**Gold Seal**

**INLAID LINOLEUM**

in new decorator colors

---

Popularity of the famous "Sequin" design grows by leaps and bounds. It can help you sell your homes faster. Home buyers are drawn to its full range of 16 beautiful colors—appreciate such "Sequin" advantages as...design inlaid clear through to the exclusive Gold Seal SuperFlex* backing...colors remain fresh and clear through years of wear...it stays smooth and resists indentations, unusually easy to clean!

With 18,000,000 magazine readers currently seeing the newest “Sequin” colors shown here, it will pay you to call your Gold Seal dealer today for the complete facts on “Sequin” Inlaid Linoleum.

**SPECIFICATIONS:**
- Standard Gauge and 1/4" "Sequin"—Install over suspended concrete or suspended wood subfloors—standard gauge—16 colors.
- 1/4" "Sequin"—burlap backed—7 colors.

---

The circular "After Test" area is the result of applying the abrasive wheel to the "Sequin" sample. See how it has worn well through the linoleum—and yet the pattern is still there, as clear and sharp as ever! Compare it with the "Before Test" area. You can't miss the difference! Write to Customers' Service Department, Congoleum-Nairn Inc., Kearny, N. J. For further information.

"We made our houses excitingly different for less than $100."

*Ocean Lea Builders, Gene Ballin, Murray Glickman and Ross Langsfur inspect the "years-ahead" electrical luxury built into their new model home at Oceanside, Long Island.

Competition is fierce in Long Island's Nassau County. So when an electrical contractor offered these promotion-minded builders REMCON remote control lighting for their new 400 home development at practically no increase in cost, they gave him the go-ahead.

This 3-position switch at stair will control light in living room, entrance foyer and at top of stairs. You can put as much or as little REMCON switching into your houses because each REMCON circuit is completely independent.

Remcon master control being installed in bedroom. It will enable the home-owner to put lights on or off throughout the house from bedside. If baby cries at night, this Master Control lights up nursery and hall instantly.

Installing entrance light which is controlled from REMCON switches in kitchen and upstairs bedroom. Electrical contractors like the unique REMCON relay because of its built-in transformer. This means trouble-free installations at low cost.

REMCON simplified remote-control switching adds so much sales appeal to your houses and so little to the cost. Send us the floor plan of any home you now have under construction or plan to build soon. We'll send you a complete remote-control switching plan. Naturally there's no obligation. Write today to: REMCON division, Pyramid Instrument Corporation, Lynbrook, New York.

So you think you've seen

**BATHROOM VANITIES?**

You've never seen anything like National Vanity's stunning new Regency line. So elegantly designed and fashioned, they look like expensive custom-built pieces. Actually they're mass-produced to save you money and to make money for you. They've taken builders by storm. For the first time, here are brand new decorator-styled vanities surfaced with genuine Formica...with matching, sliding mirror-front, Formica medicine cabinets.

The vanities are cleverly sloped to allow plenty of leg room. The sliding doors are crafted of sparkling Lusterite® that slide easily with the touch of a finger. One or two sink cut-outs. Even wonderfully convenient cosmetic boxes.

Could you ask for anything more? Of course! National Vanity's colorful new brochure. Write for it Now!

See the complete Regency line, the popular Modern line, the enticing Classic. Never before has one producer offered so much to builders—so economically.

Send for your color brochure today.

*Corrugated fiber glass panels with textured crinkle finish.
"When you can get a premium glass at no premium in price..."

"Sure, why not use it—and that means AMERICAN!"

The man-with-the-pipe is right! The more glassed-in areas there are on your projects, the more important it becomes to use the whitest, clearest, most lustrous glass you can find. And that does mean American Lustraglass or Lustracystal—for top quality at no extra cost.

- Prove it for yourself on your next job. Ask your American distributor how Lustraglass can give your client the benefit of more light transmission, and afford the least amount of distortion over large areas... how Lustracystal can save you as much as 35% in many applications. Look in your Phone Directory for the name of the American distributor in your territory.

Continental Combination Storm and Screen Doors Now feature:

NEW NARROW-LINE STYLING
Finest Insert - Fastener Available!

The new narrow-line look, so important in contemporary design, has now been added to all Continental combination door patterns. Wood parts are narrower; glass inserts give more vision and light; screen panels provide more ventilation in warm weather. And, yet, this added beauty of line and functional efficiency have been achieved with no sacrifice of overall strength.

And, Continental’s new Speed Nut Insert-Fastener has these advantages to offer: simple to operate . . . improved appearance—no metal showing on outside face of door . . . lifetime service . . . completely in open—no hidden parts to engage, no loosening of inserts through vibration . . . foolproof trouble-free operation.

How Fastener Operates
1. Arched prongs — providing spring tension — lock themselves to screw threads.
2. Speed Nut as it appears in door stile.
3. Large head screw clamps insert securely to door frame.

Here is the Full Continental Line
OF QUALITY PRODUCTS
1. Combination Screen and Storm Doors
2. Screen Doors . . . Decorator Screen Doors and Louver Inserts

AMERICAN MOTORS MEANS MORE FOR AMERICANS
“Little brown church in the vale”

...modern version

Heated radiantly with Steel Pipe

For this widely publicized community church, built for a total of only $67,000, steel pipe radiant panel heating fitted the budget and the heating requirements perfectly.

The simple beauty and dignity of an interior unmarred by exposed heating elements, and the all-purpose flexibility made possible by sliding walls, governed the selection of "invisible" radiant heating. The known economy and durability of steel pipe for heating made it first choice.

Yes, steel pipe has been proved in more than 60 years of hot water and steam heating applications. It is still the most widely used pipe in the world for radiant heating, snow melting, plumbing, fire sprinkler systems, structural applications, air, gas and water lines!

Write for the free 48-page color booklet, "Radiant Panel Heating with Steel Pipe."

Here's beautiful news!

New Flintwood "32"

... the only 32" asbestos siding... in eye-filling two-tone colors... with Wrap-Around Dura-Shield® Silicone Protection!

You've got to see it to believe it! For Flintkote's new Flintwood "32" offers you a brand new concept of color-tone, surface protection and proportion in siding!

Let's take the last-named advantage, first! A 32" length! You apply Flintwood siding across two studs which are normally 16" apart. You can apply it over insulation sheathing in new construction. And have all joints nailed into the studs... doing away with special fasteners.

And that's not all! If you use Flintwood "32" in 16" width (as available in the East), much fewer units of siding are required per square. Only 32, in fact!

If you use Flintwood "32" in 9½" widths, (as available now in the West and South), you still need only 52 units per square.

What colors... and two-tone effects! What range! Dark brown... light brown... dark green... light green... white... ivory... and gray. Sidings to please everyone!

And... every individual panel of Flintkote Flintwood Asbestos-Cement Siding is completely protected with Flintkote's new "Wrap-Around" Dura-Shield Coating! Front... back... edges... corners... yes, even the nail holes. And the facing shield of silicone gives added protection against moisture and staining.

So take Flintwood "32" from here... and use it to make homes more beautiful... customers more satisfied... and profits more gratifying. Ask your Flintkote Representative to show you Flintwood "32" siding today.

No wonder the Overhead Door Corporation recommends Masonite Dorlux panels!

When you install an "OVERHEAD DOOR" with panels of Masonite Exterior Grade Dorlux, you give the owner a Lifetime Guarantee that these panels won’t split, splinter, delaminate or crack.

They’re easier to paint, too! The smooth, flat surface of these dense, hardboard panels is a perfect base for surface finishes. And, because they have no grain to rise and disturb your finish, the door stays new-looking longer.

With assurance like this, plus the long-recognized quality of the "OVERHEAD DOOR," your selection of garage doors is made much easier—whether for residential, commercial or industrial applications.

More and more manufacturers use Dorlux®—in panel doors, flush type doors and as door ornaments. Look for the Lifetime Guarantee on the doors you select. Masonite® Corporation, Dept. HH-6, Box 777, Chicago 90, Ill.
Each of the 4,000 homes — $11,750 to $15,700 — in the Lake Hills development, Bellevue, Washington, will have "silent salesmen" in every room — ARROW-HART Junior QUIETTE SWITCHES.

These smart builders realize that Arrow-Hart Quiette Switches offer prospects tangible evidence that these are quality homes.
the newest outstanding Grant product development

Grant folding door

A REAL DOOR THAT FOLDS!
styled by Paul McCobb

features

Solid Panels: The solid panel construction of this Grant door is a revolutionary development in a folding door at moderate price. The Grant Folding Door has crisp, clean lines, blocks sound, hangs rigid without billows or rustle. Knock on it. It sounds and feels like a door.

Space Saving: Frees an average of 14 square feet of floor space (19 square feet of wall space) for living space, better arrangement of furnishings.

Durable—Easy to Maintain: Vinyl surface can be wiped with a damp cloth — scrubbed if necessary. Tough and long-wearing, resists scuffing, color is permanent.

Easy Installation: Only a screwdriver is needed to install the Grant Folding Door in standard door openings in minutes. Readily adaptable to non-standard openings.

Decorative Flexibility: Color styled to harmonize with modern or traditional furnishings. Attractive design of handles, track and other details, also specially styled by famous Paul McCobb.

Ask for your copy of fully descriptive specifications booklet, the swatch book showing the attractive colors available and texture of the non-scuffing vinyl finish.

"Prospects are amazed at luxurious 'Pioneer' kitchens of birch, copper and steel in our $9,000 homes"

—Mr. J. M. Mandlebaum, President, P.A.T. Homes, Tucson, Arizona

Tucson builder features "Pioneer" kitchens in 298 homes—with spectacular results!

"When a woman walks into the kitchen of our model home, another house is sold," says Mr. Mandlebaum, speaking of the 298 homes his company is building in Craycroft Village, near Tucson. "They've seen kitchens like these in $15,000 to $50,000 homes, and are delighted to find them in our homes, which are under $9,000."

The "Pioneer" by American Kitchens is stunning and modern—a dramatic combination of natural birch and antique copper on a steel frame. It's easy to install and truly versatile—perfect for everything from a simple kitchen center to a complete kitchen with matching appliances.

Most important, the "Pioneer" is a sale-clinching feature that adds comparatively little to your costs. No matter what the price bracket, home buyers immediately recognize the "Pioneer" as the finest in quality and styling. If you haven't already discovered the selling advantages of the "Pioneer" and other American Kitchens products, mail the coupon below—today!

The Most Appealing Comfort Feature

Bathroom—Even temperature with minimum floor space.

Bedrooms—Comfort control with the temperature of your choice.

Home buyers today are becoming increasingly aware of the comfort advantages afforded by modern hot water heating systems. It is a most important consideration in their acceptance of a new home. National-U.S. Baseboard Heating Systems bring real comfort to the entire home . . . make each room delightfully livable . . . provide a uniform, even blanket of warmth from floor to ceiling.

National-U.S. Baseboard Heating Systems are easy to install and, for this better system, add only a small percentage to the total cost of the home.

You can also offer your prospects year 'round domestic hot water, snow-melting, temperature zoning and cooling. Use these convincing comfort features to promote quick acceptance and more profitable business for you.

Strongest way to bring on the buyers...

Sell with a brand name they know and want!

IN today's competitive building market, you want all the sales sock you can muster. The kind of pull-power you get with Mueller Climatrol all year air conditioning!

Think about it. You offer the appeal of luxury along with the down-to-earth pleasure promise of full-time comfort conditioning. And you do it with Mueller Climatrol—a reputation for quality that doubles the impact.

Want a more complete look at the rosy sales possibilities? Write direct, or...

See the man from

Mueller Climatrol

SALES-WINNERS—Combination Unit (Type 128-928 at left) can be installed complete for all-year air conditioning, or with heating and provision for low-cost addition of cooling. Lets you offer the cooling feature, even though your budget prevents complete installation. Same benefit applies to coil units (above), designed for use with remote air- or waterless-condensing units and highboy or lowboy furnaces. They're part of America's most complete line of heating and cooling equipment.
... and a Terne Roof
Will Sell Your Homes!

Your buyers normally may not ask about the roof . . . but with Terne, the roof becomes a feature you can sell! For after all, a house is a shelter and the roof provides the shelter. And a Terne roof offers the selling qualities that mean so much to prospective buyers—it will last as long as the house stands, it is fireproof, weathertight, windproof and can be painted any color, anytime, to harmonize with the house exterior and the surroundings. Above all, Terne makes the best roof for air-conditioned homes. So try the roof that will help you sell your homes... a Follansbee Terne Roof!

REFLECTIVITY
Painted white or a light color, Terne will reflect more of the sun's heat than any other roof.

