • • The delighted guests depart
• • • a vigorous march maintains the note of animation
to the very end! • • • The clever hostess has used music as a
social grace and thereby won both admiration and renown.

NOW...PLAY CONTINUOUS
PROGRAMS of Your own RECORDS

At the single touch of a button... without
further attention... the Capehart AMPERION
will electrically reproduce a complete
evening of music—of your own choosing.

ENTERTAIN with music! The Amperion by Capehart
brings a new wonder in music to your drawing
room: an almost human mechanism that turns
and changes records like unseen hands, enabling
you to hear complete programs of your own selected
records without attention on your part and without
interruption. This fine instrument plays records on
BOTH sides; or if your mood prefers, a radio hour to
bring in the best that's on the air.

Perfect in tone, beautiful in modern cabinet design,
The Capehart Amperion is a revelation of a dream

Capehart

THE CAPEHART CORPORATION, FT. WAYNE, IND.
ANSWERING YOUR UPPERMOST questions about FLOORS

Are you puzzled about how to care for linoleum? . . . How to keep wooden floors from showing wear in doorways? Are your floors ever sticky? Do your children mar them? Would you like them to add more to the decorative scheme? Do you wonder how on earth to keep them CLEAN?

For these and other floor problems, leading household institutes recommend a new treatment. It is less work, it is simple, and it is wonderful for the floor.

Scrubbing, of course, is banished, as it warps wood and defaces linoleum. Oil treatment is abandoned, too, for it leaves a sticky floor. Dirt and dust cling to it, become embedded, and the floor is never actually clean.

The new treatment is to clean as well as polish floors with Johnson’s Wax. Wax won’t injure anything. In fact, you need it to protect varnish, shellac, or paint, and to keep your linoleum supple.

Waxed floors, as you will discover, are the easiest to care for, and universally considered the most beautiful. Their deep lasting lustre enriches the entire house.

Where the floor is soiled, Liquid Wax is first used as a cleaning fluid. In liquid state it dissolves the dirt and dust, and this is wiped up with a few clean rags. A fresh film of wax, either paste or liquid, is applied and when dry, burnished with an electric polisher to a mellow, glinting sheen.

Using the polisher is like running an electric train. It runs itself. The revolving bristles drive the wax into the pores, sealing the wood against dirt pockets and the damp breeding places of germs. Thereafter the dust stays on top of the hard smooth surface, where it is easily removed without rubbing or scrubbing.

When you use a polisher too, the work of cleaning floors is ended. There is no difficulty in getting a machine. Several stores near you offer them for rental at only $2.00 a day and will deliver a Johnson polisher to your door without charge. If later you decide to own one the price is $29.50, which includes a half gallon ($2.40) of Johnson’s Liquid Wax and a $1.50 Lamb’s Wool Mop for applying the wax. See illustration of this complete floor equipment in circle below.

If you would like to try this treatment, let us send you our regular 25c can of Johnson’s Wax, paste or liquid, free. This offer is possible because we feel sure you will keep on with it, once you know what a satisfaction this treatment is. Send the coupon or a few lines to S. C. Johnson & Son, “THE INTERIOR FINISHING AUTHORITIES,” Racine, Wisconsin.

THREE STEPS

1. Where floor is soiled, apply Liquid Wax freely as a cleaner.

2. Wipe up all liquid solution with clean rags. All embedded dirt, now dissolved, comes with it.

3. Apply thin coat of wax (paste or liquid) over entire floor and when dry, burnish with electric polisher to clear mellow lustre. This treatment at intervals of a month will keep floors in perfect condition.

S. C. Johnson & Son, Dept. HG4, Racine, Wis. Gentlemen: Please send free 25c can (not a sample) of Johnson’s Wax Polish (paste or liquid) and illustrated booklet on the new care of floors and furniture.

For 300 Years

Softly silhouetted against the flickering firelight—or gently drowsing in the first Spring sun—Nichols & Stone Windsors are distinguished by gracious beauty, born of a three-century pedigree.

For the welcome gesture of their out-flung arm-bows—the restful curve of the high fanned back—the strength that shows in every rise of the graceful “ladders”—the staunchness revealed in the sturdy set of the four-square legs—

Every detail traces its lineage to some priceless original Windsor, that was old when America was still young.

Only three generations of craftsmanship, inspired by the matchless facilities of the world’s greatest Windsor Chair plant, could achieve such inherent beauty and artistic fidelity at prices within reach of every homelike home. Look for the Nichols & Stone shop mark underneath each seat, and the gold and brown shield-shaped tag, that identify genuine Nichols & Stone Windsor Chairs.

In “The Charm of Wayside Inn,” a fascinatingly illustrated booklet, you will find the secret of the Windsor Chair’s adaptability to “any room in any home.” Free copy on request to

NICHOLS & STONE CO.

Distinction in Home Interiors Depends Upon Details of Construction

Remember that 80% of the interior of your home consists of plastered surfaces! ... surfaces that are the background for your picture of home! They must be flawless... and they should be permanent! Hence it pays to give special attention to these details of construction.

Were our present-day exposed plaster corners to be made only of plaster they would constantly chip and crack. The new-day method is to make these corners and curves of metal, with the corner bead so cleverly concealed that it becomes an integral part of the wall surface. Any blow on the corner is resisted by the metal bead and its force distributed over the metal reinforcing.

Milcor "Expansion" Corner Bead has patented expanded metal wings which fasten to the wall on each side of the corner. When the plaster is spread over these wings it is keyed firmly to the metal mesh right up to the nose of corner bead. The metal corner successfully resists blows that would destroy unprotected plaster... the expanded metal wings reinforce the plaster in a most effective manner. Particular people insist on this assurance of permanently beautiful plaster corners.

Another refinement in distinctive interiors is to do away with the old-fashioned wood trims. The new mode calls for casing of metal, around windows and doors, finished in the same tone as the walls.

Milcor Expansion Casing has expanded metal wings which are fastened firmly to the wall. When the plaster is applied over this metal mesh it is thoroughly reinforced... and the metal casing cannot possibly become separated from the plaster. Furthermore, the metal trim adds a touch of distinction and graceful beauty to the most attractive room.

The modern plaster base is metal lath... and here, too, Milcor offers a product that gives the most assurance of freedom from cracks and dust streaks. Stay-Rib Metal Lath, due to its patented design, is stiffer than other laths of equal weight... and enables the plasterer to do a first class job without waste of material and time.

Why not build your home so that it will still be new, years and years from now? A little insistence upon correct construction details... and your distinctive interior will be permanent. Folders describing Milcor products are yours for the asking. May we send them to you?
NO FEMININE ENGINEERS OR FIREMEN in homes that have this low cost heat

What would the modern hostess do with guests at the door and the house "as cold as ice"? Time was when it was necessary to descend the stairs, shovel fuel, and cheer a reviving blaze. The Spencer Heater answers all the puzzled questions of the modern wife who does not want to be either engineer or fireman.

Modern homes now have automatic heat with dependable fuels that have been used for centuries. The storage magazine of the Spencer Heater holds enough fuel for twenty-four hours. The fire that burns up-hill on the sloping Gable-Grate, gives uniform heat all day long, without a thought from the women in the home.

Instead of flat grates that must be fed frequently by hand, the Spencer is made with Gable-Grate that slope down from a magazine where fuel is stored. The natural way for fire to burn is up—and in the Spencer fire does burn up-hill. The natural way for things to fall is down—and fuel rolls down from the Spencer magazine to feed the fire below.*

This fuel feed is truly automatic, for gravitation needs no motors or machines to make things roll down hill. It gives unusual uniformity of temperature, for fuel flows only as fast as the fire burns. As changing temperatures require more fire or less, the fuel feed is automatically controlled by the fire's demands.

The Spencer adds economy to convenience because its magazine and Gable-Grate permit the efficient use of small size fuels. These fuels are low in cost because ordinary heaters are not designed to burn them satisfactorily. The Spencer burns No. 1 Buckwheat anthracite at half the cost of larger sizes. Where anthracite is not available, small size by-product coke, in a Spencer Heater, will give a more uniform heat at a cost no greater than soft coal in ordinary heaters, and generally less.

Write for the Spencer book, "The Fire That Burns Up-hill." It describes in detail how the Spencer Heater, for steam, vapor or hot-water systems, can save as much as half your annual fuel bill.

SPENCER HEATER COMPANY, WILLIAMSPORT, PA. Division of Lycoming Manufacturing Company.

The Spencer Heater for the average home is illustrated at left. Spencer Heaters are made in cast iron sectional and steel tubular types, for any size home or building. Sold and installed by all responsible heating contractors.

*Everybody knows that ordinary heaters require refueling frequently as the fire burns to ash. With a Spencer, fuel is put only once a day into the magazine—illustrated below at (A). Fuel covers the grate to a sloping level controlled by the magazine mouth (B). The fire bed stays at the level shown at (C), for as fuel burns it shrinks to ash (D) and settles on the Gable-Grate (E). As the fire bed shrinks more fuel feeds down automatically from the magazine, which holds enough fuel to feed the fire for as long as 24 hours, with only one shaking of the grates.

FLAT GRATE HEATER

Showers how burning fuel shrinks away to ash—heater must again be refueled

SPENCER MAGAZINE FEED HEATER

Showers how burning fuel is never refueled automatically from the magazine.
"The hall was paneled with cedar

.. the throne was of ivory"

OF OLD, the forests of Lebanon contributed their cedars to the grandeur of Solomon's halls. Slaves of the king toiled in the forests, toiled down the mountain passes—toiled thirteen years building the house for their monarch. "And they made a hall of judgment, and paneled it with cedar."

Even today, a certain cedar receives the homage of many nations. Port Orford Cedar, towering along a narrow strip of the Oregon coast—a descendant from the same species as the Cedars of Lebanon, is prized by many peoples. Japan seeks it for palace and temple; the Britons for fine interiors, and for cabinet work of their palatial liners; the United States for her finest homes.

Satin-smooth Port Orford Cedar brings chaste beauty to enameled interiors. The finish has the smoothness and depth of velvet. No trace of grain shows through. It stains with depth and richness, its cream-white color readily assuming any desired shade. Its evenness of grain and ease of working have made it the favored medium for woodworking of exquisite and exact detail.

Port Orford Cedar is also chosen for entrances, porch columns, pergolas, garden furniture. It is impervious to weathering, decay-resisting, enduring, and holds paints for many years. Non-warping, it is ideal for Venetian Blinds. Also available in panels of standard sizes and thicknesses for stained interiors and cabinet work.

Consult your architect about this rare wood. Mail coupon today to our sales agents for beautifully illustrated booklets.

My architect is
MY HOME HAS BEEN GREATLY ADMIRED

"... the paint is beautiful and my home has been greatly admired by many of my friends who have inquired as to what kind of paint was used and where I learned about it. Of course I have taken pleasure in stating that I was attracted to it by the beautiful appearance of "Mount Vernon" which I observed while on an automobile trip last summer...."

So reads an actual letter from an enthusiastic user of Outside Barreled Sunlight. Scores of similar letters have come in. Hundreds of other homes throughout the country are winning praise, for people everywhere are attracted by the rich beauty of this outstanding white paint. Home-owners are pleased—neighbors frankly admiring. Everyone acclaims Outside Barreled Sunlight.

The brilliant, rich lustre and the intense whiteness of Outside Barreled Sunlight have been achieved by an adaptation of the unique Rice Process—the same method which perfected Interior Barreled Sunlight, the satin-smooth, dirt-resisting paint enamel used on walls and woodwork in thousands of homes.

Outside Barreled Sunlight costs a few cents more per gallon than ordinary paint, but the slight additional cost is more than made up in added beauty, added distinction, added durability.

On request we will be glad to send you a free copy of the booklet, "The Whitest White House in Town."

Distributors in many other leading cities.

OUTSIDE Barreled Sunlight

Among the aristocracy of furniture

SUCH furniture pieces as these, from the hands of Valentine-Seaver's famed designers and craftsmen, carry the stamp of unmistakable worth in every line and contour. It is furniture that inspires toward higher ideals of home life. Here our designers have blended Eighteenth Century grace with the reserved simplicity of the modern school. The Sofa is tailored in a soft green mohair frieze. Pillows are covered in rich coral tapestry, an exclusive Valentine-Seaver pattern, to match the aristocratic looking lounge chair. The table is from The Furniture Shops, Grand Rapids. Valentine-Seaver furniture is featured by the better shops everywhere—at prices that are distinctly moderate by comparison. If you fail to quickly locate a dealer, write us. We will send his name and address promptly, also a copy of our book—"Modern Furniture for the Living Room."

Pierre Dutel selected Celanese Taffeta and Voile for the windows, and Permanent Moire for the bed coverings, in the home of Mrs. Archibald McNeil, Jr., at Black Rock, Conn.

Smart Country Homes Have Discovered

NEW CHARM IN CELANESE

Windows that look out over country landscapes acquire fresh, gay personalities from the beauty of Celanese draperies. Sunlight is twice as lovely filtering softly through gossamer textures of Celanese Ninon or Voile. In summer, too, when hangings must be on friendly terms with the weather's every changing mood, the unique practical qualities of curtains, overdraperies and accessories of Celanese are of prime importance—their readiness to shed dust and dirt... the fact that rain and dampness do not harm them... that they will not shrink or stretch, or mildew... that their colors are unusually fast... that they may be cleaned or washed with equal success.

CELANESE Decorative FABRICS

Celanese yarns, fabrics, and articles are made of synthetic products manufactured exclusively by the Celanese Corporation of America, 180 Madison Avenue, New York City.
Wherever you hear electric refrigerators discussed, you will hear Kelvinator’s long life and reliability favorably spoken of.

With good reason, the men who build Kelvinator regard this universal tribute to Kelvinator service and longevity as the highest possible compliment to the Kelvinator product.

For, unlike many mechanical servants, a good electric refrigerator should last a lifetime. And Kelvinator, by reason of being the first successful maker of electric refrigeration, can point to Kelvinator electric refrigerators serving their owners continuously for as long a period as fifteen years.

Bearing this important fact in mind—that the purchase of a Kelvinator forever eliminates any need of replacing your electric refrigerator—you can bring keener appreciation to what Kelvinator now offers in its new Super-Automatic models.

Both in the new and higher type of service they render, and in their characteristic Kelvinator beauty of design, the new Kelvinators strengthen and maintain Kelvinator’s 16-year leadership in the field of electric refrigeration. In the few short months these new models have been on the market, they have achieved a popular preference and a volume of orders far in excess of any similar period in Kelvinator’s history.

Four Refrigerating Services in One!
1. Iso-Thermic Tubes, giving for the first time completely automatic fast freezing of ice cubes and desserts. 2. Food compartments held always at uniform temperature between 40 and 50 degrees. 3. Normal temperature for ordinary freezing of ice and desserts. 4. In de Luxe models, a separate cold storage compartment with below-freezing temperature for keeping meat, fish, fowl, frozen fruits or an extra supply of ice cubes.

Kelvinator, alone, thus gives four distinct services, each fully automatic and each independent of the other—a unique achievement in electric refrigeration. All Kelvinators are sold on easy terms through Kelvinator’s ReDisCo monthly budget plan. Write for illustrated folder describing the new Kelvinators. Mailed free upon request.

KELVINATOR CORPORATION, 14256 PLYMOUTH ROAD, DETROIT, MICHIGAN

THE GREATEST OF GAS RANGES
Available for any home in town or country

If cooking for your household requires an unusually large and completely appointed range, you will find the Insulated Glenwood De Luxe model made to order for your needs.

... Insulated. Its three large ovens are walled with heat-tight mineral wool which makes less gas do more work.

... Heat-Controlled. The Glenwood AutomatiCook gives you absolute control, automatically, of every oven heat.

... Time-Controlled. The Time Control Clock automatically lights the oven, keeps it at exactly the right heat and turns off the gas when your cooking is done. Nobody has to watch it.

... "The Shelf that Cooks." Over the enclosed cooking top is a convenient shelf where things can be kept boiling on heat that is wasted in other ranges.

... Full Enamel Finish. The beautiful finish of this range is all clean, shining enamel inside as well as out.

... New Vertical Broiler. See how conveniently placed this broiler is. It is lined, vertically, with a special kind of fire-brick which broils by radiant heat on both sides at once and perfectly evenly.

You can have this range in your country house although it may be miles beyond the gas mains. Let us send you more complete information about this Glenwood Model SNJ 24, and tell you about Pyrofax Gas Service, if you are interested. The coupon is for your convenience.

INSULATED GLENWOOD DE LUXE GAS RANGE — MODEL SNJ 24

Costs LESS than carriage

Perfect automatic refrigeration with Electrolux is cheaper than ice

As soon as you buy an Electrolux, refrigeration expense stops and your saving begins.

Figure it out for yourself. 25¢ to 70¢ a week is all it costs to operate Electrolux. Compare that with what you’re spending now for ice or any other kind of refrigeration.

This new-type automatic refrigerator costs so little to run because it uses only a tiny gas flame and a slight trickle of water. These two inexpensive things produce constant, steady cold; freeze ice cubes and desserts quickly; chill salads perfectly.

The temperature inside an Electrolux stays remarkably even. It varies scarcely at all, because the chilling process is continuous. There is no stopping and starting. Foods can’t help but keep indefinitely.

More than that—Electrolux is silent. Silent not only when you get it, but forever after, because there is no machinery to wear loose, to vibrate, to get out of order. The refrigerant is hermetically sealed inside a rigid, one-piece steel unit. It never needs replacement. The gas flame is equipped with an automatic shut-off. No gas can flow if the flame ever goes out.

With all these advantages, Electrolux costs no more, size for size, than other refrigerators—$193 to $430 at the factory. Can be operated with Pyrofax Gas where there are no city mains. There is a complete range of models and sizes, in white and beautiful color combinations. Liberal purchase terms.

Don’t think of buying any automatic refrigerator until you see Electrolux. A post card to us will bring you complete information by mail. Address Electrolux Refrigerator Sales, Inc., Evansville, Indiana.

ELECTROLUX
THE Gas REFRIGERATOR

Hostess Model Electrolux shown above has five cubic feet of food space and makes 40 large ice-cubes.
GAS
real gas ... no matter where you live ... with Pyrofax

If you think gas can’t be had beyond the end of the city gas mains, get acquainted with Pyrofax—real gas which burns in a genuine gas range just like city gas. Pyrofax can be used for cooking anywhere.

Pyrofax Gas is refined natural gas compressed into steel cylinders. Two of these cylinders, placed in a neat cabinet back of your house, become the reservoir from which you get your gas supply. Each cylinder contains enough gas to last the average family two to three months.

With the Pyrofax two-cylinder system, you can never run out of gas. When one is empty you turn on the second and notify the Pyrofax distributing station. Immediately a new full cylinder is brought and the empty one taken away. Simple as putting a film in a camera. This service is free—you pay only for the gas. If you live beyond the distributing station, a full cylinder will be shipped freight prepaid.

Pyrofax is not new. It is the product of, and is distributed by, the oldest and largest organization in the world making compressed gases. It is in use in thousands of homes, hospitals, factories and institutions beyond the reach of city gas. Works with any gas appliance—including the Electrolux refrigerator.

The following testimonials are typical of the thousands we are constantly receiving from Pyrofax users the country over: "I have found Pyrofax installation is simple as A, B, C. Diagram shows direct piping from cabinet to range.

ORINOKA DRAPERIES, GUARANTEED COLORFAST, ENHANCE THE CHARMING SIMPLICITY OF THE DINING-ROOM DECORATED IN FRENCH PROVINCIAL STYLE

Two trends define the present vogue in decoration: Color and simplicity. And nowhere is this style more sincerely expressed than in the attractive, ancient cottages to be seen in the interior of France. For use in the American home of today, Orinoka has adapted the brilliance and refined the texture of the splendid old French peasant fabrics. And now we offer you Sardinian cloth, gayly threaded with chenille, for your draperies; sheer Casadora in a neutral tone for quaint, small-pane windows; and a Hardy rustic tapestry in lively colors for rugged ladder-back chairs. Use them with the pleasant assurance that each charming interior you create will remain charming. Orinoka colors are absolutely fast to sun and water. Curtains and slip covers may be washed as often as you wish. The intense light of the warmest climate will not change their colors, for every thread is hand dyed by a special process. Look for the Orinoka tag on every bolt. It is your guarantee.

For other rooms, whether Colonial or Georgian in feeling, Empire, Spanish, or arrestingly modern, there are equally attractive Orinoka draperies. You will find Orinoka materials at the better department stores and decorating establishments. The Orinoka Mills, 185 Madison Avenue, New York City.

A dining-room in French Provincial style; from the 1930 Orinoka booklet

ORINOKA COLORFAST DRAPERIES ARE GUARANTEED SUN AND TUBFAST.
Back of every yard of Orinoka Sunfast fabrics you buy stand the Orinoka Mills with this assurance: "These goods are guaranteed absolutely fadeless. If the color changes from exposure to the sunlight or from washing, the merchant is hereby authorized to replace with new goods or refund the purchase price." Look for the guarantee tag on every bolt.

Send 20 cents for a full-color booklet of new interiors.

12 rooms in correct period styles of decoration are shown in color in the new Orinoka booklet, by Hope Harvey, together with reproductions of draperies and upholstery materials, also in color.

"Dignified and artistic."

The CUSHIONED FLOOR brings a sense of good living to the dining room

HERE is a floor—gently, restfully yielding beneath your feet; a silent floor beneath the feet. It combines dignified beauty with the muffling resilience of rubber.

You can install Goodyear Rubber Flooring with the assurance that all its advantages are permanent. Under normal usage it needs no refinishing, no repair; it is unmarred by foot or by furniture; unchanged by time; so long as you live with it, the tough, smooth surface protects the pattern and color beneath. It has and keeps a laboratory cleanliness. You may use it without need or cost of other flooring coverings.

Goodyear Rubber Flooring adapts itself to a wide variety of rooms. In bathrooms, it is warm under foot and proof against water; in kitchens its cushion reduces fatigue and guards against the breakage of dropped dishes; it is non-resonant in music rooms; it absorbs the sound of footsteps in bedrooms, so they are seldom heard in rooms below; to living rooms Goodyear Rubber Flooring brings a combined welcome and grandeur unapproached by other floors.

For attractive booklet descriptive of this modern floor material, write to Goodyear, Akron, O., or Los Angeles, Calif.

GOODYEAR
RUBBER FLOORING
In its windows lies much of the charm of a home.

It is a fact—and people everywhere recognize it—that in the windows lies much of the charm of a home. \( \star \) It is also a fact that the basic beauty of a window is in the glass it contains. \( \star \) The overwhelming preference for Libbey-Owens Glass—as evidenced by the thousands of fine residences, as well as other buildings, glazed with Libbey-Owens—is therefore significant. \( \star \) It means that home builders have found that the rich, sparkling lustre of Libbey-Owens glass adds to the beauty and attractiveness of the window and therefore to the charm of the home. \( \star \) To achieve the utmost in window beauty, always specify Libbey-Owens "A" quality glass. Each light bears the familiar L/O label—known everywhere as the symbol of uniform high quality.

Libbey-Owens Glass Company, Toledo, Ohio.

Libbey-Owens flat drawn clear sheet glass.
The enchantment of a June morning brought indoors

WAITEX SUMMER RUGS

OUTDOORS... the sparkle of dancing sunbeams, the dazzle of dew drenched flowers aflame with vibrant colors. But indoors... the breath of cheerless winter still clinging to every room. Time to redecorate!

Wouldn't you love to snare the magic of this perfect June morning and bring it permanently into your home? Then do this:

Roll up your heavy winter rugs. Give them a well earned respite by sending them to the cleaners. Replace them for the season with inexpensive Waitex Summer Rugs. And you have a home transformed—a home radiating cheerfulness, coolness, style, without the need for further redecoration.

You'll be thrilled by Waitex modern design and brilliant colors. Patterns are subtle, intriguing—in perfect good taste and easy to live with. And Waitex differs from all other summer rugs not only in modern decorative appeal but also in durability.

The outer surface is woven of tough, mar-proof Kraft fibre; while inside there is springy American Wire Grass, soft and easy underfoot. An exclusive and patented type of construction you will find in no other summer rugs. Due to an exclusive raised wicker weave, Waitex is cool, dirt-resisting and easily cleaned.

A Waitex always lies flat. It can't curl. Abuse it. Wash it as often as you please. Expose it to sun and rain. Its non-fading colors will keep smiling through many seasons of hard wear. Yet, with all those outstanding qualities, Waitex Rugs are surprisingly moderate in price. You can buy a 6 x 9 for as little as $14.50.

Your dealer carries Waitex Summer Rugs in many patterns, colors and sizes. Better make your choice today. Or mail the coupon and receive a free catalog, showing natural color photographs of the full Waitex line.

This is Waitex Summer Rug Pattern Number 72904 Black Design. Also available in blue, brown and green. Patent Applied for. There is no other rug like a Waitex. When ordering summer rugs from your dealer be sure you specify WAITEX.

Please mail me a free catalog of Waitex Summer Rugs, Braided Canvas Ovals and Wool-Waitex Ovals. I am planning the decoration of... The firm from whom I usually purchase house furnishings is...

Dear Sirs: Please send me your booklet "A Message from Virginia Hamill," containing hints on bedroom decoration and color ensemble by this famous authority, and showing complete range of COLORCOVERS in natural colors.

W. S. LIBBEY COMPANY, INC., 44 Worth St., New York
A NEW service that helps solve the problem of summer decoration has recently been installed at Richard E. Thibaut, Inc. Its fabric department is now prepared to offer exclusive fabrics that will harmonize in color and design with the selected wall paper. Any one who has shopped all around town for fabrics to go with a definite wall paper, or vice versa, will appreciate this service. One ensemble consists of a modern wall paper with a stylized block pattern in varying shades of tan, apricot and yellow, suitable for a bedroom, and a soft silk rayon fabric with a printed leaf pattern designed in the same feeling in deeper tones of the same colors, the latter material suggested for curtains.

FABRICS coated with lacquer and pyroxylin have come to the fore the last year or two and are generally known as "processed leather" or "waterproofed fabrics." One particular type of such fabric is manufactured by the E. I. du Pont de Nemours Company, Inc. and distributed by F. Schu-

whether by choice or conviction—its infinitely Simonous scene scored on the entrance of your life. Whim not in to be it can be faded. It is particularly 
efficient for the children. Add to it a gift, it is practical and inexpensive.

Matching a unique and unifying the top to the desired position, a book, paper or magazine is supported at a convenient angle, be it the finish of painted finishes—Taupe, Ochre, Pink, Blue, Green or Brown and all shades by hand.

Price Prepaid $7.75

Hanging tinted glass enable this fabric to serve many and varied purposes. A light weight fabric with a satin finish is intended for curtains and shower curtains. Pastel tones are offered in this finish—rose, sky blue, turquoise, yellow, peach and green. Snakeskin effects are to be had in tan, gray and cream in the heavy fabric upholstery weight with a felt back. Another finish simulates leather, the pigskin effect being particularly interesting on 20th Century metal furniture. A linen weave is available in solid colors, or in two tones.

"PERMATEX" is another type of waterproofed fabric with a coat of pyroxylin and lacquer. This is made by the Aspinook Company for the Permatex Fabrics Company. Wall coverings are distributed by Richard E. Thibaut Inc. and upholstery fabrics by H. B. Lehman-Connor Company, Inc. There are three qualities—a light weight for curtains

Hand wrought hinges, thumb latches, shutter hooks, etc. are made easily to the character and individuality of the home—at a cost practically the same as stock hardware.

Our hardware is not stamped out or trip hammer but is forged in the old manner by skilful smiths, reproducing the original pieces with true fidelity and clever workmanship.

Hand wrought iron supports, any color. 12" across, 29½ high. Permanent stabilization of unusual Furniture for Town and Country Homes.

The NEW YORK SCHOOL OF INTERIOR DECORATION
578 Madison Ave. Established 1880 N.Y.
place screen in silver and black with a stylized modern design etched upon it is suitable in the most conventional of rooms. Taller screens for general living or dining room use are equally effective. Lamp shades are also made by this process, with the base especially prepared so as not to be absolutely opaque. When the lamp is lit this trace is translucent, giving an unusual and pleasing effect.

Wall paper and chintz screens of charm and individuality are made by Martel. In addition to their effective designs these screens have a practical appeal as the frames are either of wood with compo board back and facing, or of a patented light-weight specially treated all-wood panel, that makes moving or lifting easy. Most of the screens are reversible since they are backed with carefully selected Japanese tea box lining papers. All sizes and shapes are available from the 38 or 42 inch bathroom screen to the tall six feet or more type. "The First Voyage", suitable for living room or library, is made of a chintz with map and ship design.
Horses, Horses...

Like to ride? Then you'll have no end of fun at a dude ranch. If you don't ride, it won't take you long to learn!

Think of having one horse all to yourself ... your very own as long as you stay. Think of the pack trips into the mountains ... the trout fishing ... hunting ... swimming in clear mountain streams. Think of the sunsets that bathe the mountains in a glorious haze of color ... and the cool, crisp air that flows the valleys under snow. Well... don't wait another instant. Ranches can accommodate only a limited number of guests, so make your inquiries and reservations early.

Or if a dude ranch doesn't appeal to you this year, how about a vacation in New England ... a trip to Europe ... a Scandinavian cruise? Whatever it is, you'll find just the right suggestions in these pages.

CHINESE MAIDS ATTEND YOUR WISH

Ocean Front View of Rio de Janeiro

De lucas citizen to fantasticious damselfly.
Play along the Cool Pacific

Next summer's vacation here... even with but 2 weeks... will prove one of your most notable experiences. Illustrated Itinerary gives costs of an unforgettable tour in Southern California.

PACIFIC OCEAN BEACHES!... the ultimate of next summer's vacation trail... inspiring gaiety that keeps you stepping joyously in the cool, freshening breezes sweeping in from 6,000 miles of sea.

Your vacation life along the Southern California coast swings merrily early and late... a fascinating adventure in holiday contentment. Your kind of a place to play... sparkling with activity... new romance borne in with every tide! Out of the blue waters... novel aquatic sports. A placid surf gives you a new slant on swimming! Dashing motor boats cut the waves... trim 20-footers careen daringly as they change course. Far out giant barges, laden with anglers, roll lazily.

Smart cities, quaint art and home colonies dot the coast... miles of frolicsome beach "midways"! Everywhere... at every hour... new things for you to see and do... always with energizing, delighting "tang of the sea."

Here is your chosen vacation spot... made for you! And, close by... Hollywood, movies... stars... orange groves... Old Spanish Missions... High Sierran glaciers. Novelty at every bend of the road.

If you have two vacation weeks... come to Southern California. You can actually spend eleven days here out of your vacation time and be back home on the last day... live comfortably and make sightseeing trips while here... for as moderate a cost as $6.35 per day. Send the coupon at once for an ILLUSTRATED ITINERARY which details what you can see and do in those eleven days... and outlines all costs. "Peak prices" are unnecessary... this is an all-year resort.

We have published a beautiful book picturing this Southland. It contains 71 camera studies by the best men of this land of "pictures." You may have a copy for the postage cost.

EXECUTIVES: Los Angeles County Oil fields represent an investment of 750 millions—the agricultural industry over 400 millions. The port of Los Angeles is second only to New York in volume of export tonnage.

Name ____________________________

(Plase Print Name and Address)

Street ____________________________

City ____________________________ State ____________________________
Thursday—Landing day! What a revelation, is Shanghai! No wonder all the world is curious about it. It's as cosmopolitan as Vienna! Wide European streets—in the center of town—branching off into rabbit-lane by-ways, Chinese swirling the place. In brocaded coats—and crooked ribs. Ricksha bells hanging. Funny短期 cars with no rails. Foreign motors. And the traffic cops!—they're giant Sikhs in khaki. With beards, and huge turbans on their heads.

It's frightfully interesting! Just to walk the streets here. For twenty coppers, we hired a ricksha this afternoon. Ambled along Nanking Road. Past ten thousand great shops. We were searching for bargains! Off to the edge of town—a rag-tag-end of a street—called "Pig Alley." Here everything's antique. And hand-made. Even the pewter. And what ridiculous prices! Oh, such a lovely pewter boat, a junk model. What a stunning dinner centerpiece! And only five Mex. (AMex is the currency.)

This afternoon we spent at the Willow Pattern Tea House (like the design on our plates at home.) Piping hot tea.—poured out of a little teapot (of course we danced during our lavish dinner. Twenty-piece American jazz.) Oh, what an evening! I'd like to stay in Shanghai a whole year!

And the royal suite was once a Mandarin's shoretm. It's really a museum. They served our appetizers in a rock garden grotto. All ferns and shaded lights. Talk about swank!

In the evening to the New World. All of young China there. Can you imagine a Coney Island 10,000 miles from N. Y. a la Chinese? It's a roof garden. They charge the Chinese 2 coppers to ride up in the elevators. (It's part of the amusement, if you please.) There are 4 Chinese vaudevilles going on at once. Games and side-shows.

We laughed until we were hungry. Then we tried a pair of chopsticks. Never knew fried chicken could be so delicious!

"Home" to the ship by midnight. Grand, comfortable white bed!

Saturday—Today was a Russian Day! Could just as well have been Moscow. We met Stepanova. A Russian dancer, the idol of Shanghai. Our party grew and so, to the Russian Cafe in Range Road. Peasant music there. And what hors d'oeuvres! On a huge tray like a barge, I counted 24 kinds.—Oh, what tempests! They're called "Sakashka."

All my life I've wanted to go these places. What a dream come true!

And now there's Hong Kong and Manila ahead. And Java and India...
You can begin your ramble at the Royal Leamington Spa for Caxton valued the waters as far back as 1586. High Warwickshire hedges escort you to Kenilworth and the most famous baronial ruins in England. Kenilworth Castle was a veritable Gibraltar in the Middle Ages. The Earl of Leicester spent more than five thousand dollars a day entertaining Queen Elizabeth there in 1575. What tales it could tell—of Henry II, John, Henry III, Simon de Montfort, and John of Gaunt.

Spend a lazy afternoon in Stratford. In the house on Henley Street where Shakespeare was born you can see a letter written to him by Richard Quiney. His very home has been perfectly preserved through the centuries and even the gardens contain shrubs, trees and flowers mentioned in the plays. The loveliest of churches is his hallowed resting place, and in the north aisle is the font in which he was baptized.

A pleasant woodland path takes you to romantic Shottery where Shakespeare paid court to gentle Anne Hathaway. It is all so real that you expect Shakespeare to suddenly appear.

Special Great Western Railway tours leave London daily wending through this most delightful bit of England. We have a booklet which will enable you to spend an evening reading about the pleasures ahead in Shakespeare’s Land.

This new Guide No. 35 is full of historic epics and delightful suggestions and will be gladly mailed free on request

New grandeur...new thrills...new adventure await in Canada's Rocky Mountains, the playground of the continent.

In this setting Jasper National Park offers 5300 square miles of untamed Alpine beauty. Climb peaks with Swiss guides; swing your driver on its Championship course. Motor, hike, or ride to roaring canyons and placid lakes.

The delightful informal luxury of Jasper Park Lodge with its fully-serviced log cabins is a fitting climax to each day's pleasure.

Beyond Jasper Mt. Robson, Monarch of the Rockies, and the swirling Thompson, Fraser and Skeena Rivers, call you on to the Pacific coast. Take the Jasper Park-Canadian Rockies Route through this scenic wonderland to the Pacific Coast.

The Landmarks of England

Begin with York, the stately City of England—York with its glorious Minster, its encircling walls; historic gateways and quaint old streets. Visit the beautiful ruined abbeys of Fountains and Rievaulx.

At lovely Knaresborough, close to the Modern Spa of Harrogate, are the shattered ruins of the Norman Castle to which the murderers of Thomas a Becket came in hot haste and where in later years Richard II was imprisoned.

Old Whitby clings to a steep cliff and high above the town is a magnificent ruin of the abbey church associated with the great Abbess Hilda and the early poet Caedmon.

Fortress-like Durham Cathedral, on the steep banks of the river Wear, is more beautifully placed than any other in England. Further South is a veritable cluster of other famous Cathedrals—Lincoln, Norwich, Peterborough and Ely (close to Cambridge with its centuries-old colleges.)

You will find more to interest you in England than anywhere else in Europe.

Call or write for Guide No. 54 which describes the landmarks of England in detail.

Steamship tickets, hotel reservations, itineraries, cruises and tours planned and booked to any part of the world by the American Express Travel Department.

Off to Europe for the great adventure.
How delightful to start the trip auspiciously on a great White Star, Red Star or Atlantic Transport liner.

This year, taste for yourself the thrill of a transatlantic voyage at its distinguished best, on the Majestic, world's largest ship, Olympic, Homeric, Belgenland, Minnewaska—or any I. M. M. liner.

Expense is no barrier. There are rates for every purse and plan.

Smooth vibrationless speed

I. M. M. liners are comfortable, in spite of their speed, because it is tensionless speed that lets you rest and relax. Happy days and sparkling nights pass like a dream because you are not cribbed, cabined, and confined. On these great liners decks are nobly brood, staterooms truly spacious—because we realize you prefer them so...
AFRICA...
AROUND
the WORLD
... the NEW
ventures for
tavelers

Africa—across the veldts from the Cape up to Egypt or over to Kenya...visiting the heart of the big game country.

Around the World—traveling independently and leisurely—picking out your itinerary yourself. Stopping as long as you wish and leaving when you choose—through the Orient—doll-like Japan—inscrutable, age-old China—Siam, and mellowed, time-ripped India—up the Red Sea—past the land of the Pharaohs, across the Mediterranean and Europe.

An itinerary based on your ideas of where to go and for how long will be prepared...to anywhere in Africa, Around the World, South America, the Orient, or Europe. When the plans have been approved by you, everything for the trip will be reserved in advance—private motor car arrangements, visas, hotel, steamship, airplane, and sleeping car tickets.

A telephone message, a personal call, or a note will bring to you plans and helpful suggestions.

SMART...
ranch life
western style
AND A GLORIOUS VACATION

here in the wilds of Montana, on Gary Cooper's home range, you may take part in week-end round-ups and rodeos...watch the horse wranglers and cowhands perform thrilling stunts...enjoy the trails on trained Western horses, while you live in luxury at the new, modern ranch house or cabins...in fact, you and your friends may, in the parlance of the West, take over famous "seven-bar-nine" ranch, look, stock and barrel for the duration of your vacation.

WRITE FOR BOOK: We will gladly send you a complimentary copy of a beautiful new brochure, which graphically depicts the wonderful Montana Guest ranch. Profusely illustrated.

Enter Europe at Glasgow

Enter Europe at Glasgow and make the round of Scotland first. Scotland is richer in beauty and in historical association than any other country in Europe and particularly full of interest to English speaking people. Sir Walter Scott's heroes and Burns' characters people every hill and glen of Scotland and make a journey through it the most delightful and most memorable of your trip. Enter Europe through Glasgow.

Circular Tours on the London Midland & Scottish Railway start from Glasgow and embrace all that is beautiful, all that is romantic in Scotland. Send for the pamphlet.

Follow the Sun!

Don't feel depressed and cobwebby in these lagging months till Spring. Slip away for a while from winter days—and follow the gay summer sun!