LONG LIFE
Many installations of Terne have been in service for more than 100 years.

EXTRA BEAUTY
Terne can be installed in either standing, batten or horizontal seams—each a distinctive design of beauty.

SAFETY
Terne is fireproof, windproof and, when properly grounded, will protect your houses against lightning.

Roofing and sheet metal contractors everywhere will install Follansbee Terne Roofs. See them or write.

don't leave holes in your insulation

You insulate your walls for more comfort and for dollars-and-cents reasons. So why leave holes in them—uninsulated windows? With Thermopane* insulating glass in every window, your weather conditioning is complete. Thermopane gives you:

Warmer rooms in winter . . just like your other insulation does
Cooler rooms in summer . .
Savings in heat bills . .
Quieter rooms . .
And no seasonal work—it's permanent window insulation stays in all year .

Delivery of Thermopane has been accelerated by expanded glass-making facilities. Standard sizes are stocked by L'O F Distributors and Dealers (listed under "Glass" in phone book yellow pages), and consequently are more readily available than special sizes made to order. For our booklet, "Self-Insulating Windows of Thermopane," write Dept. 966, Libbey-Owens-Ford Glass Company, 608 Madison Avenue, Toledo 3, Ohio.

Thermopane gives you:
Warmer rooms in winter . . just like your other insulation does
Cooler rooms in summer . .
Savings in heat bills . .
Quieter rooms . .
And no seasonal work—it's permanent window insulation stays in all year .

One Chicago builder offers Thermopane for only $17 per month!

With single glazing
his house cost $24,674.00
Thermopane in every window added $7600 (and a whole lot of sales appeal)
For the additional comfort and prestige of Thermopane the customer paid $34 more down
And added to his mortgage 17 17 MORE PER MONTH (for less than the cost of good storm seal and none of the nuisance)
P.S. Call your LOF Distributor for the whole story
This ad ran in the POST, April 28; you'll see more in 5 or 6 other national magazines.
The "plus" home buyers want...

More built-in storage space

Here's an important new way of putting more sales appeal into your houses... to satisfy the demand for more storage space... at a cost lower than you ever thought possible!

Ready-made, one-piece drawers molded of Bakelite Brand Phenolic Plastic offer new storage unit possibilities for every room in your houses. Prospective home owners are quick to see the advantages. They'll delight in the ease of cleaning (they're glossy smooth... have rounded corners) and the smart black finish that fits into any decorative plan.

Costs are comparable to conventional drawers of quality construction. The drawers come completely finished with guides molded in... just drill a hole for the pull, slide into place! No fitting, no sanding, no painting.

See your building supply dealer today, or write Dept. PZ-78, for full information and list of suppliers.

Rugged molded phenolic drawers provide ideal storage space for the children's toys in his bedroom. Located where they're easy to use, too! Drawers manufactured by Boonton Molding Company, Boonton, N. J.

BAKELITE COMPANY

Put the permanent strength of steel into your homes... with Gold Bond's NEW Corner Bead

Guard against costly damage to wallboard construction by protecting exterior corners with steel. This new corner bead, styled after the already popular Gold Bond plaster corner bead, gives wallboard corners a firm, lasting reinforcement. The exclusive triangular design affords maximum bonding of joint cement. Deep knurled flanges prevent joint cement slippage during application and provide better adhesion after application.

Protect Door and Window Edges with Gold Bond Wallboard Casing Bead

These steel casings make terminating wallboard construction around windows and doors easier and more economical. Low-cost Gold Bond Casings are self-finishing and eliminate the need for wood trim. Each casing unit fits snugly and has a ridge design that locks in the wallboard.

Strong exterior corners and door and window edges are important sales features that homeowner prospects are looking for in home construction. Give your homes the added strength of Gold Bond Corner and Casing Bead. Ask for complete facts today. Write National Gypsum Company, Buffalo 2, New York.

Y. We will be glad to rush them to you.

**KENTILE, INC.** America’s largest manufacturer of resilient tile flooring

KENFLEX. SPECIAL
The new FIAT Monterey shower floor has a PreCast integral threshold and curb that completely eliminates the most expensive steps in shower construction: the built-on-the-job floor, threshold and pilasters. Glass filler panels at the jambs replace the pilasters, rest directly upon the curb of the Monterey. The FIAT PreCast Shower Floor simply slides into place—there's no need for sub-pan, mortar, tiling and hours of costly labor. Try this new shower technique that saves you money and produces added sales appeal.

The Monterey shower floor, PreCast of sparkling terrazzo, is permanently leakproof and furnished as a complete unit with solid brass drain and stainless steel strainer plate. There is nothing else to buy—nothing else to install! The photograph shows an excellent and economical shower combining the Monterey floor with a glass filler panel and door forming the front. Either hinged or sliding doors, by others, may be used as the solid threshold provides a convenient foundation for the track.

Monterey model available in six sizes—rectangular, square and corner designs.

It's so much easier to see the advantages of PreCast Floors than to read about them. That's why we would like just five minutes of your time to show you this cross section sample. Clip coupon to your letterhead and get full information. No obligation of course.

...opens new profit possibilities for builders of Inland homes

Inland Homes are of conventional type construction and appearance. There are 12 basic floor plans and 72 exterior designs.

- The Inland package offers more than you'll find in any other pre-fab package.
- An Inland Home can be erected in less time and at lower cost. You can offer a higher quality home than your competition.
- Floor plans which give a new dimension to living—beautiful exteriors and unusual roof designs—make Inland Homes easier to finance. Their quality is readily apparent to both buyer and mortgage men.

We have a story that tells you how easy it is to get started—it's one you can't afford to overlook. We suggest you visit us and see for yourself why an Inland Home dealership is the most valuable one you could have. Write us on your letterhead for appointment—or better still, phone 3880, Piqua, Ohio.
NEW! International® 300 Utility Tractor now with POWER STEERING

Steer single-handed, maneuver in cramped quarters . . . keep the other hand free to control equipment! The new International 300 Utility with power steering gives the operator finger-ease control of the wheel—even with heaped half-yard bucket on a heavy-duty loader. One-hand steering lets him load, doze, backfill, grade and level on the go. With the 300 Utility built-in strength and stamina, users report they move up to 25 per cent more dirt in a day than with lighter-weight, harder-to-handle outfits.

IH power steering blocks kickbacks from the front wheels to lessen operator fatigue—yet retains the "feel of the wheel" and normal self-return. It is powered from the tractor's regular Hydra-Touch hydraulic system, eliminating the cost of a separate pump.

Up to 1,000 pounds greater built-in weight gives the new International 300 Utility stamina to cut downtime, traction to step up output.

IH utility tractor power to your job. For free specification folders, write International Harvester Company, Dept. HH-4, P. O. Box 7333, Chicago 80, Ill.

Here it is! LOW COST ANSWER TO AIR CONDITIONING!

NEW LEWYT BUILT-IN WALL AIR CONDITIONERS SOLVE COST PROBLEMS FOR ALL BUILDERS!

Now, for the first time, you can install air conditioning in houses priced as low as $8,000 without substantially increasing the cost of the house.

Only 15" deep, the compact Lewyt Built-In Wall Air Conditioner fits flush—inside and out—in any outside wall. And, with Lewyt's new scientific perimeter cooling method you can air condition any part of a house or all of it.

The Lewyt has individual controls and thermostat built right in. There are no ducts to install—no obstructions of any kind in your windows.

Imagine—all of this, plus, Lewyt quality at a price every builder can afford. Get all the facts—today!

LEWYT BUILT-IN WALL AIR CONDITIONER

By the maker of the famous Lewyt Vacuum Cleaner

LEWYT AIR CONDITIONER CORPORATION, Dept. HH-6
57th St. and 1st Ave., Brooklyn 20, N. Y.

Announcing the Revolutionary New

WASTE KING
Automatic

DISHWASHER

PLUS THESE QUALITY FEATURES

Built-in Drain Pump-Out • Lifetime Porcelain Interior • Push-Pull Cycle Control Knob for fully automatic or manual operation • Interchangeable Door Panels in White Enamel, Stainless Steel, Copper. Also adaptable for wood panels to match any kitchen decor. Two Custom Models: FS-1C (free standing) and UC-1C (under counter).

Developed by Waste King engineers in the tradition of Waste King quality ... with every feature housewives need to do a better, more complete dishwashing job.

Washing action more efficient — revolutionary rinsing and drying — easier loading — service-free design — years ahead styling. Waste King obsoletes all other methods of dishwashing.

BETTER WASHING
70 swirling jets drench all dishes, glasses, pots with a powerful needle spray.

HUMIDITY-FREE DRYING
No steam expelled into the kitchen. No dust-laden air enters the sealed tub.

SUDS FLUSH-OUT
A powerful spray cleans out all wash water before first rinse water enters.

LARGEST CAPACITY
Versatile, easy-to-load Contour Racks plus large silverware basket.

QUIETER OPERATION
Super "Hush-Cushions" plus Fiberglas insulation guard all noise producing points.

EASY INSTALLATION
Water, drain, electrical connections made from front after dishwasher is placed.

New Beauty! New Features! More Flexibility! More Colors!

BRAND NEW CABINET LINE FROM KELVINATOR HELPS SELL NEW HOMES

Top Quality Steel Construction — Easy Installation — Priced Right!

The all-new, all-steel Kelvinator cabinet line has been particularly designed for builders. Here at last is a truly flexible line that will answer every kitchen installation problem. Now it is possible to easily achieve that luxurious custom look in kitchens that offer the most unusual size or shape problems. The completeness of the new Kelvinator line is of course the answer. There are sink cabinets, matching wall and base cabinets in a wide range of styles and sizes. Everything you need is provided ... corner cabinets, combinations, revolving wall and base "Lazy-Suzans," peninsular cabinets and a variety of cabinets for built-in ranges. Get complete information on this all-new Kelvinator line, write to Kelvinator, Division of American Motors, Detroit 32, Michigan. Today!

MORE COLORS TO SELL WITH!

8 DECORATOR COLORS TO MATCH KELVINATOR APPLIANCES ... PLUS
4 ADDITIONAL COLORS FOR MIX AND MATCH INTERIORS

QUICKLY AVAILABLE FROM 14 STRATEGICALLY LOCATED FACTORY WAREHOUSES PLUS ALL KELVINATOR ZONE AND DISTRIBUTOR WAREHOUSES

KELVINATOR BATHROOM BUILT-INS

Powder Bar, Vanity and Lavatory Cabinet Combinations

Beauty and practicality at a low price. All-steel cabinet with contrasting Formica tops.

Kelvinator
Division of American Motors • Detroit 32, Michigan

Deepest, single piece, rounded design drawer made. No corners to catch dirt.

Handsome recessed chrome handles pleasing to the eye—can't snag clothing.

Neoprene tires on nylon rollers assure permanent quiet and easy operation.

Adjustable shelves, a real cabinet feature, add more convenience for extra storage.

Bonderized steel, exclusive finishing methods for a smooth surface that endures.

Sturdy spring hinges hold doors fully open or closed, prevents accidental bumping.

JUNE 1956

ROUNDUP

Does housing need another shot of easier terms?
Slumping housing starts revive talk of softening FHA and VA down payments. Last Christmas, the government restored 30-year VA mortgages to its books, but new no-down commitments have been banned since last July. The administration could lower the 2% down payment now required for new VA home loans and drop FHA's minimum down payment from 7% to 5% again.

Variable standards urged to ease community facilities woes
Builders should set up three voluntary standards for community facilities, thinks ex-NAHB President Tom Coogan—one standard for high-priced developments, one for middle-priced developments and one for low-priced developments. He feels one trouble builders run into when they fight unreasonable improvement requirements is that someone in the local government has been sold a bill of goods on a high standard and the builders cannot show any good alternative which has official sanction.

Can FHA permit buyers to pay discounts—voluntarily?
Topic A in Washington is how to offset the squeeze on FHA and VA loans because of the increasing price of money. Legally, FHA could hike its interest rate from 4¼% to 6%. But VA is already at the 4¼% ceiling imposed by a Congress which has always been peculiarly sensitive to pressure from veterans lobbies. So housing officials feel FHA is stuck with the VA limit.

Mortgage bankers asked FHA officials in New York for their eastern mortgage conference last month if they could permit home buyers—particularly individuals building their own homes—to pay discounts voluntarily. So far, FHA hasn't come up with an answer, though Deputy Commissioner Charles Sigety huddled with top MBA men on this and other problems.

One possible solution: since the law permits FHA to allow a fee to reflect the cost of putting a mortgage on a lender's books, discounts might be permitted by an administrative ruling that this was part of the cost of creating the mortgage.

Has labor's drive to organize home building fizzled?
Labor's big drive to unionize the building industry (Mar. News) apparently won't get off the ground this year. A top building trades official claims that labor never really planned a drive. He blames it all on "exaggerated reports" from the AFL-CIO building trades mid-winter meeting in Miami Beach in February. "Some people believed all the noise they heard from the floor," he says. "The truth is we just don't have the money to undertake a big organizational drive this year." NAHB, worried at first, now seems to agree there is no immediate threat of an organizing drive. The building trades real 1956 goal: to iron out AFL-CIO unification problems.

Kind words for H&H from across the sea
The Architects' Journal, weekly British trade magazine and sister publication of the highbrow Architectural Review, has delivered itself of comment-from-afar on the life and times of four-and-a-half-year-old HOUSE & HOME. Said the Journal, in its page one "Astragal" editorial column: "Astragal had his doubts when the American magazine, Architectural Forum, split itself into two—Forum, the Magazine of Building, and House & Home. The reason for the split was an understandably commercial one—the publishers wanted to appeal to the enormous speculative housing industry. In spite of his original doubts, Astragal finds himself more and more impressed by the consistently high standard of House & Home. It occasionally has top-grade architect designed individual houses, but for the most part it is concerned with the American speculative housing market in all its aspects, and one has to remember that most housing in America is built by private enterprise. "What is so impressive is that House & Home has not been satisfied to follow the trend; it has led them. It has consistently put forward enlightened policies and examples. And it has consistently stressed the architect's contribution to building."

All over America Builders use Ceramic Tile Sales Power

Adhesive Installations — key to Ceramic Tile “Showplace” areas

With home prices edging up, the discriminating cash buyer is demanding more. Ceramic tile, traditional mark of a quality home, offers the builder a perfect opportunity to give more convenience, more luxury. And adhesive installations are the way to offer more tile at less cost. Here are some of the ceramic tile “showplace” areas builders are using to help sell their homes faster:

- Utility room, with practical ceramic tile floors and walls.
- Ceramic tile drainboards, a real eye-catcher for Mrs. Home-buyer.
- Ceramic tile window sills, a bonus appreciated by every home-buyer.

Don’t forget to ask your ceramic tile contractor about the savings made possible by adhesive installations. This type of installation is ideal for many dry-wall surfaces.

How Adhesive Installations cut your tiling costs

Mastic bed on drywall cuts down preparation time and costs.

Tiles are set quickly and easily on mastic bed.

Job clean-up time is held to minimum.
Here's what leading builders like

Robert P. Gerholz are doing with Tile

Gerholz Community Homes of Flint, Michigan built this best-seller home. "Open-planned" for indoor-outdoor living, this $22,950 house has the luxury feel that appeals to today's home-buyers.

Builder Gerholz used the modern adhesive method to install ceramic tile in this attractive bath. Eye-catching tile installations like these help the home-buying prospect make up his mind in a hurry—in favor of your home!

Holmes & Jensen's "Storage Wall"

house has the Ceramic Touch!

Holmes & Jensen of Salt Lake City, Utah have had great success with a $16,000 "open room" house featuring storage walls throughout. Holmes & Jensen used adhesive installations of ceramic tile in both bath and kitchen. Note the tiled lavatory counter tops and walls in the bath. The kitchen features an inviting cooking corner surrounded by gleaming tile. Holmes and Jensen feel that successful, time-saving adhesive installations are profitable because "in the construction of homes, time saved is money earned."

TILE COUNCIL OF AMERICA, INC.

Room 3401, 10 East 40th St., N.Y. 16, N.Y. or Room 933, 727 W. 7th St., Los Angeles, Calif.

PARTICIPATING COMPANIES: American Encaustic Tiling Co. • Architectural Tiling Co., Inc. • Atlantic Tile Mfg. Co. • Cambridge Tile Mfg. Co. • Carlyle Tile Co. • Dover Ceramic Co. • General Tile Co. • Gladding, McBean & Co. • Jordan Tile Mfg. Co. • Mosaic Tile Co. • Murray Tile Co., Inc. • National Tile & Mfg. Co. • Olean Tile Co. • Pomona Tile Mfg. Co. • Ridgeway Tile Co. • Robertson Mfg. Co. • Royal Tile Mfg. Co. • Sparta-Ceramic Co. • Styron Corp. • Styron Southern Corp. • Summitville Tiles, Inc. • United States Ceramic Tile Co. • Winburn Tile Mfg. Co.
MORTGAGE MARKET:

Tightest pinch in years grips housing but experts see hope of easing in Aug.

At the banquet of the Pacific Northwest Home Builders convention last month in Spokane, the orchestra played "I Can't Give You Anything but Love, Baby," and the crack went around the speakers' table that this should be the theme song of mortgage lenders.

Mortgage money, which tightened abruptly in April after showing signs of easing, is now tighter than it has been in years.

With savings off and general business demand for loans at astronomical heights, interest rates have climbed to their highest level since the depression. FHA and VA mortgage loans, with their interest frozen politically at 4 3/4%, require sharply increasing discounts to compete in the traditionally money-shy regions. When discounts rise rapidly, it gets difficult to hide them in the price of the house. Profits shrivel. Builders cut back production.

Talk by both builders and lenders is more bearish than HOUSE & HOME's editors have heard in a long time. Former MBA President William A. Clarke of Philadelphia, whose forecasting average is better than most, was predicting a "substantial reduction" in 1956 housing volume. "The mortgage market is in chaotic condition," commented Executive Vice Pres. Maurice A. Pollak of Chicago's Draper & Kramer. President Tom Coogan of Housing Securities Inc. was predicting "crisis in the housing industry."

Construction loans are tougher and tougher to get in many cities. So are warehousing loans.

Interest on both is up 1/4% to 1/2%. The Federal Reserve's deliberate tightness of money is pinching commercial banks hardest. "Our bank is flat broke," said an officer of a leading New York bank. To raise money to meet lending commitments, the "busted" banks were selling government bonds (usually at a loss) or borrowing from the Fed (at discouragingly high prices).

Despite its severity, the mortgage drought may be short-lived. Reasons:

1. Starts are dropping as sales weaken in many cities. Lenders generally blame several years of "overproduction" and give-away credit terms for temporary gluts of unsold homes. Most builders point at something else—building "too expensive" models, "unrealistic" FHA and VA requirements which "force" them out of low-price brackets, for example.

2. Many of the forces in the US economy that combined to convince the Federal Reserve that inflation threatened this spring are already reading a crest. If the peak squeeze on money passes this month, as some expect, the money market may begin to ease by August. Items:

- Corporations have been borrowing heavily to meet June tax payments.
- Spring's whopping bulge in capital expenditures for new plant construction has reached a point where most borrowings are arranged.
- Businessmen have been piling up inventories in anticipation of price increases (especially in steel, where a strike threatens). But this trend is beginning to reverse itself—reverse so sharply, in fact, that some economists now talk of a possible "inventory recession."

With the Federal Reserve's latest boost in rediscount rates under criticism even inside the administration, some prophets look for moves to ease money after the June squeeze. Some experts think the Fed's credit control mechanism, developed in the '20s and '30s, is now obsolete for steering an economy that has undergone revolutionary changes.

If mortgage money and construction loans ease by September or so, it will be too late to affect 1956 total housing output much. But builders who time their operations accordingly should be better off than those who don't.

MORTGAGE BRIEFS

Conventional lending gains

Conventional lending accounted for 57% of housing starts in the first quarter of 1956, compared to 50% in the first quarter of 1955.

Union fund to buy VAs, FHAs

Evidence grows that pension funds are beginning to come into the mortgage market more heavily. The International Ladies Gar­ment Workers Union will put $15 million of its $167 million in health and retirement reserves into FHA and VA mortgages on small homes. President David Dubinsky says the union expects to buy 1,500 mortgages in the $10,000 to $12,500 bracket.

Nudge for pension funds

Chairman Albert Rains (D, Ala.) of the House housing subcommittee will hold a round-table hearing on channelling pension funds into mortgages.

He hopes to hold the discussions soon after the banking committee completes hearings on the 1956 housing bill. Custodians of labor-management funds have expressed interest in the idea, he says.

"Some action to tap new sources of financing funds is certainly necessary," Rains contends, "because as it is now, building money tends to dry up as soon as we hit a pace of more than 1.2 million housing units a year."

Move to scrap VHMCP blocked

Added concessions by HHFA have persuaded the House veterans affairs committee to pigeonhole its bill to kill the Voluntary Home Mortgage Credit Program by prohibiting VA from referring direct loan applications to it. HHFA agreed: 1) to stop referring applicants to VHMCP in areas where VHMCP has been slow finding private mortgage money, 2) to stop referring cases to VHMCP where a builder refuses to absorb the cost of a discount.

Will cost of borrowing by S&Ls increase?

Cost of borrowing from the Home Loan Bank by the nation's federal savings and loan associations seems bound to rise.

The Home Loan Bank Board sold $126 million of six-month consolidated notes at mid-month with an all time high interest rate: 3 1/2%. Ten of its 11 member banks were charging from 3 to 3 1/2% for loans to member institutions (the San Francisco HLB has just upped its rate from 3 1/2% to 3 3/4%.) S&L industry spokesmen are resigned to paying 4% for loans from regional HLBBs before long—even though only $51 million from the note sale will be used to make new loans to members. Interest on HLB's consolidated notes has zoomed steadily since March 1955, when it was only 1.8%.
S&L leader pushing plan to tap new money sources

A plan to draw new sources of money into home finance has been proposed by former President Ben Hazen of the US Savings & Loan League.

Hazen, who considers VA and FHA financing "socialistic and bureaucratic," wants S&Ls to set up a Home Loan Fund to sell certificates to investors in multiples of $5,000 and put the money into S&Ls across the nation.

Investors would get the same dividend as any shareholder of a savings and loan association—(average: 3%)—less 0.1% servicing charge. Certificates would be redeemable at par at any time.

Hazen, president of Ben. Franklin S&L of Portland, Ore., hopes many segments of the shelter industry including manufacturers of building materials and appliances will invest in the fund. He especially hopes to see pension funds invested.

Money to the mortgage

Three trustees would direct investment of the fund, routing money to where it is needed most. In Hazen's words: "The money would be taken from the market to the mortgage instead of bringing the mortgage to the market."

At work on his plan since early 1955, Hazen has already started lining up members for Home Loan Associates, the promotional arm of the operation. He plans to start Associates when he has 600 S&L's willing to join. Last month he had 477 pledges.

To participate, each member S&L would have to pay an annual fee of no less $25 nor more than $300, based on assets. Each would also pay to Associates 0.5% of all investments received through the Home Loan Fund. This money would go to promote the plan more.

SEC approval a hurdle

Hazen expects to have his 600 members for Home Loan Associates this summer. Home Loan Fund will go slower since it will have to be examined thoroughly by the Securities and Exchange Commission before it can begin operation.

"The whole idea," Hazen explained, "is to make more money available for the home-mortgage market via private enterprise. Static areas and big investors with money to spare can thus put their money to work in money-short areas."

If his plan clicks, Hazen thinks it will mean more conventional loans by local S&Ls and fewer FHA's, VAs sold to far off investors.

S&Ls map fight against HLBB separation plan

The US Savings & Loan League has begun mustering support to fight an administration move to separate the Federal Savings & Loan Insurance Corp. from the Home Loan Bank Board.

President Eisenhower wants to divorce the insurance agency from HLBB through use of his reorganization powers. His action was a variant of recommendations by the Hoover Commission. It also had support from a report by the General Accounting Office that it was undesirable for the two agencies to have identical membership since their duties were "inherently conflicting."

US S&L spokesmen charged that the move would only result in more red tape for S&Ls and lack of uniformity.

The president's action can be prevented only if a constitutional majority of either House or Senate vote against it. If neither House even considers it, it becomes effective automatically in 60 days.

the newest addition
to a famous insulation line—
**Balsam-Wool with REFLECTIVE LINERS**

Balsam-Wool—with its proved advantages of high efficiency...wind and moisture resistance...extra ruggedness...clean, easy handling—introduces the newest "member of the family"—Balsam-Wool with Reflective Liners. This new addition of Balsam-Wool insulations is an effective answer to summer cooling, air conditioning economy plus winter comfort!
Especially developed for air conditioning economy—summer comfort—with the exclusive Spacer Flange!