Why not Bermuda, anchored in a sunlit sea, with swimming, riding and golf...Florida and the Gulf Coast, where winter's a round of sparkling beaches, and fishing you never dreamed of...Cuba, America's Spain, where you play and dance 'neath the Caribbean moon...Hawaii, the pearl of the Pacific, where nothing's serious but fun!

Plan your itinerary as you look through these pages. You now will find everything here down to the last hotel that suits your needs.
BUSY men of Commerce find in Hawaii the freedom of drowsy days under dreamy palms, of screaming-reel paid out from lazing launch or bobbing outrigger, of blissful days on sporty greens. In increasing numbers they seek the soothing calm of the few days at sea that lead to the Island Paradise, the exhilaration that quickly comes with the salt-sea tang, the restful ease of magnificent liners whose standards are those of club and home.

They were the first to shatter seasonal distinctions. A climate as free from heat as it is from cold extended Winter into Spring, then stretched it into Summer. Now they go to Hawaii the year-round. The element of time is no longer an obstacle. Swift ships go from the four gateways of the Pacific in four to six days, depending on the liner selected. Today an utterly different land offering an utterly different vacation is at your threshold.

Write for descriptive literature. It tells why the discomfort of heat is unknown in Hawaii.

Through the Great Wall of China

No longer does the Great Wall forbid entrance to the golden beauty of the oldest of the Empires, now rapidly becoming democratic and progressive, and yet losing nothing of her immemorial loveliness. There is now the broad policy of the Open Door. The gates of hospitality are thrown open for visitors, to bring modern science and invention, and to experience all the age-old marvels. You will enter the gay cosmopolitan life of Shanghai, the far-flung grandeur of Peking, how luxuriously and thrillingly you travel toward the East.

JAPAN, CHINA, AND THE PHILIPPINES, WITH STOP-OVER AT HONOLULU on the world-cruising fleet of the N. Y. K. Line with its equipment of magnificent suites, well-equipped gymnasiums, swimming pools, and exquisite meals, to suit every taste, with an American cuisine and served by English speaking stewards.

Regular sailings from San Francisco and Los Angeles, $290-$360 up. From Seattle and Victoria direct to the Orient, $175 up. Round-the-World in either direction with privilege of stop-over, $910 up, including railroad. Round-the-Pacific Tours, rates from $550-650 up.

For full information, sailing schedules and descriptive brochures, write Dept. 3.

 Isn't It Easier?

I haven't it easier to look through a classified list of shops at your leisure and find there the thing you need—than to wonder and worry about where you should go to shop for it? Isn't it easier to send a letter and a check than to spend your time and energy searching unsuccessfully for a number of shops? Isn't it easier to use the SHOPS' AND BUYERS' GUIDE.
SCHOOLS AND CAMPS
Chevrons and Character

Chevrons, guidons, gleaming brass buttons... military school is more than that. It offers your son opportunities for sound education, wholesome discipline, and physical development.

The variety of activities sharpens his interest. Military organization gives the young man a just respect for authority... competition stimulates his capacity for leadership. The splendid comradery of work and play gives added zest to these important years of physical and mental growth.

You will not want to risk his career on a haphazard choice or even a more or less casual survey.

Let House & Garden's School Directory help you select the academy best adapted to your son's requirements... or write us for any further information which you may desire.

THE CONDÉ NAST EDUCATIONAL BUREAU
1930 Graybar Building, Lexington Ave, at 33rd, New York City

You'll Like This Chair
At last, sun room furniture that harmonizes definitely with the present day trend in interior decoration... as popular with the man whose first interest is a comfortable chair for reading as with the woman whose first requirement is a beautiful piece of furniture.

Consider These Features
Old Hickory's new line of sun room furniture includes chairs, settees, chaise longues, tables and other pieces for sun room use as distinctive as the outdoor furniture Old Hickory has built for three generations. The beautifully designed models are built of sturdy young hickory trees. Delightful color harmonies are seen in smart trimmings of imported French cane and upholstery fabrics in handwoven and homespun effects. Luxurious, removable cushions are spring filled. Moderately priced. At leading department and furniture stores, and shops. Write us for the name of your nearest dealer and our catalog F.

OLD HICKORY FURNITURE CO., MARTINSVILLE, INDIANA
For Indoor and Outdoor

No matter which you read...

This chair is built of sturdy young hickory trees and trimmed with woven French cane in natural finish or silver. Two-color effects in loose cushion upholstery.
Even if we don't have another DRY SUMMER...

... you need this modern method of bringing water to your garden, garage and outbuildings

This summer, again, flowers must be watered, lawns sprinkled, cars washed. And how much time and trouble you'll save if you have all the water you want—right where you want it!

Thanks to the new Chase Copper Water Tubing with special Chase Fittings, it's easy now to have water faucets wherever you need them... in garden, garage, outbuildings, or at convenient points around the outside of the house for hose connections.

You can have that pool in your garden, too, that you've always wanted... or perhaps a little splashing fountain that will add coolness to the garden on even the hottest day.

Chase Tubing makes all these things easily possible, because it is so inexpensive to install. It's flexible, you see... comes in long 60-foot coils that can be rolled out and bent easily to suit any change of direction.

It's quicker for your plumber to lay than rigid pipe because it requires so few fittings. The few it does need are much less trouble than ordinary threaded fittings.

And, of course, Chase Tubing is absolutely rust-proof, for it's 99.9% pure copper.

Your plumber can tell you all about Chase Copper Water Tubing and Chase Fittings. They're the same tubing and fittings that make his job so much easier when he replaces rust-clogged pipe inside a house. Go over your place with him and get an estimate on this modern method of water supply.

A studio window
distinguishes this story and a half living room

ARCHITECT Aymar Embury II
DECORATOR The Arden Studios

WHAT a living room for a home-loving family! Distinctively designed by a noted New York architect; smartly decorated by a famous interior decorator. A gloriously sun-shiny living room whose keynote is the high arched studio window equipped with Fenestra Steel Casements.

The new Fenestra “Fencraft” Casements are particularly appropriate in such a delightful setting. Hardware of solid bronze or nickel silver in coinage, scaly, sand or hammered finish; permanent, bronze mesh interior screens, almost invisible; swing leaves that open outward almost at a finger’s touch — no warping, swelling, shrinking, sticking. Storm-tight as an ordinary window, weather-stripped. Easily washed from within the room.

Especially pleasing is the ease with which these modern windows lend themselves to modish draperies; harmonize with architectural designs.

New Screening Conveniences
Fenestra now adds the last word in window conveniences by providing a heavy bronze mesh screen which fits flat against the window frame on the inside. This is the first steel window in which the swing leaves are opened, closed and securely locked, through the screen but without touching it.

Detroit Steel Products Company,
2248 East Grand Boulevard, Detroit, Michigan.

Please send me without cost or obligation, “Decorating with Casements,” containing many beautiful color plates.

If you want strength and durability built into your home—if you want efficient protection against heat and cold, use an insulation material that has great structural strength and high insulating efficiency.

In a recent laboratory test the four best known insulating boards were tested for strength... and Insulite proved to be 14% stronger than any. And not only is Insulite stronger, but — full 1/2 inch thick—another laboratory test proves it 12 1/2% more efficient insulation than ordinary 3/8 inch insulating boards.

And here are additional advantages—Insulite, a strong, all wood-fiber product, chemically treated to resist moisture, is not subject to deterioration. Used as sheathing, Insulite has several times the bracing strength of lumber horizontally applied, and as a plaster base it grips plaster with twice the strength of wood lath.

The use of Insulite—because it is in large rigid units—cuts labor costs. Insulite is not only economical in its first cost, because it replaces non-insulating materials, but it also seals in the heat and saves fuel.

If you are a prospective builder, ask your architect, contractor, or lumber dealer about the many advantages of Insulite. Write for our free booklet, "Increasing Home Enjoyment," and a sample of Insulite to test.

Insulate with INSULITE the Wood-Fiber Insulating Board

OFFICES IN All PRINCIPAL CITIES

PROSPECTIVE BUILDERS

Here are 2 ADVANTAGES found in INSULITE the Wood-Fiber Insulating Board

14% STRONGER and

THE INSULITE EFFICIENCY TEST

FULL 1/2 INCH THICK MEANS

12 1/2% MORE EFFICIENT INSULATION THAN ORDINARY 3/8 INSULATING BOARDS

MAKE THESE TWO TESTS

Prove Insulite's greater strength..... Drive a nail a half inch in from the edge and through a board of Insulite. Loop a strong cord around the nail and with hand scales, see how much greater pull is required to tear the nail through Insulite than through any other insulation boards similarly tested.

Prove Insulite's greater efficiency..... Place a cube of ice on a piece of Insulite over an automatic electric iron set at hot. See how long it takes the heat to penetrate the Insulite and melt the ice. Make the same test with any other insulation boards. Then we know you will specify Insulite.

THOSE FRENCH BULLDOGS
Robert S. Lemmon

EVERY once in a while there comes into one’s hands a book which so perfectly covers some specific subject that even a professional writer is glad to step aside and let the other fellow tell the story. Such an experience was mine the other day when, settling down to write about French Bulldogs, I turned to the official volume of the French Bulldog Club of America and the French Bulldog Club of New England to refresh my impressions of this quaint breed. Turning its pages, I came upon such a perfect analysis of the French’s character traits that, without more ado, I decided to quote it verbatim. This, then, from page 265 of The French Bulldog:

“In the first place, as has been said before, they are wholly distinctive, having a quaintness and smartness of appearance all their own, which gives them an individuality that separates them from all other breeds. In one respect this is strikingly shown in peculiar formation, carriage and set on of ears. Another distinguishing feature is the unmistakable expression of sauciness or pertness, which shortness of muzzle and upward of jaw help to accentuate. This expression, while different from the sources of their English progenitors, makes them no less decidedly out of the ordinary. Their short, compact body, indicating swiftness, their rolling or rather mincing gait and quaint mannerisms of movement and action and a certain verve and chic, wholly French, all unite to add to their unusual attractiveness. Their full,

rounded dark eyes, totally different in shape from those of an English Bulldog, give them a roughish, playful, animated and inquisitive expression.

"In a marked degree the French Bulldog has the affectionate nature and even disposition of the English Bulldog, combined with the greater activity and vivacity natural to a dog of a much lighter weight. While active, alert and playful, they are not unduly belligerent or disagreeably annoying from the incessant barking common to some breeds. As a rule they bark but little, and even in the exercise of this natural medium of expressing themselves, their voice is not shrill or penetrating, but a deep, rumbling, throaty sound, as is associated with English Bulldogs, but much lessened in volume. Their size is another advantage of decided merit when considering them as indoor pets. The best specimens generally range from about twenty to twenty-five pounds for males, and somewhat less for females. Those much under or above these margins of weight are not so desirable, and less frequently maintain a high degree of quality. Therefore, their size, combined with shortness of coat that is easily kept clean, make them an ideal dog, especially for city or semi-rural homes. In temper, being uniformly gentle and seldom in any degree vicious or quarrelsome, they are the safest and most dependable dogs for children or for close, intimate relations such as a household pet would occupy."

“Brockway Residence Is New But Looks Old” - Newspaper Headline

Leander Higgins is the architect of this beautiful home of Mr. and Mrs. Walter B. Brockway, in Portland, Maine. The house is modelled upon the best Colonial precedents.

“Although the house is new,” says the Portland Evening Express, “it has the appearance, of having stood for long ages until its weather-beaten exterior had become mellow with sunshine. Just how did the architect and owner achieve the old, old appearance of the house? It is considered unusual to get so perfect an appearance of weather-beaten wood.

“It is understood that a Boston firm did the staining, and brought the color to its present state of beauty, which has the effect of great age.”

The Boston firm referred to in this warm appreciation, is Samuel Cabot, Inc., of 141 Milk Street, Boston—the inventors of creosote shingle stains, and at present the only holders of the U.S. patents which permit stains to be manufactured by the collo- paking process, which reduces the pigment to such fineness that they act like dyes, sinking deeply into the wood and giving it the mellow glow of weather-worn Colonial roofs and walls.

Just as Cabot’s Stains can make a new house look old, they can make an old house look new! There is a stain for every purpose; to give brilliance to concrete and stucco or brick, to accentuate moldings and trim, to make shutters brilliantly green, or wood dazzlingly white. To know more about these marvelous stains, you should write for full, complete information. Use the coupon below, today, before you mislay this copy of House and Garden.

For the little world around your house

Spring brings welcome feathered music to home owners who make an effort to attract it. We’ve been building bird houses long enough to know that birds have definite ideas on home-making. Our attractive shelters are constructed according to the little songsters’ specifications. In our free booklet you’ll find pictures of many kinds. This one is the Old Homestead, for martins and swallows. 10 rooms, 16-foot pole included—$15. Others from $1.50 up.

With a play house as attractive as the one below, the youngsters have only one difficulty. That’s keeping the grown-ups out of it at least half the time. It’s made of durable cedar, painted outside, stained inside, absolutely weather-proof. Grace the grounds of any estate, and makes a dignified daytime home for enthusiastic married couples under ten.

The house is made in sections; shipped ready to erect. Price, with two porch seats, $295. Others from $95 up.

Just as a picture needs a frame to set it off, your house and garden need a fence to bound their beauty. There’s friendliness in a white picket fence, gentle hospitality in an arched gateway. The entrance shown below is made of cedar; gate hangs on galvanized hinges and fastens with a thumb-latch that works. For the arch alone, $30. Gate, $8. Picket fence, $1.50 per lineal foot, including posts. Other attractive fences from $1 a foot up.

Send for our free booklet Y.

AN OLD REMODELED ARTIST'S HOME
SILVERMINE, CONN.
Set in ½ acres of woodland near the river. An old barn made over into a lovely all-year round studio house; old beams and fireplaces. A separate studio (8 ft.), with studio, studio and huge fireplace. Hot water heat, racy water—2 car garage.

WHEELER REAL ESTATE
174 Post Road Tel. 1148 Darien, Conn.
In the pretty countryside of Westport, Conn., is situated the above attractive colonial house, on a corner plot of two acres. Two story frame house with living room and open fireplace, dining room with corner cupboards, pantry and kitchen. Three master bedrooms and bath, servants' room and bath, open attic, heater. Two car garage, rooms above. Attractive grounds. Apple trees surround home. Price $25,000, listing #555.

For further particulars or to inspect the above premises, apply to Westport Office, 227 State Street.

Furnished houses for rent season 1930. Also a number of attractive homes for sale in Greenwich, Norwalk, Westport, Fairfield, Green Farms, New Canaan, Ridgefield.

The house, for sale with all its beautiful furniture, has 16 rooms—and six large open fireplaces; three of which are in master bedrooms. The estate is absolutely complete even to a tennis court and a small lake that can easily be enlarged. Gardener's cottage of 7 rooms, tool house, barn, 4-car garage. Ample servants' wing. Richardson & Boynton hot water heater and furnace—hot water heat. Unusual closet and storage space. Private telephone system all over house and grounds. Large flower and vegetable gardens, orchards. A dry-built stone wall of 2200 feet surrounds the estate. It is on a main highway and has three street frontages. Phone for an appointment to see this lovely estate—it is well worth seeing.

FULL COMMISSION TO BROKERS

House & Garden's Book of Color Schemes is full of things that set your mind dancing to new rhythms—like this dramatic room with gray walls, black floor, black and white furniture, white china and flowers, that started with a zebra and ended in success.

There are 312 illustrations—237 color schemes, from the Renaissance to tomorrow—articles on every aspect of the color problem. Every type of room has been provided for in such variety that you'll long for a house with as many divisions as a beehive, to try them all! The best things ever published in House & Garden have been picked out for you—together with plenty of new stuff.

The edition is limited—so pin your nearest five-dollar bill to the coupon this most auspicious moment, if you don't want to risk being detected when you try to steal a friend's copy later on.

Floors that match
Smart, Modern Clothes

Floors in tune with the spirit of today. As smart as Paris styles . . . as gay in color as Fifth Avenue’s Easter Parade. Designs that make the dull, colorless floors of yesterday seem as out-of-date as the hoop-skirt.

Floors that have something new to show you every time you look at them. Here, a fascinating bit of marble veining—amazing in its subtle realism. There, a delightful inset of castle, ship or coat of arms. Some designs are marble-ized throughout, others show charming harmonies of plain, jewel-colored tiles; still others offer lovely combinations of both.

The name of these wonderful floors is Sealex Embossed Straight-line Inlaid Linoleum. A long name, but every word of it means something important to you. Sealex—that it is made by the unique Sealex Process; and is therefore spot-proof, stain-proof, easy-to-clean. Embossed—that each tile is raised above the “mortar joints” . . . an effect that suggests quaint, hand-laid floors. Straight-line—that every color line runs straight and true—no blurred, careless looking edges. Inlaid—that your floor will give years of service.

Stores everywhere are now showing the new styles in Sealex Linoleums. Why not go and see them?

CONGOLEUM - NAIRN INC. Gen'l Office: Kearny, N. J.

Your Windows can be just as beautiful as these

Above and at the left is shown the popular Judd Ivanhoe Decorated Extending Rod, used in a most attractively draped window, where a soft blue velvet is combined with a silk-net panel. This Rod comes complete with ends, center ornaments, rings and brackets. The Holdback No. 366 is illustrated.

At the right and below is shown the Judd Victorian Wood Pole in Polychrome finish used with a rose and tan glazed chintz and cream Point d'Esprit. The fixture comes complete with ornamental ends and center, wooden rings and brackets. The Holdback No. 366 is illustrated.

HOW charming such a window drapery as this one of soft-toned blue velvet and cream net, mounted on a Judd Ivanhoe Rod, would be in your home; or perhaps you prefer the second drapery of rose and tan chintz suspended from the popular Judd Victorian Wooden Pole.

Either of these lovely window-drapings you can easily copy, and many others you can develop very simply, whether you live in a suburban house or a city apartment, if you will use Judd Drapery Fixtures as the basis for your design. Prices range upward from $1.50 each complete with brackets, rings and ornaments. If your dealer does not have the drapery fixture you need, write us and we will see that you are served. H. L. Judd Company, Inc., 24 West 40th Street, New York.

Suggestions for Beautiful Windows, FREE

Our new and fully illustrated booklet, "Suggestions for Beautiful Window Draping," will be sent you free if you will write for it. It is filled from cover to cover with charming and practical window draping designs showing the use of Decorated Extending Rods, Wood Poles, Decorated Iron Fixtures, Cranes, Traverse Tracks and Hi-lite Fixtures.

The House Itself Grows Overnight—Its Beauty Grows for Years

If you want an attractive, comfortable vacation home—and only your dread of the fuss and delay of building holds you back—The Hodgson Method is the answer to your wish.

You choose a floor-plan from our booklet; we build your home in sections and ship it to you ready to erect. With local help you can have it put up in a short time, without litter, confusion, or unexpected expense. If you want us to handle the job completely, we will send a Hodgson construction foreman to supervise all details.

People of means are choosing Hodgson Houses, even when price doesn’t count. For the quiet charm of a Hodgson House comes from architectural “fitness” and good taste. Each year its beauty seems to increase... so simple are its lines; so well does it blend with rugged landscape or leafy background.

The sections fit tightly together, held rigid by heavy key bolts, and the finished house is sturdy and durable. Hodgson Houses everywhere have withstood the severest storms. You will have no repairs for years. Selected cedar and Douglas fir are used in construction. Details are carefully finished. Solid brass hardware, glass doorknobs. Walls, roof and floors are insulated with Celotex.

Our free illustrated book G gives you a great variety of pictures, plans and prices. Also shows furnishings and outdoor equipment. Write for it today, to E. F. Hodgson Co., 1108 Commonwealth Avenue, Boston, Mass., or 6 East 39th Street, New York City.

HODGSON Houses
Which is modern?

—a look in the basement will tell

Two houses—exactly alike to all appearances, yet only one is truly modern!...

For only one has a Kernerator, the crowning convenience for modern housekeepers. In this home there is no rubbish problem, for the Kernerator quickly disposes of it all. Wrappings, wilted flowers, garbage and refuse of all kinds are forgotten when they are deposited in the handy hopper door... All burnable materials are incinerated in the Kernerator and bottles and other non-combustibles are flame-sterilized for removal with the ashes. No fuel is required. The air-dried waste furnishes the fuel for its own destruction... There are Kernerator representatives who are incineration specialists in 150 cities. Ask them to tell you of the complete convenience of a Kernerator and how it accomplishes effortless waste disposal.

KERNER INCINERATOR COMPANY
1230 North Water Street
Milwaukee, Wisconsin

With oil or gas for heating, what will you do with waste and rubbish?

KERNER INCINERATOR INCINERATION FOR NEW AND EXISTING BUILDINGS
Residence, Greenvale, Long Island. Roger Ballard, Architect

HAVE YOU THOUGHT OF NATURAL STONE FOR YOUR NEW HOME?

THE beautiful, soft color-tones of Indiana Limestone range from a somewhat grayish buff, through silver gray to a medium-toned gray of slightly bluish cast.

By building of this fine natural stone, you may secure a beauty of wall surface, a permanency of construction, that no other material offers. The color-tones of Indiana Limestone have infinite variety. They soften as the years pass, making your house actually more attractive with age.

ILCO Riplstone is a name we have given to Indiana Limestone prepared in a new way for residence construction. This new way of use makes it so moderate in price that it can be used in houses of average cost. ILCO Riplstone is sawed into strips at the quarries. These strips, carefully selected to insure a wall of color, texture, and pattern to suit your architect's design, are shipped direct to the building site. There, by a remarkably simple operation, the pieces of stone are made ready and laid up in the wall.

Homes of stone built the "ILCO" way cost only 5% to 6% more than if faced with more ordinary materials. There is no upkeep cost when Indiana Limestone is used. Resale values are higher. Let us send you illustrated literature. Use the handy coupon.

INDIANA LIMESTONE COMPANY General Offices: Bedford, Indiana

Indianapolis, Indiana. Illinois Office: Tribune Tower, Chicago
An exquiste interior in the residence of Mr. Francis M. Holt of Jacksonville, Florida. Mr. Mellen C. Greeley of the same city was the architect.

For smart interiors
MELLEN C. GREELEY favors
natural cypress

WHAT other material could make your rooms so warm, so modern, so beautiful, as the natural grain of Tidewater Red Cypress (Coast Type)?

It is no wonder that many such prominent architects as Mellen C. Greeley are using more of this delicately patterned wood than ever before.

Thousands of home owners have found it the most versatile of woods—a wood that can be left in its natural state, or waxed, or charred, or varnished, or painted—a wood that can be used in any room in the house for panels, trim, beams and window frames.

And, with all its beauty, it costs but little. For interiors, insist upon "sap grade Tidewater Red Cypress"—the grade most exquisitely grained. Any lumber yard can get it for you.

Ideas for interiors—FREE
Actual photographs of modern interiors by famous architects have been gathered in a booklet which we will gladly send you free of charge. Write to the Southern Cypress Manufacturers' Association, Jacksonville, Fla.

TIDEWATER RED CYPRESS
(COAST TYPE)
THE WOOD ETERNAL

This advertisement is published by the following members of the Southern Cypress Manufacturers' Association:
This pattern is the latest addition to the McKinney group of Forged Iron. It is the richest and most intricately designed of all McKinney Forged Iron creations. The delicate tracery of this pattern reflects the Moorish influence of the ancient Granada.

The beautiful Alhambra design is now available for complete home equipment: entrance door sets such as handles, drop rings or levers operating cylinder locks; hinge straps and strap hinges; interior latch sets; hammered old brass and iron knobs and lever handles; garage strap hinges. Even the door studs are obtainable to carry out the effect.

In texture, McKinney Forged Iron is characteristic of the material itself—it is strong, rugged and enduring. It reflects sincerity in every line, every curve. It will withstand years of wear and weather... These charming McKinney products are supplied in three rust-proof finishes—Dead Black Iron, Relieved Iron and Rusty Iron.

The Relieved Iron sometimes is designated as Flemish or Swedish Iron.

In addition to the exquisite Alhambra design, McKinney Forged Iron is now produced in five other charming patterns: Warwick, especially suited to homes of the English type; Heart, Tulip and Curly Lock which are of English and Colonial extraction; together with the Etruscan which is of Southern European origin.

That you may study and compare the beauties of all designs, McKinney offers a beautiful Brochure illustrating their proper application. Use the coupon to request your copy.

Concrete masonry for distinction

...plus firesafety

The walls of today's fine homes must render a far greater service than those of a decade or generation ago. To all previous requirements has now been added greater strength and durability—with lowered maintenance—and firesafety.

An example is illustrated on this page—the Lake Angelus, Michigan, home of Clarence E. Day, prominent Detroit architect. Mr. Day finds his home delightfully comfortable in both summer and winter. The reason for this is found in the excellent construction, and the fact that the concrete masonry units are hollow, forming a wall that is an effective barrier to extremes of heat and cold.

Concrete masonry responds freely to architectural expression, imparting a richness and character peculiarly its own. Erected with reasonable skill and care, concrete masonry provides a wall of virtually one-piece construction—of remarkable strength and durability. Inquiry will bring complete and interesting information.

Concrete for permanence and firesafety

CHICAGO
The mellow and seasoned beauty of

ELIZABETHAN ART

is offered you in the EXCLUSIVE DESIGNS

by RUSSWIN

THE ELIZABETHAN PERIOD is above all domestic in its appeal. Born under the Renaissance influence it offers beauty, comfort, and sturdiness. It insists on durability. For nearly a century RUSSWIN ... actuated by the ideals of Elizabethan art ... has combined grace with faultless mechanical operation. Hardwick, herewith illustrated, is one of the exclusive RUSSWIN designs in this delightful period. It will enhance the little manor house, the baronial home or the monumental business structure and provide unfailing, trouble-free, lasting service. Whether it be a sturdy, handsome door knob, a lock, door closer, night latch, or even such as small hinges and locks for the corner cupboard ... all will be in perfect accord if you select RUSSWIN. Consult your architect or interior decorator, when making plans, or write to us for descriptive booklet covering RUSSWIN Hardware expressly made for leading periods of design. Russell & Erwin Manufacturing Company (The American Hardware Corporation, Successor) New Britain, Connecticut—New York, Chicago, London.

For the Architect's convenience RUSSWIN Hardware is illustrated and described in Sweet's catalogue, page C-3137: C-3216.

Two other exclusive RUSSWIN designs

Lancaster & Carlton
Women actually do need more heat than do wool-clothed men...Now they can have their 76° and you your 69°.

Men! There is hope. Chivalry no longer need exact the penalty of overwarm rooms.

Of course, modern woman’s scanty raiment brings the need for more heat than is comfortable for wool-clothed men. Today a uniform temperature throughout the house cannot satisfy every member of the family.

In that new home you plan to buy or build, insist on room-by-room temperature control. It is called Hoffman Controlled Heat. The touch of a finger on the lever handle of the radiator valve commands that radiator to deliver full heat, three-quarters, half, one-quarter, or none at all. Action is sure and prompt. In any room you can have as much or as little heat as you require, without effect on other rooms.

Heat is generated only as the call for heat increases. Thus there is no waste. Operated under low pressure (4 to 6 ounces heats large homes), fuel costs are drastically low.

The equipment that makes it a Hoffman Controlled Heat system can be added to any standard boiler and radiators, whether oil, gas or coal is burned. This equipment includes Hoffman Modulating Valves and Return Line Valves for radiators, the accurate Hoffman Damper Regulator, the remarkable Hoffman Differential Loop and the Main Vent. Perfect operation of Hoffman Controlled Heat is guaranteed for years by a conscientious maker.

Recently we have had a great many calls from architects and people building or buying homes, for full information regarding this great advance in heating methods. So we have published a booklet describing Hoffman Controlled Heat. May we send you a copy? Your request will be promptly filled. Address Hoffman Specialty Company, Inc., Dept. H-22, Waterbury, Connecticut.

Swing the lever handle of this little valve, and command the radiator to deliver (quickly) as much or as little heat as you desire, without effect on other rooms.

HOFFMAN CONTROLLED HEAT
Now moist cold and dry cold in the same refrigerator

Frigidaire equipped with the new Hydrator now offers an extra service. Mail the coupon for salad recipe book and full details...today

Now, for the first time, you can have moist, reviving cold for vegetables and dry, frosty cold for meats and other foods—both in the same cabinet. You can have the right type of refrigeration for every kind of food. You can enjoy a new convenience in your kitchen. All of these advantages are brought to your home by the new Frigidaire Hydrator...now standard equipment on all household Frigidaires.

And what a difference the Hydrator makes in quality and flavor!

Celery comes out of the Hydrator crisp and brittle. Lettuce takes on a dew-drenched freshness. Tomatoes become firmer. Parsley, cress and other garnishes seem almost to grow again!

You'll want to know more about the Hydrator. And you'll want to know more about the "Frigidaire Cold Control" which enables you to speed the freezing of ice cubes and desserts. You'll want to know more about Frigidaire's surplus power that keeps foods fresher—longer. You'll want to see and examine the beautiful cabinets in rust-proof Porcelain-on-steel inside and out. These features are being shown at the nearest Frigidaire display room. See a demonstration.

BOOK OF SALAD RECIPES—FREE
And by all means send for the latest Frigidaire catalog and our new, free, salad recipe book. The recipe book contains many new recipes which you have probably never tried before. It also gives you full details about the Hydrator. Mail the coupon today.

FRIGIDAIRE CORPORATION, Subsidiary of General Motors Corporation, Dept.P-117, Dayton, Ohio.

Please send me, free, your new salad recipe book and a copy of the Frigidaire catalog.

Here's a Paint that can't go wrong

Then close your eyes... and picture in your room... the gay accents you'll love!

Then paint them... for yourself... in no time... with Artlac!

You'll get effects you'll be proud of... though you've never painted before. You'll get that made-in-a-fine-shop look that few amateurs have ever been able to get, with any other paint!

Here's why. Artlac is... a paint like no other paint. So easy to apply! No "trick technique" to remember. Just begin... your second stroke will tell you that you need never be afraid of any paint job again!

For on large surfaces or small, Artlac goes on... in easy strokes... beautifully, satiny smooth! No rills... brush marks... joinings. No need to hurry. Even on large areas, Artlac will never dry, one part, before you've had time to go back and join up strokes. And if some bit needs correcting, go back and correct it... Artlac will soon smooth itself out... it will never give you a way. Artlac dries between meals. Quick... but not too quick.

Hours saved—ARTLAC goes on over any smooth, clean surface

Artlac saves hours of work, when you're painting an old piece. For with Artlac you needn't remove the old finish, you needn't scrape the wood. If the surface is clean and smooth, it's perfectly safe to apply Artlac, right over old paint or varnish. It won't seep under, and "lift" old paint. With Artlac you run no risk of an unsightly buckling, bulging. Artlac can transform old pieces, in no time. Use Artlac, too, for unpainted pieces (they're making such lovely unpainted things, now!) Artlac will always give you finished results!

Best of all, here are the new colors that you've wanted most!

The most modern colors in the decorating world! That new and exclusive yellow-green... chartreuse! Reds that have been seen, until now, only in priceless old trays and secretaries... glorious accents for today's smartest rooms! Greens with a new lilt... Blues... sophisticated blues! Pinks... gloriously different... porphyry... arbutus... sea shell. Grays with the new feeling... Oh, all the newest "decorator" colors will greet you, when you ask your dealer for the Artlac color card!

And here's why these Artlac tones are so clear, so beautiful. They were created by the largest maker of artists' paints in America... their tints blended from rare pigments that are usually found only on an artist's palette. From over 400 rare pigments, Artlac's fascinating colors come!

Try this wonderful paint... soon! Before you know it, you'll be doing whole rooms... and loving every room you do!

ARTLAC'S ADVANTAGES

DRIES BETWEEN MEALS... hard, glossy, smooth... NO WAITING TO PAINT DIFFERENT SIDES (ARTLAC goes on vertically just as easily as it does horizontally... the surface you're painting doesn't have to lie flat, for best results, as it does with so many paints)... COMES IN A GLASS JAR... NO OBJECTIONABLE ODOR. That's a joy, for sensitive noses!

30 SMART COLORS COVERS EASILY... WATERPROOF... fine for porch furniture... GOES A LONG WAY... WEARS AND WEARS IN 4 SIZES... 2, 4, 8, and 16-0Z.

Tune in on the "Devoe Redskins" every Thursday night beginning February 20, 9:30 to 10 (Eastern Standard Time), Columbia Broadcasting System.

Make your new home warm and tight with

"WOOL" from

WOOD

Thick, fleecy, flexible... this true insulation proofs your home against cold and wind... saves fuel

Here, in pictures, are the facts about true house insulation—facts that every home-builder should know.

The large picture shows why flexibility is of basic importance in house insulation.

Note how Balsam-Wool, in fleecy, blanket-like strips, fits snug and tight between the framing members of the house.

In cracks and crevices, around doors and windows, in all the difficult places, Balsam-Wool tucks in.

Everywhere that cold and wind might enter, it blocks the way—as only a flexible insulation can!

Like sheep's wool

The smaller picture shows Balsam-Wool in the recommended full-inch thickness.

It looks amazingly like sheep's wool. It practically equals the actual warmth of sheep's wool!

Thus in Balsam-Wool alone you get the great triple efficiency of 1. flexibility 2. full inch thickness 3. the highest insulating value ever attained in practical house insulation.

Balsam-Wool insures you a really heat-tight home—warm in winter, cool in summer. A truly modern home, always comfortable, more readily salable.

How it saves you money

True insulation, with Balsam-Wool, is one of the few things you can build into your house that will actually save you money year after year.

The first cost of Balsam-Wool is small—only 1½ per cent, on the average, of the new house cost.

You save the major part of this at once. A smaller heating plant is required in a Balsam-Wool house—a smaller boiler, fewer or smaller radiators.

You save every winter on fuel bills—from 25 to 40 per cent. Thus Balsam-Wool actually pays you dividends every year.

In old homes, too, Balsam-Wool used as attic insulation cuts fuel costs, provides new year around comfort.

It tucks in!

Not a crack or a crevice to let in cold or wind when your house is insulated with thick, fleecy Balsam-Wool. It is applied to attic floor or roof. A simple, easy way to make your present house warmer, your fuel bills smaller!

Send for sample and booklet

Let us send you the complete facts about insulation and Balsam-Wool. Examine for yourself a sample of the actual material.

Mail the coupon.

THICK... FLEXIBLE... INSULATION... EFFICIENT
The restful beauty of rolling greensward . . . the grace of winding shrubbery, the radiant smile of many blossoms . . . trees, majestic in their silent dignity, and the peace and serenity of all ageless things under an azure sky! And against the natural loveliness of a modern cemetery, its crystalline clarity in pleasing contrast to the profusion of natural contours and colors, stands a family memorial carved in Vermont Marble—hewn from the everlasting hills—erected to perpetuate the cherished name that it proudly bears and honors.

In increasing numbers, men and women are erecting the more architectural types of family memorials, such as the mausoleum, the exedra, and the colonnade, during their own lifetime . . . Guiding their choice are the many memorials to the great names in the history of America . . . presenting to the world, in the beauty and dignity of Vermont Marble, the memory which is so indelibly engraved in the hearts and minds of their countrymen.

We shall be glad to send you illustrative material showing how leading architects have used Vermont Marble in the design of imposing cemetery memorials as well as in garden seats, bird baths, and other informal types of indoor and outdoor accessories to the well-appointed estate. Or, write for our booklet, "All That is Beautiful Shall Abide Forever." It gives helpful information on the problem of selecting appropriate memorial designs . . . Our Department of Plan and Design will gladly co-operate with a Master Craftsman in Marble in your vicinity—without obligation—in submitting sketches and estimates for your special requirements . . . Address: Dept. G 302, Vermont Marble Company (the world’s largest quarriers of marble), Proctor, Vermont.
There is a certain Spartan school of humankind—mainly male, but including not a few of the sometimes gentler sex—whose reaction toward the amenities of house furnishing is distinctly Puritanical. Ease of mind and body within four walls, to these strong souls, is a mark of a self-indulgence that did much to make the world what it is today.

But consider a moment. The essence of Simple Living lies in physical and mental peace, and these are the fundamental backdrop of good decoration.
Trailing Arbutus....

If you know, and love, that shy wild flower of early spring, you get a thrill of pleasure every time you uncover it.

Exactly the same holds true of Whitman's Chocolates. These choice chocolates have a fragrance, a purity and delicacy that make them more than merely an appeal to your "sweet tooth." They please all the senses.

As a gift, the SAMPLER is unsurpassed. As an Easter gift, the flower-covered wrap shown above expresses the true spirit of spring and rejoicing in

Consult the 'Bell Telephone Classified Directory for the nearest Whitman's agent. Send Whitman's at the last moment from any telegraph office.
THE IMPORT SHOW. For the first time in their history, it seems, Americans will have an opportunity this summer to witness on their own soil an exposition which will closely parallel the trade fairs so well known in Europe since the 13th Century. During the week of August 4th, in New York City, the International Exposition of American Import Trade is scheduled to make its decidedly impressive bow, sponsored by a long list of mercantile and governmental notables from all over the civilized world.

The list of foreign products which will be on display is much too extensive to set down here. There will be found among them, however, many which will be of particular interest to home owners. We have done much with the importation of European architectural and furnishing precedents, but our own delineations of them have not always been successful. It should be of interest and a real benefit for us to be able to see in wide variety so many of the original foreign-made articles which are applicable and obtainable for American homes.

COLOR SCHEMES FROM EXODUS. Even the Old Testament will furnish color schemes. The curtains of the tabernacle were blue, purple and scarlet on linen, with a hem of embroidered cherubim. Aholiah, son of Abisham made them. It amused us, too, to find that the laver or wash bowl was made "of the looking-glasses of the women," which rather contradicts a certain fashionable friend who, on showing us some mirror plates recently, claimed they were the latest thing from Paris.

THAT NATIONAL FLOWER. That it is high time for the United States to decide upon an official national flower is indicated by the contest now under way between the supporters of the two leading species in the contest—the Wild Rose and the Columbine. We are not taking sides in the controversy, for we believe that both flowers are exquisitely lovely and that, however the clay-footed representatives of the peupl de down in Washington may decide, both will retain all of their innate charm. Our point in doing our publicity bit on the matter is that we are a Col umbian as well as a Rorer, and that we hope some authoritative action will soon be taken to settle the issue.

All of which leads us to an irrelevant and wholly disrespectful query of our own: How many of the law-making luminaries who will eventually rule on the matter can be trusted to know whether the Columbine and the Wild Rose are flowers, or just new kinds of cocktails?

JOHNNY-CAKE HILL

A cedar has in altitude
Advantage, while a wall
Of old New England stone must brood
Together 'till they fall,

A cedar tree can watch the town
A billy mile away,
But walls forever crouching down
Must wait for Judgement Day.

JOHNNY-CAKE HILL

PRACTICAL HORTICULTURE. A notable forward step in the promotion of finer plants and better understanding of their garden usefulness has been taken within recent months by the establishment in Lexington, Mass. of Lexington Gardens, Inc. Under the eye of Stephen F. Hamblin as Director this organization will carry on intensive tests with a tremendous variety of plant material and will offer the public exceptional opportunities for examination. It is planned to establish here a genuine center of practical horticulture in New England.