This newest Balsam-Wool blanket insulation combines reflective liners with an "old" Balsam-Wool exclusive advantage—the Spacer Flange that positions the blanket to provide important air spaces on either side of the insulation. These flanges make correct application easy, assuring air spaces which are essential for proper performance of reflective surfaces.

Again—a SEALED blanket insulation!

Balsam-Wool's insulating blanket is enclosed (as are all Balsam-Wool insulations) for extra protection. The flanged liner of aluminum foil provides a vapor barrier as an integral part of the new blanket. The other reflective liner offers the extra benefit of a rugged wind and heat barrier. Here is 3-way protection...reduces heat transmission by conduction, convection and radiation. For full details, write Wood Conversion Co., Dept. 236-66, First National Bank Bldg., St. Paul 1, Minn.

WITH REFLECTIVE LINERS
HOUSING MARKET:

Sales slump in many cities; starts fall so low 1.2 million year looks unlikely

Housing starts have fallen far enough below last year’s levels to make more than 1.2 million starts this year unlikely.

In the first four months of 1956, the nation’s home builders began only 349,900 units (graph, below). That is 16% less than during the same period last year (but 11,200 units higher than the first third of 1954).

To reach 1.2 million starts, housing would have to average more than 106,000 starts a month the rest of the year.

Not only tight mortgage money, but also slumping sales of new homes cast doubt on chances for any such achievement. But it is noteworthy that dollar volume of new housing should slump only a little, if at all, because builders are putting up bigger, more expensive houses (see col. 3). That means the housing industry’s shakeout—if it is that—may hurt more statistically than financially.

Overhangs of unsold homes are a worry in some cities.

Dallas and Houston are working their way out of overhangs of unsold houses, but many another Texas city is having sales trouble. In San Antonio, one big builder has left some 30 slabs in the ground for two months—long enough to rust pipes—rather than risk pouring $7,000 or $8,000 of good money after $3,000 of bad. That is an extreme case. But sales are flat in Corpus Christi and elsewhere—though brisk in El Paso because of missile development.

On the West Coast, parts of the Los Angeles area (notably Orange County), are having trouble. Sales are better in northern California, but the spring pickup still is not encouraging. Houses are still selling well in Detroit, Chicago and Cleveland—among other places—but the market looks weak to some experts in Washington, D. C., Memphis, Oklahoma City and much of Florida.

The general picture: cities which have had a housing boom for the last two or three years are undergoing a sales slump. Where housing has stayed on an even keel—and in many a little town—new homes are still selling.

Some sophisticated builders and mortgage men say it was just as well money is as tight as it is. Said a Florida mortgage banker: “We’ve got some suffering to do and we better get started.”

MARKET BRIEFS

Home ownership hits 60%

US home ownership has reached a record 60%, the Census Bureau reported. This compares with 55% in April 1950, the last previous census of housing. Among nonfarm households, ownership is only 59%, compared to 53% in 1950.

The South showed the biggest gain, going from 52.7% to 60.7%. The North Central states still have the highest rate of home ownership, 66.4%. The Northeast is lowest with 52.1%.

Houses grow bigger

Said FHA in an official announcement: “American families want and are getting larger homes.”

Last year, for the first time since FHA has kept records on it, the typical FHA-insured new house had more than 1,000 sq. ft.

Average size FHA new house, by years:

1955 ... 1,022 sq. ft. 1952 ... 923 sq. ft. 1954 ... 961 sq. ft. 1951 ... 879 sq. ft. 1953 ... 924 sq. ft. 1950 ... 838 sq. ft.

The typical 1955 FHA new house had 5½ rooms, including three bedrooms. It was valued at $11,750, had a mortgage just over $10,000, with monthly payments of $74.

VA sketches average buyer

VA surveyed 20,000 of the more than 1 million GI home loans guaranteed in 1954 and 1955. came up with this picture of the average buyer and his house:

Income ... $5,925 Age .......... 32
Sale price .. $11,800 Down pay .. $950
Monthly payments ............ $96.75

Two of every five buyers made no down payments, and 44% applied for mortgages with 26 to 30-year maturities, VA reported.

FHA and VA applications showed a mixed trend in April. VA appraisal requests rose sharply to 45,769 (from only 37,511 in March). FHA applications slumped unseasonally to 23,755 (22,276 homes, 1,479 projects). The figures suggest more and more builders are pushing to get in on the VA market before it expires, while FHA terms grow more and more unattractive.
VA valuations protested

Builders in the Pacific Northwest have had so much trouble with low valuations from both VA and FHA that more and more of them seem to be turning to conventional financing.

At the second annual Pacific Northwest Home Builders convention in Spokane, 350 conferees talked of making an organized objection to appraisal formulas and methods, but finally decided to take no concerted action.

In Spokane, home builders and VA have been arguing since January since one builder, up to his shingles in frustration at low VA appraisals, appealed directly to Sen. Warren G. Magnuson (D. Wash.) for help in getting higher appraisals out of the regional VA office.

Spokane builders complain they can barely make 3% profit on a VA house. Said one builder: "Anyone still building under VA just doesn't realize he is going broke." Builders say FHA appraisals generally run 10% higher than VA on the same house.

Hansel & Gretel fad

The "Hansel and Gretel" house (Bavarian-type cottage with low-flying shake roof, gingerbread and imitation leaded glass windows, which is still selling well in Los Angeles, was tried out in Spokane. One builder put up a number of them, had pretty good sales. But the fad ended quickly. Now, Spokane builders say the style is a drug on the market. Los Angeles builders wonder if this foreshadows public taste in their area.

A newer fad, just emerging in such spots as Connecticut, Kansas City and the San Francisco region: new houses built like remodeled barns.

Unsold homes up in Portland

Cost of building new homes in Portland, Ore., has increased approximately 3.2% in six months, mainly because of increased labor costs. But the selling price of existing homes has remained unchanged at close to the level of two years ago.

These figures are from the latest semi-annual market study, Portland Real Estate Trends, published by the nonprofit metropolitan Portland real estate research committee.

Vacancies in the four-county metropolitan area during the six months since the previous report (Sept. 30) have dropped from 1.40 to 1.31%. But the study shows the vacancy rate in medium-priced homes ($7,500 to $9,999) rose from 0.76% six months ago to 1.34%. In both lower and higher-priced homes, vacancies declined.

The inventory of unsold homes past plastering stage rose, too. March 31 a year ago there were 374. Last September there were 500; March 31 this year 582. But a sharp pickup since the March 31 closing date for survey statistics has greatly reduced the inventory, say builders. In another report, bringing figures into April, VA indicated the inventory had dropped to "near normal."

The typical house that cost $12,355 to build last Sept. 30 cost $12,751 at the end of March. It would have been a $5,000 house in 1941.

SCHOLZ PREFABS WERE AMONG FOUR COMPLETE HOMES IN NEW YORK SHOW

Union display of make-work tactics overshadows first New York home show

Even before the nation's biggest spring home show opened in New York's mammoth Coliseum, the building industry and the public were given a muscular display of union make-work tactics.

Items:
  1. Teamsters paraded around the building, stopping deliveries and insisting that they haul and deliver every item to be part of an exhibit, however small.
  2. Carpenters and stagehands had a jurisdictional dispute over who was to set up exhibits. It grew so involved that the stagehands were following the carpenters around, taking down things which had just been put up.
  3. Glaziers threatened to picket (but didn't) because prefab house exhibits came with windows already in place.

Show sponsors blamed the labor trouble on newness of the $35 million structure, which had opened just two weeks earlier. It was built—along with an adjacent 20-story office building—with controversial Title I slum clearance aid.

Cost of exhibiting in the show spiralled overnight. Prefabber Don Scholz, who called the unionists "goons and gangsters," expected to pay $10,000 to set up his exhibit of two prefab homes. Final cost: $30,000. Halfway through the show's nine-day mid-May run, Scholz tried to pull out, explaining that the homes had been erected poorly by Coliseum workmen. He couldn't get out. Show officials would not let workmen take down the models.

Main another exhibitor was digusted. Complained one, pointing to his exhibit sign fastened with Scotch tape: "A ratty looking exhibit, but if I try to put hooks on it, some union will come screaming at me." Another exhibitor complained that the union had scouts who did nothing but make sure no one did anything on an exhibit but Coliseum union employees. Several exhibitors tried to use their own union men, but this wasn't allowed. Predicted one: "This keeps up this place will be a warehouse in six months."

Wages charged by the Coliseum workmen stunned exhibitors. Electricians were paid $10 an hour to do no more than plug in and unplug power tools. Carpenters got $11 an hour. Cost for a cleaner to sweep out a prefab, a one-hour a day job, was $30.

New York newspapers frowned editorially on the unions. Commented Scripps-Howard's World-Telegram & Sun: The unions responsible for this mess don't seem to realize that labor has an enormous stake in the success of the Coliseum. If labor wants to kill the goose capable of springing the golden eggs, it's going about it just right with its senseless shenanigans.

At one point 42 exhibitors announced they
Better Insulation Protection
Extra Sales-Features

with

CELOTEX FULL-THICK REGULAR BLANKETS
A superior sidewall insulation. The blankets practically fill the stud space, providing the maximum of year-'round comfort and fuel economy.

CELOTEX MEDIUM-THICK REGULAR BLANKETS
Cost little more than ordinary thin blankets of less insulation value. . . require no more labor cost to install. Offer an excellent balance between cost and insulation value for most homes.

CELOTEX FULL-THICK REFLECTIVE BLANKETS
Two insulating materials in one product: Reflective-surfaced sheet plus a blanket of spun rock wool. Specially developed for insulation of top-floor ceilings in air-conditioned homes. An outstanding insulation product, retarding the flow of both radiant heat and conducted heat for year-'round comfort.

CELOTEX UTILITY BLANKETS
An economical insulation that has 50% more insulation value than ordinary 1" blankets, yet is comparable in cost. Greatest possible insulation value for the money.

CELOTEX MEDIUM-THICK REFLECTIVE BLANKETS
2-in-1 blankets, insulating against both radiant and conducted heat, designed particularly for sidewalls in air-conditioned homes. A necessary inner wall air space is provided for added insulating efficiency.
Complete insulation has clinched thousands of home sales. And with the increasing demand for air conditioning in today’s homes, prospective homeowners are more insulation-conscious and sales-responsive than ever!

The Celotex line of Spun Rock Wool Blankets includes insulation types to perform perfectly in every application. New advantages now make them more efficient, more desired than ever. “Spun” process manufacturing produces longer, livelier fibers, providing even greater lightness, resiliency and effectiveness!

New Celotex Spun Rock Wool Blankets offer the uniform high quality, top insulating value, and permanent efficiency that prospects demand. Clean, rugged . . . with minimum cutting and fitting required. Two types . . . reflective and regular. Three thicknesses . . . full-thick, semi-thick, utility. All with vapor barrier and reinforced flanges for nailing or stapling. Be sure to specify Celotex Spun Rock Wool Blankets . . . for quality that convinces prospects their dollars have been wisely spent! Contact your Celotex Dealer, today.
People really buy... when homes have

Airtemp YEARROUND AIR CONDITIONING!

500 New Miami Beach Homes—all equipped with Airtemp yearround air conditioning (80,000 B.T.U. gas furnace and 3 H.P. waterless conditioner). Prices on homes start at $19,990. Low installation cost of Airtemp yearround air conditioning helps builder keep prices down.

AIRTEMP GIVES BUILDERS THESE BIG EXTRAS

- Chrysler Engineering for superior performance
- Complete Builder's Line of heating and cooling
- Hard-selling New Home Merchandising Program
- Factory-trained dealer service—nationwide

Phone your nearby Airtemp dealer for full details. He's in the Yellow Pages. Or write: Airtemp Division, Chrysler Corp., Dept HH-6-56, Dayton 1, Ohio.

22 homes sold opening day. Newspaper advertising (shown at top), plus strong Airtemp builder promotion aids, drew large crowds. Home buyers were enthusiastic about the air conditioning. No wonder! It was 20° cooler inside on opening day.
would quit the show if the unions didn’t stop their make-work tactics. Eventually several did walk out. (The sponsors said there were only two. Other exhibitors said there were a dozen.)

Near the show’s end, carpenters and stagehands, brought together by top union leaders who deplored the “black eye for labor,” reached agreement on their dispute.

The show itself was no great shakes as a show. With 300,000 sq. ft. of space on four floors, the sponsors took many a non-housing exhibitor, including pitchmen for everything from vibrator chairs to summer coats and carnival chins.

### VA, BUILDERS ON THE GRIDDLE

#### Underestimating tax on VA homes brings grand jury probe

**Southern California builders move fast to stamp out careless arithmetic giving them black eye**

A grand jury in Orange County, Calif. has just flung another brickbat at the Veterans Administration's home loan program.