The original area contains some eleven acres, including a marsh, brook, Oak wood and glacial hill. There will be special gardens of at least five acres, of some twenty-five types. Among them is planned to have a Rose Garden with 500 different climbers and 1,000 bush sorts; a formal garden; a trial garden of 2,000 rare perennials; a hardly border for eight months of bloom; a garden of 1,000 annuals; a bulb, Fern, Lily and Primrose garden; rock, marsh, woodland and wild gardens, special groups for autumn, spring and seasonal effects; display gardens of Iris, Peony, Chrysanthemum, Dahlia, Gladiolus and other groups; and special plantings for dwarf evergreens, sweet herbs, color effects and an heated greenhouse for alpines.

The gardens will be open every day of the year, with continuous service to visitors. The Garden Clubs have been especially helpful in organizing them and from the former Botanic Garden of Harvard University has come much of the plant material that is going into them.

GEORGE KERR. The name of George Kerr will always be associated with the advancement of the Sweet Pea in America. Among the many horticultural labors of his long career this stood foremost. Now that he has gone from us we wonder whence will come the man who can carry on the torch of this beautiful endeavor. The ranks of horticulturists have recently been thinned of many noble and important men. A new generation must advance to take their places.

STEEL'S CANDLE. Most of us, at an early stage of our education, were obliged to read parts of the Spectator and the Tatler, those two 18th Century London papers into which poured the wit and whimsicality of men of letters of that day. Joseph Addison, we were told by our masters, was a nice person, and his contributions should certainly be read, but Richard Steele wasn't supposed to be so nice a person and so we neededn't bother much with his skits. Recently Sir Richard has been enjoying a pleasant revival, and he turns out to be a delightful fellow. A bit profligate, to be sure, yet he loved his wife tremendously. He was fond of writing letters even though she was only in the next room. To Steele we are indebted for a splendid phrase which, if we were given to motosols, we'd place above our bed head. For Sir Richard was given to reading in bed, even reading the Classics, and his description runs thus, you'll recall: "Bring Virgil" said I, "and if I fall asleep, take care of the candle."

OLD DOC LEMMON HIMSELF. Last month we intimatad that Old Doc Lemmon fan would find his sayings amplified into book form this spring, but we didn't know how soon the happy event would occur. The volume has already come to our desk and we find it even more satisfying than our long friendship with the old fellow had led us to hope. In it is the essence of sincerity, of humor and of Edibility to type. The book is far more than a collection of random themes, for though it runs a human story that in the end comes to a telling climax, We can think of no more fitting volume for the country guest room table and the personal library of all who enjoy his accidents of humor and his dignified style. The book is indeed far more than a collection of random themes, for through it runs a human story that in the end comes to a telling climax, We can think of no more fitting volume for the country guest room table and the personal library of all who welcome the haunting odor of new-plowed fields, the taste of wild Strawberries in June, the drowsy clatter of a mowing-machine drifting through the afternoon of a summer day.

FARMHOUSE REPARTIE. The scene was a small Connecticut farmhouse to which a reasonably fashionable New York woman had become attached after tiring of the complications of society. She had remodelled the house, made the garden herself and was completely enjoying her freedom from city ways and stuffy customs. Nevertheless she had to entertain, once in a while, friends from that other existence who could not understand what it was all about. How they wondered of them, a man, having spent the weekend and the hour for his departure drawing near, asked his rural hostess, "By the way, who packs my bags?" To which she replied, "I don't know, but you and I'll flip a coin to see which one does."

ROCK GARDENERS GET TOGETHER. Our city Cincinnati the Rock Garden Society of Ohio has come into being as, so far as we know, the first organization of its kind in this country. Its constitution provides that members must be familiar with the growing of rock plants or students of alpines in their native habitats, or interested in the planning and construction of rock gardens. Active members are enrolled from within a fifty-mile radius from Cincinnati, and corresponding members from other parts of Ohio as well as from neighboring States. It is the hope of the founders that this society may become the nucleus for a federation of rock garden enthusiasts covering the whole State. Those who are interested can obtain additional information about the society, its aims and scope from the Recording Secretary, Miss Elizabeth Lamp, 2906 Fisher Place, Cincinnati.
INCREASING to an almost unlimited extent the possibilities for unusual wall decoration, a new medium—photographic murals—has made its appearance as a result of recent experiments by the Eastman Kodak Company. A photographic mural is, as its name implies, wall paper made photographically. It is specially treated paper upon which a scene that has been photographed from a book or magazine illustration, an original painting, map, etc., is printed by the projection method. The result is an artistic print which was exposed and developed in the same manner as any photographic enlargement. Jones & Erwin, decorators, in New York City, have been pioneers in this field of individual wall ornamentation, Mr. Erwin having devised all the wall treatments illustrating this article.

Think for a moment what this new method of decorating with enlarged photographs means! So wide is the choice of subjects that it is inconceivable to imagine a problem of wall ornamentation that cannot be solved by this process. Among the sources for pictures that can be utilized are photographs, drawings, paintings and pictures from books and magazines. Endless are the novel effects possible by photographic murals. For instance, a commonplace bit of woodland recorded through soft focus lens can become a subject of rare beauty for the walls of dining room or hall. Or the wall decoration may record the owner's hobby with pictures of hunting scenes, ships, golf or gardens. An instance of giving a personal touch to a room by this method can be seen in a country house in upper New York State where the dining room walls are decorated with enlarged photographs of members and scenes of the Genesee Valley.

Walls in Owen Winston's New York dining room (opposite) are decorated with photographic murals. These are photographs made into wall paper by a process recently perfected by the Eastman Kodak Company. The pictures were plates from Valentine's Manual. These were photographed and enlarged to the required proportions.
On the left wall shown below is a picture of the old Gracie mansion, which this dining room overlooks. An illustration of the Astor residence, which once stood nearby is also reproduced. On page 70, the picture to the right shows Mr. Winston’s grandfather’s India importing house. From this place he looked across to the post office, depicted in the center panel, another Winston house appearing in the view at the left.

(Above) This view of the old Astor residence, which stood originally in the vicinity of Mr. Winston’s present house, was photographed from a plate in Valentine’s Manual and then enlarged to the proper proportions for the space above the sideboard. These interesting wall decorations were devised by H. G. Erwin and executed for him by the Eastman Kodak Company.
Hunt Club. These pictures are combined to depict a meet and are joined to make one continuous hunting scene around the room. In another interior, the living room of an English family residing in America, photographic murals depicting scenes of their ancestral home in England fittingly ornament the walls in panel effect. Another instance shows a wash drawing of conventional design photographed for the background of a boudoir, thus giving originality to the scheme without expensive treatment of the whole wall by the artist.

These are only a few examples of the effects possible through this new medium. It offers the heretofore unheard-of possibility of selecting a rare print, etching or map and having its subtle beauty photographed in diffused and enlarged proportions and made into wall paper that gives marked individuality wherever it is used. Because of the range of subjects this treatment is adaptable to all types of rooms—business offices, restaurants and shops, as well as the private residence.

The beauty of photographic murals can be enhanced by projecting the negative through bolting cloth. The resulting print reveals a cloth or tapestry effect in white tones which in addition to breaking up the grain of the negative gives a soft, pastel appearance. In cases where a half-tone or other engraving has been copied for projection, the engraver's screen is artistically apparent, giving the finished print somewhat the look of hand-blocked wall paper.

These murals are printed on photographic enlarging paper which comes in
sepia or gray. The Eastman experiments have revealed that No. 3 and No. 5 Bromide papers are well suited to photographic murals as they are durable and their surfaces satisfactory for coloring. There are three mediums for coloring photographic murals—oils, pastels and water colors. Pastels are the most successful as they can be quickly applied and mistakes easily corrected. No. 5 Bromide paper takes pastels well because of its rougher surface. Have a definite color scheme in mind before starting the work, and avoid realism. The decorative effect of a photographic mural is its charm. When finished, the pastel-tinted mural is often coated with varnish, which protects the wall and gives an antique effect. If this lacquer finish is used, allowance should be made for approximately a thirty percent decrease in color brightness. Waterproofing lacquer is applied by spraying with an air-gun, care being taken not to use the gun too close to the surface as the force of air will blow away some of the pastel. When coloring with oil, use large brushes or rags over large areas, and avoid streakiness. If mistakes are made, colors can be removed with boiled linseed oil, or, if dry, with carbon tetrachloride. Water colors are sometimes used and while results are often satisfactory, it is the least successful medium of the three.

Although the production of photographic murals is merely making large prints by the orthodox enlarging process, there are several phases entering the printing and hanging process that should be well understood to assure best results. First of all, the shape of the composition to be used as wall decoration should be in proportion to the shape of the wall area to be covered. For instance,
The picture at the right shows another portion of the white room illustrated on the opposite page. This section, with its folds of gleaming drapery on either side of Venetian blinds, was photographed. The picture was then enlarged and made into wall paper, the result appearing in the illustration above. By this method it is possible to reproduce the entire background of this room by means of photographic murals. Jones & Erwin, decorators.

At the left is a man’s office showing another version of photographic wall paper. Individual maps were photographed and enlarged so as to form a panorama of the world around the room. The whole was then colored in the manner of the old maps. This room is in the New York office of Brown Brothers & Company.
Concerning House Pockets—
A Plea For System

I AM contemplating a move. I’ve been contemplating it ever since I came into my present quarters twenty years ago. I’ve been hemmed in so by accumulations that I must spread! Every time I think of moving, I am struck dumb over the thought of the rows of file boxes with letters received and answered, of bills paid; I have been staggered by the boxes of stored possessions, each with its tale of association too precious to destroy. I have looked at the double-rowed book shelves, and have groaned at the mere suggestion of packing them. In my mind’s eye, I have seen the cavalcade of vehicles transporting my possessions, mostly things saved from the passing of time—records of the self that has lived—moving to the new abode where I am going to live.

I was on top of a step-ladder last Christmas, searching blindly for the tree decorations which we had carefully stored away from the season before. At first it was a mere fleeting suggestion passing through my mind; but as soon as a pile of boxes was pushed off the shelf upon me, the thought became a passion. Why should we have to spend our valuable moments in useless searching for things we have stored away? Why should we always have to believe that what we are looking for is certainly on the top shelf of a closet, available only from the precipitate heights of a shaky ladder? Why, even then, should we have to grope at a dangerous angle from bulky package to bulky package, separated from each other by oddly shaped baskets, with linen miscellanies and empty bottles?

“Here,” I said to my noble assistant, “I am going into the library to consult my How To Build A House books. I’ve something important to do.” I rubbed my head, still smarting from the downfall of sharp edges, and beat a hasty retreat—dusty, disgruntled, shamelessly passing the buck, but anyway holding on to my idea: which was that in planning homes, house pockets have not yet received the recognition they deserve.

MAN has always attached to himself convenient receptacles for carrying things: the game bag, the mail pouch, the brief case, the music roll, the medicine chest, the tool kit, the wallet, the brief case; made in celestial light. Housekeeping necessities, caring little for the things that have had their day, and are pensioned off to the realm of sentiment, are appraised in celestial light.

I have gone through plan after plan, city house and country house, searching with the assiduity of a mouse looking for cheese, for some recognition of man’s dominant trait—his natural inclination to save things, to store them, to look them over and renew acquaintance with his Buried Self. As Matthew Arnold declares:

“But often, in the world’s most crowded streets,
But often, in the din of strife,
There rises an unspeakable desire
After the knowledge of our buried life.”

Perhaps Arnold would have us dig deeper into our spiritual selves, but even if all of us don’t, at least we heard our past in moments. And, alas, I have failed to find the house pockets of which I speak—such an easy, inexpensive accessory to add to the plan—a concentrated place for the gathering of those odds and ends of life, which now are scattered everywhere, anywhere, and crop up in the most unexpected corners. Where did I put the garden seeds of last year? I had quantities of them, enough to color an acre of field. Hours of search—in which my family was scornfully reproached for carelessness—revealed them stuffed in an old discarded teapot on the top shelf of the china closet in the kitchen. The logic of putting them there was forgotten: there is always logic for putting things away! But, hang it all, life can’t always be a memory test. Architects should bear this in mind. They should help to lessen our mental irritations.

I REMEMBER once calling on a well-known fiction writer in her downtown office. She sat behind her desk with an imperial air, with her manuscript open. She sat behind her desk with an imperial pose which suggested executive control. When, in our conversation, we mentioned a certain story of hers, she touched an electric button, at the same time turning over the leaves of what, to all appearances, seemed to be an address book. Her secretary came in.

“Let me have manuscript 2XLVI,” she said, as though tuning in on some imminent station, on a wave length authorized by the Federal Government. Within a flash, the well-ordered pages were before her. There was no mussy endeavor to find the story, no hurried opening of this drawer or that, this file box or that, this envelope or that. As constant as the North Star was the place for this bit of fiction, yclept 2XLVI. What a relief to the human spirit not to be upset in an endeavor to find such things. You want what you want when you want it, and every well-ordered house should be in a state of preparedness. Ease of location would thus enhance the joy of remembering about things. At present, there is in most of us a Freudian fear that some object will be needed that may turn the house topsy turvy before the pesky thing is located in about as inapt a spot for concealment as ever occurred to the human mind. But the mind has nothing much to do with this matter of storing away our past. The tendency is not to put things in definite location, but to slip them away so as not to clutter the daily high-way of life.

(Continued on page 148)
Harmony At A Garden’s Edge

The meeting place of garden and woodland is ever a test of landscaping skill, for here man’s art and Nature’s must be framed together. Rarely are they so softly blended as here at the home of Richard A. Strong, Port Chester, N. Y. Frederick Barnard Hinchman was the landscape architect.
The incomparable bloom of Apple-trees and Wisteria is a feature of the grounds in May, seeming to fill the air with white and pink and lavender. There is a settled, mature charm about the place which comes from fine trees well established and well cared for—especially in the old orchard where, now, a gravelled drive winds through the undulations of smoothly mown turf. It is a place that is at once expansive and intimate.

Massed Blossoms

Of Tree And Vine
There are many different impressions registered by Mr. Strong's garden. From one viewpoint the scheme is formal, regular, well ordered, while from another the effect is of only slightly tamed naturalism. In the merging of such effects the landscape architect has been very successful, producing a unit in which trees and shrubs play a prominent part. Another aspect of this blending is furnished by the photograph on page 99.

Where Ruggedness Meets Regularity
The gardener's difficulty today is to choose from among the superabundance of plant material that which is best and most fitted for his needs. There is no dearth of plants beautiful in flower and leaf suitable for any and every type of garden. The problem is to choose judiciously among the vast array of wealth. It was quite otherwise in the 18th Century. When one turns to the books of that period one is astounded at the limited range of plant material available. It is hard for us to visualize what an 18th Century garden was filled with for we are apt to forget all but the bounties dowered upon recent generations.

Among the first gardens laid out in this country, undoubtedly, were those about the old plantations in Savannah and the vicinity early in the 18th Century. They had, of course, a rich wealth of native trees and bushes and these they used to great advantage, probably better than we who garden now, but when it came to the cream of herbaceous plants—annual, biennial or perennial, excepting bulbs—an amazingly limited number were available and nearly all of them were European immigrants.

To get some understanding of what the pioneer in American gardening had for his

---

Flowers of our great-grandparents' day, as depicted and named in Gerard's Herball, published in London in 1636. (Top, left) White Pipe, Syringa alba; (Right) Red Bachelors buttons; (Center, left) the Peach leaved Bell-flower; (Right) red narrow leaved Lily; (Bottom, left) the Wall Pepper or Stone-crop, which we know today as Sedum acre; (Right) Great broad leaved Time. Many of these old-fashioned plants are available today practically unchanged. A list of them is appended to the accompanying article.
use in the early half of the 18th Century it is necessary for us to remember that geographical knowledge in general was still raw and crude. The white race was busy spreading its tentacles over the world, concentrating endeavor in amassing wealth; conditions in this country were nebulous and but a small area of North America was settled. Voyagers had rounded the Cape of Good Hope and found an all-sea route to India and beyond. The Dutch and English, having ousted the Portuguese and Spaniards from monopoly of the seas, were busily engaged struggling for trade supremacy in the Far East. A number of medicinal plants and others of unusual growth and form were brought back to Europe and some of these found their way to this country. Curious persons, as the old books have it, collected plant treasures and sent them to the gardens of their friends. But ships were slow and voyaging dangerous, and there were very few persons interested in plants apart from any real or supposed economic value they might possess.

The gorgeous-blossomed annual and perennial herbs of central and western North America were unknown, but the Century Plant had made its début in England, as the following humorous reference by Miller denotes: "Another common error is that when the flower opens it makes a report like that of firing a gun; this is sufficiently confuted by all those who have been where these plants have flowered, but I suppose the rise of this story might proceed from some persons saying when one of these plants flowered it made a great noise, meaning thereby that whenever one of them

New Metal Furniture
For Modern Schemes

Louise Bonney

(Below) Interesting lines and proportions mark both the round ash tray of chromium plated brass and the square aluminum curtain pulls. Designed by William Lescaze.

The card table shown above accommodates six people when opened for dining. The base is made of rectangular bronze tubing plated with chromium, polished, and the top may be had in black or colored bakelite. Gilbert Rohde.

In the French Art et Décoration, the following quotation appeared during 1927, "In railroad cars and automobiles metal has progressively eliminated wood. Perhaps one day not too far distant the same thing will happen to the furniture of our houses." Two years later this suggestion became a forceful fact with the exhibiting of metal furniture ensembles by several of the major figures in the French decorative world—Le Corbusier, Djo Bourgeois, Pierre Chareau, René Herbst, Louis Sognot, and of wood and metal furniture by a half-dozen others. This season sees several artist-decorators in America offering programs of metal furniture—which seem to imply steel for the skyscraper, why not for the table? Aluminum for airplanes, why not for chairs? Chromium for the motor lamp, why not for the bed? After all, designers of interior furnishings cannot live in this mechanistic age without feeling the presence of metal in the warp and woof of their lives; cannot ride about in shining motors and gaze up at the aluminum spandrels of a Chrysler Building, or file by the slim beauty of an aluminum airplane or the spider web steel layers of a soaring skyscraper without thinking of the possibilities of these materials for the furnishings of our homes.

The practical dressing table shown at the left is of black enameled steel with chromium plated base and trimmings. It is part of a modernist bedroom suite made entirely of metal and designed by Norman Bel Geddes for the Simmons Company.
April, 1930

Even this artistic consciousness does not furnish an adequate explanation for the invasion of metal into present day interior decoration. This lies primarily in the merits of metal and its adaptability to our changed mode of living. Durability is the first advantage—a durability that withstands steam heat, changes of temperature, constant moving about and mechanical care in place of personal care. Wood, with all its beauty, demands a great deal of attention before it comes to you. It must be cut, assembled, sanded, stained, and finished by hours of work, all adding to its initial expense. Then when it becomes a part of a room, it has a disconcerting way of failing to adapt itself to its environment, to climatic changes and steam heat particularly. The beautiful patine caused by hours of loving labor must be treated tenderly. A casual cigarette, a moist glass, Johnny's hob-nails, the cat's claws, a temperamental vacuum in the hands of a temperamental maid—and you have to start all over again!

Consider now the advantages of metal. A corresponding piece of furniture is fabricated in two operations and will last indefinitely, since welding takes the place of glue in many cases, and impenetrable finish the place of sensitive polish. The bakelite top offers the resistance values of marble. The only blemish possible will be a slight scratch which can be pumiced off. So much for durability. What about comfort? Certainly no period has produced more comfortable seating arrangements than ours, from the motor car seat to the divan. There is no reason why the fundamentals of these—strong springs, soft cushions and right proportions, should not be translated into metal terms. There is absolutely nothing in the idea of modern design or materials which eliminates comfort.

Although the materials of the new metal furniture range through aluminum, steel,

James Tassie And His Portraits

Adeline D. Piper

(Right) Two superbly executed Tassie medallions from the collection of Mrs. Robert C. Taylor. Sir Archibald Campbell was the subject of the farther portrait model. The lady is unknown.

One of the many hunting scenes which were depicted by Tassie on glass. His pieces are notable for their minute exactness of detail.

James Tassie (1735-1799). From a painting by David Allen which is now hanging in the National Portrait Gallery, Scotland. In his hand is one of the medallions which gave him fame.

The National Portrait Gallery in the picturesque town of Edinburgh contains a collection of 150 portrait medallions by a certain James Tassie, a modeler with an art worthy of comparison to that of the rugged Raeburn—who looked people shrewdly between the eyes, surprised their manners in their faces, and possessed himself of what was essential in their character before they had been many minutes in his studio. What Raeburn did with the brush Tassie did in a medium all his own; first modeling his subjects in wax and then casting these models from life in a vitreous paste of finely powdered glass and pigments, which was annealed by being placed in a reverberatory furnace.

My introduction to Tassie medallions came from that enthusiastic collector, Mrs. Robert C. Taylor of New York. Her portrait medallions are to Wedgwood's basso-relievor as Rodin is to Donatello; not so broadly done, perhaps, but executed with the simplicity of genius, the character of the sitter being of paramount importance.

Here was evident the sure touch of a master sculptor who felt the mass rather than the detail. The skull was under the marble, so thorough, so searching and so full of individuality were these portraits, as Mr. Grey, keeper of the Tassie medallions, expresses it in his book. His conviction is that they more than hold their own against the medallions that were contemporaneously produced by Messrs. Wedgwood and Bentley, though that firm employed such capable modelers of the time as Flaxman, Smith, Hackwood and Lochee.

Tassie was not a potter. In aim and spirit his portraits are definitely sculptor's work. In Mrs. Taylor's small collection is the beautiful head of an unknown lady, shown above. The paste has the appearance of marble and is mounted on black slate, as
April, 1930

is also the medallion of Sir Archibald Campbell, signed with a "T" on the shoulder. The catalog of the collection gives a minute description of his Highland bonnet, the three feathers fastened with a circular brooch, the tartan plaid on the left shoulder, and adds "This has sometimes been absurdly mistaken for Prince Charles Edward Stewart." Romney painted one of his finest portraits of this brave gentleman, loving the pomp and circumstance of his scarlet uniform and gold lace, dwelling lovingly on the Star of Bath blazing on his left shoulder; the face, however, lacks somewhat of the strength of character that has been portrayed by Tassie.

Prof. Dugald Stewart, the subject of another of Mrs. Taylor's medallions, reproduced in the catalog, is mounted on gray marble, which is unusual. That of Prof. Black, M.D., which also exists in Wedgwood paste, is mounted on a gray-blue background.

My penchant for Tassie medallions being fully established, I began a quest for others in America. The Metropolitan owns one of the Duke of Cumberland and one of John Hunter (rather poor examples) as well as a group of small antique heads such as Keats purchased for his little sister, who delighted in them and was making a collection of Tassie's at that time. Mr. Walters has several in his splendid gallery in Baltimore, Maryland, one a very unusual mould for David Garrick's portrait.

By a strange chance I learned that Tassie's great-niece was living down in Virginia—Mrs. Robert Montgomery of Magbie Hill. It was a golden day in October when I motored down from Washington to see her, but the pageant of autumn color was not more vivid than my anticipation. Could she own the collection belonging to the collection of Mrs. Robert Montgomery

(Above) Various small medallions made by James Tassie, showing a great diversity in the subjects treated; a head of Shakespeare, two Scottish Kings and mythological figures. Now in the collection of Mrs. Robert Montgomery

Another portrait of Sir Archibald Campbell (1741-1791). Probably an earlier study than the one on the opposite page. From Mrs. Montgomery's collection

At the extreme left is a model of Prof. Dugald Stewart, distinguished metaphysician of the time. The other shows Prof. Joseph Black, a physician and chemist

(Continued on page 134)
At the left is a sketch suggesting an alternative way of grouping the furniture used in the living room described in the accompanying article and illustrated by the photograph below and those on the following page.

(Below) A fine Adam mantel acts as background for the fireplace group of two chairs, small table holding a lamp and floor lamp. This group can be enlarged by adding the side chairs standing nearby.

NEITHER beautiful furniture nor splendid materials nor priceless objects of art can make a room livable if it is not well arranged. This fact has been demonstrated in countless homes where pictures by great masters, antique tapestries of rare design and weave, and old furniture exquisite in design were plentiful, yet the rooms lacked charm and interest because they were not livably arranged.

There are certain well established principles governing furniture arrangement. Light, wall space, the scale of the furniture and the habits of the household, as well as the number of its members, must be considered when planning the various furniture groups. Very often the age of the children makes a great difference in the placing of certain pieces. For instance, if

(Continued on page 124)
(Above) This bay window is truly a room within a room for it has complete furnishings of its own. A two-tiered table obstructs little of the view and holds flowers, books, and porcelains. Cane-backed chairs were chosen because they do not interfere with the outlook.

Below is the end of the room opposite the fireplace, showing furniture forming another complete unit. The pieces are so arranged that people can gather for coffee, music or conversation. In the Chicago home of Mrs. E. H. Fahrney, Miss Gheen, Inc., decorators.
A Comprehensive Glossary
Of Continental Silverware

Mr. and Mrs. G. Glen Gould

THE ancient plate of Troy and Greece, or even Rome, may seem rather remote from the silver on our modern sideboards, our writing, dining, or dressing-tables, or the appointments on our writing desks, but it is astonishing how persistent are some of its shapes and how perennial some of its ornament. Chasing, repoussé, niello, and enamel are as ancient as history and as modern as the latest designs in the ultra-modern mode.

The Orient has added occasional pieces to decorate the most modern of rooms, and the charm of convenient little boxes, great bulbous-based candlesticks, fascinating, pierced arabesque-work and exquisite damascening are altogether too delightful to be ignored.

English and American silver, heirs of all ages and countries, have a province distinctly their own though they cannot be well separated from French, Italian, German, and Dutch plate, which have inspired both their shapes and ornament since the days of the magnificent Elizabeth. Without some glimpse of Continental plate, the changes of our period styles are as incomprehensible as is our American Colonial furniture without a knowledge of English Jacobean, of Italian Renaissance, and of French fashions in the 17th and 18th Centuries.

Ajouré or à jour: Openwork or pierced design.

Alloy: Baser metal, usually copper, added for hardness.

Ancient: Silverware native to Egypt and to Europe, introduced into Asia by Phoenicians. Egyptian bowls formed like lotus blossom, 4th Century B.C.; statues and vases; silver objects inlaid with gold. Trojan dishes and vases: one boat-shaped, a form persisting in the modern sauce-boat.

Austrian: Shows German influence, especially in 16th and 17th Century domestic plate. 15th and 16th Century enamel in floral designs enclosed in filagree.

Baroque: 17th Century; ornament—typically full-bodied conventional scrolling and heavy garlands.

Bas-relief: Bas-relief carving used under enamel, the deeper cuttings give the shading.

Bashmore Treasure: Roman, 2nd Century B.C.; oval plate; found in France, 1830.

Boat-shaped: Long dish suggesting boat's hull, ancient and modern; sauce, gravy, cream, sugar, etc. See Nej.

Bosco Reale Treasure: Roman, 1st Century A.D., domestic plate; found near Pompeii, 1895.

Bowl: Ancient and modern; deep or shallow receptacle, frequently round, often hemispherical or some portion of a sphere; various sizes, shapes, and decoration; with or without side handles. Continental broth bowl resembles American porringer, but has two handles instead of one.

Box: Ancient and modern; sizes vary, from tiny covered receptacles to huge treasure caskets. Shapes and ornament much varied in different countries and periods. For tea, spice, snuff, perfume, toilet preparations, jewels, patches, sacred relics, etc. 17th Century Dutch vogue for fantastic animal forms for spices.

Cast or casting: Object or ornament formed in a mold.

Chaise: French, casket or box, especially for jewels or sacred relics.

Classic: 7th Century B.C., 4th Century A.D. Greek and Roman table and cooking services, furnishings, sacred and official plate decorated in successive styles: figures, animals, scenes, mythological subjects, acanthus, floral, and foliage motifs; embossing, chasing, casting, damascening, gilding, niello, and enamel.

Clock: Renaissance and later; 18th Century examples part of garniture.

Coconut shell: Carved and mounted in silver, as standing cup or goblet, especially from Renaissance until 17th Century in Italy, France, and Germany.

Cooking utensils: Especially Roman, French, and Spanish saucepans and kettles.

Coopé: French, cup, bowl, chalice, crater, or vase.

Cover: Loose or hinged, flat, domed, etc.; often with human figure, vase, etc., as finial ornament.

Crystal, etc.: Semiprecious stones, used as medieval enrichment, formed objects mounted in silver during Renaissance and later periods; especially crystal, agate, marble, ivory, horn, mother-of-pearl, etc.

Cup: Drinking vessel, set on foot or stem and foot; covered, uncovered, with or without handles; various sizes. Types: animal form, beaker, chalice, coconuts cup, coopé, covered cup, crystal, etc., double-cup, falcon, goblet, mug, nautilus cup, ostrich-egg cup, peg cup, rython, standing cup, tankard, vase, tumbler, wager-cup.

Decoration: Methods have varied only slightly from ancient days: Burnish—bright smooth finish. Chasing—hammered ornament, the tools leaving various impressions. Chiseled—French, chiseled; chiselled—the craftsmen. Damascening—named from Damascus, noted for inlaid ornament; silver or gold, iron, tortoise-shell, etc.; gold on silver, steel, etc. Email—French, enamelled. Engraving—design cut into surface; bright cutting—the lines as bright as if burnished. Filagree—fine wire twisted into intricate design; openwork or applied. Frosting—roughened surface, produced by removing surface alloy. Incrustation—jewel-work, precious or semiprecious. Inlay—metal, enamel, etc., sunk into surface in plates, bands, or designs. Matting—pounced ground work, the punch marks blurred. Pointing—pounce-work, pointillé, punches or dots outlining a design, used for shading, or groundwork. Repoussé—embossing, bas-relief or raised design hammered from within. Wire-work—heavier than filagree.

Decorative Plate: For display: rosewater dishes and ewers, plaques, standing cups, vases, statues, etc.

Dish: General term for tableware. Presentation Dish—ornate plaque, Roman type; with Emperor's portrait.

Domestic or Service Plate: Terms dis-

A Portfolio Devoted To

Decorators' Own Homes

This group, of Miss Grace Fakes' New York apartment, shows an effective arrangement of furniture around a fireplace. The walls are white with wide yellow bands outlining panels, and a green and white marbleized dado. Furniture pieces are 18th Century French and Italian types.
It is one thing to possess antique furniture but quite another matter to capture the charm and flavor of another era in the furnishings of a room. For this reason the living room illustrated on this page is particularly interesting, as Mrs. Torrance has succeeded in giving a gracious Old-world flavor to the decorations, while paying due regard to modern comfort. The background is the outstanding feature. Original Louis XIV panels painted in landscape scenes in soft greens, blues, browns and dull reds alternate with bookshelves extending to the ceiling. The wood trim throughout is pine, with a line carved mantel over which is an interesting arrangement of antique Chippendale mirror and small colored prints. The Queen Anne armchair and the graceful small sofa in front of the fireplace are covered in walnut colored damask; a Venetian sofa which occupies the side wall opposite the fireplace is in dull red moire. The rest of the furniture is a mixture of Irish, English and French 18th Century pieces. The hangings in this room are of red moire over buff colored chiffon voile glass curtains. Entirely covering the floor is a plain carpet in soft gray-blue to repeat one of the colors in the panels and as a contrast to the many reds in the decorative scheme.

Three Rooms In The New York Home Of Mrs. Kenneth Torrance
THE FRENCH DINING ROOM

This Louis XV dining room appears larger than it really is on account of the delicate lines of the furniture and its space-giving color scheme. The paneled walls are painted primrose yellow—an excellent color for any interior inclined to be dark—and given a wax finish. Curtains are of blue-violet velvet and the rug is an Aubusson in pinkish browns, reds and golds. The Louis XVI console is antique white, the dining table walnut and the chairs yellow with upholstery of tufted blue and yellow silk.

DELFNIUM BLUE WALLS

When a room gets sufficient sunlight, blue makes a delightful background, particularly if warmer tints are found in the textiles and accessories. The walls in this bedroom are light delphinium blue and the carpet is several shades darker. Contrasting with this restful background are curtains of gray and pink chintz and pink and blue chintz on the chaise longue. The original Chippen-dale bed is hung in gold silk gauze, with a bedspread of a flowered chintz. Mrs. Torrance was the decorator of both these rooms.
This friendly living room with its many books and old furniture has the further advantage of an engaging color scheme. The walls are paneled with simple moldings and painted a greenish-aquamarine color. Hangings are of damask, the tint of pale amber, over ivory gauze glass curtains and Venetian blinds painted to match the walls are used in place of shades. Small bookcases at one end of the room finished in red lacquer provide a contrasting color note. The chintz on the love seat has a deep brown background figured in ivory, amber, henna and green; one large armchair is in golden brown damask and the two 18th Century Italian armchairs by the fireplace have coverings of henna toned damask. The rugs are antique Samarkands lovely in color—old gold, peach, greenish blue and deep brown predominating. A noteworthy feature of the room is the deep fireplace alcove which is completely lined with books.
A SERENE SCHEME

Pale, serene colors give an air of tranquility to this dining room where furniture and textiles supply the main notes, as the paneled walls are painted white with a line of turquoise blue accenting the simple moldings. The ceiling is pale blue and the rug honey colored chenille. Against this white background the Louis XVI walnut commode and dining table, and the Venetian chairs painted blue and gold with seats in blue, ivory and rose chintz, are particularly effective. The window is well curtained with Venetian blinds painted pale blue next to the glass, ivory gauze sash curtains and hangings of cerulean blue taffeta trimmed with an appliqué Empire border in ivory color. The Directoire bench painted old white and gold has a cushion covered in deep red and gold satin. Crystal lights and an old French painted panel in turquoise and faded rose used as a wall decoration above the commode complete the scheme. Mrs. Wickware is the owner and decorator of this apartment.

CORAL AND BLUE

Warm color predominates in the bedroom. Here the paneled walls are painted a light coral tone and glazed, and the chenille carpet is bois de rose. Some of the furniture is old walnut but the dressing table and bench shown in the picture are a deep turquoise blue. The seat of the bench is in coral velvet and the large armchair in the corner is covered in turquoise blue chintz with variegated flowers. Venetian blinds painted turquoise are used in place of shades, with over curtains of silk gauze in a deeper coral than the walls, with pleated ruffles and draped valance.
THE LIVING ROOM

This room in a farmhouse built a hundred and sixty-five years ago illustrates the adaptation of 18th Century French, English and Italian furnishings to a Colonial setting. Walls and ceiling are robin’s egg blue, curtains blue and yellow striped silk and carpet blue-green accented by Chinese rugs in yellows. Furniture delicate in line makes the room appear larger, the overstuffed pieces seeming less bulky owing to their coverings of toile the same green as the carpet with figures in sepia.

CHINESE AND COLONIAL

The effective room opposite shows the remarkable fitness of Chinese furniture and accessories with a Colonial background. Coloring throughout is low in key to emphasize the faded tones of old paintings and screen. Curtains of tawny yellow silk blend with neutral plaster walls and pine, and the 18th Century Chinese furniture is the soft brown of fruit woods. Corner cupboards are dull lacquer red as a background for a collection of Tang figures. Elsie Cobb Wilson, decorator.

The Residence Of

Elsie Cobb Wilson
Late Developments in Home Equipment

Gayne T. K. Norton

PLUMBING fixtures, it seems, do all but walk about. Differences in the rate of contraction and expansion between the fixtures and the floor, as well as settling of the structure are apt to open crevices if, as is now usually the case, tub and lavatory are cemented to the tile floor.

For the insanitary places thus created a vitrified base is available that is gracefully curved to meet the floor and the edge of the fixture with a smooth flush joint; it measures three-quarters of an inch in height and an inch and three-eighths wide. Detracting not at all from the appearance of modern fixtures, it forms, when properly laid, moisture-tight connections between them and the floor.

Very reasonable in cost, this patented type of cove tile is furnished to exactly fit all standard tubs, bowls and lavatories. It may be inserted where sidewalls join the floor not only in bath and lavatory, but also in tiled kitchens and laundries. Such straight lengths, angles and curves as are needed (Continued on page 146)
Some Pertinent Facts About
Bed-linen And Blankets

Elizabeth Hallam Bohn

ASTROLOGISTS could no doubt chart a scientific reason for the domestic unrest which stirs the home-making heart as Taurus the bull yields his sceptre to the Heavenly Twins. Opening the country house is not sufficient to cure the disturbance, nor is the blossoming of the city home into gay summery chintzes. Below surface depths it penetrates, reaching its height as the linen closet reveals a stock wearedied from winter hospitality and close friendship with the washing machine. Only a shopping trip through the enchanted region which is a modern linen department, can restore that serenity which comes from an adequate and up-to-date supply of fine bed-linen—the mark of a born house keeper from time immemorial.

Some meticulous folk still insist on covering the smart fabric of the modern mattress with a complete cover, and these should be made sufficiently large to allow shrinkage. But as a general thing, the quilted pad—which may be bought in varying sizes to fit the standard mattress sizes—is now considered more satisfactory. In the new bride’s linen chest these pads may appear in charming hues to match her guest room sheets, for the better qualities of colored bed-linen are practically color-fast under ordinary laundry conditions.

SHEET SIZES

Over the mattress pad the under sheet is spread, its mitred corners and ample length keeping it smooth and taut. The wise purchaser insists that the sheets be the 108 inch length which is now almost the standard. For longer beds, the manufacturer will make her sheets in any length she desires. And for those accustomed to Continental living, there are the imported sheets 144 inches long, which give the most American bed a French accent by turning half way down over the blanket. Seventy-two inches in width gives ample tuck-in for the single bed; eighty-one inches is adequate for one of three-quarter-size, and ninety inches provides comfort for the double bed.

For summer nights, sheets of fine spun linen are particularly grateful. Good linen sheets—especially if decorated with embroidery or hemstitching—will mount to a considerable figure, their price depending on the fineness of the thread and weaving. Loosely woven linen muses easily, so one of the exquisitely fine cottons is usually preferable, if the finer qualities of linen are prohibitive. Sheets of imported percale, in featherweights, give a splendidly luxurious note with their smooth, even texture and hand hemstitched hems.

VALUE IN FIBRES

American loomed percale, which has become almost a standard for the conservative, well-dressed bed, will give a patrician aspect at a most moderate price. The hidden value in these long-lived sheets lies in the close weaving, long cotton fibres used and the evenly spun yarn which prevents fuzziness even after repeated trips to the laundry. In this high-grade sheeting, strength and sheerness have been balanced to an exact degree, making them both light and serviceable, the laboratory tests carried on proving that six years of laundering was needed to wear out the material. Another point which adds to the wear of the hemstitched sheets and cases lies in the fact that this hemstitching, which is almost a perfect match for the finest hand work, stops inside the tape selvedge, preventing the possibility of tearing out. These domestic sheets come not only in the conservative white, but also in lovely pastel hues or with color in the hems alone, either a solid band matching the general color scheme or with most attractive patterns woven in.

When sheets of regular cotton are to be bought, the test of their quality lies in the number of threads to the inch. A skilled salesman will scratch the surface of a good sheet with his finger nail, showing how little dressing has been used to give substance to the material. Cotton sheets should be close, even and supple. And to these qualities may be added, style—through light-and-landry fast coloring, charming designs woven into the borders, or a touch of Philippine embroidery. Perhaps, as the package is opened, a fragrance of fresh lavender arises to add fragrance and freshness.

Pillow cases share the charm of the new sheets, and are bought by the same criterion. As cases are made in standard sizes to match standard pillows, the latter should be measured before the shopping trip. For too tight a pillow case makes a hard and uncomfortable pillow, while if it is too loose a mussed appearance is the result. About two inches in width should be allowed over the size of the pillow and ten inches or a little over, in extra length.

To the practical virtues of warmth and lightness the blanket manufacturers today have added the all-important feature of style. New weaves and designs add novelty to even the most moderately priced offerings, and colors, of the rich depth and striking beauty which distinguish the effect of dyestuff on wool fibres, make the modern blanket a thing of real beauty.

In immaculate white, or the daintiest of colors, the height of blanket luxury is reached in a closely wovencashemere. Orfine spun worsted warp allows of the tight weave, which prevents the destruction of the fibre under wear, and gives to the all-wool blanket the serviceability of the older cotton warp material.

BLANKET FACTS

The life and real value of a wool blanket is hidden in the fibres themselves, and the name of a reputable manufacturer is the best insurance which the purchaser can have that satisfaction will result from the substantial outlay which a good blanket represents. Selected long fibre wool retains its resiliency and softness, and assures the permanency of the nap. And such blankets are preshrunk to keep size and shape through repeated washings.

As health findings today prove that a porous material is not only healthful but warm, some home-makers prefer that a blanket be of the more loosely woven type with a deep nap. Within the meshes (Continued on page 140)
Intimacy characterizes this German country house garden which, enclosed by a low wall and lattice for a degree of privacy, is cheerfully green the year around. Free use is made of shrubs and low conifers to give background for the flowers. The planting list is given below, left.

Spring Comes Among The Hills

Mid-May in Westchester is the season's masterpiece of subtlety in fine fragrances and blended colors, in faint shadows that grow stronger almost hourly. It is at its best viewed among the hills, as here on the Richard A. Strong place, other views of which are shown on pages 77, 78 and 79.
Insect Pests Of The Garden And Grounds

MEDITERRANEAN FLY

The Mediterranean Fruit Fly attacks Grapefruit, Peppers, Grapes, Eggplants and others. Methods of control include destruction of susceptible fruits while immature, spraying trees with sweetened arsenate of lead, and destruction of the pupae in the soil by burning or chemicals. In the illustration, 1 is the adult fly, 2 the pupa, 3 the larva and 4 enlarged view of the eggs under the skin of a fruit.

JAPANESE BEETLE

Metallic green is the color of the Japanese Beetle, a pest which eats almost everything green and growing. Control methods include spraying trees and plants with arsenate of lead for the adult beetles and killing the larvae in the ground with arsenate of lead. Figure 1 is the adult, 2 the pupa and 3 the larva. All the drawings shown on these pages done by Dr. E. Bade from studies of the actual insects.

BROWNTAIL MOTH

Arsenate of lead spray, banding tree trunks with sticky paper and destruction of the winter nests are the control measures. The drawing shows (1) male moth, (2) female, (3) pupa, (4) caterpillar, (5) young caterpillars eating leaf immediately after hatching, (6) egg mass, (7) young caterpillars hibernating in nest, (8) enlarged barbed hairs of caterpillar which cause skin irritation when touched.
The Life Histories
Of Six Plant Foes

**Mexican Bean Beetle**

This pest is brownish yellow with black spots and is found in the Southwest and most of the territory east of the Mississippi. It attacks only Beans, among which it causes great havoc. Magnesium arsenate spray, applied four times in a season, is a good control. Figure 1 is of the adult, 2 shows the pupa attached to a leaf tip, and 3 is the larva. The beetle is about 1/4" long and suggests the common lady-bird.

**The Gypsy Moth**

(Center) Another serious leaf-eating pest, with a wing spread of 1 1/2" in the male and 2 1/4" in the female. Figure 1 shows the male, 2 the female, 3 pupa in the nest, 4 the larva, 5 an egg mass on a twig, and 6 the eggs enlarged. To control the Gypsy Moth, kill the egg masses with coal-tar creosote, spray the trees with arsenate of lead and band the trunks with sticky paper to keep down larvae.

**European Corn Borer**

This serious crop menace is firmly established in the United States and is highly resistant to control. Burning of all infested material will help, but the chief hope of eradication seems to lie in the discovery of some natural insect enemy, for which experiments are constantly going forward. In the drawing, 1 is of the adult form, 2 the pupa, and 3 the caterpillar which does the destructive boring.
A high place among spring’s wildflowers should be accorded to the quaint little Dutchman’s-breeches (Dicentra cucullaria), for it is lovely, odd in form and thrives lustily in dampish, shaded woods soil. Easily established

The Climbing Fumitory is an annual seldom reaching a height of more than four feet, with delicate, finely dissected compound foliage and dense racemes of small pinkish flowers. Not a showy plant, but quite charming

Plants To Redeem
A Shady Corner

Louise Beebe Wilder

WE frequently hear the plaint that nothing will grow in the shade. This, however, is far from being the truth if we look into the matter; but for some reason shade-loving plants are much less familiar to the general public than are the sun lovers. Of course, it is often true that certain plants upon which we have set our hearts—Roses, Poppies, Pinks or the like, and most annuals—will not thrive in shade and it is difficult to achieve very brilliant color effects without sunshine. Nevertheless the case for beauty beneath trees, or where house walls or other elevations cast a shadow, is far from a hopeless one.

The Fumitories at once come to mind as solving the problem of many a dull situation if they are given the chance. They are not brilliant or striking plants but all of them possess a quiet beauty and grace which is very appealing and which one appreciates more the longer one knows them. In the case of most of them their foliage rather than their flowers is their fortune, but the flowers are pretty enough too and repay minute inspection. The order is that of the Fumariaceae which contains the four genera—Adlumia, Corydalis, Dicentra and Fumaria.

Adlumia and Fumaria we shall perhaps not take great trouble to know or to cultivate. They no doubt would be considered weeds. But after all, the Mountain Fringe or Alleghany Vine, Adlumia ciliata, is a charming thing, a little fragile vine that climbs by its slender young leaf-stalks over tall bushes in half shaded places, and in summer dangles ample clusters of pinkish sack-like blossoms from its slender branches.

It is a biennial, sowing itself freely where the conditions suit it, and once was cultivated in gardens. The climbing Fumitory, Fumaria officinalis, is not a true native, but has escaped to the roadsides and woods from old gardens where it was once cherished because of its supposed medicinal value. It is an annual, a very slender little climber reaching perhaps a height of four feet, with delicate, finely dissected compound leaves and small pinkish flowers in dense racemes.

I used to grow it in my herb garden and enjoyed its string of quaint names—Wax
Dolls, Earth Smoke, Beggary, God's Fingers and Thumbs. And a lady who visited my garden told me that she had always known it by the name of Delicacy, which is more appropriate than most plant names.

But Dicentra and Corydalis are the important members of the order from the point of view of the gardener. Dicentra will be chiefly known by the beautiful Bleeding-heart, which we always think of as an inhabitant of old gardens—a really old-fashioned plant, so that it is surprising to learn that it is a Japanese and was introduced to cultivation in western gardens less than a hundred years ago. There is a white form of the Bleedingheart but I have never seen it offered or growing in this country. The wild Bleedingheart of our Eastern States is *Dicentra eximia*, found in rocky places in western New York and southward to the mountains of Georgia. It has pretty fern-like foliage that persists throughout the season and slender flower scapes hung with rose-purple, heart-shaped flowers that barely top the leaves. It grows from nine to eighteen inches tall and is a fine plant for a half shaded position in the rock garden or narrow shadowed border where the soil is good.

Much confused with it is the western species, *D. formosa*, found in the Yosemite Valley and in other parts of the Far West. This, however, is a dwarfer plant altogether, though of much the same character. The delicately cut and lobed leaves come directly from the root and are borne on long stalks, and the sprays of purplish-rose bleeding hearts are carried well above the foliage.

Both these plants, given a good rich soil, not too damp, spread rapidly. I once had seeds of another western species, *D. chrysanthina*, described as a handsome Ja-

(Continued on page 172)

(Top) Largest of the Corydalis is *C. nobilis*, from Siberia. Its yellow, sweet scented blossoms tipped with black are borne on stalks some eighteen inches tall. Flowering in May, by early summer it has gone

(Center) Wholly delightful is Corydalis cava alba, which can be looked for late in March or in early April. Gleaming white blossoms and leaves like those Bleedingheart give it special appeal

Given the right conditions, Corydalis chelanthifolia, from central China, will completely decorate a shaded corner. It forms large rosettes of fern-like foliage with spikes of yellow flowers in April
A mere dip in a hillside will not prove satisfactory as a location for an artificial lake, as it cannot look natural. A large body of water on a slope always looks precarious, as though it might spill over on the land below.

The dam of masonry or concrete must be firmly bedded to prevent water seepage beneath it. Its correct proportions of height and thickness can be readily worked out from this diagram, as described in the text.

(Below) Log dams are rather picturesque and entirely satisfactory, if there is no objection to a little leakage of water through them. The top should be planked for ice protection and there must be an apron below it.

Planning and Making
Artificial Lakes

Henry B. Raymore

"Of all the varied materials in the composition of natural scenery, there is none that produces more beauty, variety and interest than water; nor is there any that enters into so many pleasing combinations with surrounding objects." So wrote Charles H. J. Smith, a now forgotten landscape gardener, in Edinburgh in 1852. Eight years later, A. J. Downing, the dean of American landscape gardeners, said, "There is no department of Landscape Gardening which appears to have been less understood in this country than the management of water." Which goes to show that water has long been considered an important element in the landscape treatment of parks and home grounds, but that not always, from the artistic standpoint, has this treatment been particularly successful. In fact, when one of my friends genially informs me that he plans to build an artificial lake on his country place, I smile in a blandest smile and say "Oh yes, won't that be interesting?" but at the same time I hope that some act of a guiding and beneficent providence will prevent him from carrying out his intentions.

Not that the artificial pond or lake hasn't a place in the scheme of the country place. It certainly has. But with all due respect to those who, by much labor and sorrow have brought such things into existence, I must assert that the artistic results in too many cases haven't justified the work and thought expended upon them. Really, most of them
are pretty bad as assets in the landscape. Of course I am not now speaking of the work of masters in the landscape profession who have created such charming water effects as are to be seen in many of the big city parks, or on the largest estates. I am inveighing against the work of the average amateur gardener who, somehow, does not seem to get the right point of view concerning these things. In making an artificial lake so many seem to stress the idea of artificiality and forget that a lake is a purely natural feature and must be so treated. In fact, all water in the landscape must be definitely one of two things. It must either be formal, in which case it becomes a garden or decorative pool with a definite geometrical shape, located in a definite place in accordance with the more or less architectural design of the area around it and embellished with decorative coping, statuary, fountain jets and the like; or it is natural, without any definiteness of shape, without formality of placement, without architectural embellishment. This is fundamental. There is no middle ground. You cannot have a natural pool in the midst of definitely architectural beds, walks and borders, no matter how simple these may be; and you cannot have a formal, architectural lake dropped into the untamed natural landscape.

Let us be emphatic and perfectly clear on this point. The artificial lake (or the natural one which is brought into the landscape scheme, for that matter) is a purely naturalistic feature and must be so treated. If good taste is not to be violated, then, it cannot be regular in shape, even though the regularities take the form of curves. Much less may it be circular, square, oblong or polygonal. The shape must be irregular, as nearly natural as we can make it. If formed in a hollow, the plane of the water naturally assumes an outline corresponding to the original configuration of the ground, and this outline can be varied and improved only by the formation of bays, promontories and islands. If the site is on level ground, the outline may of course be varied at pleasure. It may be broad, bending or winding, but in every case it should present the appearance of breadth rather than length. In varying the outline by bays, islands and promontories care should be exercised that the projecting masses do not obscure or destroy the breadth of surface. In too many instances, what is intended for a lake dwindles into a winding canal, a palmated pool with an island stuck into it, or some other outlandish arrangement.

The treatment of the banks of the lake is most important. If we observe carefully a natural lake we will see that the height and slope of the banks vary considerably.

(Continued on page 174)
So well has the residence of Samuel Bell, at Chestnut Hill, been imbued with an Old-world atmosphere that one regarding it from the court might certainly be excused for having difficulty reconciling its façades with 20th Century Pennsylvania, rather than medieval Normandy. Walls are of native ledge rock. At the left is the entrance, opening through a vestibule to the huge hall. Tilden, Register & Pepper, architects

A Pennsylvania Residence Finds Its Precedent In The Manoirs Of Normandy
The turret in the foreground of the view above contains the master's stairway. Placing this feature alongside the taller entrance bay creates an extremely interesting combination of diverse outlines. At right angles to the main body of the house is the service wing. The garage is approached through the archway at the right.

Each room of this residence has been located with proper regard to function, relation with other rooms and relation with the exterior. The living room is at one end, where it has three exposures, opens to a porch and is separated from other rooms by the entrance hall. At the corner where the service wing joins the house is the dining room, overlooking a grass terrace. Between dining room and hall is the library—here it gains privacy.
Window And Doorway
Details From Abroad

STAIR WINDOW

The photograph of old bay windows in Ipswich, England, suggests their employment in this country for some special purpose, such as at a stair landing. An odd feature is the way the outside supporting brackets are pigeon-toed instead of parallel. All of the photographs and sketches on these pages are the work of Gerald K. Geerlings.

A WINDOW SILL

(Below) In common with many window sills in Brittany, this one at Point Aven (left, below) is wide enough to accommodate placing a number of flowerpots. In the sketch, the idea is applied to a house facing upon a flagged terrace, where potted plants are especially welcome to lighten the effect of barrenness often inherent in the stonework.
Suggested For Use On
Our American Homes

CORNER DOORWAY
Not a few of the Breton houses have cut-off corners, and whether the siding is above or below, the roof descends without hesitation as though nothing unusual were afoot. Such a feature lends itself agreeably to a doorway treatment, as suggested by the drawing in which an adaptation of this idea planned to balance a corner fireplace.

WINDOW DETAILS
The white-painted brick façade of the Bucking-
hamshire Arms, across the road from Blickling
Hall, utilizes simple projecting brick courses to
good effect. Not only can the window details be
transplanted to the American scene, but also this
pleasant means of tying together windows to
prevent their "floating" about on a broad facade.
As a typical New England salt-box type, this house at Southport, Conn., began life in the times when Indians were no rarity. In 1870 it was haphazardly remodeled to conform with the vogue of the times, assuming the appearance shown by the photographs at the left and right. Recently acquired by Mr. Willard I. Emerson, it has again been remodeled, as shown above, to conform with the best traditions of the Connecticut Valley, near which it is located. Before and after plans are on page 113. Howard & Frease, architects

An Early Connecticut Farmhouse Undergoes A Second Regeneration
The Remodeled House
Is Dignified By
A Colonial Entrance
Inside the Emerson residence several large rooms were thrown together to form the "L" shaped living room, a part of which is shown above. The fireplace was resurrected from behind a plaster wall and moldings added to recapture its original appearance. Supporting beams in the ceiling were uncovered and the old floor of wide oak planks came to light under a new floor. The entrance treatment and the hall are on the opposite page. The door in the background of the latter picture leads to the dining room.

The first plans at the right are of the house before remodeling. Alongside are the new plans. The long porch has been taken away so that sunlight could penetrate the front windows. Parlor, bedroom and living room all have gone to make one large living room. The kitchen has been expanded and a side porch, children's dining room and laundry have been added. Disposition of rooms on the second floor has been logically changed, and, over the service wing, rooms for the children and their nurse were placed.
IN our everyday conversation we use the words house and home as synonymous. Yet to my mind there is a distinction that is interesting. The word house originated as meaning a shelter. We might say that in our travels we put up for the night at some little house on the roadside. In other words, this little house afforded us shelter for the night. The next night we arrived home. This was a little house, too, but it was home. Not because it belonged to us, but because it had been designed originally to meet our every need and requirement. It was much more to us than our house; it was in reality our home.

For every house offers to the designer—the architect—its own individual problem. Each one of us has his own peculiar manner of living. Each leads a different life, and a house that might suit one of us perfectly would be entirely inappropriate to another.

Your individuality is more pronounced in the plan of your house than anywhere else, perhaps. The floor plan, in the language of the architect, shows the house as it might look if you were to take the roof off and look right down at it from an airplane. The drawing of the plan shows the size of the house over-all, the different rooms that are included, their size and shape, the location of windows, and the means of communication from one room to another, as well as closet space, and so forth. It is easy to understand that in planning your house the architect must be familiar with your peculiar traits and customs. For he must actually reflect your personality in the plan if the house he is designing for you is to serve satisfactorily as your home.

But, you say, all houses are very much alike; you have lived in several rented houses and have been able to adapt yourself so that they seemed like home to you. True. But why does that desire to build your own house keep coming back to you? How many times have you said that you could never possibly live in Mrs. So-and-So's house across the street, although she may be one of your best friends? It is not because you do not like the paper on the living room walls or the design of her bedroom furniture, but because you lead such a different life from hers; and, while her house meets her needs and requirements, it could not possibly satisfy you.

Let us take an illustration and see how this idea of reflecting individuality in the plan works out in practice. Suppose, in the first place, there are four in the family: a man and his wife, and a son and a daughter. The children are in their teens. The owners are not wealthy. They do not do much entertaining. They have never had a maid, but hope to some day. Immediately the architect sketches a plan of the first floor to include a fair sized living room, a very small dining room—room to seat four persons comfortably; a small kitchen, with adjacent dining nook. Both the dining room and the dining nook are near the kitchen. The architect surmises from his conversa-

(Continued on page 156)
The plans for Mrs. Robert B. Dean's house at Bedford Hills, N. Y., adhere generally to the owner's original ideas, thus embodying her individuality in the design. A plan of this type logically calls for emphasis on horizontal lines in the design; hence the use of Georgian forms. Godwin, Thompson & Patterson, architects.
Difference in character between small houses appropriate for the Northern States and those suited to the South is ideally presented by the two on these pages, designed by the same architect, Dwight James Baum. The home of Thomas McCall at Fieldston, New York City, is carried out in the Colonial manner, the traditional style of this section of the country. A typical detail of Early New England shop fronts is the oriel window, which divides interest with the well detailed entrance. For a house of this size no more worthy plans could be worked out than those used. Thorough study is apparent in every feature.

Two Small Houses Represent Both North And South
For architectural inspiration Florida has relied on Spain since the time of its first colonization. This little residence at Temple Terrace, on the outskirts of Tampa, not only follows the spirit of Spain in its design but the tiles on its roof and those used for decorative purposes were made in that country during the 16th Century. Both exterior design and interior planning of this house are worthy of sincere commendation.
The Versatility
Of Duncan Phyfe

Paul Harness

The pieces illustrated on this and the opposite page have added tremendously to the history of Phyfe cabinet-making since Mr. Charles Over Cornelius wrote his book on the subject in 1922. It was known, of course, that Phyfe in his day was willing to undertake the complete furnishing of any house if he could secure an order to do so. The fact that his work for Mrs. Astor brought him into prominence, would promise almost with surety that the furnishing of more than one new home by members of New York’s smart set of the early 19th Century would be entrusted to the most fashionable furniture maker of the day. But just what pieces actually came from Phyfe’s shop except chairs, sofas, window seats, tables, beds, and a few minor miscellaneous articles, and how these pieces actually looked were matters of conjecture until recently the fact of his versatility has been established by the discovery of such articles as we are illustrating. These discoveries have caused not a little stir among enthusiastic collectors of Americana, as one by one they have come to attention.

Ever since the Hudson-Fulton Exhibition at The Metropolitan Museum, in 1909, experts have been busily searching for documents and data regarding the work of this clever and successful Scotchman who came to America in 1783 or 4, and settled in New York in 1790, and who worked for fashionable New York for the next half century and more. The fact that he furnished a house completely, from the parlor set to the kitchen ironing-board, is the point that espe-

(Continued on page 132)

(Above,left) A fine sideboard made by Phyfe during the first fifteen years of the 19th Century. This piece certainly bears no trace of the clumsiness which is sometimes attributed to Phyfe’s later work

(Left) One of a pair of Duncan Phyfe beds. The design of the bed-posts is at variance with his usual patterns. Arranged for the hanging of draperies in a simplification of the more ornate Sheraton manner
Slenderly proportioned Sheraton writing table by Phyfe. Its completeness of appointments is typical of the period. Illustrations courtesy American Art Association, Anderson Galleries, Inc.

An interesting commentary on its New York City origin is this chair which follows the lines of Phyfe’s most typical design except for the harp which has replaced the usual lyre motif in its back.

The Phyfe dressing table illustrated above has only recently come to light as an example of his work. It dates between 1815 and 1820. Note the successful handling of the long cabriole legs.

A very rare type of chair-back settee with caned seat and arms is shown below. This is a product of Duncan Phyfe’s fine craftsmanship and was made some time between 1800 and 1810.

**Moderately Priced Chintzes Suggest**

**Color Schemes For Country Rooms**

**A LIBRARY IN BROWNS**

The following color scheme for a library can be used with either of the glazed chintzes shown at the immediate left and right as they are similar in coloring. The hand-blocked Chinoiserie design at the left has a light walnut ground figured in rose red, green, yellow and touches of bright blue. A larger design distinguishes the column chintz at the right which also has a walnut ground with flowers in reds, yellow and deeper brown. Both from Macy's. Walls: painted brownish tan to harmonize with background of chintz. Ceiling: painted dark blue with gold stars or covered with star wall paper. Floor: Oriental rug in faded reds and blues, or plain brown carpet. Curtains: chintz bound in red over yellow celanese glass curtains. Furniture coverings: rose red rep or antique satin, small patterned red and yellow chintz, and red leather. Red tôle lamps with parchment shades.

**WITH APPLE GREEN WALLS**

(Left) For a cottage living room comes a diverting glazed chintz picturing the various modes of transportation in Early America. Colors are vigorous—light and dark greens, browns, strong blues, with here and there a vivid note of red. The fabric shown at the right, which may be used in connection with the transportation chintz as the colors harmonize, has small red and yellow pin-wheels on a green ground. Both are Waverly prints from the Chintz Shop. Walls: painted pale apple green with woodwork to match. Floor: dark green with hooked rugs in flower designs on brown grounds. Curtains: chintz with bright blue binding, looped back over blue glass tie backs. Undercurtains: ruffled white organdie, tied back. Furniture coverings: blue, green and brown checked cotton, or green and blue striped linen, green chintz darker than the walls, corded in blue, and the pin-wheel chintz.

**PEACH AND BLUE-CREEN**

A charming morning room could be built around either of the chintzes shown at the bottom of this page which are alike in coloring. Both the French print at the left, with its flowers, butterflies and engaging 19th Century motifs, and the hand-blocked lace design at the right, have peach pink grounds figured in French blue, blue-green, yellow and deeper pink. From Macy's. Walls: painted the same peach tone as the background of the chintz. Woodwork and doors: blush green. Floor: covered in plain blush green carpet. Curtains: chintz edged with ruffles and hanging straight. Glass curtains of fine cream colored net, ruffled and tied back. Furniture coverings: powder blue satin, blue brocade with flowers in pink, needlepoint in faded greens and green blues, peach and cream striped more. Pink glass and white Wedgwood ornaments decorate the mantelshelf.
Wall Papers For The Modest Purse

With Accompanying Color Schemes

FOR A CHILD'S ROOM

Following is a color scheme for a child's room adaptable to either of the wall papers shown at the immediate left and right. At the left is an effective new Strahan paper with a grayish-white ground, scrolls in deeper gray and buff, and miniature hunting and pastoral scenes in red, brilliant blue, bright green and yellow. The Sabine paper at the right, with its delightfully modern versions of flowers, castles, ships and the sea, has a gray ground, the design being in red, blue, yellow, jade and candy pink. Both from Ruth Campbell Bigelow. Woodwork: painted gray to match gray in paper. Floor: green jasper linoleum, gray wool rug. Curtains: jade green glazed chintz trimmed with bright blue binding. Gray celanese glass curtains. Bedspread: bright blue organdie or white Swiss with big blue dots. Furniture coverings: quilted red and yellow calico and green chintz.

A COUNTRY HOUSE HALL

The wall papers shown at the left and right suggest interesting schemes for a country house hallway. At the left is a decorative Birge paper suitable for an informal type of entrance as its pattern is fairly small. It has a buff ground latticed in deeper buff and in the center of each diamond-shaped space is a modernistically designed flower in two shades of green. From Richard E. Thibaut. At the right is a new Strahan paper unusually effective in both design and color and adaptable to either a hall or dining room. It has a pale sky blue ground, the landscape scene of lake and mountains being in mauve, tan, buff and several shades of soft green. From Thibaut. Woodwork: painted buff. Floor: stained brown, checked wool rug in greens. Curtains: green sunfast silk trimmed with ball fringe to match. Chair coverings: green and plum striped sateen. Settee covered in latticed green chintz.

THE BEDROOM IN BLUE

Blue makes a restful background for bedroom walls provided the room gets sufficient sunlight. At the left is a new Strahan paper unusually adaptable on account of its simple, conventionalized design. It is a deep sky blue ground, the medallions being in a yellowish ivory tone. From Bertha Schaefer. (Right) A charming bedroom wall paper with a pastel blue ground and rows of flowers delicately tinted in mauve, amethyst, yellow and pink, with deep green leaves. From R. E. Thibaut. Woodwork: ivory. Floor: covered in deep blue carpet to tone in with blue background. Curtains: yellow organdie with fluted ruffles and loomed back over amethyst glass tie backs. Venetian blinds in blue. Furniture: ivory with flower decorations. Bedspread: ivory sateen, hand quilted, with gingham appliqués in flower designs. Covers: chintz with pink flowers on ivory ground.
The Gardener’s Calendar

For April

This Calendar of the gardener’s labors is planned as a reminder for taking up all his work in their proper seasons. It is fitted to the time of carrying out the operations. The dates are for an average season.

SUNDAY MONDAY TUESDAY WEDNESDAY THURSDAY FRIDAY SATURDAY

**Garden Success**

Of course, in horticulture, as in every other culture, the success depends on the cultivator. It is not given to him, who has a garden because his father had a garden, and who wishes to be "kept up" exactly as he found it.—Dean Hole

**Old Doc Lenonn Was Saying To Us The Other Day—**

"Well, sir, they've got that Old Doc Lenonn book printed at last, an' I want to tell ye what I looked at it for the just time last week, an' seen it was a regular book with a picture o' me in it altogether, I purty near had a spell!"

"There I was, shirt sleeves an' all, up against the front, an' my name on the cover, an' when I went on reads ezichg a couple hundred pages I kept comin' onto all my old friends—Cap Taylor, Birch, Holler Break Oka Bill the snap'p' turtle, Caddy Cuddeback an' his room
ten Jem, the Lickes o' Hardhapp Valley an' all the rest of 'em. Seemed like my hull life, fayre the days when Bop [just took me a syllable, had been down there as natural as I was livin' it all over agin'."

"It gives a man a kind o' queer feelin' to know the my-count things he says about this an' that can be fixed up into something as if folks can see 'em.

"Weel, anyways, there's the book, wrote just like I talked it an' tellin' a whole 'sh' bout me an' the things I do an' think that ain't never been told. Things like we just got off, to be a horticulturer fifty years age an' marryin' Elvira, an' how my boy old Waly went we thought we'd lost him, an' how he finally gave us the biggest Christmas present an old couple ever had. There ain't much 'bout us an' the old form o' the country an' follers round about, but there's plenty o' what folks can see. I guess, brented, that's how it looks to me, an' I guess I ought to know!"
Lenten choices in delicious soups that are strictly vegetable!

With the arrival of Lent and its limitations, the selection of a constantly pleasing variety for the table becomes even more of a problem in many homes. But there are four Campbell's Soups which prove especially helpful at this time. They are strictly vegetable, a delight to the taste, invigorating and nutritious.

Campbell's Tomato, Pea, Celery and Asparagus Soups contain no meat in any form. Instead they are enriched with choice creamery butter. Here are soups which reveal the art of the great French soup-chefs — a pride alike to the hostess and the mother. Food with genuine charm.

12 cents a can.

MEAL-PLANNING IS EASIER WITH DAILY CHOICES FROM CAMPBELL'S 21 SOUPS
This Wheel Chaise-Lawn

for Luxurious Comfort

THIS appealing design presents a new and very distinctive type of Solarium furniture which can be moved easily to the lawn. It is rattan construction, natural finish, decorated with bands of French Enamelled Cane in contrasting colors. The upholstery is an imported fabric chemically treated to resist water. Light of weight, but sturdily built, it is an exceptionally useful and a very comfortable piece of furniture.

The arm chair and sofa illustrated typify Sons-Cunningham originality and leadership in style design—one of their latest creations, built along low, loungy lines. The material, decoration, and workmanship is similar to that in the lawn chair. The upholstery shown on the sofa is an unique undersea design on linen crash; but the material, decoration, and workmanship is in style design—one of their latest creations, built along low, loungy lines. The material, decoration, and workmanship is similar to that in the lawn chair. The upholstery shown on the sofa is an unique undersea design on linen crash; but the upholstery is an imported fabric chemically treated to resist water. Light of weight, but sturdily built, it is an exceptionally useful and a very comfortable piece of furniture.

You are cordially invited to call at the Sons-Cunningham Showrooms, where a most representative display of their furniture is available for selection. Purchases may be made through your dealer or decorator.

A portfolio of colored prints and other illustrations will be mailed upon receipt of twenty cents—stamps or coin.

Making Rooms Within Rooms

(Continued from page 86)

the house is comparatively small for the size of the family, the desk in the living room may be so arranged that the children can pursue his studies there. Distribution of materials and color also play an important part. The science of conventional arrangement can be acquired, but the experienced decorator versed in the possibilities of unusual and livable furniture groupings, or the amateur with a natural flair for such things has a splendid chance of transforming an unattractive room badly arranged through the application of this knowledge and skill.

Architects play a larger role in the decorating of a room than is generally supposed. Well balanced wall spaces, doors, and windows make the decorator's task infinitely easier. I would also make a plea to architects to abstain from the hasty and skill.

Furniture should be so placed in any sizable living room that there are several centers where groups of people can sit in comfort, with all the necessary adjuncts to their well-being, including a good reading light, close at hand. Take for instance, the living room indicated in the photographs on pages 86 and 87. Here are three distinct units of furniture—in other words, three small rooms within a large one. First of all there is the fireplace group shown at the bottom of page 87, a large comfortable sofa is placed at one side of the fireplace with a table holding a lamp beside it. Balancing this on the other side are an overstuffed chair and a small armchair. This is one unit. Another appears in the bay window, where a large table, a wing chair placed at one end and facing into the room, and an upholstered armchair at the other end form another livable group. A secretary desk takes the place of the small sofa between the French doors in the other arrangement, and no piano is indicated in this plan. The third group appears at the side wall opposite the large window. Here are a sofa with a small lamp table beside it, a chair and a low coffee table. Three people could sit here comfortably and if more desired to occupy this space, side chairs nearby could be pressed into service. Eight or ten people can be comfortably seated in this room in small groups quite independent of each other by virtue of the clever arrangement of furniture. Each group is a livable unit in itself.
FIVE O’CLOCK... Drawn Curtains

The Pleasant Gesture of Serving Tea

Teatime... an hour of graceful leisure... no occasion so completely expresses a woman’s poise and innate good taste. In her feeling for the beauty and dignity of a solid silver service, she shows the instinct of generations. And today, in the selection of her tea set and flat silver, she is offered a new refinement of choice — “Treasure” patterns to harmonize, in mood and motif, with the decorative scheme of her home. The William and Mary pattern and its contemporary, the engraved Mary II design, are both beautifully suited to the beamed ceilings, panelled walls and mellowed furnishings of the early English type. And inspired by the three other basic periods in the decoration of American homes are other authoritative “Treasure” patterns...Early American, expressing the charm of Colonial interiors; Granado in the dramatic Spanish style; the Adam pattern with the artistry of the Georgian manner.

Treasure Solid Silver, in both flatware and holloware, is to be seen at leading jewelers. If you care to have special advice in selecting your patterns, write us the details of the decorative scheme of your dining room. Should you wish to purchase Treasure silver out of income, this privilege may be extended by leading jewelers, through the Membership of Rogers, Lunt and Bowlen in the Sterling Silversmiths Guild of America.

**Glossary of Continental Silverware**

(Continued from page 88)

Exquisite craftsmanship is the hallmark of European silversmiths, who were renowned for their skill in creating exquisite works of art. The attention to detail and the use of precious metals such as silver, gold, and platinum set European silverware apart from its counterparts in other regions. European silversmiths were known for their ability to create intricate designs and masterfully executed workmanship, whether in the form of flatware, bowls, or decorative items.

The term "ecclesiastical" includes items used in religious ceremonies or for church services. These items are often highly decorated and include chalices, patens, and ciboria.

"Distinctive" items are those that stand out for their unique design or craftsmanship. These could be items with a particular artistic style or those that are rare or one-of-a-kind.

"Endowment" refers to the process of gilding, which involves coating an object with a thin layer of gold or gold alloy.

"Everyday use" silverware is designed for regular use in the home, such as serving dishes, eating utensils, and drinkware.

"Exquisite craftsmanship" is a hallmark of European silversmiths, who were renowned for their skill in creating exquisite works of art. The attention to detail and the use of precious metals such as silver, gold, and platinum set European silverware apart from its counterparts in other regions. European silversmiths were known for their ability to create intricate designs and masterfully executed workmanship, whether in the form of flatware, bowls, or decorative items.

"Floral motifs" are commonly found in European silverware, often incorporating elements from nature such as flowers, leaves, and birds.

"Folding silverware" includes items that can be folded, such as napkin rings or clappers, which offer a decorative and practical touch to the table setting.

"Footed" items are those that have a foot or pedestal, often to elevate the item above the table or to provide stability.

"Gilt metal" is a type of metal that has been coated with a thin layer of gold or silver, often used to create decorative and artistic effects.

"Gold leaf" is a thin, foiled metal that is used to create a sense of luxury and elegance. It is often used as an accent material in silverware.
Let your new Eight be smart ... seasoned ... and a Champion! Studebaker's smart, seasoned Champion Eights ride the high tide of public preference. The three Studebaker Eights hold the greatest world and international records, and more American stock car records than all other makes of cars combined. Choose one and you get not only the very newest in engineering and comfort requirements, but proved economy, speed and endurance plus the honor-mark of Studebaker manufacture, famous for 78 years.

THE ART OF OLD BRITTANY INSPIRED THIS LOVELY FURNITURE

Nowhere perhaps is there furniture more interesting for bedrooms than in the provinces of France. Yet nine out of ten of these virile pieces are too dark in wood, too clumsy in appearance and improperly constructed for our climate and American heating conditions.

A few years ago, one of our designers summered in Brittany and Normandy for the express purpose of making an intimate study of the quaint bedroom furniture of the old-time French cottages. Based on a collection of these quaint pieces, the DANERSK group here illustrated was made.

The graceful simplicity of the original furniture has been faithfully retained, but the thick masculine mouldings have been replaced with gay feminine bands of color, and the dark woods have given way to cheerful tones which blend with the daintiest taffeta spreads.

Twin beds, a chair with the characteristic French fluted legs, a poudreuse with mirror, a little chest and other delightful pieces are offered, exquisitely decorated in old French designs on the natural wood, or done in your specific color scheme to go with the various draperies of your room.

Many other DANERSK groups for all rooms will interest you. Prices are pleasantly moderate!

Erskine-Danforth Corporation, designers and makers of choice furniture. New York, 383 Madison Avenue, Chicago, 620 North Michigan Avenue, Cleveland, 11129 Euclid Avenue. Distributors, Boston, 132 Newbury Street; Los Angeles, 2869 West 7th Street.

In true taste and elegance, but lenient on the purse strings

Perhaps the hardest thing to find in motor cars is true taste and elegance, and superfine performance—linked with a really moderate price . . .

There are plenty of "in-betweens" and "almosts"—but where will you find another car which so completely meets all of these requirements as does the beautiful, reasonably priced La Salle? . . . That was why La Salle was conceived, designed and developed by Cadillac—to provide a motor carriage which would generate genuine pride, and still be lenient on the purse strings in first and in after cost . . .

La Salle not only leaves nothing to be desired in handling ease and power and roominess, and in the smartness of its exquisite Fisher and Fleetwood bodies—it provides all of these attractions in overflowing measure . . . The values represented by the noteworthy prices come as a shock of pleasant surprise—prices and value which would be impossible if La Salle were not the running mate to Cadillac—enjoying all the economies of their great joint volume of production . . . The market will bear close scrutiny in search of an equal value, and no like to La Salle can or will be revealed. It is literally a case, in this fine class, of La Salle against the market and the world. Cadillac Motor Car Company, Division of General Motors.

LaSALLE

The new La Salles are priced as low as $2385 f. o. b. Detroit.
Enter your home FOR THE FIRST TIME

PRETEND you've never been in your home before. Stroll casually about and be very, very critical. Now be very frank. Your home is charming...but isn't there room for improvement? Wouldn't a radiant new carpet make the living room more spacious, a bedroom more luxurious? If the answer is "yes", here is a suggestion. See the loveliest of carpets...the newest plain colors...the most charming designs. In other words, see the creations of Bigelow-Sanford...weavers for more than a century. There is a dealer near you. He has chosen from Bigelow-Sanford's unequaled variety. He will show you many correct new colors in plain carpet...and many authentic patterns in figured carpet. Whatever your present furnishings...whatever your color schemes...you will find a Bigelow-Sanford rug or carpet to meet your needs as well as your budget. There is a place for such a floor covering in your home.

BIGELOW-SANFORD RUGS AND CARPETS
HAT a way to entertain—the Chris-Craft way! So fast is Chris-Craft—so safe and so luxurious—it brings within reach the sports and recreations of the whole coast-line! Every Chris-Craft inevitably becomes a social center. Whole parties may go in restful luxury at express train speed to distant regatta, dinner or dance—to sports and recreations everywhere on water. With a Chris-Craft you find yourself more frequently invited and more frequently inviting social contacts with really worth-while folks. The boating set is a cheery, happy family, socially active and socially worth-while. Industrial leaders, statesmen and bankers find Chris-Craft the means to secure needed rest and recreation in limited time. Let Chris-Craft solve your recreation and entertainment problem. Between the nimble twenty-foot runabout and the stately Chris-Craft yacht is the widest range of pleasure craft ever offered. All are luxuriously cushioned, all are seaworthy, safe and fast. All have automobile type controls and starting, lighting and steering devices. Chris-Craft merchants throughout the world will demonstrate and describe the various models. Illustrated catalog may be had by writing Chris Smith & Sons Boat Co., 184 Detroit Road, Algonac, Michigan.

Glossary of Continental Silverware

(Continued from page 126)

Ouichegg: Set with silver or silver-gilt as cup or ornament, 14th-17th Century in many countries.

Parcel-gilt: classic, oval, flat, flagon type—cylindrical, sides vertical or tapering, pyriform and other types.

Plate: From the Latin plavis—silver, the term expanded to include articles of gold, silver-plated or gold-plated, and pewter. Ancestrally bent out of flat metal and ornamented with repoussé, engraving, chasing, enameling, and filigree; modern—gun or stamped and soldered, or cast, with similar methods of decoration.