The jury rapped VA for failing to protect the interest of veteran home buyers by “allowing deception in tax and impound schedules.”

Although it is a local report covering a local California situation, the jurors’ findings and the story behind them are coming in for close scrutiny elsewhere—especially by Congressional opponents of the VA home program who have long operated in the benefit of builders, not buyers.

And Los Angeles home builder groups, outraged at the black eye home building is getting from the disclosures, have taken strong steps to slam the door on understatements of taxes by both members and non-members.

**Only one price group**

The squabble revolves around 6,000 new homes in the $11,000 to $13,000 price bracket, sold in the last two years in the hotly competitive Orange County market. Some underestimated taxes as much as 75% but buyers didn’t know it. This had the effect of making families with lower incomes qualify as buyers. In one tract, for instance, builders estimated taxes at $60 per year. They turned out to be about $250.

Home owners found out early this year when mortgage holders notified them that their monthly payments were being increased $10 to $15. Their cries of outrage were heard first by the editors of the semiweekly West Orange County News and Garden Grove News. “The main reason we got into it,” says News Editor Jim Cooper, “was the moral issue of whether any builders were using phony impound statements to qualify marginal buyers.”

Some affected builders protested that increased tax rates, unforeseen when taxes were estimated, caused payments to jump. Buena Park, for instance, boosted taxes 40% to $1.25 per $100 assessed valuation. This meant an increase of about $4 a month on a $12,000 house, since California assessments run about 25 to 30% of market value.

That did not explain away increased payments of $18 a month. However, as the Garden Grove paper noted: “Most ‘estimates’ of probable tax payments are made by lending institutions rather than by builders or sales representatives in the tracts. However, as they admit, some builders may have been a little lax in double checking the ‘estimates.’ Regardless of who was initially at fault, the builders are getting the blame and they know it.”

**Mass meetings**

Home buyers began holding mass meetings, and, talking over their problems, brought up examples of what they said was shoddy construction.

Builders replied that many gripe was just lack of maintenance by owners, and that they were actually taking care of many complaints which were unwarranted—though not, perhaps, as promptly as possible.

When News Editor Cooper and City Editor Gale Ellis made a page one crusade out of the complaints, the National Affiliates of Building Contractors’ Assn. and Home Builders’ Institute moved into the picture. Warned BCA President Ernst Bernardi: “Although these organized protests are localized in Orange County, studies by a committee comprised of mortgage lenders, the VA and representatives of the BCA and HBI indicate that this practice of underestimating taxes and of laxity in taking care of call backs exists in most areas where GI houses are sold, the difference in degree depending on the amount of competition for sales in the particular areas.

“Unless drastic measures are taken to correct this situation these mass meetings could spread to all areas with damaging results to the GI housing program.”

BCA’s Bernardi: “We do not intend to sit idly by while a few unscrupulous operators give the industry a bad name. These men are only in the GI program to make a fast buck.”

These measures did not stop the Orange County grand jury—now pressured by veterans’ groups—from going ahead with its probe. Although the jury’s report issued April 26 blasted VA for “allowing deception in tax and impound schedules,” it noted that VA officials testified that new procedures—those proposed by BCA—would prevent such trouble in the future.

Arnold Wilken, VA loan guaranty officer for southern California, said later however, that it is not VA’s job to check the conditions of payment on the GI loans it insures.

“The VA never actually sees the loan papers, only the applications for a loan. It is the veteran’s place to make certain of his own obligations,” Wilken declared.

VA has moved in to force builders to make necessary corrections on GI homes still covered by a warrant and—in view of the publicity—nearly all builders are cooperating without complaint.

#### Summing up

Builders who tried to maintain an objective attitude toward the entire matter feel that the construction was never shoddy as charged. They contend that it was more a matter of corner cutting by builders anxious to keep prices down so people could afford to buy.

The County News checked 80 complaints about poor construction, concluded that 60 were justified, 18 were just normal household wear and six were unjustified.

City Editor Ellis is quite pleased with the results of his crusade—a fight never reported by Los Angeles metropolitan dailies. “We feel we made our greatest strides in getting the industry to clean up its own house,” he explains. “Everyone learned a good lesson from this. The subdividers will keep in better touch with their buyers after they’ve finished a tract and moved out.”

Financially, the County News and Garden Grove News may have had a lesson, too. The two papers had only recently started real estate pages with the hope of getting some lucrative home advertising. It vanished with the crusade.

This brand name also means...

Kiln-dried Lumber

Seasoned lumber delivers sound building values—and gives builders an important sales point

- If your business is building and selling homes, here is a fact worth considering: a home is easier to sell if it is framed and sheathed with Weyerhaeuser 4-Square Kiln-dried Lumber. There are several reasons for this increased salability.

  For example, Kiln-dried Framing is an important sales feature because the public has learned that seasoned lumber is strong... that it has dimensional stability... that it contributes to sound, reliable construction.

  Kiln-dried Lumber Sheathing on a new home is a feature that helps close many sales. Lumber is strong... it holds nails firmly. Also, lumber sheathing permits the use of shingles, vertical siding, and other special coverings without furring strips. These are a few of the reasons why lumber sheathing has been the accepted standard for generations... and is still a mark of high quality construction in homes, farm buildings and commercial structures.

  The Weyerhaeuser 4-Square brand name, nationally advertised, is well-known to the public... a mark of quality that helps builders close sales.

  All lumber bearing the brand name Weyerhaeuser 4-Square is scientifically kiln-dried, precision-manufactured, properly graded and carefully loaded for shipment. It is available in a wide range of species and grades, in commons and clears. There are Weyerhaeuser 4-Square Lumber products, from dimension to moldings, to meet every need in light construction.

Weyerhaeuser Sales Company

ST. PAUL 1, MINNESOTA
Crawford Corporation, Balon Rouge, La., provides builders with distinctive, modern homes—with selling prices ranging from $7,000 to $50,000.

Thousands of Crawford homes will be Hotpoint equipped in 1956!

The building industry recognizes W. Hamilton Crawford as one of America's leading manufacturers of high quality prefabricated homes. Mr. Crawford says—

"We selected Hotpoint for one good reason. The superior value and performance of Hotpoint Appliances are appreciated by everyone—prospective home buyers, appraisers, and lending agencies. People know you're giving them the best when they see the Hotpoint name."

Hotpoint Appliances offer you...

1. An unequalled reputation for superior quality that helps you sell your homes.
2. A complete variety of prices, models, and finishes for homes in every price category.
3. Maximum evaluation and higher mortgages from financing agencies.
4. Powerful advertising and merchandising support.

The Hotpoint name will help you sell and finance your homes—so contact your Hotpoint Distributor’s Builder Specialist for information about these famous appliances and the Hotpoint Kitchen-Laundry Design Service for builders!

Hotpoint Refrigerator-Freezers feature "Big Bin" storage, Frost-Away defrosting, many other work-saving conveniences.

Hotpoint Built-In Appliances are available in Colortones, Coppertone, and Stainless Finish!

Hotpoint Home Laundries are completely automatic—they'll wash and dry ALL types of fabrics!

Hotpoint Dishwashers offer Spot-Less Washing, Spot-Less Rinsing, Spot-Less Drying!

Hotpoint Table Top Water Heaters—Famous Calrod® units assure Magic Circle® Heat!

Only Hotpoint Disposals® Food Waste Disposer—quiet and efficient!

Look to Hotpoint for the finest-first!
Now you can put the Built-In sell of Hotpoint "Living-Room" Kitchens in homes in **All Price Ranges**!

**Hotpoint**

"Living-Room" Kitchens are what the 1956 home buyer wants!

It's a fact that this year's prospects are looking for kitchens that are as warm and friendly and beautiful as the other "living" areas in the home—kitchens for living in and entertaining in, as well as kitchens that offer the very latest in work-saving convenience.

Cash in on this demand by including "Living-Room" Kitchens with Hotpoint built-ins in your home. In the tighter 1956 home market, your Hotpoint "Living-Room" Kitchen will be your biggest sales feature—the one that makes prospects choose your homes over those of a competitor.

These glamour rooms will sell your homes faster—bring you speedier returns on your investment—and higher profits per home! When you build in Hotpoint—you build in sell!

- **Widest variety of Models, Prices and Finishes**—Whether you build luxury homes or modest homes, you'll find the right combination of Built-Ins among Hotpoint's complete selection of models—in 5 beautiful colors and gleaming stainless finish.

**PLUS**

- **Maximum ease of installation**—Hotpoint Built-Ins are specially engineered to save you time, labor, and money.

- **Enthusiastic public demand for a famous brand name known as the "Finest."** Hotpoint's superior features and quality are sold to your prospects by powerful advertising—and proved by the outstanding performance of Hotpoint Appliances in millions of American homes. When prospects see Hotpoint Appliances in your houses, they know they're getting a well-built, well-equipped home.
**FORMICA® “takes it” standing up**

Note the use of Formica's new Milano pattern on “wall areas” of this kitchen as well as on the cabinet tops. Did you know that Formica can be applied to “Vertical Surfaces” with our new adhesive at a lower cost than many other wall surfaces? New cements, new moldings, and new techniques have all combined to cut costs of Formica wall areas. Now you can carry the famous Formica color patterns as used on cabinet tops onto your “Vertical Surfaces” for complete color harmony.

To get helpful information on how to apply Formica to “Vertical Surfaces,” write Formica 4586 Spring Grove Ave., Cincinnati 32, Ohio for Form No. 670 or call your Formica Fabricator as listed in the Yellow pages in Your phone Directory.

Customers buy Formica because it is a brand name they know and trust.

**DEMAND THIS CERTIFICATION**

We protect this faith in our product by certifying every sheet with a wash-off Formica marking. It is for your protection and guarantee that you are getting genuine Beauty Bonded Formica.

Seeing is believing. If this wash-off identification is not on the surface, it’s not FORMICA.
"COLORFUL ASBESTOS SIDING ADDS INTEREST TO THIS SPLIT-LEVEL"

Yes, those siding shingles are asbestos, smartly textured, smartly styled, and applied with accentuated shadow lines to add interest to the entire exterior. This house has real sales appeal. Notice how well the asbestos shingles harmonize with the brick wall. Gray siding, yellow trim for accent, and a white asbestos roof blend in perfect color styling. A minimum of upkeep expense for this homeowner! His asbestos exterior is fireproof, rotproof and never needs paint to preserve it. For more information on the new beauty and design possibilities with asbestos cement products, write for your copy of "Advanced Designing – 1956".
But, plenty of ceiling on cost! That's because lightweight, easy-handling Chase copper tube for radiant heating installs faster! Perfectly tempered, it easily unrolls into position on ceiling or floor. Comes in long 60 and 100-foot lengths that result in fewer joints. Connections are quickly made with simple soldering techniques. Even the rugged carton for Chase copper water tube is designed to speed handling...save time! It's color-coded for easy identification of type and size. Has a center hole big enough for a firm grip. Can be stacked, rolled or carried with ease!

Proof that Chase copper water tube cuts installation time is the fact that it is being used in many of the largest housing developments where over-all costs must be low!

If it's radiant heating, be sure the system is made with Chase copper tube and solder-joint fittings.

FOOT OF CHRISTIANA AVENUE • WILMINGTON, DELAWARE
LEGISLATIVE OUTLOOK:

Senate gets a housing bill that would balloon federal control of the industry

A 1956 housing law, looking only vaguely like the one proposed by the Eisenhower administration, is taking on more definite form.

As usual, the Senate banking committee was first with its proposal. It is one which makes industry leaders shudder, but one which they realize will be considerably toned down by the time Senate and House finally agree.

The administration took its worst—but not its most significant—drubbing on public housing.

The Senators voted for 135,000 units a year until the balance of the old 1949 Housing Act's authorization of 810,000 units is built. The President, on advice of his economic council, could fluctuate the program from 50,000 to 200,000 units a year. There are 494,000 units left in the '49 Act kitty, but PHA Commissioner Charles Slusser disclosed last month that appropriations limits on annual subsidies would let PHA build only 275,000 because prices have shot up. More important than the whopping boost from the administration's proposal of 35,000 units a year for two years was that the committee also ignored its plea to restore the requirement that a city must have a workable urban renewal program before it can get more public housing.

Most controversial point in the bill—and one which many industry leaders consider the worst—would have Fanny May expand its special support program by, in effect, buying some of the least desirable mortgages at the highest prices.

FNMA would be ordered to pay par for FHAs and VAs in territories, disaster areas, for military housing, housing for the elderly and—if possible—minority housing. It would create a new $50 million revolving fund for housing for the aged. But the limitation would be on commitments, not mortgage purchases, so it is really no limitation at all. Lenders predict if the FNMA section becomes law it will force Fanny May to run at a loss or make excessive demands on the Treasury. Other changes proposed for Fanny May were substantially those asked by HHF Administrator Cole. There would be a floor of 1% and a ceiling of 3% on the stock participation requirement. Cole would control the figure.

An attack on package mortgages spearheaded by the National Retail Furniture Assn. may damage this important sales tool.

The committee considered (but did not adopt), an amendment to forbid inclusion of "rapidly wasting assets" (i.e. appliances) on mortgages. Instead, the senators asked FHA to study the probable effect of the ban and report back by next Jan. 31. Other key points in the Senate measure:

- More liberal terms for garden apartments, to match those of elevator apartments, are included in reworked FHA Secs. 220 and 221. FHA could allow $1,000 extra per room or per unit.
- The military housing program would be increased from 100,000 to 200,000 units with limit for average unit cost up from $13,500 to $14,250. The Pentagon hopes the higher limit would enable prefabbers to compete for Capitol military housing projects. The bill would also require FHA to consult Congress if FHA and the military disagree over how many housing units are needed at any base.
- Housing for the aged would be expanded by a new FHA section, providing for 40 year, 100% loans and down payments of $200. The bill would allow a third party to sign the note and post the $200. On top of regular public housing, the bill authorizes 15,000 units a year of public housing for the aged for five years. Eligibility requirements would be cut, too.
- A National Housing Policy Committee is called for to study housing needs and the capacity of the building industry and mortgage market—an idea hatched by public housers.
- Title I home improvement program would be extended for three years with the loan limit raised from $2,500 to $3,500 and the term from three to five years.

Flood insurance bill approved by Senate

A flood insurance bill, the result of severe floods in the northeast and far west last year, has been approved by the Senate.

Though the measure is much like the one proposed by the President, it has only nominal support of top HHFA men who admit privately they aren't pleased to see their agency get into the insurance business. They proposed and drafted the bill because, among other things, they feared Democrats might otherwise write a wilder one.

Key points in the Senate measure:

- A new federal Flood Insurance Administration would be set up under HHFA, directed by a federal insurance commissioner.
- The commissioner would set rates high enough to pay all claims over the long run. Policyholders would pay 60% of the premium with the government paying 40%. (After 1959, federal and state government's would share the 40% cost.)
- The bill limits to $3 billion the total face value of insurance which can be outstanding at one time, though the President can increase this to $5 billion.
- Losses would be limited to $250,000 for industrial policies and $10,000 per dwelling unit.

The Senate banking committee noted in its report favoring the bill that it hoped the government could show private insurance companies that flood insurance is financially feasible. Private companies now will not write flood insurance, contending the risk is too great.

TEAGUE AND BRADLEY

Is VA housing still a benefit?

NAHB asks merger of VA, FHA housing programs

Chances are increasing that the VA home loan program will get no more than a brief extension from Congress.

NAHB, in a major policy shift, has decided to press for a three-year extension of GI home loans for World War 2 veterans. Instead, the builders agreed at their directors' meeting last month in Washington, D. C. to back most ideas in a bill just introduced by Rep. Olin E. Teague (D, Tex.), powerful chairman of the House veterans' committee. Teague would start merging the VA home program into FHA by ending special

"Flexivents cut speed building schedule" reports Ohio dealer-builder team

"Ease and speed of assembly and installation speeds our building schedule," says F. A. Archer (left), president of F. A. Archer Co., Troy, Ohio. "On the installation of over 1000 Flexivents we've had just one adjustment call. Flexivents have eliminated our complaint problem."

"Andersen's packaging of Flexivents makes it possible to store many units in a small area, and that's important to us," says J. W. Goodall, manager of Troy Lumber Company. "This same packaging also virtually eliminates damage by handling."
Assembly of Flexivents for an Archer project. “The pre-installation assembly of units is a big factor in expediting our building schedules,” reports Mr. Archer.

Workmen slip 6-sash Flexivent group into place. “Housewives like ease and safety of being able to clean both sides of window from inside the home,” says Mr. Archer.

storage problems,

In all parts of the country men who build homes for sale . . . and men who furnish those homes . . . are turning to Andersen Flexivent Windows. Like Mr. Archer and Mr. Goodall they want Flexivent’s extreme versatility, high quality, low cost and proven customer appeal. As Mr. Goodall says, “Whether they’re project builders or prospective homeowners, people like the style, flexibility and economy of Flexivent Windows.” Look into the advantages offered by Flexivents for the next project you plan or build.

It’s easy to get complete information on double glazings, screens, insulating glass, and other features of Andersen Flexivents. Just see your lumber and millwork dealer, Sweet’s Files or write Andersen Corporation. WINDOWWALLS are sold throughout the country, including the Pacific Coast.

cial VA privileges for World War 2 veterans, but simultaneously reducing down payments for VA home loans (both by quarters) shows the program has flourished only in spells of growth. It has been inflationary because "many of the loans were [made] among marginal groups due to the easy terms." Said the report: "These terms encouraged building even in the face of rising costs and thus contributed to . . . inflation. In addition, they tended to lead competitive means of financing to use still easier terms, causing still more pressure on limited supplies of labor and materials." 2. Because interest rates are fixed by Congress, it has hit peaks when the cost of money is low (see charts). This "tends to create fluctuations in the over-all business cycle . . . ." 3. High discounts, paid indirectly by the veteran, rob him of the supposed "veteran's benefit" and the house "may be costing him as much or more than if he financed the loan by conventional means." (The Bradley commission urged, however, that discounts be "openly recognized as a cost of making the loan" because "if a buyer knows all the components of cost, it should help discourage unsound loans.") What Congress may do was still unclear at mid-month. NAHB's new stand should be a powerful boost for letting the VA program die quietly and gradually—without a sudden drop in housing output that probably would result if the rigid deadline stands. But at least two other schemes are before the nation's lawmakers.

Sen. John Sparkman (D. Ala.) has proposed a flat three-year extension of the VA program. Rep. Dante B. Fascell (D. Fla.) is urging a three-year extension on a sliding scale, as proposed by the US Savings & Loan League (May, News). Each World War 2 veteran would get a one-month extension beyond July 25, 1957 for each two months in service.

Producers Council finances new BLS study of housing

The most thorough study yet of the characteristics of new housing will be made this year by the Bureau of Labor Statistics. BLS' field staff will interview builders throughout the country to find out what kinds of homes are being built, what they're made of, how big they are, how they're heated, what types of equipment they contain and how much they cost. It is estimated the survey will cover 40,000 to 45,000 homes started in the first quarter of 1956. The Producers' Council is paying $43,500 of the survey's $48,500 cost. The money was contributed by 33 manufacturers and groups.

New census of housing wins House approval

A nationwide housing inventory, the first since 1950, has been virtually assured with House approval of a $45,000 Commerce Dept. appropriation for that purpose. The Senate, which has yet to act, has approved such projects repeatedly. The Census Bureau would gather the data either in November or next spring. Results would not be known until late 1957 or 1958. One statistical gap the industry hopes to close: the number of houses lost each year through fire, storm and demolition and the state of repair of the nation's housing.

The House has also approved a $350,000 budget increase for Commerce to study the housing fix-up market. Commerce's construction department chief, Walter Schneider, also expects to study what the material requirements are per $1 million in construction.

Both appropriations, though welcomed by housing leaders, were substantial reductions from the original requests: $1,800,000 for the housing census and $600,000 for the fix-up market study. The House inconsistently—but because the matter came before different committees—killed a BLS request for $75,000 to parallel Commerce by studying labor requirements in $1 million of building as well as an HHFA request for $175,000 to finance a study of housing demand.

FHA plans $300,000 technical test program

FHA has earmarked $300,000 of its new budget for a new technical testing program to "keep up with advancing technology in the adjustment of our construction standards." There would be an additional $40,000-50,000 for supervision, to be centered under Chief Architect Neil Connolly. FHA plans to farm out all the testing work to recognized experts like the Bureau of Standards, Dept. of Agriculture's Forest Products Laboratory or to private researches. It thinks the program will help settle arguments over whether new minimum property requirements are too strict, too.

MILITARY HOUSING:

Can localities tax Wherry houses? High court to rule

Can local communities collect real estate taxes on Wherry Act military family housing? The US Supreme Court was pondering the question last month. Its decision will affect some 100,000 units at military bases across the nation.

If the court rules localities can levy taxes, rents will jump so much on many a project that Pentagon officials fear wholesale vacancies, perhaps foreclosures. At issue is the effort of Sarpy County, Neb. to collect some $100,000 in taxes covering a four-year span from Offutt Housing Co., which operates 611 units of Wherry Act FHA Title VIII housing at Offutt Air Force Base, headquarters of the Strategic Air Command, on a 75-year land lease.

The Sarpy County district court held the local tax authority had no jurisdiction over the units, which lie on government land. But the Nebraska Supreme Court reversed the decision. The appeal was argued before the US Supreme Court April 30, so a decision is expected this spring.

Sarpy County argues it can tax the units as personal property. If the Supreme Court agrees, say Air Force officials, the rent increase will be minor at Offutt Field—only about $6 a month. But

Here’s the feature that will close the sale—fast

One look at this Frigidaire Dishwasher and any woman born will say, “This is my dream house.” A home, free of the 3-times-a-day dishwashing routine, a housewife’s most detested chore.

Particularly, she will be enthused about a Frigidaire Dishwasher—because this one’s a pan-washer, too. With king-size capacity, it takes care of all the dishes and kitchenware for a dinner for eight. For the average family it means just pushing a button once a day—“and walking away.”

And you will like this—this new Frigidaire Dishwasher is quickly and easily installed in place of any 24” standard cabinet, requires no extra-cost pump as gravity drainage dishwashers do. The same pump that recirculates the water also pumps the water out of the tub.

Of course, behind the buying appeal of Frigidaire equipment is the largest, best-organized service force in the field. It assumes full responsibility for the continued satisfaction of your customers.

Remember, Frigidaire is a name you can count on—for sales appeal, and lasting customer satisfaction.

Mr. Builder:

Will Electric Heat Sell Homes?

Electric Home Heating is the dramatic, new application of electric power that captures the imagination of home buyers all over America. Paced by the fabulous growth of the electrical industry, Electric Home Heating has all the Sales Magic of a radically new and different way of heating. Never before has so much interest and attention been focused on the benefits of electric living. Now you can add Electric Heating to the latest electrical developments that help build sales for you.

IT'S ALL SET

After careful design and development the stage is set. As the world's largest manufacturer of electric heating equipment, Edwin L. Wiegand Company offers you an unmatched line of electric home heating products developed out of thirty-nine years of pioneering in the design, development and application of electric heat exclusively.

PROMOTION HELP, TOO!

A complete packaged promotion program is ready to help you exploit Electric Home Heating in your market. Bucked by strong national advertising, it will put the dramatic new sales appeal of Electric Home Heating to work for you.

Write, wire, or phone your nearest Chromalox Representative . . . he'll help you with information, ideas, and applications of Electric Home Heating.

Edwin L. Wiegand Company

7770 Thomas Boulevard, Pittsburgh 8, Pennsylvania
1. BUILDING . . . to help you build

Construction has progressed rapidly since this picture was taken at the new Armstrong plant in Macon, Georgia. Not only is the building under roof but machinery is being installed to produce increased supplies of Armstrong Temlok Roof Deck, Temlok Sheathing, and Cushiontone . . . building materials that add value while cutting costs of your '56 homes. Turn the page for a report on one of these modern materials.
2. PRODUCTION OF TEMLOK SHEATHING TO BE INCREASED

It won't be long until you can be supplied with more Temlok Sheathing. The new production facilities in Macon will soon be turning out a greater quantity of this popular building material that helps you build faster, easier, and more profitably. More and more builders are using Temlok Sheathing to add extra strength and insulation value to their houses.

3. MUCH EASIER TO HANDLE THAN WOOD

Temlok Sheathing comes neatly wrapped in kraft paper—six 2' x 8' x 5/8" boards to the package. This means each time a carpenter handles a bundle of Temlok, he's moving 96 square feet of sheathing. Compare this to grappling 96 square feet of lumber. Removed from the package, individual Temlok boards are easy to handle, fast to install, and strong and durable on the job.

One easy-to-handle package covers 96 square feet of wall area.