Planèces: Classic term, used for a style of ornament popularized by the Renaissance planter or silversmith; applied also to models of architectural structures in silver.

Polish: German and Hungarian influences.

Porcelain: Similar to Spanish, the oriental influence pronounced as in all metal-work. Gothic types extremely florid and extravagant.

Renaissance: 16th Century French style, featuring decorative elements and ornament, felt throughout Europe.

Romanoesque: 8th-12th Century, late Classic style, following the Byzantine and preceding the Gothic. Gothic Water Ewer and Salt-Cellar, ornament in Renaissance and 17th Century, to rinse fingers after meat, oblocale after introduction of table-fork.

Royal or Official Plate and Regalia: Belonging to the Crown, to various state, city, and corporation officials, as insignia of office, or treasure used or displayed at ceremonious functions.

Ruskin: Byzantine influence continuous, with oriental, Gothic, and Renaissance, German types. French and English importations frequent.

Salt or Salt-Cellar: French, saltière; most important and imbibing Gothic and Renaissance article of tableware; continued use until 18th Century, when individual salt-cellars were substituted. German steple designs in 16th Century.

Silver-gilt: Covered with this layer of gold prevalent in decorative plates prior to 18th Century.

Spanish: 9th-10th Century, medieval work resembling French and German. Gothic work architectural, 14th-early 15th Century—Flemish, French, and English influences, excellent chiseling, enameling, and gilding, applied flanges in Moorish style. Renaissance work sumptuous beyond comparison; Juan de Arpbe, the outstanding silversmith, 16th and early 17th Centuries, small enameled disk ornaments, Saracen type. 17th and 18th Centuries, great abundance of ostentatious massive domed plates, bold and sumptuous decoration. Almost complete destruction by Napoleon.

Standing Cup or Hanget: Ornamental goblet. Various types in different countries and periods.

Statue and Statuette: Domestic or ecclesiastical ornaments; various types in ancient and modern, in all countries, especially popular in Gothic and Renaissance periods.

Stem: Support of cup, candlestick, etc., resting on a foot; cylindrical, clustered column, knopped, baluster, facetted—hexagonal or octagonal, human or animal figure, tree trunk, etc.

Styles: Classic, Byzantine, Romanesque, Gothic, Renaissance, Baroque, Rococo, Empire, and others.

Surtour or Surtour de Table: Ornamental centerpiece, often composed of a great number of separate decorative articles and ornaments.

Swiss: German influence predominant. Notable work at Berne, Rapperswil, etc.

Table Service: Variously constituted at different periods, occasionally made in complete sets, 18th-19th Century. Basin or lavabo—bread, cake, comb, fruit, sugar, sweetmeat, beaker, bell—tea-table and toilet; bottles—bowl, caster—pepper, spice, sugar, condiment; cister—casser; coffee-pot; cream-jug or pitcher; cream—cylinder; cruet; écuelle—shallow bowl with handles; entree dish; écuelle; ewer or pitcher; flat silver—French, service à bouche; spoon, fork, knife, plate, gold; jug; ladle; mug; mustard-pot; punch-bowl; salt-cellar; sauceboat; sauce-tureen; sugar-spoon; sugar-bowl; sweetmeat dish; swab—wine cooler; soap—turer; sugar-bowl or basin; sugar-casting; surtour de table; sweatmeat dish; tankard; tray; vegetable dish.

Tuscan: Italian term, shallow cup on high foot or low stem.

Tea and Coffee Service: In vogue 18th, and 19th Centuries. Tea: caddy, pot, kettle, urn, sugar-bowl, cream—(Continued on page 154)
The silver you would rather have can be yours

Gorham sterling is not expensive

76 pieces - a complete service for eight costs as little as $232

The tradition of Gorham Sterling has often led women to assume that it must be costly. They have felt that because Gorham Sterling was designed by rarely gifted artists who imparted to the precious metal such unsurpassable beauty, they, themselves, would never be able to afford it.

The most amazing thing about Gorham Sterling is its very moderate cost. It is a fact that you can buy 76 pieces—an ample service that will completely serve eight people—in any one of Gorham's seven most popular patterns—for less than $260—a service that will become in succeeding generations a proud remembrance of your discerning taste.

This complete service of 76 handsome pieces includes 8 teaspoons, 8 dessert forks, 8 dinner forks, 8 soup spoons, 8 dinner knives, 8 dessert knives, 8 salad forks, 8 butter spreaders, 8 after-dinner coffee spoons and 4 tablespoons.

This beautiful pattern in Gorham Sterling can be easily identified by the famous hallmark on the back, showing the lion, the anchor and the Gorham "G."

The established jeweler in your city will be very pleased to show you the exquisite Gorham patterns as well as many beautiful pieces of matching hollow ware.

HAND—QUILTED THINGS

They are distinctive and charming, all the smart quilted creations which Eleanor Beard designs to adorn the modern home—from Chaise Covers, taffeta Spreads, delightful Pillows, old-time applique Quilts—to lovely Robes and a host of novel accessories for boudoir and bedroom. Eleanor Beard’s modes originate in her own Kentucky studios. They are hand quilted by Kentucky needlewomen, who give the appealing beauty of an old American handicraft to a collection of exquisite feminine luxuries. Send for the illustrated booklet of Eleanor Beard’s Creations.

Illustrated: Spread in softest French taffeta—long enough to cover night pillows. $65.00 single bed—$75.00 double bed.

The Versatility of Duncan Phyfe

(Continued from page 118)

naturally interests us in Phyfe’s work as distinct from that of other and earlier cabinet-makers like Goddard and Savery.

There were 17 pieces attributed to Phyfe in the Hudson-Fulton Exhition. There were 100 in the Phyfe Exhibition at The Metropolitan Museum in 1922. In the notable loan exhibition which patronize America rallied to hold at The American Art Association, Anderson Galleries, Inc. last October at the call of the Girl Scouts, 46 Phyfe pieces were included, these unique and extraordinary examples among them. Those three notable loan exhibitions have given those interested in the subject the opportunity of becoming familiar with the quality of Phyfe’s sound construction, the unmistakable character of his designs, and his distinctive use of ornament, so that we may expect many more surprising Phyfe “finds”, as more family heirlooms come into the market or pieces still in use gradually attract the attention of those who know Phyfe’s work.

If Philadelphia and Newport will do as much for Savery and Goddard, as New York has done for Phyfe, we may discover that Goddard did much besides his famous block front desks, and Savery accomplished other things besides his low-boys and the chairs for which some experts insist he was noted, and in which he was supposed to have specialized.

Phyfe, of course, is nearer our own day, and family papers are more available for the documentary evidence of receipt bills and other records so that we have indisputable authority for so much of Phyfe’s work that many articles can now be safely attributed to his shop even when such records are as yet lacking. Such public interest in the work of Duncan Phyfe is coming none too soon. England, fast developing interest in the work of Duncan Phyfe, but hard to reconcile to some critics. We are perhaps familiar enough with the general characteristics of Phyfe’s style, but the sideboard illustrated on page 118 and the dressing-table on the next page give us pause, while the bed shown adds another design to the bed posts formerly attributed to him. The tiny writing-table, the chair-back settee, and the harp chair have given us things unique to contemplate. The use of the harp motif is an extraordinary performance which none but a master of his craft would dare attempt and none but a great master could achieve successfully. Is it a hit of old New York styles like those of a recent English writer whom they do not at all please.

The chair-back settee, with caned seat, back, and arms is a rare “find.” Typically Phyfe are the carved panels in the top rail filled thunderbolts flanking the middle drapery motif with tassel ends to its fillet. The same writer finds fault with Phyfe for binding his thunderbolts with ribbons.

(Continued on page 119)
Mellow beauty of rare cabinetwork... melody of deep-toned chimes... and the accuracy of modern electric time

Revere Clocks

There are certain things about which a real home revolves. The master craftsmen of Colonial America knew it. And for those homes most worthy of the name, they created sturdy, venerable grandfather’s clocks... marking the hours... showing the phases of the moon... filling the house with music and content. • For the homes of today, Revere has created floor clocks no whit less fine—with the greater convenience and accuracy entailed by modern life. Rich cabinetwork. Distinguished period designs. Elaborately etched and inlaid dials. Full-toned Westminster, Canterbury, or Whittington chimes. Or a ship’s bell strike. • And fit complement to the artistry of these cases is the precision of the Telechron motor inside. Synchronized with the Telechron Master Clock in your power house, it delivers accurate time, once you’ve plugged in the clock and set the hands. No winding, oiling, cleaning or regulating. • Illustrated above is Hanover, a Colonial design in the finest Honduras mahogany. 87½” high, it is priced at $375. At the right is R-130, a Gothic design. 12½” high, it sells for $88. • There are many others, ranging in price from $50 to $1200. • Write for free illustrated booklet, “Observatory Time.” Revere Clock Co., 44th McMillan St., Cincinnati.

*The Warren Telechron Co., of Ashland, Mass., manufactures non-striking clocks at prices up to $55.
SMART WALL COVERINGS
FOR SMART INTERIORS

Perhaps, in your mind's eye, you are already envisioning your rooms done over with the smartest of modern wall coverings. "This is 1930," you argue, "and I must be up to date." Or perhaps, like many others, you prefer to take this modernizing of your walls a little more gradually—something smart, new, different, and all that... but, "not too smart!"

Whatever your mental picture, Salubra's 2,000 patterns and color combinations, created by leading European artists, appeal to every degree of taste. The non-porous—therefore, sanitary; can be scrubbed with soap and water—washed as readily as your china. Dust, dirt, finger marks and grease spots come off as easily as they go on! Leading decorators can tell you about Salubra, or write us direct. FREDERIC BLANK & COMPANY, New York Central Building, Annex, 24 North Wabash Avenue, Chicago.
This coat of arms of Benvenuto Cellini (16th century) sculptor, lover of beauty, and the greatest craftsman of all times in gold, silver and precious jewels, when engraved on your Tuscany service adds a charming touch of distinction.

Hand-Chased Tuscany Tea Set . . . 5 pcs $400 . . . 7 pcs $707
Tea Spoons, $23 Doz.
Ind. Salad Forks, $35 Doz.
Dessert Knives, $42 Doz.

BRIDES . . . of Yesterday . . . Today . . . Tomorrow will choose Tuscany because it is so impressively Sterling, so moderately priced, so sure to harmonize with every decorative period.

The hostess who knows the elusiveness of "just the right touch" in entertaining, realizes the importance of having her silver for the table unmistakably Sterling. She wants it of generous weight, beautiful in design, distinctive and traditionally correct. Tuscany, inspired by the art of Cellini, is just such a design . . . finely proportioned and balanced, and with a smart, hand-chased appearance that gives it an enduring beauty. Use it every day. Continuing use and age develops an exquisite platinum-like loveliness.

A Commencement Set of Sixes is priced surprisingly low — $67.35 — and may be purchased on the convenient Watson Budget Plan. Write for the beautiful 24-page brochure which illustrates the complete Tuscany service—a Sterling classic for the modern American home.

THAT the Packard Eight provides the most luxurious personal transportation available to the modern world is generally recognized if not everywhere admitted.

It would be absurd, therefore, not to conclude that there are literally thousands of motorists who would prefer to own Packard cars. That they do not drive the cars they envy is due to but one cause—they over-estimate the cost.

Yet the average Packard prospect already has invested in his present car a substantial portion of the Packard purchase price—generally two-thirds or more! And he is paying Packard operating costs. With but a few hundred dollars more—spread, if he likes, over many months—he can have the car he really wants. And the extra expenditure will be completely absorbed in the longer period he will gladly keep his Packard Eight.

Packard owners know that they can enjoy their Packards for many years—secure in the distinction of a characteristic and unchanging beauty of design; assured of continuously superb performance by advanced engineering and quality craftsmanship.

But many thousands who have longed for the luxury of Packard transportation have still to learn that it may be theirs—easily and without added cost.

PACKARD

ASK THE MAN WHO OWNS ONE
Hotchkotch? . . . Oochkooch?  “Better to be guilty of mispronunciation than travel with anything less than the best trunk in the world.” That’s what hundreds of experienced French travelers say who have a perfectly terrible time pronouncing the name “OSHKOSH.”

The trunk in the picture is an Oshkosh “Chief” Wardrobe. The name “Chief” means the best trunk that Oshkosh knows how to make. The people of Mars may have discovered how to produce a better trunk than this, but they haven’t told anyone on earth about it yet. A handsome descriptive booklet, “The Chief of Trunks,” is free. For a copy, address the Oshkosh Trunk Company, 445 High Street, Oshkosh, Wisconsin.
The feeling of antiquity that distinguishes the Lancaster pattern is not confined to any definite period, but harmonizes with drawing-room or dining-room furnishings of all periods of decorative history. Authoritative in outline and detail, the Lancaster pattern brings gracious old-world charm to the tea table. Your jeweler will gladly show you this lovely design.

**REED & BARTON**

**STERLING**  
EASTERN OVER 170 YEARS  
SILVER PLATE

TAUNTON, MASS.  
NEW YORK, N. Y.
Wishes than in the collection he had inherited, although he wrote an article on Tassie Gems in the "Leisure Hour of October, 1866."

"I remember that we had our favorites and those with periwigs were taboos" and Mrs. Montgomery smiled at the recollection, "down with the periwigs we would cry, and they received rough treatment at our childish hands."

In 1888, when the Rev. William Hardy Vernon died at the age of 84, without mentioning the Tassies in his will, the lawyers were of the opinion that because of the several heirs it was wiser to sell them. The Rev. Frederick Vernon, Mrs. Montgomery's father, bid in the present lot at Christie's in April, 1882. On the passing of her father, Mrs. Montgomery brought his cabinet and collection to America. Among her larger portrait medallions is one of Sir Archibald Campbell. It is, I think, an earlier period than the one in Mrs. Taylor's collection, and the costume is less elaborate, but it is one of the finest character delineations it has been my fortune to see. Tassie's reputation could stand on this chef d'oeuvre alone. It is signed "Tassie fecit."

Next day we motored up to Washington to see the Rasper Catalog at the Congressional Library there, which was printed in 1791 and is very scarce. It is in two volumes fully illustrated with 842 engraved gems and cameos of small size. We had a most exciting hour verifying a number of pieces from Mrs. Montgomery's cabinet, finding the large amber mould with the horses and chariots, which was originally cast in rock crystal and is, according to Raper, one of the finest examples in existence of the course of the circus.

The Tassies, whose original name was Tasso, were Italians of noble family. Early in 1600 they landed as refugees in Scotland.

James Tassie was born in 1755. As a youth it was his good fortune to go to Glasgow, and there his vagrant fancy was stimulated by a collection of paintings made by the brothers Foulis, who were also known for their skill in printing, and who maintained a really superior art school. Here Tassie learned to draw and model.

Before the great manufacturer of Staffordshire, became a competitor but, far from checking Mr. Tassie's success or impending his pursuits, served only as fuel to his work, inciting him to improve his art and paste until he brought them to perfection.

The artist, the scholar and the man of taste could not be beguiled with the Birmingham glass pastes, for the quality of the material and the lowness of their price cannot obviate the unavoidable and insurable marks of hurry in which they have been made by the cheapest and consequently the most illiterate workmen, in order to render them at a low rate. The subjects are generally gaudy and we find them constantly injured in outline, with noses and other parts mangled out of place and proportion.

It would be painful to dwell on the assertion of Mears, Wedgwood and Bentley's Catalog published in 1779, but it has led us under the necessity of saying what artists, connoisseurs, and the public have always thought on the subject . . . . "The whole manufactory has been carried on much to their honor and to the credit of this country and too much praise cannot be bestowed on the Etruscan and other elegant vases and baso-relieves in black and various colors, but their writer has unluckily ascertained that their impressions of antique gems are . . . .
Poirot
designs this springtime chintz to turn
your house into
a modern garden

It is Schumacher’s privilege to offer a rare
collection of printed fabrics made exclusively for them by an artist of unusual re-
nown, Poirot.

The desire for new effects in decorative fabrics is one of the most difficult to satisfy.
That difficulty has been mastered by Paul Poirot in the design illustrated here, which
he has named "Magnolias." This is but one of a varied and comprehensive collection now
being presented by Schumacher.

Poirot’s conceptions are unique—his designs are bold—his interpretations personal
—his colorations powerful yet delicate.

You will find in Schumacher collections fabrics for your every need—the best of contemporary designs side by side with authentic examples of historic periods. Your decorator
will gladly obtain samples for you.

"Fabrics—the Key to Successful Decoration"

This generously illustrated booklet suggests a wealth of decorative possibilities for fabrics.
It will help you to plan intelligently with your decorator...and to discover many new sources
of charm for your home. It will be sent to you free upon request.

The hidden radiator, illustrated

To illustrate a Robras 20-20 Radiator "in action," one would need to pry into all sorts of hidden places. Into walls between rooms (as above). Into walls under windows. Under stairs. Under sills of French windows. In short, wherever there is four inches of waste space!

Right in the walls of your present apartment or house, there is space for you to hide the ugliness of radiation. And, incidentally, the only place to "conceal" a radiator successfully is within a wall, altogether out of sight, out of the way. Ask us—via the coupon below. Ask us now.

James Tassie And His Portraits

(Continued from page 138)

above all other imitations and consequently are far less proper for giving correct impressions than either wax, metal, plaster or glass, and it must be evident that their being opaque and of a dull gloomy color cannot place them in competition with colored glass impressions which equally imitate the brightness and transparency of the originals."

Which goes to show that Tassie had a staunch defender.

Wedgwood praises his rival's past; "although not as good as mine," he blandly remarks, and dismisses the subject.

Dying without issue in 1799, his secret was passed on to his nephew, William Tassie, who, it is said, added greatly to his uncle's collections of paste, for the younger man had the advantage of visiting all the gem collections abroad, but the sure fox was lacking and although the skill and resourcefulness of William gave him many successful years, it was the elder Tassie who won the greater fame.

There is a delightful anecdote of William Tassie which stresses this quality of resourcefulness. Receiving a royal command to attend his sovereign, George IV, he found, while waiting in an ante-room that he had forgotten to bring his modeling tools. Nothing daunted, he took his pocket comb, broke off one of the teeth and, with this improvised tool modeled the portrait. An example of his kindess has a surprising denouement. A poor artist was bewailing his impovrihcence in buying a lottery ticket costing a guinea for the Boydell Shakespeare gallery. To help the artist Mr. Tassie bought it from him. To his great surprise, out of the twelve thousand tickets the one Tassie bought won the prize, which was the Shakespeare gallery, pictures and estate. After giving the artist a handsome amount, he sold his property at auction. The pictures brought over 6000 pounds, the gallery being purchased by the British Institution, and Bank's sculpture, The Apotheosis of Shakespeare intended to be placed over Boydell's grave. Finally found its way to Stratford-on-Avon.

About Bed-Linen And Blankets

(Continued from page 97)

are thousands of tiny air cells which retain the warmth as well, it is claimed, as a closer material. An interesting exponent of this theory is a knitted blanket imported from Scotland, which features a texture, open yet deep. Exceptional warmth is said to distinguish this novel bed covering.

Judgment should be used that the blanket purchased is suited to its purpose. For the expensively cashmere would be out of place in the informal summer cottage or picturesque log cabin. For less ceremonious homes, equally delightful cotton and wool blankets have been loomed in every possible design and coloring—from soft floral patterns, through smart modern designs, to the most vivid of Indian motifs. The prices of these charming covers are as gratifying as their beauty, and the soft surface of the all-cotton material has been secured by a process which gives it the characteristic feel of wool. One distinctly new pattern has a wide band of contrasting color at either end, giving the effect of a two-toned blanket when the bed is turned down and matching in color schemes with the tinted sheets of the day in delightful ensembles.

Regardless of type or price, a blanket should always be large enough. It should come well up around the shoulders and allow a generous tuck in at the foot. And there must be plenty of width to hang down on either side. For the skilled bed maker does not tuck in the blankets, but allows them to drap themselves softly around the body for greater warmth. For single or twin beds, a blanket 84 inches in length is satisfactory. For the standard double bed, they should be 72 by 84. For the larger beds, the manufacturers provide extra sizes—90 inches long in either double or double width, and also a size 90 by 90 and 90 by 108. In case of doubt, it is their policy to always recommend that the larger size be purchased.

Many housewives, today, make use of the tinted sheets in place of the dimly under-cover which remains on at night and protects the blankets from a surprising amount of soil. Then over this cover is carefully arranged the spread, which for the summer home, should be simpler than the taffetas and more formal fabrics of winter.

Metropolitan shops maintain specialists who design custom spreads to suit individual decorative schemes or to carry out their patron's own ideas. Spreads from Czechoslovakia or covers of Irish mill with their colorful woven stripes, vie for favor with India prints. Candlewick spreads are particularly practical for the summer home, with their colored designs and ease of laundering. And romance and quaint beauty radiate from the old time patterns so skilfully created in modern quilting, which has revived for the present generation the leisurely traditions of past gentlewomen. Woven designs, too, have been brought to modern homes, the charming "Whig Rose", the "Gentleman's Fancy", the "Lover's Knot", now coming straight from the looms of southern mountains to grace our Early American bedrooms.

The choice from the bewildering variety of decorative spreads put out by the manufacturer, is of necessity an individual affair, depending on the color scheme of the room and its general character. The heavy cottons, effective in rooms of modernist influence, would be out of place in the country home where spacious airiness and many outdoors doors, in more elemental atmosphere.

In covers, as in all bed-linens, quality and appearance determine the life and satisfaction to be obtained from these most important furnishings, whose aim is to help one "rise refreshed to greet the new day."
"BEAUTY THAT RIVALED
THAT GLORIOUS ENGLISH DAY"

"Both Dee and her youngest (and by the way, she is now eighteen) were in that inevitable top rail row that
is usually dominated by our younger sisters. If she had
only affected just a bit more adolescent boredom I should
never have detected her. For, true to England, both
mother and daughter had complexions that rivalled that
glorious English day for clear, fresh beauty."
—From the letters of an English traveler at home.

There is a new and
lasting freshness for your
skin in this English
complexion treatment

For the clear and natural freshness of her skin, for
her vibrant color, the English woman is famous
throughout the world. It is significant that she uses
only a few cosmetics. But it is more significant that
those few are invariably the best—Yardley’s.

Yardley’s English Complexion Cream, Yardley’s
English Lavender Soap, Yardley’s English Lavender
Face Powder—here is her effective beauty treat-
ment. Yardley’s soap is for the initial cleansing of
her face. Yardley’s Complexion Cream follows, to
coax out any lingering bits of imbedded dust. Then
Yardley’s English Lavender Face Powder to protect
the new and lovely freshness of her skin. Soft, cool-
ing, smooth, and delicately scented, it heightens the
natural radiance of her beauty. English Complexion
Cream is also a nourishing cream for use at night
and a foundation cream for powder. Used as a
powder base, it is to be put on liberally and then
washed off in water. Just enough remains to retain
your powder perfectly.

Use Yardley’s faithfully. Your mirror will reveal
to you a new beauty—sure and poised, but at the
same time, unstudied, the sort of beauty that has
always been the preference of the gentlewoman.
You will find these three Yardley toiletries at your
favorite store. Send for our new booklet, “Complex-
ions with an English Accent.” It is free. Yardley
& Co., Ltd., 8 New Bond Street, London; 452 Fifth
Avenue at Fortieth Street, New York City. Also

Furniture For Modern Schemes

(Continued from page 83)

brass and nickel as bases, with chrome, copper, gold and silver as platings, aluminum and chromium steel seem to be most popular today. Do not expect to find metal furniture at present much cheaper than wood because the production is still limited. But mass distribution will soon bring about the same difference that prevails today between a top-priced car and a cheap one.

The base material is used most frequently in its stock forms—tubing or bars. In the best design it is worked into simple structural forms with continuing stream lines instead of halting joints, welding instead of glue. The finish can be bright or dull, but it should be honest. Metal simulated wood is a mottled form, dishonest and unbecoming.

For flat surfaces—table tops, chair-arms, etc.—formica is most popular. This is a synthetic material resulting from the playful interactions of formaldehyde, paper and rosin, with great resistance qualities. It comes in colors as well as black. The upholstery should be thick and texture contrasts to the piece. Anything from rayon satin to velvet, may be used, from fabriced leather to calfskin, from printed linen to mohair, from tapestry to leather. Where shall we go for well designed metal furniture? Owing to the popularity of metal as a material for furniture with leading modern designers in this country, the problem of purchasing it is not difficult. Howe & Leavitt, architects, have been particularly successful with metal and believe firmly in this medium for both architecture and decoration. Fireplaces, chairs, tables, curtain pulls, lamps and vases designed by this firm can be depended upon for sureness of line and appropriateness of detail. Walter von Nessen, a master in metal, whether his contribution is a lamp, chair, mirror or small accessory, is now working on a "limited edition" plan, making about fifty pieces from each design.

He has developed several practical ideas in illumination such as the lamp illustrated above which incorporates both direct and indirect lighting. Gilbert Rohde also works on the individual or limited edition piece, being particularly successful in creating original space-saving furniture for the small apartment.

Paul Frankl has believed for some time in an all metal formula for furniture and he uses metal to decorate lacquered wooden pieces with unique success. An illustration of metal used in this manner is the chest shown on page 81 where discs of metal, gold and silver-plated, hands of gold and silver leaf at top and bottom are striking notes against the black and red background.

Donald Deskey has proven himself the most prolific of metal designers so far—lamps, window display fixtures, chairs, tables, sofas, accessories and the present impressive mass production program of the Ypsilanti Reed Furniture Company, to mention a few of his achievements. His feeling for the materials of this age—vitreous, bakelite, glass, metals—is sure and sympathetic.

Other sources for interesting metal furniture are Robert Locher, who designs exquisitely in metal and glass, Jules Buey, Fornix, Park Avenue Galleries, Eugene Schoen and department store handling some of the products of these designers as well as creating designs in their own studios, such as Lord & Taylor. And last but most significant are the two big stylized mass production programs of the Simmons Company and the Ypsilanti Reed Furniture Company. For where Mr. Deskey has designed chairs, sofas and tables for living and dining rooms, Mr. Bel Geddes complements with beds, dressing tables, chairs and day-beds. The Aluminum Company of America also plans a production of its own for the home which will embody the best principles of modern design.
Lincoln has used its unlimited resources to develop a motor that notably combines strength and performance.

In making this motor, operations that best can be done by hand are in the unhurried hands of fine craftsmen; whereas operations that are beyond the power of even the finest craftsman to perform... inhumanly delicate measurements and exquisite applications of tremendous force... are done by machines that are the wonder of the engineering world. Costly to maintain, these machines often slow up production; but there is no intention to produce the beautiful, luxurious Lincoln in large quantities.

Because the motor avoids periodic vibration, as soldiers avoid keeping step on a bridge, the excellent structures and precise alignments in the Lincoln are left undeteriorated throughout the years. Because the parts are related with such unparalleled precision, the powerful Lincoln needs no tedious breaking in... but is, from its first day of service, a quiet, steadily functioning possession for those who can afford to purchase anything they desire; yet who demand authentic value for their money.
In a month or so now, the advance army of flies and other winged pests will begin their annual invasion. Wives will begin their screen-talks. Eventually, husbands will give in, as usual, and really get at the job of dusting off the screens and finding the windows they fit.

In the interests of domestic harmony — to save battered thumbs and tempers — Lupton has devised steel casements with the handiest, most convenient screens you've ever seen. Spring pivots allow them to be attached to the window in 15 seconds. And when these screens are closed, a mosquito hasn't a Chinaman's chance of getting in.

Lupton Casements are built to meet all kinds of weather. In winter, they shut tight against wind and cold — with a saving in weather-stripping and furnace-bills. In summer, they can be set, like little sails, to catch the slightest whisper of air. Steel construction means they will not warp, stick or jam. The Lupton friction-hinge assures effortless operation.

The small extra cost of these windows is not to be compared with the extra comfort and convenience they bring to your home. May we send you a free copy of the color booklet "Your Windows Through a Decorator's Eye"?

David Lupton's Sons Co., 2253 East Allegheny Avenue, Philadelphia, Pa.
Before we purchased this delightful painting by Mrs. Paxton, it was shown at the National Academy in New York, the Philadelphia Academy, the Detroit Art Institute, the Boston Museum of Fine Arts, and the Corcoran Gallery.

A well-known art critic said of it: "Among American painters... it seems to have been left for Elizabeth Paxton to do a series of veritable bedroom epics, among which one may especially admire Breakfast in Bed. This is the life... comfortable, seemly, modern life as actually lived in well-ordered America."

The kind of life... may we add... that is made comfortable and seemly in most well-ordered American homes by making the beds with Wamsutta Percale sheets and pillow cases.

WAMSUTTA PERCALE SHEETS & PILLOW CASES

Ridley Watts & Co., Selling Agents, 44 Leonard St., N.Y.
"PERSONALITY"
makes
the
Masterpiece!

YOU need not know that Rembrandt was the greatest painter of the Seventeenth Century nor be posted on the superiorities of his technique to stand in awe of his inspiring work.

You realize instinctively that here is a masterpiece. His canvases are kindled with inventiveness; they glow with "personality."

Yet the impression of excellence which a Rembrandt conveys to the lay observer is supported by detailed analysis of those technical qualities on which the student of art bases his expert judgment of Rembrandt's genius.

And so, too, with Chrysler cars. There is a "personality" about them that can be felt better than it can be described.

Yet a comparison of Chrysler features with those of other cars sustains in the mind of the mechanical expert the same impression of excellence that is felt by those who neither know nor care what makes the wheels go round.

And just as among paintings, one stands out above the rest because of some almost indefinable spark of genius, so, too, between Chrysler and other cars.

Specifications may sound much alike, styling may seem similar; all may be competent, serviceable and durable.

But from no other car do you get that sense of pride and enthusiasm of ownership that you get from a Chrysler.

For the "personality" of a Chrysler inspires a pride all its own.
"But the bedroom belongs to me"

It was fun planning it. First I chose Lady Pepperell sheets in my color—delphinium blue. And because the bed is the chief piece of furniture in any bedroom, that color naturally sets the color keynote for the rest of the room. And now everyone says the room simply couldn’t belong to anyone else but me! You want to get the ‘Personal­ity Bedrooms’ booklet I used. It’s just crammed with wonderful color ideas for your bedroom. And next time you’re in a store ask to see the Lady Pepperell sheets; they come in white, white with colored borders, and in seven perfectly charming colors; blue, green, rose, peach, shell pink, orchid and maize. Of course they wash. Of course the color is fast. You’ll love the texture of Lady Pepperell sheets too—they’re so smooth and firm and so evenly woven. They wear and wear and wear—and they’re not one bit expensive."

SMART...

We like to possess things that are smart. We like to know that what we have is in vogue... correct... beautiful. Their charm appeals!

There are these qualities in Roseville Pottery. There is in Roseville Pottery the note of distinction, the flair of what is fine and in good taste. And so you find it helpful to you in expressing your personality in the appointment of your home.

The recent Roseville designs portray smartness in outlines flavored with the classic and Early American traditions. There are vases, bowls, jars, candlesticks... in varying sizes, in lovely shapes...with soft blues and greens and browns.

And exquisite pieces that can be made into lamps, like the one on the right in the picture. It is smart now to have table lamps of pottery... See the Roseville Pottery displays at leading stores. Also write for your free copy of the interesting booklet, "Pottery."

THE ROSEVILLE POTTERY COMPANY, Zanesville, Ohio.

ROSEVILLE POTTERY

Developments In Home Equipment

(Continued from page 96.)

Houses are as unhealthy as the Great Sahara. Lack of moisture causes glue to give up its task and furniture joints come apart. Windows shrink and rattle, floors creak, rugs wear rapidly. Eyes suffer and annoying winter colds flourish.

Cold weather indoor comfort depends not alone on warmth. Temperature, moisture, air motion and cleanliness are contributing factors. Protect a home from dryness in the heating season and its first-year look will linger. Humans cannot thrive in an atmosphere the cactus enjoys, although we try to do so year after year.

A new humidifier claims to maintain air conditions closely resembling the physical comfort zone of from 40 to 50 percent relative humidity at room temperatures of 65-70 degrees. Without moving parts to get out of order, this unit washes and purifies the air, adding the proper amount of moisture. Ordinary water pressure is sufficient for operation, special nozzles giving very complete water atomization. Necessary water connections are easily arranged as the humidifier can usually be located on a wall wherein both supply and waste lines are situated.

All-over dimensions of mirror and frame, the only visible parts of the equipment, are 16 1/2 inches wide by 42 1/2 inches long, being only four inches deep, the unit fits conveniently between partition studs.

ENGAGING bits of rich-hued wood, black walnut and quartersawn red oak blocks, offer a simple means for giving color and pattern interest to floors. With them one can secure a variety of flooring effects, just as different wall finishes are employed in the various rooms.

Border patterns, with blocks usually placed in the corners, may be developed in endless array with these two and one-quarter inch squares and the seven-eighths inch walnut strips that accompany them. It is a fancy-catching game, the working out of these figures, that challenges the ingenuity as size of room, interior architecture and decorative scheme must be considered.

This material is not common lumber, roughly made and sold in bulk. The pieces are matched and packaged, after being air dried and steam kilned; each one is finished for use with standard oak flooring, no additional working on the job is necessary. Nailing, of course, is concealed. Cartons contain 100 linear feet of black walnut strips, 20 blocks of the same wood and 10 red oak blocks. Each package has sufficient material for two average-sized rooms if a single strip design is used.

WHEN industrial barons have (Continued on page 158)
Fine—he's coming too!

READ IT,
Dick

—says our home is “always a grand place in which to be a guest”

It's great to plan a party... and have everybody eager to accept. Of course, there's rivalry. Entertaining at home has suddenly become fashionable. People have discovered it's so much more fun! Now they're picking up new ideas everywhere. Here's a suggestion from Alvin, creator of the new Dawn pattern in silverware.

Read this new book, "The Crowd Comes to Our House." Between its covers are a host of ideas for every woman who ever plans a party... original ways of giving and getting more enjoyment by entertaining at home... recipes and menus featuring famous American food products available everywhere... not so much how to set the table as where to set it. It's the starting point of ideas that may be used in the one-room apartment or the house of many servants. You'll enjoy it, it's so modern, youthful, beautifully printed. You can now get a copy for thirty cents in any store where Silverware by Alvin is sold—or by mail direct to you... at this special price... if you use the coupon below.

GARDEN

In one household I know, a discussion once arose as to the architectural styles in the South. There was innocently injected into the conversation a suggestion that somewhere a few inches of the silk gown grandmother wore on her wedding day was to be had. The family separated into rescuing squads to find it; there were various clues suggested, research parties broke up an otherwise delightful party. The inconsistency of household arrangements was soon clearly apparent to everyone. “What we need in this house,” suggested one, “is a Safety Deposit Department.” I bathed myself of my regal fiction writer and her system. How peaceful it would have been, even if the house was not enriched with a convenient storage system of house pockets, to have a record of things put away. Item, under “Grandmother”—a bit of her wedding gown, entered as “1862 YZ” and thus located—Vol. II, Works of the Bronte sisters, between pages 244 and 265 of excerpts from Paradise Lost. Who would ever dream that the bowwow meow worn by the son of the family at his graduation should find a pressing place among the pages of an old edition of Two Gentlemen of Verona? The homey instinct of the Family Fetish is uncertain.

THE SAVING INSTINCT

In Truly Royal, a most useful book which gives me peaceful moments of home contemplation, the author calls closets in a house the woman’s provocative. She is supposed to be the associated one. She is the concocter of mouchoir cases, hat boxes, coat hangers varnished—the modern Pandora, if you please. But the saving instinct in man is equally strong, from the era of the boy’s deep-rooted pocket to the baby period of the five-sectioned briefcase. His tie drawer is a bonanz and jotsam of unusable but hoarded neckwear. He holds to his ties with an instinct one usually associates with the odd bits of silk for the quilt which is but family history put together by cross-stitch. Instead of flinging his ties away in a season of wearing, he rummages amidst accidental strata of fashion for the usable neck piece, which is crushed beneath his sentiment. He is the proud possessor of his past. Ralandt he may be, save for a fringe of dark hair, yet he must declare stoutly that at live he possessed and wore, according to Faunederoy fashion of the era, curls of spun gold. “Mother,” he says flintingly, pleading for evidence, “get the two curls you have.” Then, as explanatory note, he adds, “The family gave them to her when we were engaged,” and the fever of reminiscence makes triumphant the smoke of his cigar. At 9:15 on that evening started the expedition in search of two curls. First it was a jaunty guess as to where they were, then there was alarm, then, as shelves were ransacked and trunks were hauled from the storeroom, and boxes were upturned, alarm changed to downright temper. “So that’s the way you value my curls!” was the disruptive conclu- sion. Merely because we have not learned, when we build houses, to have pockets in definite location, for our peace of mind.

I recall, though I cannot at this moment tell where it is, a small board box containing a stone picked up in the streets of a small town. A little boy used to kick that stone wherever he walked. There is also an abject marble, flecked with half-moons, mindless of a game of “knuckles” he played in the savage days of his term; there are remnants of his first watch, there are pages of a ditty magazine. If a cornerstone were get-at-able, do not tell me that such treasures are not worthy of such a niche! I take it that the house pockets I seek in plans are the very foundations of even living.

Now, let us look at the matter mathematically. Man is supposed, at generous disposal, to live three score and ten years. Give him a pocket for each decade; build in his home as definitely as you fasten a rock-box at the bank. Like a mirror, you concentrate, in a narrow row of shelves, the record of yourself. One of the peculiar of correspondence; in one year, you boil down to the very extract of association. If you go so far as to save each season’s Christmas cards, you might have a pocket for “Holy Days and Holidays.” You show the instinct for record in the orderly arrangement of your Snap Shot Albums—your fishing trip of such and such a year, your golf tournament at such a club, your tour in the new car on such and such a trail. The Sons and Daughters of the Revolution are not more sedulous to bromide-table the million and one Washington headquarters than you are to fix in memory by record the fleeting incidents of life—fleeting though auspicious, and sometimes disconcerting, as when a sedate Grown-up has to acknowledge that the carte de visite has been placed indeed a perfect likeness of himself when staring his now august career!

SENTIMENTAL MOMENTS

There are those who hold to ridicule the saving instinct of man. There are many who feel themselves especially dedicated to reproach in sorrowful manner any inclination to put aside a momento, to treasure a letter. A dress worn in its destined time ends the matter, whether it be your first frock at your first dance, or the pair of gloves whether it be your first frock at your first dance, or the pair of gloves which touched the royal hand on the Prince of Wales’ last visit to America. A way, scream is an excellent house cleaner. The empty box is the arch-fond of accumulation. It was Pandora’s box that first got into trouble by becoming a son of store-house of unsellable articles. The cynic will declare that the faded ribbons, the pressed flowers, the dance earth, the fitted boxes, are the bleak sentimental twaddle undiminished in the universe. Yet the primal instinct in the man who may be studying Einstein’s theory or reading Nietzsche or Schopenhauer, is to decorate his college room with a stolen lace handkerchief or a scarf or slipper, as tokens of that irrepressible portion which still abides beneath all the

(Continued from page 76)
COMPANIONS

What's a reading chair without its inseparable companion . . . a lamp that lights your way into that thrilling detective story! The Miller Company now introduces this new lower floor lamp . . . The Companion . . . designed to fraternize with the underslung type of couches and chairs so much in vogue today. Its three-candle stem has the classic restraint that predominates in the design of smart modern interiors. And its wide-spreading drum shade sheds the light at just the right angle for reading. You will like its low price as well as its chaste beauty. Ask to see this Companion Lamp in the Miller display at your favorite dealer's. Should your dealer not carry it, write us immediately for information.