To cover same area with wood, carpenters have to carry 16 boards 1" x 6" x 12' long.
4. CUTS LABOR TIME 35%

Each time carpenters nail a piece of Temlok to studs, they sheathe 16 square feet of wall area. They also do much less sawing and fitting . . . pound fewer nails . . . and eliminate building paper. Two men can sheathe an average house in one day, compared to a day and a half with wood. And Temlok waste is only ¼ that of wood.

5. COMPLETELY WEATHERPROOF INSIDE AND OUT

Rainstorms won’t hold up construction schedules because Temlok’s exclusive Rain-Shield® finish sheds water. Your crew can resume work almost immediately after the storm. The board is asphalt impregnated to protect it even after cutting. There’s no stickiness to gum up saws and hands.

6. GIVES CUSTOMERS TIGHTER CONSTRUCTION

Explain Temlok’s insulating value when you tell prospects about heating or air conditioning. Emphasize how Temlok cuts down heat loss through walls, saves on heating bills . . . and how Temlok reduces cooling costs by keeping heat outside in summer.

For your free booklet on how to build with Armstrong Temlok Sheathing, write Armstrong Cork Company, 3506 Sixth Street, Lancaster, Penna.

Plan your 1956 homes with Armstrong BUILDING MATERIALS

ing to private owners for rehabilitation and repair of multifamily buildings.

A bill to let cities engage in slum clearance and urban renewal projects, getting state funds to cover half of the amount needed to qualify for federal grants.

Among bills introduced but not enacted was one which would have allowed savings banks to set up a branch office within a 15-mile radius of the main office.

California boosts limits on State vets housing program

California’s veterans home loan program, now in its 33rd year, has been brought up to date by the state legislature. The changes, which go into effect next month, are expected to produce something of a buying spree. The law makers voted these changes:

- Maximum loan limit on a home was increased from $8,500 to $15,000 and on a farm from $15,000 to $40,000.
- The limit on the full price of the property, formerly $12,500 on homes and $18,500 on farms, was lifted entirely.

To finance the bigger program, the legislature approved a $500 million bond issue. The bonds must be approved by voters in November before they can be issued. Meanwhile, the state has $80 million bond issuing authority left from $175 million approved by voters in 1954.

J. Marvin Russell, California director of veterans’ affairs, led the drive for the changes in the law (with strong support from builders).

Russell pointed out to the legislators that most veterans need and want three- or four-bedroom homes. Of homes this size studied in a recent survey, he noted, only 13% were priced under $12,000.

Russell estimated that there are 1,400,000 California veterans eligible to buy homes through the Cal-vet program. So he will not approve loans for more than $10,000 until voters pass the new bond issue.

The Cal-vet program is quite unlike the federal VA plan. If a veteran wants a home under the state program, the state buys it for him and takes title. The veteran then buys it from the state on a long term lease-purchase deal—at only 3% interest. In 33 years there have been 33,000 Cal-vet loans totalling $500 million.

Kentucky empowers cities to drain land for builders

A drainage law which is expected to open up much flat land to residential development has been approved by Kentucky’s legislature.

The bill, supported by the Associated Home Builders of Louisville, lets local governments install drainage systems on flat lands where surface drainage is now poor. Cost will be assessed against benefiting property owners.

Kentucky lawmakers killed a bill which would have set time limits for eliminating nonconforming buildings and land uses in zoned areas. The bill was proposed by the Louisville-Jefferson County Planning and Zoning Board but fought by Louisville realtors. NEWS continued on p. 73.

Wide flexibility of GENEVA lines saves man hours... permits tailoring a GENEVA kitchen to any room dimensions.

There are many reasons for the rapid rise in popularity of GENEVA steel kitchens with the builder... excellent quality... greatest range of standard size cabinets... cabinets for most built-ins... color at no extra cost, to mention but a few. However, one of the most important is the fact that GENEVA steel cabinets can be installed easily and quickly, with important savings in man hours.

Learn how you can offer GENEVA... the finest quality steel kitchen—at a price to fit your budget.

Cabinets of Steel—for Lasting Appeal

Irregular surfaces or out of plumb walls are no problem at all. Fillers are furnished which can be quickly and easily scribed. Fillers can be cut on the job with tin snips.

MATERIALS & PRICES:

**Big swing to central air conditioning expected by manufacturers this year**

This should be the year for the big swing to central air conditioning in new subdivision homes, say most of the nation's largest air conditioning manufacturers.

This year the industry expects to produce between 160,000 and 200,000 central units, compared to last year's 125,000. And by 1966 they confidently predict the industry will be producing 1,500,000 annually with most of the new homes in the nation getting one as standard equipment.

There is a growing tendency to put a central air conditioning unit into a home as standard equipment, rather than as an option to the buyer.

Two years ago a central unit was a rarity in any but the most expensive builder homes. Today many builders are offering a central cooling unit in large projects of $15,000 to $20,000 homes.

Until quite recently most builders claimed that middle class home buyers did not want air conditioning because of the potential operating costs. But one large manufacturer, Don V. Petrone of Typhoon Air Conditioning, blames past sales failure of central units on builder, rather than buyer, resistance. He says builders would talk prospects out of buying air conditioning, claiming closet space for the unit was not sufficient and water for cooling was a problem.

Petrone, who recently signed a contract to equip 1,152 new homes near Austin, Tex. with central units, said that his firm now provides a detailed blueprint for builders to simplify planning and installation. According to the Air-conditioning and Refrigeration Institute, more and more architects and builders are designing homes to take full advantage of air-conditioning.

Cost of central units has been coming down—another factor which is expected to help sales.

Average price for a central unit for a seven-room home is now $1,000.

The manufacturers expect their total sales volume to hit $3.2 billion this year compared with $2.9 billion last year. Still the mainstay of the industry: the window unit with sales this year expected to hit 1.5 million. But this year manufacturers hope to avoid overproduction and panic-selling which characterized the window unit market in '55.

---

**Westinghouse exec. raps air conditioning labels**

Westinghouse Electric Corp. is demanding that the air conditioning industry stop putting misleading labels on central air-conditioning units.

The rule-of-thumb that 1 hp equals 1 ton of cooling capacity, long used by makers of window units, does not measure the cooling capacity of air-cooled central conditioners, the company argues.

As a result, cries Vice President Bruce D. Henderson of the Westinghouse air conditioning division, customers are getting an entirely false idea of the cost of central cooling. He says: "Comprehensive tests in our laboratories of many brands of residential air conditioners revealed that some units carry published performance figures almost 50% higher than they are capable of producing. This is a direct result of the common industry habit of using 'compressor horsepower' and 'ton of cooling capacity' interchangeably. In air-cooled units nothing could be further from the truth. A homeowner attempting to select one of the five major air-cooled home air conditioners, each claimed far and wide to be a 3-hp model, would find the actual cooling capacities ranged from 25,000 Btu/hr to 37,000 Btu/hr—a variation of a full ton in cooling capacity."

Henderson called for industry-wide adoption and enforcement of "proper rating of products."

---

**Battle of the boards ends; ALS votes for new standard**

The Battle of the Boards, a complex cross-country disagreement over how thin a nominal 1" board should be, has apparently ended in a pact of peace.

The American Lumber Standards committee, whose standards are accepted by FHA, voted to revise its rules to read that a 1" board must be no less than ¾" thick.

For reasons still not clear, the committee imposed a news ban on its Chicago session.

---

Materials prices climbed to still another all-time high in April: 131.2. Plywood dropped but plumbing equipment rose 0.8%, due mostly to price hikes of non-ferrous metals. Asphalt roofing shot up from 106.5 in March to 111.9 in April.
Grade for grade, Tree Life Hemlock is the best buy on the market today!

FROM California, where it’s preferred for exposed plank and beam ceilings, to the Midwest where rough board and batten siding is rapidly taking hold, there is a marked swing to Tree Life Hemlock. Cost and quality-conscious prefabricators like National Homes specify it for framing. Several Northwest builders use it exclusively on luxury homes, schools and commercial jobs.

Actually, Tree Life Hemlock offers a combination of strength, appearance and low cost found in no other wood. It has greater strength-weight ratio than Douglas fir. Rivals redwood for appearance, easy finishing. Works as easily as choice white pine. Straight grain and proper drying give it freedom from warping and twisting.

Certainly no other wood product is more carefully made. At St. Paul mills, select old growth logs are manufactured with the accumulated knowledge, skill and experience of 66 years. Tree Life Hemlock is milled full size, very carefully kiln dried, conservatively graded, fairly priced. See your supplier for details, or use coupon.
"We're building 368 homes—all air conditioned, because buyers demand it"

"Home buyers today are demanding the comfort and convenience found in air conditioned homes," says Mr. Lunt. "That's why my partner and I are building air conditioning into every one of the 368 homes in our developments."

Lunt and Thomason are building homes priced from $13,000 to $18,000 in Irving and Carrollton, Texas.

"We've often heard a buyer comment that air conditioning was the difference that gave us the sale," says Mr. Thomason.

**THESE ADVANTAGES SELL TODAY'S AIR CONDITIONED HOMES:**
- Year-round comfort
- Less cleaning and redecorating
- Street noises eliminated
- Basement humidity reduced
- Odors removed
- Better sleep
- Higher resale value

Sales resistance falls flat when you point out the advantages of living in an air conditioned home. Home buyers today know that residential air conditioning is here to stay. That's why successful builders all over the country are keeping ahead of competition and selling homes faster by including year-round air conditioning in the homes they build. It's the modern way to sell the prospect.

Why you should insist on units charged with "Freon"

Be sure to specify Du Pont "Freon" refrigerants for the equipment you select to air condition the homes you build.

Building codes everywhere endorse "Freon" refrigerants. They are safe—nonflammable, nonexplosive, virtually nontoxic. For nearly 25 years Du Pont has manufactured "Freon" to strict laboratory standards. The result is a product of uniform purity which contributes to long, efficient, trouble-free service for all types of air conditioning equipment.

"Freon" refrigerants are the most widely used of all refrigerants; there is one for every type and size of air conditioning equipment.

Learn how air conditioning has helped others sell homes. Send for your copy of the Du Pont brochure, "What Successful Builders Think of Home Air Conditioning." For your free copy write to E. I. du Pont de Nemours & Co., Kinetic Division, Wilmington, Delaware.

Mr. Thomason and Mr. Lunt beside the installation of a 3-ton Gibson unit. Even on hottest Texas summer days this unit, charged with "Freon", maintains a cool 68° indoor temperature.
Color Style your homes

with these standard

REPUBLIC STEEL products

...with Truscon "paint to match" Steel Windows

...with new contemporary colors of Republic Steel Kitchens

...with Truscon Steel Doors in your choice of colors

REPUBLIC

World's Widest Range of Standard Steels
Steel makes the ideal window. It can't warp, swell, shrink or rot. Steel is quick to install and to adjust. And, you simply paint steel windows to match both interior and exterior colors. Paint them right along with walls and trim. All types of Truscon Steel Windows come to you in prime condition for painting. Truscon Steel Double-Hung Windows are electrogalvanized, Bonderized and prime coat painted. Stainless steel weatherstripping and motor type spring balances are built in. Now available in window sizes up to 6' 5 1/2” high and 4' wide. Truscon Steel Casements and Ranch Windows offer the same “paint to match” features. All immediately available from Truscon warehouses all over the country. See your dealer or Sweet's File for more facts.

Now! Republic is introducing "Harmony Hues." Three lovely colors at no extra cost. Color style your kitchens in Tempo Turquoise, Largo Yellow, Prelude Pink — colors carefully selected to harmonize with all major appliances . . . whether you select them or your customers buy them later. In contemporary or traditional homes, "Harmony Hues" were created to go well with today's most fashionable decorating materials. Republic Steel Kitchens, more than ever, give you and your buyers most for your money. More than ever you can create customized kitchens using standard Republic cabinets. Put this dramatic, wanted feature in your homes at not one penny more! See your distributor for quick-to-the-site delivery.

Now! Truscon can offer interior steel doors finish-painted in your choice of any one of 26 contemporary colors! If you're building as few as ten houses, you can take advantage of this color feature available in lots of 200 or more swing or slide doors. Truscon Steel Doors save you dollars on framing, fitting, hanging and finishing. They're quick and easy to install. No cutting, planing, sanding needed. Now, finish-painted in color means more savings. They refuse to stick or bind because steel can't swell or warp. Truscon Interior Swing Doors are sound-deadened. Sliding Doors glide noiselessly on nylon rollers. Both types are flush, trim, modern. Get the Truscon color story from your nearest Truscon District Sales Office or send coupon below.