THE MILLER COMPANY, MERIDEN, CONN.

"Pioneers in Good Lighting Since 1844"

JUST the right height for the new low furniture, the Companion Floor Lamp is an exquisitely balanced creation. Richly finished in a lovely combination of bronze and brass, or in pewter. The two-toned shade has a closed top and is 14 in. in diameter. It comes in tan crepe with apricot lining; putty with rose lining; beige with apricot lining, gold with gold; green with green; binding to match. The stem is adjustable; height, 53 in.
are YOU thinking of modernizing your home?

“One thing is certain... no matter what you introduce to modernize your home — new draperies, new wall paper, new furniture and pictures — you'll never secure a satisfactory effect until you do something about those ugly old-fashioned, exposed radiators.”

And it is so easy to “do something” about ugly, exposed radiators. Hart & Cooley Radiator Enclosures — well designed and efficient — not only conceal them but are truly decorative pieces of furniture. Designed and constructed by men with long experience in the heating field, these attractive radiator enclosures direct efficiently humidified air into the room at the living level. Their air-insulated tops make them practical for use as tables or window seats.

Of course, Hart & Cooley Enclosures give absolute protection to walls and hangings against sooty radiator dirt. Thanks to their bolted angle-iron construction, they will not give under heavy weights as less sturdy enclosures are apt to do. Their adjustable rubber-tipped feet prevent even the slightest rattling and safeguard your fine floors.

Made of fine furniture steel, Hart & Cooley Enclosures can be depended on not to warp or split under extremes of temperature. They come in a wide variety of designs — in sixteen beautiful colors and twelve natural wood grain effects. If you will send for our interesting and well illustrated booklet you can secure full details. Use the coupon below.

THE HART & COOLEY MFG. CO., NEW BRITAIN, CONN.
EXPERTS IN HEATING EQUIPMENT FOR 25 YEARS

Concerning House Pockets

(Continued from page 145)

modern sex talk of a sophisticated age. And he packs his college memories as the girl does hers, marked Exhibit C in its niche amidst the Seven Age of Man, which should be represented in the safety deposit room of every well-planned home by seven ample boxes built according to the latest fashions in file cases.

Of course we are inclined to the attic idea in a home, where trunks may be dragged from corners, and floors may be scattered over by odd garments and draperies and bits of feebie furniture, each with its human past. But I hate to meet thus the evidences of a buried life once lived. I recall one dreary day by the sea. Mice had worked their worst in such an attic, and had nibbled into documents of importance, into letters of literary value. I recall a warehouse where trunks and boxes had been opened by executors of an estate, eager to settle the mandates of a Will. The frail atmosphere of a dead woman was trampled upon, the diaries of an Italian trip fluttered page by page beneath the feet of many workmen, books — rare in these pages, delicate in bindings — were sprawled painfully amidst a conglomerate mess of possession. This little woman had been homeless for many years, yet had closer to her past in packaging cases. Rather a bonfire than this: the ceremonial pyre is preferable to the official exhumation of the past, the hasty prying into sentiment.

PRESENT VERSUS PAST

But where a home is attached to sentiment — as the right sort of homes usually are — house pockets become sanctuaries rather than posts. Architects bother themselves mostly in conceiving a well-ordered present; even the closets take cognizance of things that are: here is ample space for the stove polish and the floor mop; there is a special shrine for endless mists of shoes and slippers. Hours are spent concocting sliding drawers and shelves for the past at your feet no less than for the past — bag and baggage — will always be looked up. You can expect yourself to say, when you give your house a good airing, “In my safety deposit box, and look around...

PROHIBITION POCKETS

We wouldn’t compensate for an instant the museum quality of such an idea, though I have heard recently of portraits on Wall Street used for the purpose of defeating the eye of the Prohibition officer. We wouldn’t live by classifying ourselves, though, when dressing, we would very much welcome some filing system for our ties or socks or ribbons. House pockets should not dominate the atmosphere any more than should the articles packed away in disregard of the fact that they might be wanted some day.

You issue a mandate in the home, to be followed, willy-nilly, “Put that in your pipe and smoke it,” you say. You don’t dare disregard it; fear the pipe might erupt. Authority somehow seems lodged in the bowl of that pipe. But, even though I plead most earnestly for house pockets, I know that we cannot live by exactness. Memory must be allowed to float. I suppose, no more how orderly you may ask your architect to be in the design of your house pockets, your past—bag and baggage—will always have to be looked up. You can expect yourself to say, when you give your wife the first kiss, “File that, where did we put our marriage license, after we went to housekeeping?”

So I plead, architecturally, for some system of house pockets, some method to set aside madness. Ten years after that source. Could you get for me on the instant your Birth Certificate?
Will you pay 50c to get rid of dandruff?

It isn't at all surprising that many thousands of women—and men—have found the solution to the troubling dandruff problem, in a 50c bottle of Listerine.

Dandruff, many authorities contend, is a germ disease. Full strength Listerine kills germs in 15 seconds. Even the Staphylococcus Aureus (pus) and Bacillus Typhosus (typhoid), the stubborn germs used by the U. S. Government to test germicidal power, yield to it in counts ranging to 200,000,000.

Listerine first dislodges and dissolves the tiny scales which are the outward evidence of dandruff, then it soothes, cools, and heals the troubled scalp. If infection is present, Listerine attacks it. The flesh tingles and glows with new health and invigoration.

If you have any evidence of humiliating dandruff, begin with Listerine at once. Remember that it is entirely safe, and douse it full strength on the scalp. Then massage the latter vigorously with the finger tips. Keep the treatment up as a part of the regular soap and water shampoo, or independent of it. If your hair and scalp are exceptionally dry, use a little olive oil in conjunction with the treatment.

You will be delighted to find how quickly Listerine overcomes ordinary cases of loose dandruff. When dandruff persists, consult your physician as the condition may require expert attention.

Listerine first dislodges and dissolves the tiny scales which are the outward evidence of dandruff, then it soothes, cools, and heals the troubled scalp. If infection is present, Listerine attacks it. The flesh tingles and glows with new health and invigoration.

NOTE TO MEDICAL AND DENTAL PROFESSION:

When prescribing a mouth wash for germicidal purposes, make certain that it is a germicide; and not merely a colored preparation which is only deodorant and astringent.

Listerine first dislodges and dissolves the tiny scales which are the outward evidence of dandruff, then it soothes, cools, and heals the troubled scalp. If infection is present, Listerine attacks it. The flesh tingles and glows with new health and invigoration.

Listerine first dislodges and dissolves the tiny scales which are the outward evidence of dandruff, then it soothes, cools, and heals the troubled scalp. If infection is present, Listerine attacks it. The flesh tingles and glows with new health and invigoration.

Luxurious warmth
at getting-up-time

Every morning like a June morning
when Iron Fireman does your firing

Set your Iron Fireman thermostat
for 6 o'clock. Promptly at six the
Iron Fireman wakens automatically
and starts to work. It fans the
slumbering coals into a bright flame.
It feeds fresh coal to the fire just as
needed. In a few minutes if you were
to look into the firebox you would
see a bright, steady flame. Soon this
warmth starts to penetrate the
whole house, wherever you have the
heat turned on. By seven you
awaken in a warm room.

That is one of the luxuries which
the Iron Fireman brings. Another
luxury is the knowledge that Iron
Fireman is safe. Still another is the
knowledge that Iron Fireman heat­
ing is so economical that you can
afford an abundance of heat. Then
there is the automatic regulation of
warmth. For Iron Fireman prevents
overheating just as automatically
and just as positively as it prevents
underheating.

Take all of these luxuries to­
gether. Then consider that Iron
Fireman also gives you a substantial
reduction in your fuel bill. This fuel
saving is not a manufacturer's
claim. A recent compilation of sav­
ing figures supplied by home owners
themselves showed an average re­
duction of 45.61 per cent on their
fuel bills.

For your own information have
an Iron Fireman engineer survey
your present heating system, and
give you a report as to what Iron
Fireman could do in giving you
better heat for less money. Get the
facts and figures. Write for literature
or ask for an engineer to call. Iron
Fireman Manufacturing Company,
Portland, Oregon. Branches in
Cleveland - St. Louis - Chicago -
New York. Dealers in principal cities
of the United States and Canada.
18th Century London dabbled skillfully in the art of fine living. In such settings of decorative opulence as the house of Sir Hugh Middleton—a magnificent home of old England from which we have brought this richly panelled room, a superb setting for many of our exquisite pieces.

The Georgian mirror reflects the dignity of the room. The Oriental rug suavely knits these stunning pieces into an incomparably rich composite. From the Queen Anne chair upholstered in green damask, the sofa covered in hand crewel work and petit point figures, to the exquisite needlepoint screen—achievements, all of them, in decorative artistry. Our contribution to the modern art of fine living.

INTERIOR DECORATION — HOME FURNISHING COUNSEL
The introduction by Franklin of the first airplane-type engine in a motor car—an engine which in tests has flown an airplane—is heralded as a great forward step in the automobile’s march of progress. A vision of the future—the turning point of a new era.

Even more important and dramatic is this engine’s tremendous power-ability. Delivering the greatest power for cylinder capacity of all automotive power plants, it brings air-cooling engineering into undisputed leadership. It sweeps aside all previous conceptions of motor-car performance. Sixty, seventy, eighty miles an hour are quickly, quietly and comfortably reached without the slightest engine exertion.

Now riding is gliding. You get a new thrill every time the Franklin does things you thought impossible before. Last year Franklin gained the distinction of holding all major road records. This year many of these same records have been sensational re-broken by the new Franklin.

Distinguished for its airplane performance, the new Franklin also enjoys nation-wide distinction for its authoritative appearance. Darting-arrow horizontal louvres—modishly fashioned embossed paneling—low hung doors concealing the running boards—gracefully arched hood front, ribbon-wide, with highlighted vertical shutters—the whole exterior ensemble is modern, smart, fleet-looking . . . When you see the car—when you are thrilled by the performance of its airplane-type engine, you will enthusiastically award Franklin highest motor car honors for 1930. Franklin Automobile Company, Syracuse, New York.
INTERNATIONAL SCREENED CASEMENTS

INTERNATIONAL Metal Casements—both Custom-built and Cotswold—now are available equipped with Screens. Note the Solid Bronze Hardware which permits the casement to be opened and closed without removing the screen. Note also there are no holes nor slots in the screen, an important feature ensuring easier handling and longer screen life. No other screened casement possesses such advantages.

FRANCE in miniature, given wings below the waterline . . . that’s every French Line ship . . . the chic of the boulevards, the gayety of the cafes and dance places, the thrill of the shops, the elegance of the ancient régime, the electric modernity that sets a pace for the world . . . all here, in the stately salons, the broad white decks, the marvellous suites and cabins. The cuisine is Paris, too, in flavor as in name . . . the service anticipates every wish . . . Breton seamen whose ancestors tamed the Atlantic in the fifteenth century swing their modern miracles of speed and luxury from New York to Plymouth and Le Havre. The "Ile de France," the "Paris" and the "France" maintain Weekly de luxe Express Service. The "Lafayette," the "De Grasse" and the "Rochambeau" form a cabin fleet that makes economy smart.

The Versatility of Duncan Phyfe (Continued from page 132)

but when we remember the ancient and most honorable lineage of the filet as carried in China for decorative symbols of many kinds, and its later Classic, and its French interpretations we cannot find very strong grounds for the objection. Only the learned connoisseur recognizes Phyfe’s thunderbolts for what they are, and the poetic imagery that holds the myth in a fact might quite as well bind the thunderbolts with a cord. Historic ornament is too old to quarrel with; either we understand and like it or we do not. Phyfe simply used it, without much ado and rather formally—witness the acanthus leaves which trail down the legs of his dressing-table, as down the legs of many of his chairs and tables, to outrageous lengths unknown to any self-respecting acanthus plant. We never shall agree with experts in the naming of this motif. It no more resembles an acanthus than it does a waterleaf and might better be called an elongated fluted leaf, unknown as it is to nature, and as much a figment of the designer’s imagination as any modernist ornament. The tiny writing-table on page 119 is most charming. It sets severely on legs whose slenderness has just the right balance between strength and delicacy. Its interior outfitting is delightful. Any modern writer might crave it. But the sideboard and bed are perhaps the most outstanding and handsome of these exceptional pieces. The wall bed, or sofa bed, is one of a pair, unique at this writing. Its Sheraton influence is unmistakable but its simplicity is all Phyfe’s. The pineapple finials are without the topknot of the middle finial which crests the broken pediment of the sideboard. A lover of fine woods delights in Phyfe’s superb choice in this sideboard and the dressing-table. In fact all the articles illustrated, whether solid or veneered, are notable for this vital quality of Phyfe’s work—his personal and careful attention to the choice of materials used in his shop; and for this reason and the neatness of the carved ornament the effect of the whole piece far outrights the impression conveyed by the photographs.

Many of Phyfe’s characteristics are incorporated in these pieces. Here are the turning, reeding, fluting, veneering. Here is the hairy leg with the dog foot below a panel on the chair, and topped by the so-called acanthus on the dressing table. Here are the carved thunderbolts and drapery swag. Here are the brass mountings—the paw foot on the sideboard; the lion’s mask with ring handle on both sideboard and dressing-table. But we must look to more familiar pieces for the usual lyre, the carved wheat ears, laurel, and oak leaves, as for the waterleaf though we find two renderings of the acanthus leaf on the sideboard.

The style periods of Phyfe’s work are also happily represented in these pieces. The settle and writing-table are of the years when Sheraton’s influence was evident—1805-10, and the bed, though not assigned a date, also shows this influence. The chair dates from 1810-15, when Directoire influence was ushering in the early Empire forms of 1815-20. The sideboard and dressing-table were doubtless made at this time—1815-20, and before the rosewood sets of the Victorian era delighted our great-grandmothers despite Phyfe’s sorrowful epitaph of “butcher’s furniture.”

We have so generally associated Phyfe with his fine tables and elegant chairs, his neat little sideboards and washstands, that it distinctly enlarges our horizons of his work to see in a single room the significant witnesses to his versatility. Nor were these all. There was on exhibition a cheval glass in Sheraton’s style, 1805-10; a cabinet of even earlier date, 1795-1800; a lovely little satinwood desk, 1805-10, with inlays and borders of rosewood, attributed to him, doubtless rightly, a roll-top desk of the same date, and a rarity in the form of a small dressing-table. All of these pieces add hope to the heart of the true and, we may say, wealthy collector, for Phyfe’s work to-day as a century ago rarely descends into humble surroundings, and the “finds” of tomorrow will be similar, be located in old and stately New York mansions than in its outskirts or tenements.

Glossary Of Continental Silverware

(Continued from page 130)

pitcher, with or without tray. Coffee Service: similar, with addition of coffee-pot, and no candle, kettle or urn.

Thumb-piece: Protection on cover of flagon, coffee-pot, etc.; conventional scroll or other shape, or human, mythological, or animal figure.

Toilet-table: Articles similarly designed for toilet use. Late Chasie sets in case, elaborately decorated. In vogue 17th Century and later.

Top: Diminutive ornaments; Dutch, 18th-19th Century: groups with domestic articles—chair, table, cradle; windmill, fountain, fountain-bird; mountain and vase, village industries—carpenter, butcher, spinner, lace-maker; trades and crafts; and religious subjects.

Transavant: See Hungarian.

Faux. Ancient and modern; decorative plate in various vase and urn shapes; Egyptian, Trojan, Classic, Italian Renaissance, and French 17th Century.

Vermeil: French, silver-gilt.

Wager-cap: A trick contrivance: two cups, the smaller hung on a pivot which drops below larger cup when both are filled, the wager being set on the drinker’s ability to drain the larger cup without spilling the contents of the smaller, which is handed to another drinker. 16th and 17th Centuries. Known as bridal cup. French—gobelet à surprise, German—Jargrundteller.
A CLEAN, immaculate Church Sani-White Toilet Seat will work wonders in helping you modernize an old bathroom. Very often it is all you need to permanently remedy the out-of-date appearance of a bathroom—a fault which may sooner or later cause you embarrassment when you have friends and visitors in your home.

Church Toilet Seats are made so that they fit any make of bowl. They can be easily and quickly attached with ordinary household tools. All good plumbing stores sell them.

If you like simplicity, buy the durable Sani-White Seat. Or, if you wish a modern touch of color, ask any plumbing store to show you the beautiful pastel shades or sea-pearl tints (there is a complete range) in which Church Toilet Seats are to be had. To match the colored toilet seat you can get a lovely Church Bathroom Stool or Bathroom Chair. You will be surprised to see how these inexpensive furnishings in color will blend with the rugs, curtains, towels you may already have.

When you buy a Church Toilet Seat, Bathroom Chair, or Stool, you can rely on it to be a lasting improvement for tidiness and neatness. It will last as long as your bathroom and will not chip, break, crack or lose its original, lustrous newness.

Write for the illustrated folio which we have prepared. It shows you different ways of quickly modernizing your bathroom, at little cost. C. F. Church Manufacturing Company, Dept. H-4, Holyoke, Massachusetts.

Your Individuality in the Design

(Continued from page 114)

You who love fine coffee will be interested in this advertisement

No drink has ever pleased Americans like good coffee. Yet, thousands of people who love coffee do not drink it because they fear it will keep them awake.

Now, all can enjoy it. . . . Kellogg's Kaffee Hag Coffee is a delicious blend of the world's finest coffees—with the caffeine removed. And so skillfully is this done that not one bit of the wonderful coffee flavor and aroma is lost! How much better than cheerless substitutes! You can enjoy Kaffee Hag Coffee at midnight. It will never affect your nerves or keep you awake. Kaffee Hag Coffee is the original caffeine-free coffee. And now, after years of continuous experiment, the blend has been wonderfully improved. There is no finer coffee on the market. A new method of packing brings every pound fresh and mellow to your kitchen. The coffee is sealed in vacuum tins when it leaves the roasters. Will you try it? Isn't there someone in your home who loves coffee but fears to drink it at night? Give him Kaffee Hag Coffee. Two cups, three—as many as he wants. Make it just as he loves it. It will keep them awake.

It will be found convenient to mark the negative into sections, placing the matching lines on the negative for the guidance of the worker in enlarging. If each strip is intended to cover a forty inch width on the wall, the matching lines on the negative should include a thirty-nine inch width. For the guidance of the worker in enlarging, the matching lines on the negative should include a thirty-nine inch width. For the guidance of the worker in enlarging, the matching lines on the negative should include a thirty-nine inch width. For the guidance of the worker in enlarging, the matching lines on the negative should include a thirty-nine inch width.

Better that they could, perhaps, but that is asking too much. The result is that architects specializing in the design of private houses have not progressed in proportion to their ability. Although the modern movement has brought about a demand on the part of the people generally for modern theatres, modern office buildings, modern schools and even modern shops, a modern house is as rare as a snowflake in June. Why? Our social conditions have changed as much as have our economic ideas. It is natural that the solution of a modern problem, logically arrived at, will result in the development of original (modern, if you will) ideas. Wherever this theory has been put in practice it has produced designs of buildings which stand out as characteristic of those times. But the sad part of it is that it has been so seldom applied to the design of a private house. There are very few exceptions, but these exceptions prove the value of the doctrine.

We might adapt an old proverb to the subject: Be true to yourself, and your architect will be true to you. Architecture is based on individuality and character. The architect is an artist, but, unlike the artist who paints pictures, his works of art are guided by certain fixed conditions. His client's character is his inspiration; his client's individuality stipulates certain conditions which must be met. Give him every opportunity to study your character and every occasion to understand your individuality, and the resulting work of art will be better able to express his aesthetic taste and more fully satisfy your practical needs.

WALL PAPER which cheerfully mirrors this colorful age serves as the smartest of backgrounds—if chosen from these lovely "Designs of Today" by Thibaut. Typically modern—yet restrained in design and color as the background for your furnishings should be—these papers are always in perfect taste. And a decided economy too, for not only are they very modestly priced, they are so skilfully printed they are light proof, they cannot fade. Sketched above is "Spring Bouquet"—as dainty as the room it adorns—which may be had for $1.10 the single roll. No doubt your decorator can show Thibaut "Designs of Today" to you. Or, if you prefer, we will gladly send you specimen cuttings free of charge, as well as a helpful booklet, "Wall Paper Designs of Today."

Address Richard E. Thibaut, Inc., 24 West 40th Street, New York.
Bring Spring time indoors with decorative Ret-Rac Rugs

NEW colorful rugs will do so much to freshen up your home for Spring and Summer! Ret-Rac has sets and rugs in lovely pastel colors for bedrooms, bath room and sun parlor... others that are appropriate to take the place of heavy Winter rugs in living rooms and dining rooms and are perfect for every room in a Summer cottage... All Ret-Rac Rugs and Sets may be sent to the laundry again and again. They'll come back with their colors undimmed and with their soft deep pile even fluffier than ever. They never shrink, won't slip or buckle on the floor— the pile can't ravel or work out.

Ret-Rac Sets in all-cotton for bath rooms include rug, mat, lid and stool covers. Car-Tex Rugs have rayon motifs on a cotton field. The Diana Rugs are all rayon. New this year— Car-Shah Rugs with an all-wool pile! The wool used in the pile is the highest grade that can be obtained. They wash the same as other grades of Ret-Rac Rugs and also guaranteed fast to washing and light.

The beauty and high quality of the materials in Ret-Rac Rugs and Sets account for their use in many luxurious hotels as well as in homes. If you do not find the type and size of Ret-Rac Rug you want, write us at Chattanooga for name of nearest dealer and descriptive booklet.

Let Spring come in--
keep insects out with
HIGGIN Screens

Illustration above shows Higgin horizontal sliding screen. At side, Higgin side hinged screen.

Can you open your windows to Springtime -- can you let all the fresh breezes and warm sunlight pour freely into your home ... and be sure that not an insect can get in?

FREE passage to light and air, protection against insects ... that's what you want of screens. Some screens will keep insects out temporarily. So will boards nailed across the window. But ordinary screens, with their wide, unsightly frames and coarse mesh will keep a lot of light and air out, too.

Higgin All-Metal Screens . . . Rolling, Swinging or Sliding . . . give you absolute protection, together with maximum unobstructed window area. Their slender, neat frames are usually narrower than the window frames themselves. Their fine bronze mesh invites the light to enter. While they lend an atmosphere of distinction to the aperture they fit, they are almost invisible.

And yet they are strong! So strong that they can not warp, break or twist. So durable that, with a minimum of attention they will never need to be replaced.

Call the Higgin Specialist in your locality. He can prescribe exactly the correct screen for every window, door or porch in your house. If you can't find his name in the phone book, write us.

THE HIGGIN MANUFACTURING COMPANY

A delightfully friendly occasion—tea ... apparently so careless and convivial, yet really so thoughtfully planned by the hostess.

On the many-decked tea basket . . . crisp canapes of some savory, perhaps; delicate sandwiches of cress—of olives—of cucumbers—of cucumbers—of strawberries, raspberries or currant jelly. Somewhere in the background of these smart teas—or equally smart suppers—you'll find the Heinz preserves and jellies. Because the hostess finds their flavor and goodness so in keeping with the other delightful foods she serve.

H. J. HEINZ COMPANY • PITTSBURGH, PA.

The Heinz label on any jar or bottle is the sure promise of flavor inside—flavor in its happiest form!

Photographic Murals (Continued from page 156)

is an overlap that permits trimming for accurate matching of the edges when hanging the prints. Photographic wall paper is hung in much the same manner as ordinary wall paper, but due to the difference in the kind of paper and the lapping, a few precautions must be followed. Let us assume a wall space 120 inches broad to be covered. First, size the walls with any good wall size. The picture as delivered to the paper hanger will be in three strips, each forty inches wide. On the extreme right and left edges matching lines will be found. The width of picture space between these lines will be thirty-nine inches. The print to fill the extreme left side of the wall calls for attention first. It is trimmed on the left matching line and then ½ an inch to the right of the right matching line. This narrow strip is the overlap. This overlap is then carefully skived with sand paper on the wrong side. This step is very important as it depends most points and good adhesion. Do not pare the edge too thin, that is, right down to the enamel, for curling will result when the print is hung. Both edges of the lap should be skived.

Now that accurate trimming and skiving are done, the print is wetted in a tank or thoroughly sponged on the reverse side. Photographic wall paper is hung wet. After soaking, it will be found that the paper has stretched. The distance between the matching lines has increased from thirty-nine inches to slightly over forty. Surplus water is wiped from the back of the print just prior to coating with any good wall paper paste. The print is then hung and rubbed down with a set sponge. The next strip is trimmed and treated in the same manner. The extreme left edge, trimmed on the matching line, is accurately placed over the narrow lap strip and flush with the matching line on the right hand edge of the strip already hung. This if properly done, means that the subject will match correctly.

Photographic wall paper naturally does not compare in price with the cheaper grade of wall paper. However, it does compare with other mural decorations involving original thought and execution. A developing and printing establishment which has had considerable experience in making photographic murals finds that a minimum price of 80 cents a square foot should cover the cost of the enlarging process. Ordinary wall paper rolls contain about 32 square feet. Photographic wall paper then averages about $25 per roll.

Developments in Home Equipment (Continued from page 146)

their factory chimneys polished, the mortar is no longer tediously chipped from between the bricks. Nowadays they employ a special product to keep out moisture and frost. It is of equal value to the householder. This is a cement that, unlike the Portland variety or the terrilified material desired in, is specially adapted for painting, weather- and waterproofing parapet walls and tile roofs, also for filling cracks in terra cotta, tile, brick, stone, cement and stucco. Its frost-resistant quality and its ability to adhere and grip all materials give it many uses about the house. Berries have a man go outside their house. If these walls make interiors damp and chill, and cracks have a very costly way of growing bigger.

FOR the use of invalids a miniature incline elevator has been brought out which may be placed in the straight-run stairway of the home. The equipment releases an invalid from confinement to a single floor, making life for the shut-in far pleasanter. It also serves as a labor-saving means for transporting heavy or bulky loads upstairs or down.

The carriage consists of a sturdy platform and two sets of guide rails which are mounted along one side of the wall. Customary use of the stairway is not restricted. The carriage is directly controlled by push button switches placed within easy reach on the carriage proper and at the top and bottom of the stairs. Operating electrically at a nominal cost, the fractional horse-power motor can usually be accommodated on the existing house meter. The machinery, none of which is in view, may be located beneath the stairway or in the cellar. Carriages are supplied on a roller truck running within a specially constructed rail which is mounted along one side of the stair. Giving a home all the advantages of an elevator at a fraction of the cost, this device may be installed without cutting up or facing the residence. Carriages are furnished in oak, walnut and mahogany finishes. A miniature elevator of comparatively low cost and simple installation is available for homes of medium size, No overhead construction is used; automatic stops and full safety provisions are provided.

EVERY home has its quota of drawers that will neither open nor close easily. They stick and jam and require such coaxing, tugging and pulling that not infrequently their contents are spilled upon the floor. A ball bearing gadget is made that ensures easy operation of heavily loaded drawers, provided they are three or more inches deep.

It consists of a track screwed to the casing, two rollers which are attached to the side of the drawer, a second track which moves with the drawer and upon the upper surface of which the rollers rest or travel, and a housing containing six ball bearings that operate between the two tracks, carrying the weight from the moving track to the stationary track on the casing. Each side of the drawer is so equipped. Rubber insulated stops prevent the drawer from rolling or being pulled entirely out of the case, although it can be quite easily removed when necessary.

YOU READ HOUSE & GARDEN
but do you really use it?

Rightly read, intelligently used, House & Garden is a practical money-saver for everybody who has taste and a house.

If you are about to build, it shows you every good type of house, large or small, with floor plans which you can use or modify for your own dwelling.

If you are about to decorate, it shows you the most distinguished work of the best decorators, which you can follow in inspiration if not in actual fact. It gives color schemes, reproduces buyable furniture, wall-coverings, fabrics.

If you are about to garden, House & Garden’s Gardener’s Calendar, planting tables, landscape photographs, expert articles on new types and varieties, are the best gardening guide published.

House & Garden’s advice applies equally to the estate owner, and to the suburban dweller...to the duplex apartment, and the made-over farm-house...every issue contains answers to the problems of each, and inspiration for all.

In This Very Issue:

If you are about to build:
see how to adapt foreign architectural ideas from Brittany, Normandy, England, to the American house, pages 108-109...how to put your own individuality into a house, pages 114-115...see the two charming small houses, for North and South, pages 106-107 and 110-111...and the built-in modern conveniences and decorations, page 96. House mistakes are horribly costly...let House & Garden save you from them.

If you are about to decorate:
see our editorial scoop on the new photographic murals, which can be used as wall-coverings, or less expensively as over-mantels or overdoors, pages 70-75...the new modern metal furniture, pages 82-83...Miss Gheen’s rearrangement of furniture to give the illusion of added space, pages 86-87...the large portfolio of decorators’ own homes, pages 89-95...the furniture and fabrics pages, 118-121.

If you are about to garden:
see how to use natural backgrounds, pages 77-79...how to grow grandmother’s hardy plants, pages 80-81...our own “rogue’s gallery” of insect pests, pages 100-101...plants that will thrive in shady corners, pages 102-103...how to make an artificial lake for as little as $200...and the Gardener’s Calendar, page 122, which saves more time and money than the cost of a magazine subscription a hundred times over.

Every issue of House & Garden is just as practical as this one...every one of them can save you money and add charm to your house. The whole magazine is a “how-to” book for the house-dweller...put it to work for you today!

Start your decoration with a floor of your own design

Linosets and Linostrips... newest effects in Armstrong's Linoleum... now permit you to fashion your own floors

Planning distinctive rooms? Then start your decoration with a floor of your own creation. It's fascinating! Just let your own good taste dictate the design. Let your own likes decide the colors. Easily, economically, the floor you have fashioned will be laid in your home—custom-tailored by experts in less than a day's time.

This new freedom in floor style has been made possible by the latest contribution of Armstrong artists—the new Linosets and Linostrips. Just a word about them. Linosets are special figured inserts—stars, ships, shields, and heraldry effects—that can be quickly laid at your order in any linoleum floor. Linostrips are feature borders of plain linoleum, made in a number of colors and widths, to be combined at your will.

Just as the Armstrong Floor in the dining-room illustrated has been created expressly for that one room, so can you have in your home floors of individual design. Here a five-point star Linoset has been centered in a plain terra cotta field. Framing it in delightful color contrast is a three-toned Linostrip border.

You can create this same effect in entirely different colors, or plan a floor that is totally different in design as well as color. The field can be plain or patterned, selected from any of the scores of standard effects in Armstrong's Linoleum. You can make the border narrow or wide, single strip or many strips, as you will. Even the Linosets, themselves of totally new design, may be inserted in many original ways to carry out your own ideas of what you want your floors to be.

Before you decorate another room, please see this latest floor fashion in Armstrong's Linoleum that decorators and architects are enthusiastically using in the country's finest homes. Local linoleum, department, or furniture store merchants will gladly help you fashion your own floors. Or, if you wish, write to our Bureau of Interior Decoration. You will receive, free of charge, expert suggestions for making your floors a distinctive part of each room picture.

Free Service Explained in New Book. "New Ideas in Home Decoration," by Hazel Dell Brown, decorator, tells you how you may get this free service, illustrates different types of rooms, reveals a simple yet effective plan to follow when you decorate.

If you want your rooms to reflect your own original good taste, let this book and our Bureau help you. Just send 10¢ to cover mailing. (Canada, 20¢.) Address your request to Armstrong Cork Company, Floor Division, 928 Mulberry Street, Lancaster, Pennsylvania.

Armstrong's Linoleum Floors for every room in the house

One of many original border effects you can now fashion with Armstrong's new Linostrips. Colors, from left to right, are Nos. 21, 22 and 42.

Originally in this dining-room is due largely to the distinctive design of the floor with its special Linoset star and Linostrip feature border (colors 45, 49 and 41). Field is plain linoleum No. 25. Two other new Linoset motifs are shown at right and left, Nos. 1 and 5.
For Your New Home—or the Old One

... new beauty with life-long economy

If you build your own home or if you plan to buy one in some real estate development... or if you have a home growing old that you would like to modernize... consider the value of WEATHERBEST Stained Shingles. No other building material, especially for sidewalls, offers so much charm of color with durability that means life-long economy. Then, too, the first cost is lower than you pay for ordinary sidewall material.

WEATHERBEST Stained Shingles should not be compared with shingles stained on the job, painted or bundle-dipped. There is special value in WEATHERBEST 100% edge grain shingles treated by the WEATHERBEST process of staining. Your guarantee is expressed in this eighteen-year-old WEATHERBEST policy: "Not to cheapen materials or process to meet price competition."

A Portfolio of Photogravures in natural colors has been prepared to show special treatments like that above as well as the results secured with regular grades of 16, 18, and 24-in. shingles stained in a choice of twenty shades for sidewalls and roofs. Send 10c to cover postage and handling and Color Chart. Address WEATHERBEST STAINED SHINGLE Co., Inc., 551 Island St., North Tonawanda, N. Y. Plants: North Tonawanda—Cleveland—St. Paul Distributing Warehouses in Leading Centers.

WEATHERBEST STAINED SHINGLE Co., Inc.
551 Island St., North Tonawanda, N. Y.
Enclosed is 10c (stamps or coin) to cover postage and handling.
☐ Please send WEATHERBEST Color Chart and Portfolio of Photogravures showing WEATHERBEST Homes in full colors.
☐ Also enclose booklet on Modernizing and Reshingling old homes, and pamphlet showing prize-winning homes.

REAL HOME INSULATION

UNITED STATES MINERAL WOOL
"The Perfect Insulator"
cold-proof, heat-proof, fire-proof,
sond-proof, erosion-proof

Proper insulation reduces the upkeep of any home. Mineral Wool placed in the walls, floors and rafters of a building assures your round saving and increased comfort. It keeps out winter cold and summer heat, sound-deadens rooms and reduces fire hazard. The saving in winter fuel will quickly cover installation cost and that saving continues year after year as long as the building stands. Mineral Wool is sanitary, indestructible and entirely mineral. It is easily applied and inexpensive.

FREE sample and booklet sent on request.

UNITED STATES MINERAL WOOL COMPANY
Dept. D, 200 Madison Avenue, New York
Western Connection: Columbia Mineral Wool Co., South Milwaukee, Wis.

How do you keep your floors so beautiful in just . . .

30 minutes a month

NOW it's easy to keep floors lovely in a few minutes a month—without messy upset—and with less work than sweeping. Give them instant double lustre that will last for weeks and weeks with one application of Old English Wax.

Every floor can be made to glisten with a wonderful shine, so utterly hard that it is impervious to scratches, heel-marks, and children's rompings. Only Old English Wax can give such a surface because it contains the highest percentage of the finest imported Carnauba Wax.

That's why it brings beauty to any floor, whether it is waxed, varnished, shellacked or painted. Be sure and get the genuine Old English Wax if you want the best results. Sold at hardware, paint, drug, grocery, department stores. Made by The A. S. Boyle Co., Cincinnati, O., U. S. A.

H. T. WEL-CLO
Where comfort means health

An uncomfortable closet seat in a measure endangers the health of the individual. Muscles and organs of elimination do not relax properly, hence do not function thoroughly and a constipated condition follows. In designing the Improved Quiet Si-wel-clo fundamental health laws were closely observed—bowel and seat were curved and molded to assist the digestive tract just as nature requires. So now the Si-wel-clo combines sound hygienic features with its other worth while improvements. It can be safely stated that the Si-wel-clo is the most sanitary, comfortable and quiet closet ever devised.

The Quiet Si-wel-clo is one of a large family of plumbing fixtures all bearing the well-known Te-pe-co Trade-Mark. It serves as a guarantee of superior quality.

OUR GUARANTEE—We make but one grade of ware—the best that can be produced—and sell it at reasonable prices. We sell no seconds or calls. Our ware is guaranteed to be equal in quality and durability to any sanitary ware made in the world. The Te-pe-co trade-mark is found on all goods manufactured by us and is your guarantee that you have received that for which you have paid.

See what April brings!

Golden Opportunities for the early gardeners! Beauties galore for the flower lover! Succulent delights for the gourmets! For example, these

12 Distinguished Flower Rarities

A cut flower collection of unusual charm—chosen for quick growth and easy culture to give you a shower of lovely blooms from July to Frost, Sow in late April and early May.

A $4 Value for $3

Seabright Peach Blossom

1 pkt. Blue Lake Flower, a remarkable variety.
1 pkt. Calliaspis Amaranthus, dwarf amaranth.
1 pkt. Celosyia, flesh color.
1 pkt. Japanese Fringed Zinnias, a variety similar to the common Basal Zinnia, a very showy sort.
1 pkt. Heliotrope Oelazlik, a new miniature flower form in Gathered colors on spidered stems.
1 pkt. Giant Yellow Tulip Poppy (Romneya), a glorious new pink petalled poppy

12 JAPANESE LILIES

Lovely children of the Soil! Handsome! Easily Grown—Give Years of Pleasure

A $6 Value for $3

(Choice, head pride Member only)

1 pkt. Lampagars—Pure white, dotted with maroon. Each petal hatched with golden pincher through the entire length.

1 pkt. Magnificum—A lovely amaranth-like, solid color, slightly splashed with deep scarlet spots. Very satisfactory.

1 pkt. Specimen Album—A reliably pure white, striped with purple. Flowering early and September.

100 GLORIOUS GLADIOLUS

A $7 Value for $4

50 Bulbs for $2.25

Chosen Mixture—Including all the latest beautiful varieties such as Glory of Persia, Margaretta, Berliner, and all the finest, latest varieties. At a most remarkable and actual equal in vase to the popular varieties.

1 pkt. Schling's Annual Oriental Poppy, Best Variety with black spots. Fully double, and of the very finest quality.

1 pkt. Schling's Giant Golden Salmon Pink Zinnia, a new variety with handsomely colored flowers on solid stems down to 12 inch tall.

GREEN PEAS (and lots of them) from June to August— if you know your secret.

Instead of planting at 2 or 7 week intervals—plant these six varieties all AT ONCE, just as soon as you can find it out of the ground and get big enough to transplant with ease. Center germination will be much better and result in a much heavier harvest from June to late August.

SHRINCHS "Long Season" Pea Collection

Sure to give you more of all kinds of peas.

Schling's Pea, Pedigree Extra-Early—Bright, full-flavored, tender, Wire-Headed, 25 lbs. in a box. Very early;

Grade 1, or Prosperity-Brilliants, 5 feet, Dine large bunches of fresh peas. Delicious flavor.

Butter's Cushion—Bright, tall as large as Onion, Very early;

Dwarf Champion—Bright, 25 lbs. An enormous ear from one plant. An excellent pea.

Improved Tomahawk—Height, 5 feet, Tame, pods, solid filled, yellow. Of the finest quality;

Lovers of Vitamin—Attention!!

Schling's Pea, Peruvian Summer Sprout will keep your table supplied all summer with this tender and wholesome delicious if you plant this packet early and cut often.

A big 2 oz. packet—enough for a family of 3.

$1.00

MAX SCHLING SEEDSMEN, Inc. New York City

The Garden Scrap Book

GROUNDOILES. Every spring the garden lover who has a lawn lawns up the old moles-trap, earnestly hoping that this season it will succeed in keeping his turf free from the devastating tunnels of this innocent looking pest. Every fall the majority of such optimists dejectedly gaze upon the damage which their best efforts have failed to forestall.

We do not deny that mole-traps, skilfully and steadily used, will shew a lot of moles, but it is our claim that an ordinary garden spike is a much cheaper engine of destruction. Moles carry on their operations quite regularly about eleven o'clock in the morning and again in late afternoon. Approach stealthily at these times and you will see the surface of the ground bunching up as they work their way forward. Advance without even slightly jarring the ground, drive in the corner of the spike an inch or so behind the head of the tunnel, and nine times out of ten you will kill the pest with neatness and dispatch.

EARLY DIGGING. It is a natural temptation to start delving in the soil as soon as the frost is out, but, like many other temptations, you will do well to resist it so far as garden intended for planting this season is concerned. Almost always, at this stage of the year, the soil is soggy and, under the pressure of the spike, is so compacted that, as it dries, it forms more or less hard clods which will be troublesome all through the season.

The wise plan is to postpone all digging until the ground to be worked has lost its early season softness. As a matter of fact, this warning against the digging of saturated ground applies to all seasons of the year, for the reasons set forth.

SPRING PERENNIALS. A rather satisfactory perennial flower can be achieved in a single season if young plants are bought in the spring and set out properly. As compared with seed sowing: this plan is expensive, but it does save time and attention. The plants you buy, of course, are from seed sown last year.

WOD ASHES. If you have been wine and saved the ashes from the winter's wood fires, April is the time to scatter them over the lawn where the rains can carry them down to the grass roots as one of the finest kinds of tonic. Spread them as evenly as you can, and, not too thickly; anything like a mass or small pile of ashes in any one spot is likely to "burn" the grass instead of helping it.

WATERING SEEDINGS. Seedlings of vegetables are so tiny when they first appear above the ground and for several weeks thereafter that after them to water with a fine sprinkling can be done by a fine hose on a bed of Pansies. Each drop as it issues from the can is larger and farther heavier than the plant on which it lands; small wonder that the latter is beaten down, often never to rise again. So, when you water these weet plants, use the finest of sprays. Give them a mist, not a cloudlet—or such a mist as comes from one of the small spraying devices which are operated after the manner of an old-fashioned bicycle pump. And so long enough before sowing to allow the leaves of the seedlings to dry before darkness overtakes them.

TREE FEEDING. Ornamental and shade trees need food quite as much as other plant forms, even after they become large. In some cases they find enough in the natural soil supply to keep them going full tilt, but in many others the available food is depleted after some years and, until it is replenished, the trees suffer.

When such a condition arises, it is not difficult to introduce fresh nourishment by means of numerous holes driven in a considerable soil all around the root area, into which the chosen fertilizer is put. A handful or so to each hole will suffice, a spadeful for large trees, the holden matter mixed in with fresh soil. Special tree foods are made up for this purpose. Lacking these, use ground bone or pulverized mineral meal mixed with an equal bulk of fine soil.

REGLA LILIES. This is one of the very finest garden Lilacs anyone can have—and one of the easiest to manage, its dependability even begins with the soil, which is now obtainable from most of the better-class seed stores all over the country at prices which, considering the high percentage of germination and the merit of the ultimate bulbs, are very reasonable. Regal Lily seeds are best sown in a coldframe during March, though good results in the latitude of New York can be had by sowing in the open ground early in May. In either case, use a light, fairly rich loam that contains plenty of humus and is well steamed. Do not let the seedlings suffer from dryness at any time during the first season. By fall they should be 24 in. to 3 ft. in height, and, after the foliage dies down, should be transplanted into rows 2'^ deep. Here they are well mulched after the ground freezes. In the following autumn they will be ready to go into their permanent places.

TENT CATERPILLARS. Injections last year in many eastern sections were that the destructive tent caterpillar is about to start on a fresh cycle of activity. It has been said that this pest in its maximum of abundance every seven years, tapering up and off from that peak with considerable regularity. Having encountered tent caterpillar come from the past two years, we are probably due for another onslaught.

Much can be done to control tent caterpillars by keeping their eggs clusters during winter and very early spring. At this time, before the leaves start, examine the twigs of Apples, Cherries and Wild Cherries (Continued on page 180)

DR. GEORGE E. STONE
Plant Pathologist
Massachusetts

The Development of Tree Surgery
By F. A. BARTLETT

Trees have been closely associated with the lives of men since earliest history. Literature from ancient writings refers to trees. Egyptian literature and art 3000 years B. C. record the search for trees in distant lands. The Bible has many references to trees and to the pruning of trees. Thus we find that tree care is no new subject. The development has been progressive throughout the ages and is not, as many believe, altogether modern. The treatment of wounds with specific remedies has appeared in horticultural literature for centuries. The oldest record of treatment seems to be recorded in a book by Thomas Lawton published in England in 1640 in which he describes a treatment of a wound by filling the hole with well tempered mortar, which is nothing more than the forerunner of commercial cement. Evelyn, in his famous "Sylva," published in 1664, under the heading "Infirmities of Trees," gives instructions for treating "hollowness" in trees. He recommends "stiff loam and fine clay mingled." William Forsyth, "Gardener to His Majesty The King" about 1790, wrote a very exhaustive treatise of the treatment of wounds in fruit and forest trees. This book was very popular, many editions followed the first, and it was later printed in America. Forsyth was voted an annual grant of 4,000 pounds sterling by the British Parliament for making public his method and the filling which was composed of "fresh cow dung, old lime, wood ashes and sand." His directions for the preparation and use of cements were used for many years. Many fine examples of workmanship were still in evidence during the past century when large holes in trees were filled with remedies which have been known for centuries.

The scientific care of shade trees, however, is a more recent development and too much credit cannot be given to Dr. George E. Stone, for many years plant pathologist of the state of Massachusetts. Dr. Stone carried on extensive experiments in tree preservation and his many bulletins on the subject followed by State Experiment Station publications are still used as authoritative references. Dr. Stone gave extensive courses at the Massachusetts Agricultural College on shade tree care from 1896 to 1915. Many of his former pupils today are outstanding figures in the field of tree surgery. His experiments with concrete or cement led him to carry on studies designed to overcome many of the defects in concrete fillings which every scientist has recognized. Many types of fillers were described and data kept for later reference. From 1900 to 1920 numerous workers went into the field of tree surgery and many types of fillers have been used such as zinc, tin, and copper patches, combinations of asphalt, sand, and asphalt-cement, tar, wood blocks, and wood strips. Cement in one form or another was most generally used, however, although its glaring weaknesses were generally recognized. To quote a few opinions:

"We are convinced that the use of cement in filling cavities in trees is a waste of money and that it is not beneficial to the trees. So many examples have been found where decayed had continued back of the cement, resulting in the loss of the tree, that many eminent arborists and foresters are emphatically opposed to its use." Massachusetts Forestry Association, 26th annual report, Bulletin No. 111.

"There are many theoretical and practical reasons why the use of cement should be discouraged. For the past fifteen years when traveling about the country, primarily on other business, I have made it a point to look over cement-filled cavities wherever I have been and had the time to do so, and check up on their general condition. My method of checking was to count only fillings that had been in place for a few years so as to get some idea of their permanency. Those which showed obvious cracks, chipped cement, severe dying back of the cambium, excessive leakage, or a loose filling were considered defective. Judged on this basis more than 90% of all fillings examined have proved to be defective." J. Franklin Collins, Bureau of Plant Industry, United States Department of Agriculture.

Two and a half centuries ago tree surgery was being successfully practiced. Below is a reproduction of a page from an old book by Forsyth, showing a decaying cavity cleaned out and filled with his newly discovered "composition."

Figs. 2-4. Figs. 5-8. Figs. 9-10. "The principal steps in the correct treatment of cavities are: first, the opening to the wound is outlined so that rapid callus development will be certain to result around the entire margin; second, the decayed tissues are chiseled out sufficiently so as to shape the cavity properly; third, the margin of living tissues is cut to a smooth edge and protected by waterproofing; and then, after draining and reinforcing for mechanical support, a filling is installed. This filling must serve a double purpose; it must act as an artificial bark for this area and as a foundation on which the bark callus may grow from year to year."

Mr. A. F. W. Vick perfected a filling process which has accomplished to a great extent all of the foregoing requirements. The filler is called NuwoD, as it utilizes wood fibre for a base with a magnesium compound for a binder. It is an adaptation of marine decking wherein permanent flexibility and tenacity are component factors. NuwoD has met with the exacting tests of scientists, in a wide variety of trees and under all conditions of temperature and climatic conditions. It is antiseptic, light, durable, and waterproof and has approximately the same co-efficient of expansion as wood. It adheres to the wall of the cavity and becomes, in reality, a part of the tree itself. From experiments conducted at the Bartlett Tree Research Laboratories actual proofs have become evident that this synthetic wood filler not only swells and sways with the tree by virtue of its flexibility, but it encourages a healthier, more rapid growth of new wood than does rigid cement.

The application of various filling materials has had disadvantages owing to the accumulation of salts at the base of the cavities. To offset this the writer perfected a process of protecting the edges of filled cavities with surgeon's tape and a rubberoid material in which is termed a "Heal Collar." This Heal Collar is placed in such a manner as to allow any drip or leakage from the filling to be drained away from the cavity and the cambium. Not alone does this process serve to seal the cavity, but it has an added value in protecting newly cut cambium cells from drying out and promotes continuous growth which, heretofore, has been greatly retarded.

There are many and varied factors entering into the successful treatment of major wounds in trees. It is as difficult and as inadvisable to prescribe any set formula for their treatment as it would be to follow such a procedure in human surgery. "The animal and vegetable kingdoms are complementary to each other. They are to life what the positive and negative poles are to electricity. Man represents one pole; the tree the other, therefore, the most important factor involved besides ourselves is the tree." (C. B. Whitnall.)

In tree surgery and in human surgery, the highest technical skill backed by scientific research is necessary. In neither field can important and vital work be trusted to the amateur.
ROCK GARDEN PLANTS AND DELPHINIUMS

There is no form of gardening quite so captivating to the majority of garden lovers as the rock garden. It is admirably adapted for any size and if given a sunny exposure and good drainage, requires but little care. Scores of rock plants may be grown within a few square yards, and if well-placed varieties are chosen, will thrive happily without trespassing upon the territory of neighboring plants.

We offer a special rock garden collection of 24 varieties particularly suited for this fascinating garden hobby. It includes such popular favorites as, Aubretia Purpurea, Dianthus Caesius, Linaria Hepatica, Muscari Ruginosum, Veronica Teucrium and Veronica Repens, etc., etc.

Price 50c per plant, $5.00 per dozen, $35.00 per 100.

Totty's Delphiniums are the pride of fanciers everywhere. This year they have reached a new peak of perfection. When our twenty-five thousand plants come into bloom their beauty is breath-taking. The infinite varieties and shades of blue would make an enchanting border for your garden.

ROCK GARDEN PLANTS

1 Plant each of 24 varieties—$2.00
2 Plants a garden 2 ft. x 3 ft. —$10.00
3 Plants a garden 4 ft. x 8 ft. —$18.00
4 Plants each of 21 varieties—$12.00

DELPHINIUMS

Five trays, not named but selected in shades of light blue, dark blue, and mauve—$1 each

6 Plants each of 21 varieties—$1.00

“When You Think of ROSES
Think of Totty’s”

MADISON, NEW JERSEY
Motor Lawn Mowers
for modern lawns

Many new and exclusive engineering advancements are responsible for the staunch dependability, superlative performance, long life and economical operation of the new Coldwell Motor Lawn Mowers and Rollers.

Skilled engineers designed these machines to meet the requirements of the modern lawn . . . large and small. Twin-cylinder motors provide ample reserve power for cutting on steep grades and in tough grasses. Elimination of parts requiring adjustment by operator, insure dependable performance free from trouble and repair. Adapted for combined mowing and rolling or for separate rolling only.

The superiority of these machines is definitely and completely established. Reasonable in price.

Let your local Coldwell dealer show you how quickly and economically a Coldwell Motor Lawn Mower will mow your lawn. No obligation for a demonstration. Descriptive literature on request.

COLDWELL LAWN MOWER COMPANY, NEWBURGH, N. Y., U. S. A.

With saw-toothed, knife-edged blades!

ONE look at a pair of Wiss Hedge Shears shows why they cut cleaner, faster, and easier...

You'll see that one blade is serrated or saw-toothed, so that it holds each twig and leaf in place. The other blade is hollow-ground, to an excep-
able place. The other blade is hollow-ground, to an excep-
place. The other blade is hol­
ea>lier...

For a pair of Wiss Hedge Shears, you'll simply cannot slide forward a hedge separately because each twig is held in place by the notchted blade. Branches simply can not slide forward into tough bunches needing heavy man-sized chops.

When you pick up a pair of Wiss Hedge Shears, you'll notice their perfect balance, and the large diameter pivot bolt which gives added strength and holds the blades in exact alignment...

These hedge shears are made by a firm which has manu-
factured the finest quality shears and scissors for over 80 years.

Now wonder they make a boy's job out of what used to be heavy work!

On sale wherever good garden cutlery is sold.

Our Great-Grandmothers' Day
(Continued from page 164)

evil-scented Paeonia officinalis and P. peregrina from Portugal were known. The sweet-scented P. officinalis and the gorgeous bloomed P. officinalis had not yet been sent from China.

It is much the same if we look into the world that one can indulge in things which merely delight the eye. In other words, things necessary to maintain life have first call on civilization; it is only after those are assured that those things which delight the soul can take their proper place in life.

As new and strange plants were brought by curious minded people into gardens a real difficulty arose in the matter of providing them with names. Many of us today are amused at the seriousness the botanists attach to mere names. Sometimes we must wish devoutly that he would coin less tongue-twisting names, but what we suffer at his hands is as nothing com-
pared with what the would be student of plants in the early 18th Century endured. For example, Acer Americanum, falcata major, Acer Professional

every garden; indeed, fruit trees were much more popular than flowering trees and shrubs remain even though they are much more popular than flowering trees and shrubs remain even though they are more popular than flowering trees and shrubs remain evergreen since the first law of nature is to exist. It is only after the struggle to sustain life is reduced to the min-
nered pines...
20 Years Ago
we photographed this woven wood fence...

...and again today!

20 Years Hence
our FRENCH PROVINCIAL FENCE, erected now,
will stand as sturdily!

TWENTY YEARS ago when the heroes of the Spanish American War were still young men—when fire engines shrieked behind the flying hoofs of fast horses—when automobiles were still a doubtful novelty and women scandalized our world with hobble skirts—this woven wood fence was new!

In this span of time the house in the picture has called for many paintings and repairs...the dirt roadway has given way to modern concrete...the little shrubs have grown into towering trees...but the woven wood fence without painting or repairs has remained as sturdy as the day it was erected 20 years ago!...eloquent testimony not only to the lasting beauty but to the ultimate economy of this type of fence.

This FRENCH PROVINCIAL FENCE is made in sections five feet in length, in six heights, 18", 3' 10", 4' 11", 6' 6", 8' and 10', and is imported from France solely by the Robert C. Reeves Co.

When erected by our experienced construction crews, we absolutely GUARANTEE IT FOR FIFTEEN YEARS against the ravages of time and the elements. The photographs above bear out this claim.

In perfect harmony always...above, in a formal garden...at the left, crowning a rugged fieldstone wall.

NAME
ADDRESS
CITY STATE (H-4)
counts remain the early 18th Century gardens of this country must have been delightful spots with their noble trees shading the pathways and beneath them matting simple, friendly blossoms.

Who brought the first exotic flowering plants to this country we know not, but many of them reached the land soon after the first settlers. Indeed, human nature was then much as it is now and we can readily imagine that those journeys to found a new home in a new country would be as anxious to have with them some moments of the motherland. We do know that the Huguenot people, women especially, brought to this land many of the most familiar European flowers, including in all probability the Lillie.

By looking backward and trying to realize the state of geographical knowledge, of commercial intercourse and the social conditions of the 18th Century it is easy to realize that so far as variety went the gardens of that time were poor as compared with the riches of today, yet if one turns the pages of the books written at that period it is obvious that the love of flowers and the appreciation of the garden was as deep and as wholesome then as now. There were fewer—ten thousand times fewer—people who could afford the pleasures of a garden in the early part of the 18th Century, but among those fortunate enough to have one the love for it and its plants was evidently just as deep as among the greatest devotees of today. Not one of us would love our garden or our plants more than did Parkinson, Gerarde, Peter Collinson and other ancient worthies; moreover, none could give more wholehearted service to their welfare than did old Phillip Miller. Read what Gerarde writes about his Crown Imperial, his Lilies and his Primroses and it will almost cause us to blush with shame when we think how little width we are apt to attribute to them these days.

We shall, however, find that to ten thousand gardens today, and one in the early 18th Century, may their number continue to increase and may we foster the love and appreciation of flowers and from them reap the delight that characterized our forefathers.

For the benefit of those interested in the restoration of Mid-18th Century plants the following list of a couple of hundred or so which were available for gardens of that period may be of value.

**HIBERNACEOUS PLANTS**

- Achillia milflolia—Milkfoil
- Aconitum napellus—Aconite
- Althaea rosea—Hollyhock
- Amaranthus caudatus—Love-lies-bleeding
- Anchusa officinalis—Alkanet
- Asnunnrhepatica—Hepatica
- Asnunnrutpalustris—Pasque Flower
- Astragalus vulgaris—Chamomile
- Astrantia major—Snaption
- Astragalus mexicanus—Pickle Poppy
- Armeria vulgaris—Thrift
- Afternoon-anemone—New England Bell
- Arnottii perennis—Daisy

**SOIL CONDITION**

The foundation of all garden success is the condition of the soil.

Soil condition is the most important element in a garden. Admittedly, flowers now grow in your garden; but no plant will produce its maximum beauty and luxury unless the mechanical condition of the soil is such that it gives decided stimulation to root development. It is soil condition more than fertilizers that stimulates root action.

Let's demonstrate.

We'll start with clay. Water runs off as it does from a duck's back. It becomes muck. No absorption; no aeration; no holding power for the precious water which plants must have in just the right volume. Clay is too tight and compact.

Take sand. Again no holding power, because of excess drainage. Water and food leach rapidly away, are wasted.

But if you mixed sand and clay you would still lack the most important element—organic matter—humus. And this would not be enough. Clay and sand will have to be mixed with humus which must be kept in the soil at all times.

Pioneer GPM Peat Moss is the only consistently reliable source of supply for this soil improvement. Be sure to specify it. Insist upon seeing the triangle A GPM trade mark. Brochure telling all about soil and its needs, gladly sent FREE on request. Sample (trial) package for experimental purposes $1.50 Postpaid.
3¼ million dollar Davey tree-saving business in 1929

N\otwithstanding this large volume of business, 73.5\% of clients pay less than $100.00 each for the service of internationally famous Davey Tree Surgeons. You might wonder why it is possible to secure this reliable, expert service at so low an average cost.

In the first place, Davey men are really local to you. They are thoroughly trained in Ohio and are then sent out to live in the many localities where Davey clients are served. They are easily available for large or small operations.

In the second place, nearly all Davey men are motor equipped and can go quickly from one operation to another in the sections where they live. The element of lost time is negligible.

In the next place, Davey Tree Surgeons know what to do. They do not waste any time in guessing or in experimenting. Not only are they real experts in actual performance, but they are specially trained in the all-important matter of diagnosis.

And last, but by no means least, Davey men are workers. No one is permitted to remain in the Davey organization unless he works diligently and honestly. You can trust Davey Tree Surgeons.

Send for nearest Davey representative to make a careful examination of your priceless trees without obligation. Write or wire Kent, Ohio, or telephone nearest branch office.

Tune in Davey Tree Golden Anniversary Radio Hour

Every Sunday afternoon, 5 to 6 Eastern time; 4 to 5 Central time; over the Red Network National Broadcasting Company. Featuring the old-time songs that everyone knows and loves. Listen to Chandler Goldthwaite on the Skinner Residence Organ.

THE DAVEY TREE EXPERT CO., INC., 383 City Bank Bldg., Kent, Ohio

Martin L. Davey, President and General Manager

When you get this Goodyear Emerald Cord Hose, you are getting a garden hose that, with the proper care, should still be sprinkling in 1940—and perhaps when the twentieth century is 50 years old.

Never before has such a garden hose been built. Goodyear engineers designed it without any limitation on costs—to make a garden hose as fine as the greatest rubber laboratories in the world could make it.

It is encased with stout, thick rubber, reinforced by broad flat ribs which help to keep it kinkless. It is built with a body of double-double cord — another Goodyear feature.

Even its color has been carefully considered — and it is green — to make it fit unobtrusively into beauty of lawns or gardens.

Ask your dealer for it by name—Goodyear Emerald Cord. It costs only a few cents more than ordinary hose—and its long years of leak-free service make it a true economy. Lengths up to 500 feet, 58", 34", and 1" capacities. Start the new season with this "ten-year hose".

GUARD

HERE is the way one family solved the problem caused by the ever-increasing throng of motor cars.

And you can easily create the same peaceful seclusion, and safety for your children by using this artistic fence to enclose your garden or lawn, or surround your estate.

With Dubois you can gain privacy immediately, and economically,—a welcome advantage over a hedge which takes time to grow, or a solid wall, which is costly to build.

Dubois never requires painting or other upkeep expense. Its quality and construction give a lifetime of service. Its quaint, rustic beauty is a perpetual source of delight, and it will increase the value of your property.

Dubois is being used in hundreds of ways all over the country. Besides serving as a wonderful boundary fence, it makes the ideal screen for laundry yards, garages, or any unsightly view.

Only genuine Dubois is made by hand in France of live-cut seasoned chestnut, heat-treated to prevent warping, and bound with rustproof Copperweld wire. Comes ready to erect in sections 5 feet wide, and in five heights: 3'10", 4'11", 6'6", 8' and 10'. Write today for the beautifully illustrated Dubois booklet, containing full description and prices.

Be sure to order DUBOIS by name—
Each section is branded for Year Protection
The Chestnut saplings in genuine Dubois are aged and scientifically heat-treated before being used. This process prevents warping or bending, and is your assurance of long years of service. The first Dubois fencing brought to this country was erected at Westbury, Long Island, in 1901, and is still in perfect condition.

C O U P O N

I am interested in Dubois for:

- boundary
- laundry yard

Garden Equipment as Lovely as your Garden

Summer is just beyond! Soon you will be hours in your garden. To make them more enjoyable than ever before place a few pieces of Hartmann-Sanders garden equipment at certain vantage points in your garden landscape.

Think of the added pleasure provided by the simple addition of a garden house, a rose arbor, trellis or pergola. The cost is far outweighed by the increased beauty they bring your garden scheme.

We can supply you with whatever equipment you desire both in features on hand and others of your own liking, as our designers are yours without cost.

A BOOKLET OF PEGOLAS AND.GARDEN HOUSES WILL BE SENT UPON REQUEST

We have published a large, profusely illustrated booklet which offers countless suggestions to those who seek distinction in their home surroundings. It shows page after page of beautiful pergolas, garden houses, ornamental fences, garden entrances, seats, rose arbors, trellises, columns and garden accessories of all kinds.

For the booklet, send 30 cents to HARTMANN-SANDERS COMPANY Factory and Showroom: 2165 Elston Avenue, Chicago Eastern Office and Showroom: Dept. D, 6 E. 39th Street, New York City

Rubber Tired Wheels
For America's Favorite
POWER LAWN MOWER

These practical rubber-tired wheels are the latest engineering refinement in power mowers. Like the tires on a truck, they reduce vibration and the shock of traversing over hard surfaced roadways, graveled paths or when one wheel is traveling on the walk in mowing. Rubber tires give more quiet, smooth operation and definitely prolong the life of the mower.

The JACOBSEN 4-Acre Mower Has Many Distinctive Features

Many years successful performance have given the Jacobsen 4-Acre, Heavy-Duty Mower a reputation for proved dependability. The cut-gear drive running in oil, auto-type differential, separate clutch control of traction and cutting unit, self sharpening reel, specially-built powerful motor, give the Jacobsen superior performance and low upkeep cost. A model for every lawn.

The Sickle-Bar Clipping Attachment, an exclusive Jacobsen feature, gets dandelions, buckhorn, plantain and other lawn pests before they go to seed. The Sickle-Bar Clipping Attachment, an Enclosed Gear Drive, runs in oil, auto-type differential, separate clutch control of traction and cutting unit, self sharpening reel, specially-built powerful motor, give the Jacobsen superior performance and low upkeep cost. A model for every lawn.

To Redeem A Shady Corner
(Continued from page 165)

Corydalis lutea is a small, delicate, yellow-flowered plant which is said to bloom in April or May according to locality. The flowers are white tinged with rose and, quite surprisingly, have a strong fragrance much like that of Hyacinths. If you grow two or three little woodlanders mark their position well, for the foliage dies down after they have blossomed, as is the case with many of their relatives, and they stand in danger of being rooted out and destroyed while they sleep.

And now we come to Corydalis. It is impossible not to have favorites among our garden inhabitants. Certain flower families appeal to me very strongly—Narcissus, Dianthus, Primula, Papaver—and—all the list of my love is too long, but Corydalis has been among them for many years. Always I am on the lookout for a new member of this family and never yet have I been disappointed in any of them. Not at all showy, but quite undeniably they have charm and a certain very winsome quality which endears them to us. All of them have the beautiful Fern-like foliage which is their chief claim to distinction, and the flowers for the most part are yellow, though there are some with white or rose-purple blossoms. Most of them will grow where it is not only shady but dry, which is often a great accommodation, and certain ones are unsurpassed for growing in walls. Many of them are quite easily raised from seed.

The first I met with was the little yellow Fumitory, Corydalis lutea, which I saw completely veiling an old wall at Mr. William Robinson's place, Gravetye, in Sussex. I brought a few seeds from this lovely garden and the progeny of these seeds have spread far and wide in this country. Immense numbers of people have had seeds from my plants, for Corydalis lutea is a generous seeder, and in districts where it is not reliably hardy may be counted upon to persist through self-sowing. Later I had from the Floraria Nurseries in Switzerland the seeds of the white-flowered form and that is now established in my garden, but it is less effective and somewhat more delicate than the yellow Fumitory. To gather the seeds one must be very quick for they are no sooner ripe than they pop open and scatter widely. It is well to sow them just before they begin to turn yellow and to allow them to ripen in an envelope. Corydalis lutea is not a plant to trust among other flowers. It is, what I once heard it called, "unreproachable"; it takes all the space and everyone to trust among choice treasures. The next member of the family I met with was Corydalis chelidonii. This species hails from central China. It forms great rosettes of very beautiful dark fern-like foliage from the center of which arise in April spikes of bright yellow flowers. It makes a pleasant picture grown among rocks with Scilla and Viola and Bloodroot springing up about it. My plants have seeded themselves impartially in sun and shade but the foliage is always more luxuriant in shaded places. Miss Jekyll notes its resemblance to a Fern, a Chelidonium, and says of it, "it is a wayward plant, for one puts it in one place and though the original plant..." (Continued on page 175)
Smother Lawns—Better Sod
—and lower costs!

For the average sized lawn there is no more suitable machine than the Ideal "227" illustrated below. Easily operated, it cuts and rolls 3 to 4 acres per day, equaling the work of several men with hand mowers. The heavy roller smooths out little bumps and hollows, and develops a thicker, healthier sod. There is an Ideal Mower for every cutting need. Write today for illustrated brochure showing Ideals in action on the finest estates of this continent.

WILSON'S O. K. PLANT SPRAY

KEEP your plants, flowers and shrubs free from bugs ... spray them frequently with Wilson's O. K. Plant Spray, the recognized standard insecticide that kills all the common flower and garden insects. Wilson's O. K. Plant Spray is highly effective yet clean, non-poisonous and easy to apply. Order a supply to-day!

Recommended by the Officers of The Garden Club of America.

1 quart $1.00 1 gallon $6.00

Wilson's WEED KILLER is the answer to those obnoxious weeds, poison ivy, etc., ... simply dilute with water and sprinkle, ... 1 gallon $2.00, 5 gallons $12.00, 20 gallons $50.00.

Wilson's RHODY-LIFE is a wonderful soil sterilant (not a fertilizer) for making the soil acid or ideal for growing rhododendrons, azaleas, laurels, rhododendrons, evergreens, and other acid-loving plants. Wilson's RHODY-LIFE may be applied at any time of the year . . . 100 pounds $14.00, 250 pounds $35.00, 1000 pounds $125.00.

"Insects and Their Control" is the title of a new book by Andrew Wilson illustrating the various insects and giving directions for their control. Price $2.50 postpaid.

ANDREW WILSON
SPRINGFIELD
DEPT. H4
NEW JERSEY
What a pleasure it is to live in the privacy of fence-protected grounds, secure from prying curiosity and unwelcome intrusion. Shrubbery, vines and bushes afford seclusion, but give little protection from strays.

Pittsburgh Chain-Link Fence offers protection as well as privacy. A substantial barrier against invasion of privacy, it is, at the same time, an attractive addition to the home landscape.

Scientifically designed to withstand the abuses of everyday happenings, Pittsburgh Chain-Link Fence will always retain its shape and attractive appearance.

Pittsburgh Chain-Link Fence can be erected quickly without unduly messing up the grounds, and at a moderate cost. Erectors are always available. Write for descriptive literature.

---

**Making Artificial Lakes**

(Continued from page 109)

At some places the shore will steal gently away from the level of the water, and at others it will rise suddenly, abruptly. Rocks and stones covered with forms and mosses will here and there jut out from the banks, or lie along the margin of the water. All will blend together, forming an harmonious whole. Never, therefore, may the banks of the lake be walled up with stones to a hard, uniform line and height. Nor may they be retained with pilings or staves. The banks must be such that the natural plants, whether of grass, trees, or shrubs, may approach the water as nearly as such growths would in nature. Grasses must trail in the water, shrubs drop over it, trees cast their shadows upon it.

Bridges, wharves, boat houses and such things may be introduced, of course. They are formal features, as such they will inevitably detract somewhat from the pure naturalness of the lake itself. But if they do not dominate the scene, if they are logical continuations of walks, axes or vistas, if they are a part of the circulation system of the whole landscape scheme, they are perfectly fitting and proper.

Generally speaking, the fewer of such features the better.

With the view of creating a purely natural feature, let us suppose that the landscape scheme such a lake may most appropriately be placed. "If the locality does not convey the impression that the water is resting in a hollow, and is retained there by a natural obstruction not easily removed, there will be a 'want of truth or fidelity' of expression in relation to the lake as it is imagined that will tend to excite aversion rather than pleasure in the minds of those who have a natural taste in these matters," so wrote Mr. Smith.

By which he meant that a lake should occupy a natural depression in the land, preferably below the point from which it will habitually be seen. A mere dip in a hillside won't do, for a large body of water on a hillside always looks precarious.

**THE BEST SITE**

Our best site is a natural depression below the level of the house or garden from which the principal view of it is to be had. In flat land which is naturally dry we will have difficulty in making a lake seem at home, as well as difficulty in making it hold water. Usually if one is located in such country one had best be content with a formal garden pool of concrete or masonry, and attempt no large or artificial water feature. If there is a natural stream of any size running through the property our site will be somewhere along its course, for it will supply us with both the requisites for the formation of an artificial lake—namely, a sufficient supply of water and a suitable site. Many sites of similar family embedded in the ground. The timber wier has the unique advantage of being adjustable to various heights of water, but the disadvantage that, when regulated to a small overflow, there may come a sudden flood when, if the boards are not removed in time, will prove disastrous. It is always wise to provide (Continued on page 176)
The Sensational Gold Medal Rose of the Year

CHAPLIN’S PINK CLIMBER

UNQUESTIONABLY the most important acquisition in climbing Roses since the introduction of Dr. Van Fleet and Paul’s Scarlet Climber, universally recognized as the most popular climbing Roses. A cross between Paul’s Scarlet and American Pillar, it is of strong growth, perfectly hardy, producing its large flowers, similar in size and form to Paul’s Scarlet, profusely in strong trusses of from 8 to 12 flowers each, but in color a rich lively pink. Awarded the much coveted Gold Medal of the National Rose Society of England in 1928.

Strong two-year-old plants, $2.50 each

The Dreer Garden Book

presents what is unquestionably the greatest collection of choicest Rose novelties ever offered in our 92 years of doing business. Nineteen pages of it are devoted to Roses, sixteen of them portray Roses in natural colors. Besides, it offers the best on file in Seeds, Bulbs, Plants, Dahlias, etc. Free for the asking and please mention this publication.

A Milbradt Power Lawn Mower for every kind of lawn

THERE are four types, suitable for different kinds and sizes of lawns—from 1-2 acre up to the largest estates.

MILBRADT Power Lawn Mowers are simply but sturdily constructed, operate easily, trim closely around trees, shrubbery and flower beds. The Wide Roller type gives the Lawn a gentle rolling, keeping it smooth and velvety.

Hardy Chrysanthemums

Queens of the Autumn Garden

Here are four of the earliest Hardy Chrysanthemums we have ever grown. From early September into November their bright colors liven the dullest garden.

Barbara Cumming. Clear yellow, shading to orange-brown. More than 3 inches across.

Gypsy Girl. Chestnut-crimson. Good in both garden and for cutting.

Ruth Hatton. Ivory-white; the best in this color.

October Girl. Clear rose-pink, shading to lavender-pink when fully open.

Twelve plants (48 total) of each for $17.50

Single plants 50 cts. each.

Three plants of each variety $5

Twelve plants of one variety $5

Two New Violas, the lovely Gypsophila Bristol Fairy, and many other new and rare perennials, with older friends, are presented in our catalogue. A copy will be mailed on request.

Making Artificial Lakes
(Continued from page 174)

ample width in the wiser for the most extreme flood conditions. A good rule to follow for watersheds not more than three square miles in extent is to allow one yard of width to every one hundred acres of watershed. The watershed, of course, includes all the land, whether your own or your neighbor's, that drains into the lake.

If the character of the foundation or the soil one must use for the construction of the dam seems to indicate that water might seep under or through the dam, one may improve the construction by making either a masonry, concrete or puddled clay center core to the dam. This should be at least four feet thick, and should be carried down into a trench several feet lower than the bottom of the dam. This prevents water seepage beneath the dam, and helps hold the latter in place.

LOG DAMS

Log dams, or dams of log cribbing filled with loose rocks and silt, have long been used and are very satisfactory if a small amount of leakage is not objected to. Log dams may be built up as is shown in the accompanying diagram, or they may be made in the form of cribs or hollow squares. Each foot in diameter filled with rocks and silt. In the construction of such a dam it is important first to have the dam wider than high. In fact, such dams are not very suitable for heights greater than twenty feet. The face of the dam should be vertical or nearly so, the plan may be straight, curved or rounded, with the point upstream. They may be even built obliquely across a stream, but this tends to force the current against one bank. The top of the dam should be replanned smoothly to prevent ice damage, and a generous apron must positively be used on the downstream side to prevent the falling water from excavating a hole under the dam face which would ultimately undermine the structure. There is no need for a weir or spillway, for the excess water merely flows over the whole top of the dam. Such construction has been known to stand up under flood conditions where fourteen feet of water went over the top of the dam. Certainiy much depends, however, on how solidly the foundation piles are embedded, and how straight the apron timbers and the succeeding courses are fastened together.

Both earthen and timber dams are satisfactory if not more than twenty feet or so in height, but for larger works masonry or concrete should be used. Here the foundation is as important as the structure itself. It should invariably go down to bed rock, and it should be certain that there are no cracks or fissures which will allow water to seep in under the dam. If such should occur the upward pressure of the water will lift the heaviest dam off its base and hurl it into the valley below. For this reason we should pick out our dam site very carefully. A rocky gorge into the walls of which the ends of the dam can be embedded is the best location. The dam can also then be made curved, with the convex side upstream. By this means the dam acts as a horizontal arch resisting the pressure of the water above. Such a curve, however, should be between two hundred and six hundred feet in radius, for longer curves lose this arching function.

The thickness of the dam from base to top can be figured out by a rather simple formula, which will give a theoretical cross section. On this is based a design which will be serviceable and beautiful as well as built out, the lines being resolved into a continuous curve, all of which should, of course, pass outside the theoretical minimum section lines. By reference to the diagram on page 106 the letter therin will be seen to represent the theoretical quantities. It is the height of the dam, in feet; X is the depth below the surface of the water, in feet; Y is the offset in feet to the outer face of the dam from a vertical line corresponding to the inner face at the top; Z is the offset to the inner face from the same line. The distance B equals the square root of H, plus one-half the factor 0.72; Y equals X times the factor 0.067; and Z equals E divided by twenty-five (for dams up to one hundred feet in height).

Leaving the subject of dams, let us return to the problem of the lake itself.

We have been dealing with that type of problem where the construction is made in the bed of an existing stream. If, on the other hand, our lake is wholly artificial, we shall have to see that the bottom that will hold the water. After taking off the topsoil we shall have to remove the sub-soil also, débris, hands, sod, etc., when necessary. If we strike clay of a good "brick" quality, at least six inches thick, it will probably suffice. If we do not, without going to an unreasonable depth, we shall have to put in a clay bottom. This should be at least six inches thick, and should be puddled in, that is, tamped in when very wet. Thus a bottom imperious to water will be formed. This should be carried up the sides a few inches above high water.

THE OUTLET

When we studied geography in the primary grades we learned that a lake differs from a pond in that it had not only one or more inlets but also an outlet, which a pond lacked. Our artificial lake will have to have an inlet, of course, either from a stream in whose bed it has been made, from the city water supply, or from an arterial well especially sunk for the purpose. It ought also to have an outlet, for the reason that water which is flowing, even slightly, will remain clear and pleasing to look at and free from disagreeable odors. Of course, if a lake formed in the stream bed will have to have an outlet anyway, to take care of the excess water. This outlet gives us a chance to stop the lake in its course with cascades and similar features.

So far we have spoken only in a general way of size and shape. These must be largely governed by the requirements of the particular site in question and by the size of the property in which the lake is located. In a rural property acres in extent a lake can often cover ten or more acres.

ROSES—Spring Planting

Several hundred thousand, two-year-old, low-budded, field-grown plants, in several hundred varieties, are ready for shipment at the proper season. Many are new and rare; in the Hybrid Tea group are

President Herbert Hoover, Lady Margaret Stewart

ROSES by Bobbink & Atkins

The 1930 edition is replete with up-to-date varieties—it is more than a Catalogue; it is a reference and guide for American Rose Amateurs and Growers; it presents late introductions which offer new surprises, and includes many features of comments on their merits and demerits; cultivation instructions are simplified, all new classified and arranged to make ordering easy; pen and ink sketches show planting steps and how to secure the most perfect flowers. A copy will be mailed on request to those who intend to plant Roses.

Our Specialties

BOBBINK & ATKINS, Rutherford, New Jersey
Making Artificial Lakes
(Continued from page 176)

On the private estate half an acre to an acre is the usual size on the small place twenty-five by fifty feet or smaller would be more appropriate. In any event the size should be in scale with the rest of the landscape, neither too large nor too small to seem in proportion. It should not wholly dominate the scene, nor may it be insignificantly small. The shape will certainly be controlled to a large extent by the natural topography of the site, but we may reasonably wish to vary this basic outline somewhat by excavation or by filling in. Naturalness is the keynote here. Curves, surely, but not short choppy ones, nor regular scallops, rather long sweeping bends. Again, make it look natural. Islands should be few, and, as in nature, should be located near the end of the lake rather than in the middle, and should be related to some jutting promontory, so that they seem like the remains of a once-submerged range of hills or knobs. They should not be overcrowded with planting.

In fact, planting plays a most important part in the treatment of either a stream or lake. It must be naturalistic to the last degree to seem in keeping with the wildness of the situation. Nothing which does not look as though it might grow wild in the neighborhood should be used. Let me amplify that statement. We do not have to go to extremes and use only those plants which we found growing on the site before work commenced. But we may not rush to the nearest nursery and bring in a lot of horticultural varieties or foreign plants which never would or could grow in such a situation.

In making up our list we will first study the plant ecology of the locality. We will find out in general what plants form the natural groups around us. If we find the Red Maple, Horsebean, Shagbark Hickory, Black and Red Ash, Pin Oak and Elm society predominating we will use Hawthorn, Linden, Canada Plum, Alders, Shadbush, Spicers School and Arrowwood with them to complete our groups. We will plant Sweet Flag, Wood Anemone, Jack-in-the-pulpit, Wild Senna, Virgin's Bower, Joe-pye Weed, Rosemallow and Cardinal Flower along the shore of lake and stream. We will encourage Ferns to grow in the crevices of masonry or timber dams and spillways. We will not use Retinopora, Arborvitae, Spruces or Hydrangeas. We cannot expect Phlox, Delphinium or Tulips to look at home along a stream; they actually are so, for their roots are mixed and fibrous, remaining near the surface of the soil where they will get enough but not too much moisture. Their foliage is light, allowing for the evaporation of much water, differing in this respect from dry ground plants whose foliage is tough and leathery. And all this is fortunate, for these very characteristics make these plants especially to move and re-establish in their new sites.

When we leave the water's edge, we may find another plant group flourishing. Perhaps the Beech, Hard Maple, Hemlock group, to which we may add White and Sweet Birch, Mountain Laurel, Canada Yew, Way-faring Tree, Indiatopie, Showy Orris, Frilliums, Hepaticas, Viollets and Solomon's-seal. Or it may be that the lordly Pine forest is a near neighbor. Here we will find White, Red and Pitch Pines, and such herbaceous plants as Pipisecwa, Ladieslipper, Wood Fern and Purtridge Berry. Hardywood trees will be lacking and shrubs will be. Thus, by giving some attention to the natural plant groups in our particular locality we will achieve plenty of variety and yet have a unique harmony which will be a fitting complement to the natural harmony of the lake itself.

One last word about the arrangement of planting about the lake. Do not bush up the entire shore, neither leave it all bare of anything but grass. Plant in groups here and there. Have a few trees under which one may catch a breath of water. Let the lawn or meadow lead down to the water's edge here, while over there shrubs trail their branches in the languid current. On an overcropping ledge use one or Juniper, in a sheltered cove a few Catails, Lilies or other aquatics. There is no end to the possibilities for artistic planting. Let us not be afraid to use water that is not smooth or clear, for if we will but look about us for inspiration, and then, with imagination, apply that inspiration to the problem at hand.

To Redeem A Shady Corner
(Continued from page 172)

may remain there for a year or so, others appear self-sown in quite different places. It seems to like the joints of a cool wall or rock-work and especially likes to get its back up against a stone wall or almost any aspect. No finer subject could be found for a shaded wall and as it is easily raised from seed no one need do without it. And then, many years later, Mr. Clarence Lown gave me a few little tubers of Corydalis olba (syn. Inclata), that Holowert, a native of Florida. The first small bulbs in late March invite its gray-green buds to push through the earth and very soon we have the masses of ferny foliage and little purple-pink blossoms all complete. It is a quiet little plant growing no more than eight inches high, but its early flowering is cheerful and it makes a pretty setting for the Duffoolls that come up at the same time. It spreads nicely where it is happy, but the whole plant dies away after flowering, not to appear again until the following spring.

Two other very early blooming and very delightful species are C. densiflora and C. coca alba (syn. tuberosa). Both reach my garden from the same general source, at the little Holowert. Neither has spread appreciably, but as they both die down after flowering I think their increase is somewhat checked by weekly uprooting. C. densiflora always surprises me

(Continued on page 186)
If you haven't yet started to work on your garden, decided on varieties, arranged groupings, bought seeds . . . let House & Garden's Second Book of Gardens help you. Now is the time to insure against a useless waste of money and bare spots in your garden borders later on!

House & Garden's Second Book of Gardens tells you everything you need to know about gardening. 650 illustrations of enchanting gardens, a host of new ideas for you! 223 pages written by experts—suiting the garden to site and climate . . . making rock gardens, wildflower gardens . . . growing annuals and perennials . . . setting out borders . . . caring for the trees, vines, shrubs . . . growing fussy flowers like roses, larkspurs, lilies . . . furnishing the garden with pottery, chairs, fountains. The cream of recent House & Garden issues and lots of new stuff besides are all in this clever book.

How much for all this? Just one dollar. A little $5 bill—less than the cost of a modest rose bush. Sign and mail that coupon today!

THE TRIPLEX—makes
large, hard jobs, EASY

Triplex solves that difficult cutting job—the thickly foliaged area of ten acres and more. It can reel off 35 acres in one day. It works right up to bushes and trees—whirls around them with the agility of a hand mower, and a good deal faster. Turns in its own length. Backs up at top speed. Raises its cutting units for crossing walks—and for long trips quickly dons a pair of rubber tires and travels any distance on the highway. The powerful and foolproof mower operates for years. Write today for full details on this nimble mower, that has never met its equal.

IDEAL POWER LAWN MOWER COMPANY
404 Kalamazoo Street, Lansing, Mich.

IDEAL POWER LAWN MOWERS
especially, looking for honey-colored, glossy rings encircling them which, on close examination, prove to be formed of closely packed, minute eggs. Every such ring cut off and burned means one less caterpillar colony a couple of months hence.

**PERENNIAL WEEDS.** Of all lawn troubles, perennial weeds are the commonest, most annoying and the hardest for the majority of people to eradicate. With tough, deep-striking roots and determination worthy of better aims, they persist in spite of all ordinary methods which are directed against them.

The best way to get rid of these pests and prevent their return is to keep everlastingly at it. Some can be pulled loose, roots and all; others can be discouraged eventually by cutting their taproots far underground with an Asparagus knife. Feeding the grass so that it grows luxuriantly and prevents scudding weeds from getting a start will help win the battle, too. But perhaps the best wholesale way of freeing a lawn from these persistent pests is found in the application of sulphate of ammonia at the rate of three pounds for each thousand square feet of area.

**WILDFLOWERS.** Some of the loveliest and most delicate wildflowers blossom in the early spring, hold their leaves for a brief space, and then vanish completely for the rest of the season. Among these are Dutchman's breeches, Trout-lilies and Dwarf Ginger—all so common in a good many places that there need be no hesitancy about transplanting a few properly to some suitable location within the cultivated area.

It is generally best not to move any of these plants until they have finished flowering and returned to a virtually dormant condition favorable to transplanting. Their early dying down, however, means that some method of exact marking must be employed while they are in flower so that they can be located when digging time comes. For this purpose, regular plant labels will serve, one of them being firmly inserted in the ground as close as possible to the stem of each plant.

**GROUND BONE.** The advantages of raw ground bone as a general plant food, both as a top-dressing and dug into the soil at any depth to which roots go, are definite and well proved. For one thing, it contains valuable powers of morale which it gives out gradually over a period of several years. It cannot "burn" even delicate roots, as some other fertilizers, chemical as well as natural, may do if injudiciously applied. A complete absence of weed seeds and every other kind of injurious material is characteristic. Finally, it is

Grow Lovely Rhododendrons

Success depends chiefly on supplying correct soil conditions. These and other Ericaceous Shrubs (Laurels, Azaleas, etc.) thrive best in a deep, moist, highly acid soil, such as found in deep woods.

**RHODO-GRO**

The Original Soil Corrective for Rhododendrons, Azaleas, etc.

RHODO-GRO was developed in co-operation with a famous Rhododendron specialist. Used with great success since 1926. It supplies exactly the right acidity and increases the moisture-holding capacity of the soil. Your Broad-Leaved Evergreens will show quick response. Send $5: we'll ship 100-lb. Bag, freight paid—enough to treat seven square yards.

inexpensive, obtainable at all garden supply stores, keeps indefinitely, is easily applied and can be used at any season of the year.

SPRING CLEANING. There is always debris to clean up around even the smallest grounds when the last snow has gone—the varied debris which winter has produced and left. Dead twigs from the trees, leaves scattered by the wind and binned in every imaginable corner, perhaps dried weed stalks which have come from Heaven knows where. They make an unsightly litter and one which may lead to real annoyance, for there is no telling what insect pests, weed seeds or plant diseases stuff like this may harbor.

There is just one thorough way to get rid of these things, and that is to pile them up in a safe place and burn them when they have dried sufficiently. Such a procedure kills about one-and-a-half birds with a single stone, too, for besides destroying the litter and any danger that may lurk therein, it also provides some ashes which will be useful as top-dressing fertilizer.

TRANPLANTING SEEDLINGS. The first transplanting of seedlings is a highly important step in the production of strong, healthy plants, for unless it is done right the slight and very delicate root system of the wee things will be injured and they will receive a severe set back at the very last.

Unless the seedlings are widely scattered, do not try to take them out of the flat singly. The best plan is to use a flat-tipped wooden lath or other thin, flat object and with it lift out a chunk of soil, seedlings and all, being careful to go deeply enough and far enough out from the plants to avoid injury to the roots. If the soil is of the right consistency, a slight pressure on this chunk will crumble it apart, freeing the roots of the seedlings and permitting you to lift each one out intact.

GARDEN MARKERS. Something new in garden accessories is always interesting in the spring, especially if its novelty is added definite practical utility and reasonable price.

Such an item is a garden marker which has just been put on the market by one of the big brass and copper foundries. Briefly, it consists of a stout galvanized stake about a foot long to the top of which is solidly attached a round cup-like affair of brass tubing. Inside the business end of a medium-sized torch type flashlight. The cap is in three parts: a base, a collar which screws down over it, and a glass lens held by the collar which serves to complete the waterproof protection of the written label.

GLADIOLUS
THE FINEST GARDEN CUT FLOWER

AMIE LAUGR, exquisite ruffled pink.

AMIE CLAIRE, large blooms, illustrated on left.

ARMOIRE GLOW, beautiful Apricot colored.

GARDEN DREAM, finest clear yellow.

MARIA, very large orange.

Cost 11 each, value $1.50 for $1.00

A Whole "Glad" Garden $3

Special "Get-Acquainted" Offer

100 large bulbs, at least 15 fine varieties, in many different shades of red, yellow, pink, blue, orange, smoke, white. All good varieties but not labeled as to name. Prepaid, $1.75. I believe this to be the finest "glad" collection ever offered anywhere. The above 15 varieties together with the collection of 100 bulbs at $3.25 per 100 large bulbs. Send for illustrated catalog that is "different", listing over 100 of the "world's best" varieties.

Scott's Creeping Bent for Perfect Lawns!

Soil in six weeks! A rich, velvety stretch of lawn that chokes out weeds before they can grow! With proper care no reseeding is ever necessary. You will have a deep, thick, uniform turf that's everlast­ing and makes your home a beauty spot. That's what you'll get if you plant Scott's Creeping Bent.

The New Super-Lawn Creeping Bent—long recognized as the ideal grass for golf putting greens—is now producing Super-Lawns. Instead of sowing seed, you plant stone or the chopped grass—and in a few weeks you have a luxuriant lawn like the deep green pile of a Turkis

The ROCK GARDEN. As soon as the frost is out the whole rock garden ought to be gone over rather carefully to repair any damage which the winter may have wrought. You will probably find that labels need re

WINTER SEED BEDS. Early April is usually the time to remove the leaf mulches which all winter have been protecting the beds where various slow-sprouting seeds have lain since last fall. Many of these seeds will start sprouting soon after the frost is out, and they ought not to be hindered by the smothering presence of litter, dead leaves and other moldering material.

Among the seeds which can be handled by this system are many from trees and shrubs, such as Dogwood, Ritterswort, Nut trees, pine, spruce, and Yew. In general, they are hard-selled seeds of fair to large size which must be handled by this system.

It shows in an unusual and interesting way how you can beautify your home grounds. Contains authentic plans for planting lawns of various sizes, with many illustrations of beautiful yards before and after planting. Send 25 cents.

SEEDLINGS UNDER GLASS.
It is of vital importance that young seedlings be protected from freezing rain and wind until well able to fend for themselves—a fact which gives special advantage to those grown in a well-managed coldframe. Indeed, it may be taken as a rule that in the case of perennial flower seedlings, to maintain this protection through the first spring and summer, removing it only when the plants are set in permanent places.

When utilizing coldframe and sash in this manner, keep the latter raised several inches to permit air circulation. Watering must be done by hand, of course, and after the middle of May it will be well to place a lath screen over each sash to cut down the amount of sunlight which might otherwise be too strong for the young plants. Watch their growth closely and give more light if they seem to be growing spindly.

TREE MULCHES. Recently planted trees need every incentive which can be given them to make strong root growth with all possible speed. Even those which were set last fall come within this category for they have thus far made little real headway in re-establishing themselves.

The first requisite to such progress, of course, is good soil—rich, friable and moisture-retentive. This having been provided, its benefits can be maintained and even increased by a manure mulch applied in the early spring and left in place until next fall, when it may be forked in. The rains will carry the plant food from the manure to the trees' roots, leaving the coarse material on the surface where it will serve as a preventive of too rapid evaporation from the soil.

WILD ROSES. American rock gardeners are coming to appreciate more each year the merits of native plant material. Wildflowers and shrubs from various parts of the United States and Canada are rapidly being recognized as valuable additions, and every year we are hearing and learning more about them.

For those in the northern half of the country New England provides a Wild Rose which, though rarely used, is lovely in rock gardens which are not too small. It is the dwarf, ordinarily straggling, which is common in old pastured fields exposed to full sun. Usually it grows no more than a foot high and is easily kept down to that height by pruning, even in good soil and when fed from its usual compost. Its large, fragrant pink blossoms, seemingly out of all proportion to the plant's stature, are lovely though not long-lived. In fall and winter its red hips are decidedly worth-while.

Irises - Peonies
Gladiolus - Dahlias!

Our new free catalogue gives complete and accurate instructions how to succeed with these flowers. It also lists one of the most extensive collections of American at very moderate price. None better at any price. Our past acquired Iris offer. 55 varieties all labeled including choice of Dream, Crusader, Sweet Lavender, Lady Foster or Ambassadeur, postpaid for $1.00.

THE SAM CARPENTER GARDENS
OSWEGO, KANSAS

Ah! A BIRD SANCTUARY

Birds add untold interest and pleasure to any grounds or estate. Learn how to attract only beneficial song birds who thank you not only with cheery songs, but by destroying harmful insects, moths and mosquitoes. A Martin in every instance, will keep your premises free from mosquitoes and other flying insect pests.

JOSEPH H. DODSON, America's foremost bird authority, has supervised the building of bird sanctuaries for prominent people like Henry Ford, John D. Rockefeller, Thomas Edison, Harvey Firestone, Dr. Mayo and others at various country clubs such as Westchester Biltmore, Olympia Fields, Glen现有, etc.

He will be glad to have from any home owner interested in helping preserve America's song birds and to enter personally regarding the construction of a sanctuary or the proper location of bird houses on your premises. Even a small garden can be made a haven for our beautiful birds. Write Mr. Dodson today as you should have your name ready for the birds when they come with the first warm spring days.

Thompson Sprinkling Systems

If you wish luxuriant green grass on your grounds or lawn, you can not depend upon irregular rainfall. In the dry, but summer months you may wait weeks for rain, until your grass becomes burnt and dry.

Your cutdown gardener and water bills with a Thompson Sprinkling System installed in your grounds. All sprinkling labor and hose upkeep are done away with. And a Thompson System is unaffected by ice and snow—it's ready every spring to start keeping your lawn fresh and velvety!

Our interesting new free booklet tells you how easy it is to have a beautiful lawn. Send for it Now!
Say Goodbye to Radiators!

How to save every inch of floor space and make rooms far more lovely

Don't let radiators mar the beauty of your new home.

Just one brief remark to your architect and you make your home a finer place to live in, with every room red and built by men who have solved every intricate problem of heating for factories, industrial processes, and great office and apartment buildings as well as homes. In every sense of the phrase, the Trane engineers made it possible for you to say goodbye to radiators and make rooms far more lovely.

184

Trane Concealed Heat

The newest thing in lawns is the use of bent grasses, formerly producing so-called weedy turf. The popularity of bent as a lawn grass has paralleled the remarkable development of golf since the World War. From a few hundred pre-war clubs the craze for golf has spread from coast to coast until today there are over $5,000 clubs in the United States, the number increasing by at least one fourth. Why has bent grass become so popular? Short answer is that it produces beautiful, well-kept lawns, and the reason is that there is less maintenance required.

There are dozens of species and varieties of bent grasses, which gives the architec

t a great deal of freedom regarding the selection of the various kinds of bent grasses and it is the purpose of this article to try to make order out of this chaos.

BENT GRASSES

Let us first consider creeping bent, the basis of putting green species, around which so much popular attention has focused. It is known at the outset that creeping bent makes some demands on the soil and maintenance method. Why not grow bent grass on the home lawn? And it is as natural as commercial concerns should exploit the possibilities of this newcomer among turf grasses and extraordinary promises and claims have been made in its behalf.

But there are dozens of species and varieties of bent grasses, which is the basis of the practicality of the various kinds of bent grasses and it is the purpose of this article to try to make order out of this chaos.

“Katamouth Tavern

“No taxation without representation,” the Squire said in this very room, and thumped the table as though to split the solid maple.

Many a meeting of the Green Mountain Boys has filled the Council Room in the Catamount Tavern. These chairs have heard the whispering of many a revolutionary plan. These tables have resounded to toasts, loud shouted to the rafters. For in this historic hostelry, they planned the great victory of Bennington.

No wonder we like to pattern rooms today after the old tavern ... a true cradle of American history. No wonder we try to recapture in every detail the charming air of hospitality and good cheer.

Cushman Colonial Reproductions are closely copied from fine pieces found in the inns and homes of Old Bennington. They are built from native woods, by craftsmen whose forefathers fought in the Revolution. Perfect in line and finish, they are worthy companions to your own family antiques. Ask your dealer to show you Cushman Reproductions.

OLD BLEACH LINEN

A “Lift” is Needed

IT MAY be linen to be taken to or from the laundry or a breakfast tray to be sent upstairs, it may be a trunk to be carried to the attic; it may be fuel for the fireplace; perhaps the invalid of the family wants to go from one floor to another—

For each and every one of these tasks there is a type of Sedgwick Equipment which easily, safely, and joyfully performs its work.

A Sedgwick Fuel Lift serves the fireplace easily and quickly and abolishes all muss and fuss. Write for Folder No. 137.

A Sedgwick Invalid Elevator is a blessing to invalids, to the lame, to the aged and infirm. For these it eliminates the trial of “Climbing the Stairs.” Write for Booklet No. 153.

A Sedgwick Dumb Waiter is a convenience for countless household loads. It saves a thousand steps a day and is an actual necessity in most residences. Write for Circular No. 67.

A Sedgwick Trunk Lift lightens labor when trunks, furniture, and other heavy loads are to be moved from floor to floor. No more gouging of walls and stairways! Write for Circular No. 142.

Complete descriptive matter on any or all of these outfits will be gladly sent upon request. Address Sedgwick Machine Works, 146 West 15th St., New York
The Rent Grasses  
(Continued from page 194)

In New Zealand, with the exception that the New Zealand kind is not usually as badly contaminated with redtop and chaff as is the home product. To counterbalance this, however, the imported form (due possibly to the long voyage from New Zealand) is usually of distinctly lower vitality than the American produced seed. Most of the New Zealand seed now on the market is Rhode Island bent.

The only bent grass mixture that may be found on the market is South German mixed bent, produced mainly in the Rhineland region of Germany, although small amounts come from Holland and elsewhere on the Continent. For some time the exact composition of this mixture was somewhat of a mystery but a number of careful analyses have established that it is usually made up of about eighty-five per cent of Rhode Island bent, from ten to fifteen per cent of velvet bent and a trace of the seeds of true creeping bent. On account of the velvet and creeping seed content, South German mixed bent is considered superior to Rhode Island bent.

The great value of all the bent grasses is their ability to produce fine turf on land too poor for bluegrass and the common lawn weeds. Lime should never be used on a bent grass lawn and the turf can be kept in best condition with an acid reacting fertilizer such as sulphate of ammonia. Best growth may be maintained indefinitely by fertilizing twice during the spring and again during the first cool days of September with a mixture when it makes its very early appearance. It lives beside a flat rock in a half-shaded part of the rock garden and the first thing I know its reddish purple flower spike is standing up stiffly above its gray neighbor, I have never seen it in the bud stage. Each year the clump becomes a little more ample and I have now put a row of stones around it so that it may increase without fear of having portions of its tuberous root sliced off. Corydalis alba 'pushes in gray-green scroils of buds' out of the soil in mid-March or early April. There are several bits of it about the garden that I cherish greatly. Its leaves are almost exactly like those of the beloved old Bleedingheart and its flowers are gleaming white and borne on a spike. In both of these species the flower spike develops before the leaves are fully unfurled. There is a purple-flowered form of the last named that I have not seen.

Corydalis nobilis, a Siberian species, is undoubtedly the noblest of the clan. It grows perhaps eight inches tall and bears many heads of yellow, sweet-scented blossoms tipped with black, that are somewhat like paper marigold mixture. It flowers in May and by early summer has quite disappeared. With me, this species does not seed itself at all, nor is it in bloom but in a leisurely manner it yearly becomes more and more a conspicuous feature of the shaded corner where it grows.

Corydalis thalictroides is a lovely Chinese species that prefers a somewhat sunny situation. It has not proved reliably hardy with me but is easily raised from seed. C. eulophii has not proved hardy at all and so has been given up, but for milder sections of the country it would be worth trying. In foliage it is distinctly glaucous and creates a fine fill for its candy-colored blossoms. C. alibet, with pinkish flowers, has never been able to bloom, and C. ochroleuca has so far eluded me, but I see that a Swiss seedsman offers seed of this year. It is said to have beautiful foliage and turns a fine dark color in the autumn.

Of two little native Corydals I am extremely fond. One is C. aurea, to be found in thin woodland in parts of the West as well as out through our west country. It is an annual with hollow stems and delicately cut leaves and bright yellow flowers that continue to develop through most of the summer. It seeds freely so when once established in some shaded corner is likely to be an ever recurring pleasure. A free seeded also is C. crispata, temperate, annual or biennial, with lovely gray leafeage, an ornament to any situation, and pretty little pink and yellow sax-like blossoms on wiry little stems, a bit too leggy for grace. The Pole Corydal is to be found in "rocky places and recent clearings" in many parts of the East. This year I have ever seen this engaging little native offered in this country.

I shall be glad to reveal to any one who is interested the whereabouts of these plants.

---

LUXURIOUS Freedom from Care...

Home from the theater—late. It's a bit colder outside but they know that their home is flooded with perfect warmth from top to bottom.

No matter whether you are away or the servants are away you can be sure that your home is being kept at just the temperature you desire at any time of the night or day when you have this most modern heating luxury.

IDEAL GAS BOILERS

Combine with other luxurious features, all the efficiency that the American Radiator Company builds into every boiler. They are absolutely automatic, controlled entirely mechanically—and the fuel comes from the same inconspicuous pipe as the fuel for your kitchen range and is paid for on the same bill—after you have used it. It eliminates all responsibility on the part of the owner and furnishes healthful, clean warmth—automatically.

Write for complete information on the comfort, convenience and cleanliness of Ideal Gas Boilers.
THINK NOW . . . about summer camps

Perhaps your summer plans are still nebulous . . . but you think vaguely of "going somewhere and taking the children".

Remember that your idea of a perfect rest may to the children mean an infinite monotony . . . or that your plans for a charmingly social season may prove to them a veritable mischief-mine.

Why not send them to Camp? . . . two months of glorious out-door freedom, supervised, but not restricted, by young and competent counsellors . . . innumerable delightful sports—swimming, canoeing, tennis, organized games . . . instruction in nature study and handcrafts.

There are any number of attractive camps, large and small, located by the sea, in the mountains, on ranches, in Europe . . . and if the camp is advertised in House & Garden’s School and Camp Directory, you may rest assured that your child will come home glowing with health . . . chattering delightfully about splendid new friends and a succession of superlatively happy days.

Turn to Page 55 of this issue, where a few of the best schools and camps in the country are listed. Write for some of their catalogues . . . and if you have difficulty in finding exactly what you want, House & Garden will gladly give you further information and advice.

TRADE LITERATURE

OF INTEREST TO PROSPECTIVE HOME BUILDERS

Each month there will be briefly reviewed on this page a number of the new brochures, pamphlets and catalogs which have been issued by concerns in the building, decorating and gardening fields. This issue is devoted to those in the building field.

- SOUND-PROOFING

Quelling Noise with Soundex. The cover of this catalog shows four different sizes and colors of Soundex tile, which is described in the text. This sound absorbing material used extensively for schools, hospitals, etc., is also appropriate for the ceilings of living rooms, sun rooms, ball rooms or wherever the floors are uncarpeted. The Stockdale Corporation, Builders Building, Chicago, Ill.

- AIR CONDITIONING

Controlled Humidity and Human Comfort. The Lewis Corporation has endeavored to explain in simple terms the necessity for humidification. They discuss the subject of humidification in general, and follow it with an explanation of the operation and purpose of the Lewis Air Conditioner. A List of questions and answers is helpful. The Lewis Corporation, Minneapolis, Minn.

- SLATE ROOFS

From Rock to Roof. The story of how natural rock is fashioned by hand into durable and distinguished roofings. Many practical reasons are given for roothing with slate. Charming color illustrations show slate roofs used with different types of architecture. Additional photographs show specimen sample roofs of Pennsylvania Slate. Pennsylvania Slate Institute, Pen Argyl, Pa.

- WALNUT

American Walnut for Interior Woodwork and Paneling. Interesting photographs show American Walnut paneling interiors, as a trim and for flooring. The natural walnut brown color of the wood permits its use in a wide range of color schemes. Its many advantages are also mentioned. American Walnut Manufacturers Association, 619 South Michigan Avenue, Chicago, Ill.

- PINE

Specify Shevlin Pine. Color illustrations depict the story of Shevlin Pine, starting with the felling of the trees and ending with its use for the interior and exterior of the home. There are five varieties of Shevlin Pine all of which are described. This wood takes practically any finish. Shevlin Carpenter and Clarke Company, 900 First National-Soo Line Building, Minneapolis, Minn.

- BIRCH

Beautiful Birch for Beautiful Woodwork. A book of fascinating birch tells how it meets the requirements of interior woodwork, because of its smooth grain, extreme hardness and natural color. Its qualities make it a standard wood for hardwood floors. Color illustrations show how it has been used in interiors. Northern Hemlock and Hardwood Manufacturers' Ass'n, Osceola, Wis.

- OAK

The Charm of the Sovereign Wood. A beautifully illustrated brochure shows the decorative possibilities in the use of oak. This fine wood is adaptable to practically any taste as it ages with the warmth of its tone increases. Although a sturdy wood, oak nevertheless lends itself easily to delicate carving and turning. Oak Service Bureau, Bank of Commerce Building, Memphis, Tenn.

- MAPLE

The New Color Enchantment in Hard Maple Floors. Several illustrations of interiors show rooms floored with MFMA Maple in various colors. By a special process this wood is made to take delightful transparent permanent color finishes. Available in several widths, so that different effects may be obtained. Maple Flooring Manufacturers' Association, 1740 McCormick Building, Chicago, Ill.

- CASEMENT WINDOWS

Crittall Universal Casemetics. Illustrations show interior and exterior views of Crittall Casements. The outward opening casements can be effectively screened on the inside, and those opening inward have screens attached to the stone, as shown by photographs. Technical drawings show the construction and operation of the casements. Crittall Casement Window Company, Detroit, Mich.

- SCREENS

Your Home Screened the Higgin Way. The "Higgin Way" of screening is explained in the foreword. Several color illustrations show various types of Higgin Screens, for use on windows, doors, porches and special shapes for individual needs. The details of construction for each screen are fully illustrated and described in the text. The Higgin Manufacturing Company, Newport, Kentucky.

- WALL MATERIAL

San-Onyx for Your Walls. This catalog contains many beautiful color illustrations of rooms walled in San-Onyx, a material made from melted rock. In addition to its many practical advantages, San-Onyx is very decorative. Available in the pattern sheets or plain sheets upon which any desired design may be cut. MARIETTA MANUFACTURING COMPANY, Indianapolis, Ind.

- CONCEALED SCREENS

Roloscreens. The text and illustrations relate the numerous advantages of the Roloscreen, which can be installed during building or any time after the house has been erected. A particular feature of its construction prevents the screen from tearing in spite of hard blows. Photographs show many residences and apartments equipped with Roloscreens. Roloscreen Company, Peoria, Ill.

- CASEMENT WINDOWS

CRITTALL UNIVERSAL CASEMENTS. Illustrations show interior and exterior views of Crittall Casements. The outward opening casements can be effectively screened on the inside, and those opening inward have screens attached to the stone, as shown by photographs. Technical drawings show the construction and operation of the casements. Crittall Casement Window Company, Detroit, Mich.

- SCREENS

Fenestra Screen Casements. The Fenestra casement is described in the catalog as a complete window, with frame, swing leaves, hardware and screen all in one unit. Its many advantages are described, and a page of detailed illustrations shows how it is operated from the inside of the window, and the way that the screen can be removed. Detroit Steel Products Company, Detroit, Mich.

- SCREENS

Your Home Screened the Higgin Way. The "Higgin Way" of screening is explained in the foreword. Several color illustrations show various types of Higgin Screens, for use on windows, doors, porches and special shapes for individual needs. The details of construction for each screen are fully illustrated and described in the text. The Higgin Manufacturing Company, Newport, Kentucky.

- CONCEALED SCREENS

Roloscreens. The text and illustrations relate the numerous advantages of the Roloscreen, which can be installed during building or any time after the house has been erected. A particular feature of its construction prevents the screen from tearing in spite of hard blows. Photographs show many residences and apartments equipped with Roloscreens. Roloscreen Company, Peoria, Ill.

- WALL MATERIAL

San-Onyx for Your Walls. This catalog contains many beautiful color illustrations of rooms walled in San-Onyx, a material made from melted rock. In addition to its many practical advantages, San-Onyx is very decorative. Available in the pattern sheets or plain sheets upon which any desired design may be cut. MARIETTA MANUFACTURING COMPANY, Indianapolis, Ind.

- INCINERATORS

ESTATE TYPE KERNERATOR INCINERATOR. Kerner Incinerator Company publish a catalog on a new type of Kernerator which takes care of the disposal of waste on estates, developed to provide for the incineration of both dry rubbish and wet garbage. Illustrations show its appearance and text explains how it operates. KERNER INCINERATOR COMPANY, 1225 North Water Street, Milwaukee, Wis.

- WROUGHT IRON PIPING

Pipe Pointers for Home Builders. This booklet on Reading Genuine Wrought Iron Pipe emphasizes its rust-resistant qualities. Illustrations show famous historical landmarks, still in good condition, for which wrought iron had been used. Helpful information is given as to the proper care of pipes and fittings accompanied by detailed drawings. READING IRON COMPANY, Reading, Pa.
To have a fine lawn, feed it!

Fried your lawn with a clean, rich food that the grass will relish and that neither you nor your neighbors will notice. Feed it V-C Fairway, then watch the turf grow fast—thick and green and velvety. Anybody can do the work. V-C Fairway is a dry and granulated powder, ready for use, in bags, easily handled. Carries no weed seeds, no insect pests, no plant diseases. Moderately priced. Buy V-C Fairway from your dealer, or ask us for prices. Send for "How to Grow and Keep a Lawn."

AMERICAN MODERNIST

Modernize your home
and kitchen

This beautiful "Venetian" medicine cabinet will add charm and distinction to your new or old bathroom. Large mirror is artistically etched and completely conceals a deep, roomy cabinet—made of steel with sanitary, baked-on white enamel finish. Sold complete with plate glass shelves ready to install. Very reasonably priced.
YOU'D STOP THIS IN A MINUTE

Imagine how horrified you'd be if you found one of the children destroying a valuable fur coat...how quickly you'd stop it!

Something just as destructive is probably happening this very moment to your valuable furs and other clothing. In garment bags or in your cedar chest moths take an enormous toll because so-called protective devices do not really protect...see Government Bulletin No. 1353

A Government approved process, which destroys all moth life, is used in each Plymetl Vault...it gives permanent protection to your garments...cold storage does not. Moths and their eggs are merely stupefied by refrigeration...a few hours in a warm closet is enough to revive them for their destructive work. The fact that the Plymetl process completely sterilizes all moth life has caused many leading department stores to adopt Plymetl storage equipment exclusively.

The Plymetl Vault affords your clothing complete protection...not only from moths, but from human marauders, as well. Its sturdy Plymetl walls and its multiple tumbler lock make it possible for you to lock things up and know that they will still be there safe and sound when you return.

No dirt or dust can reach your clothing in a Plymetl Vault...its steel walls are absolutely air tight. Cleaning bills are greatly reduced for families who have these modern personal storage vaults in their homes or apartments. The vault bars out all alkaline dust, carbon monoxide and the sulphuric particles of coal soot...even a trace of which soon ages, rots and fades delicate fabrics. "What a blissful feeling to hang a dress away in the Plymetl Vault" writes one of many satisfied owners..."and to know that the next time I take it out it will be just as clean and fresh as the day I placed it there."

Thousands of people first tried a single vault in their homes...they found that clothing lasted much longer...that dry cleaning bills were a great deal lower. This proof of economy has caused the majority of these owners to add at least a second Plymetl Vault. These people have learned from actual experience that the damage done by moths to one garment alone will cost as much, or more than the outlay for a single Plymetl Vault.

Plymetl Vaults are attractively finished in a variety of beautiful colors. Approximately 2 feet square and 6 feet high. Can be located in any desirable place such as a closet, hall, attic or bedroom.

Let us send you complete particulars about this modern method of protecting your clothing. There is absolutely no obligation...representative will not call unless you so desire. Haskelite Manufacturing Corporation, 120 South La Salle Street, Chicago, Illinois.

Progressive dealers and distributors are invited to ask for details of our attractive sales plan.

The Gracious Home Reflects the Ease with which it is Managed

Telephones in important parts of the house simplify the direction of the domestic establishment...yet from them you can call other homes, other cities, other countries.

The house that is managed with a minimum of effort is pleasant to live in, or to visit. And telephone convenience within the home plays a large part in this scheme of things. It enables women to give all of their household directions for the day within a few minutes' time. To make sure, with no unnecessary bother, that domestic affairs are progressing smoothly. And to keep fresh their energies for the varied activities of their interesting lives.

This household administration is conducted over the regular Bell telephones...the same instruments with which you call friends across the street, or in other cities, or even in other lands.

At moderate cost you can have telephone service in all parts of your home. Even in smaller houses, enough telephones add enormously to the efficiency of household affairs...to your ease in calling friends, or in receiving service from the outside.

Your local Bell Company will be glad to help plan the arrangements which will give you the greatest satisfaction. Just call the Business Office today.

Conversations with the cook or maid can be so conveniently carried on by telephone from your bedroom or your room. The day's routine can be arranged in no time at all...meals planned, orders given...and without one step. And all this over your regular Bell telephones, which are used to call friends across the street, or across it.

Telephone convenience is a mark of the modern home...as important to the smaller household as it is to the large.

Calls to the butler's pantry...before luncheon, while you are dressing for dinner...assure the smooth functioning of your household and save time, effort and trouble.

Telephones located in all parts of your home, laundry, the maid's room, the garage...play an important part in the ease and efficiency of modern households.
Men might never have thought of it, but women have long known the convenience of a shelf above the kitchen sink. The new Crane Corwith has an integral one in the flat-topped box back... Men, not being daily annoyed, might not guess how often overhanging sink fittings can break dishes. A recess, into which even the spout swings back, leaves the whole sink free... Low back for under-window placement, concealed hose and spray, hand-closing Dual strainer or lever-operated pop-up waste to make the sink a dishpan; every detail of the Corwith has been planned from women's viewpoint. Because women know that pleasant surroundings also keep away fatigue, it is offered in the Lisbon blue here shown and in eleven other charming hues, to set the color key for the whole room. No matter how little or much you wish to spend on your kitchen, nearby Crane Exhibit Rooms will give many profitable suggestions. Your architect and plumbing contractor will help you take advantage of modern possibilities at lowest cost.
"An American in Paris."

Following "Rhapsody in Blue"... after an interval, during which the world hailed this first controversial composition in the modern musical form, "An American in Paris" brilliantly confirms George Gershwin's genius. But it is more than a definite answer to those who feared that this young composer had benefited by a creative accident. It is an inspiring gesture in musical adventure. It is a refreshing criticism of a nation on tour, a kind of alluring cacophony sweetened with an abundance of original jazz phrases and made beautifully sad with a touch of superb "blues."

The history of music bears graphic witness to the fact that the Steinway truly is "the Instrument of the Immortals." From Liszt to Gershwin, the masters of the piano have chosen the Steinway. There has been no mere turn of events in this remarkable preference; for when an artist sets about the difficult business of building a career, he can take no chances with his instrument. He must bring to his genius, his ability and inspiration the instrument that will insure him maximum scope and present no extra obstacle to be conquered. Such an instrument is the Steinway.

Its magic tone, its brilliance, the complete manner in which it submits to the control of the exacting artist, as well as its ability to serve year in and year out for a lifetime without suffering deterioration of quality, are virtues that explain why the Steinway ever has been "The Instrument of the Immortals."

Probably the reason why every one who buys a piano does not buy a Steinway is the belief that this glorious instrument is beyond the reach of the ordinary income. But this decidedly is not true.

With an original payment of so little as $155, you may have immediate possession of a Steinway Grand... an instrument equal to the demands of the greatest artist... an instrument so beautifully encased that it will perfect the decoration of a charming room... an instrument that becomes an entertaining companion wherever there are cultured guests. You may make your selection from many different sizes and models, each at a different price, but in all of these the quality will be the same... Steinway.

A new Steinway Upright piano can be bought for a total of $875
GRANDS $1550 and up

Used pianos accepted in partial exchange. If there is no dealer near you, write for information to STEINWAY & SONS, STEINWAY HALL, 109 West 57th Street, New York.