LUMBER MARKET:

Plywood, lumber fail to get normal spring buying rush

Spring's normal buying rush for lumber and plywood may have slipped by with nothing more than a slight rustle.

Orders for both lumber and plywood have been trailing production for several weeks with the exception of the large, mixed-car fir lumber mills. And at mid-month the latter's favorable position was slipping.

Plywood had established a tradition, until last year, of slumping in the fall, but certainly not in the spring when things should be picking up.

Fir plywood has suffered from a weak sheathing market because of delayed building and large production since late winter. Last month, the price of 5/8" ply fell still further. Only a little was selling at $116 without an extra 5% discount. At mid-month a second 5% was appearing here and there.

This has spread even to sanded plywood, which now has ended one of its longest stable market periods in history, more than a year with a virtually uninterrupted $88 (5/8" AD index grade) market level. In late April, a few sales at the $85 appeared. By mid-May, $85 was a general pattern. There is every indication the price could go lower unless housing starts pick up.

A check of plywood warehouses around the US shows they have plywood running out their ears. At best it will be a few weeks before that part of the building materials market can show any appreciable sign of a turn for the better.

Softness has appeared in random green dimension. It sagged to about $74 per M in April on the heels of renewed bad weather in eastern and midwestern marketing areas. By mid-May, it recovered to $73 to $78, not quite up to the $80 and $82 of early April when there was a brief buying rush in the face of sharply curtailed western production.

The original seven plaintiffs have been joined in the case by 60 western, midwestern and eastern mill operators. Intervening in behalf of ICC, however, are the West Coast Lumbermen's Assn., Western Pine Assn., California Redwood Assn., and the National Industrial Traffic League.

The mill operators oppose the ICC ban since transit shipment of lumber gives wholesalers 20 to 25 days to find a buyer in the Midwest or East. If shipped by direct route from the West, the lumber reaches Chicago in 7 to 12 days.

ICC banned the practice because it will tie up hundreds of freight cars this summer amid a car shortage that may be one of the worst on record. ICC has sent its general counsel, Robert Jimenez, to Portland to fight the case.

In the background is the fear that ruling against ICC would upset all car service orders across the country.

Iowa's Commerce Commission granted a 6% freight rate increase to railroads handling interstate shipments, paralleling increases recently granted by ICC for interstate shipments. The Iowa increase does not apply to brick, tile and other clay products, gravel, limestone and gypsum rock.

Iowa's Commerce Commission granted a 6% freight rate increase to railroads handling interstate shipments, paralleling increases recently granted by ICC for interstate shipments. The Iowa increase does not apply to brick, tile and other clay products, gravel, limestone and gypsum rock.

LUMBER MARKET:

Plywood, lumber fail to get normal spring buying rush

Spring's normal buying rush for lumber and plywood may have slipped by with nothing more than a slight rustle.

Orders for both lumber and plywood have been trailing production for several weeks with the exception of the large, mixed-car fir lumber mills. And at mid-month the latter's favorable position was slipping.

Plywood had established a tradition, until last year, of slumping in the fall, but certainly not in the spring when things should be picking up.

Fir plywood has suffered from a weak sheathing market because of delayed building and large production since late winter. Last month, the price of 5/8" ply fell still further. Only a little was selling at $116 without an extra 5% discount. At mid-month a second 5% was appearing here and there.

This has spread even to sanded plywood, which now has ended one of its longest stable market periods in history, more than a year with a virtually uninterrupted $88 (5/8" AD index grade) market level. In late April, a few sales at the $85 appeared. By mid-May, $85 was a general pattern. There is every indication the price could go lower unless housing starts pick up.

For new homes or old — this Virden fixture works selling magic

Smart, handsome Virden lighting will help you sell your homes. Buyers today are style-conscious, and the more you put in your homes, at a reasonable cost, the easier they will be to sell.

This reel-concealed, pull-down fixture is one of the best selling tonics you can give your homes. The smartly styled 20” top reflector and the spotlights are finished in gleaming brass...a finish that fits any decor. A thin, strong cable that disappears into the canopy is hidden by a coiled black cord. Fixture holds in any position from 24” to 57”.

This is just one of the many styles of Virden fixtures that will give your home that selling plus. Fill out the coupon below to learn about all the other decorative lighting fixtures by Virden.

Write today for Miniature Booklet No. 56 showing all of the popular Virden styles, including the Virden line of pull-down fixtures and where to buy them.
Johns-Manville Presents...

the new line of

that meets the

New 6" Thick Spintex Batts
provide the maximum insulation for ceilings. A "must" for air-conditioned and electrically heated houses.

Plus Aluminum-wrapped Spintex Blankets
provide "plus" summer benefits. Available in 3" and 2" thickness.

Remember!
The factors which decide the efficiency of an insulation are the quality of the wool and its thickness. Because the new Spintex is made of finer mineral fibers, it has more heat-stopping dead air spaces per cubic inch. It is these dead air spaces and the thickness of the insulation that count...not how it is wrapped!

Learn how you can cash in on this important, new development in home insulation! Write Johns-Manville, Box 158, New York 16, N. Y.
SPINTEX® insulation
6-4-2 specification

Ful-Thik Spintex Batts —
the only batts which completely fill the full depth of the spaces between the 2" x 4" studs (actually 3¾"). Also available in 2" Semi-Thik Batts.

Fully wrapped Spintex Blankets available in thick blankets, 3"; medium blankets, 2"; and service blankets 1½".

25% Lighter Weight
The new finer fibers make Spintex 25% lighter in weight — packages are easy to handle!

NEW Rigidity
Spintex batts and blankets have greater rigidity for easier handling, better application. They are firm and strong — hold their shape. Overhead work is easier.

Cuts Clean and Sharp
The new Spintex cuts sharp and clean with knife or saw — assures a neat fit for irregular spaces.

NEW Resilience
Finer "live" fibers of Spintex permit batts or blankets to be compressed for packaging and spring back to full thickness when opened. This resiliency assures more effective insulation.

Outstanding advantages of New Spintex Batts and Blankets

Johns-Manville
Inland Homes, Scholz expand their operations

Inland Homes has announced plans for a major addition to its prefab plant in Piqua, O., plus a completely new plant at Hanover, Pa. Work on both projects will begin this summer. When completed in early 1957 they will enable Inland to up production from 20 to 32 homes per day. The new Hanover plant will be headquarters for a new eastern division.

Scholz Homes of Toledo is expanding its operations to include schools and commercial buildings. The firm has retained Architect Richard B. Pollman, 42, of Detroit to design these buildings plus a line of Colonial homes. Pollman is also chairman of PHMI's design, research and engineering committee.

John McDonald takes helm of American Houses Inc.

John R. H. (for Robert Harrison) McDonald, 48, a carefully tailored Scotland-born engineer, took over as president of American Houses Inc. and announced plans to move the prefab company's main office from New York City to its Allentown, Pa., plant.

McDonald succeeds Horace N. Durston, interim president of the nation's third biggest prefabber for the last year. Durston, resuming duties as vice president in charge of production, will head up the company's plant at Lumberton, N. C. with its own sales-service staff for closer tieup between sales and service in the South.

McDonald's plans, he told House & Home, are to intensify American's efforts in its present market east of the Mississippi (the company has a third plant in Tennessee). He hopes to hold the price line while improving the specifications of American's 81 models. Last year, he noted, the company grossed over $7 million on sales of "between 3,000 and 4,000 units, priced from $7,500 to $47,500 (most of them between $12,000 and $15,000)."

American's trim (5'10", 160 lbs.) new chief executive has been in home building and manufacturing on both sides of the Atlantic for some 25 years.

He grew up in his native Glasgow, studied civil engineering at Glasgow and Cambridge Universities and married an American girl he met while she was visiting Glasgow. His career led him into making houses to sell to contractors and speculative builders. Later, he started his own company to make wooden parts for homes. Before World War 2 one firm bearing his name reached an output peak of a house per hour.

McDonald says he got into US prefabricating by accident. During a 1947 trip to the US, Prefabber Peter Knox Jr. asked him to become general manager of the Knox Corp. plant at Thomson, Ga. In 1950, McDonald became president of A. H. Construction Co., American Houses subsidiary in Atlanta.

Architects, brick men attack prefab schools in Washington, D. C. area

Architects and spokesmen for brick interests are warring against prefabricated schools around Washington, D. C.

Both stand to lose their lucrative share of the high cost of school building if prefabs gain a foothold. So they are attacking prefabs as "more costly" than conventional construction.

The row came to light when the Wall St. Journal carried a tiny item reporting (erroneously, according to the company) that National Homes, the nation's No. 1 prefabricator, was getting out of the prefab school business because of opposition from "politically powerful local contractors, township trustees and building material dealers."

A few days later, President Fred H. Daues of the Mason Contractors Assn., rushed into print with a press release denouncing National Homes for saying what even the Wall St. Journal had not specifically attributed to the company. Cried Daues: "Responsible school boards, architects and civic groups have rejected prefabricated schools as excessively expensive, impractical, unsafe and conducive to substandard education... The problem of fitting a school plant to an individual site—with its own soil condition, grade and orientation—is alone enough to make prefabrication of entire buildings a foolish pipe dream."

The release was put out by Henry J. Kaufman & Associates of Washington—the same agency which led last August's attack on Skidmore, Owings & Merrill's original designs for the Air Force Academy at Colorado Springs because they contained too little brick.

Behind this mud-throwing lies a quietly bitter fight against prefab schools in suburban Bethesda, Md. It is led by Architect Ronald S. Senseman, president of AIA's Potomac chapter and designer of many a school in the Washington suburbs.

The Montgomery County school board, under fire recently for spending $2 million in five years on architects' fees, decided (by a one-vote margin) to advertise for bids on a 10-classroom prefab addition to the Viers Mill school. The school, designed by Senseman, is a conventional masonry structure.

The board said it was turning to prefabs to make sure the structure was ready by the start of next fall's semester. Retorts Senseman: if the county would give him the same break implicit in a prefab contract (no time-consuming delays for plan approval and competitive bid solicitation) he could have a masonry addition ready by fall, too. He branded prefab schools "an unwise experiment" that will cost more to start with than a conventional masonry structure, cost far more to maintain.
National’s list price for its school is $18,000 per classroom. That is approximately $17.50 sq ft, based on a 32x32’ size. Architect Senehense recently designed a 10-room addition for another Montgomery County school which cost $121,780, and included a health room, storage room and teacher’s room. Cost was $11.89 per sq. ft. On the other hand, National Homes cites a conventional masonry school in Lafayette, Ind. that cost $27,000 per classroom or $26.30 per sq. ft.

The Montgomery County school board concedes the prefab may cost more but still insists that speedy construction is all important. It cites delays on other school projects resulting from site acquisition problems and the steel shortage. The board has a National school in mind, although the bidding will be open to anyone.

National Homes is taking no direct part in the squabble. Public Relations Chief Allan Dibble admitted recently that National’s prefab schools, introduced a year ago, have not been a spectacular success. So far only five have been spoken for—three in Lafayette, Ind. National’s home town, one in Crawfordsville, Ind. and the fifth—if the deal goes through—in Bethesda.

Dibble says National is not interested in selling schools to anyone who wants changes in the basic plan. “We can’t mass produce unless we have a mass market.” National produces prefab school units only on order.

Viewing the situation from afar, the Milwaukee Journal offered this advice:

“With prefabricated units, it is possible to save much time and money. . . . School authorities have been ready enough to look at them, to praise them, but usually not to buy. Why? . . . Powerful building trades unions, sometimes with the weapon of building authorities have been ready enough to look at them, to praise them, but usually not to buy. Why? . . . Powerful building trades unions, sometimes with the weapon of building codes designed to keep local jobs for them instead of primarily protecting the public, are frequently in position to stop prefab school projects. . . . In many cases, local school authorities insist they have to have a little change here and there. That rules out the savings of prefab units. It would be like changing the basic design of a standard automobile to suit every customer.

“This seems to indicate there is not much serious worrying yet about this school building situation. . . . Not enough so that we’re willing to buy classrooms as we buy automobiles—or school buses. Is this just exerting our democratic right to be different if we choose, regardless of what it costs us or our children? Or is it just because we’re generally indifferent to one of the larger public responsibilities of the times?”

**Western prefabs eye small town markets, see big growth**

The western prefab industry, which tried unsuccessfully to compete with big on-site builders in the late 40’s, is showing signs of new life.

From Washington to California, prefabs who survived the lean years—joined now by a few newcomers—see good times ahead for their industry.

While they hope to cut into the business of their on-site competitors in metropolitan areas, they think their best market lies in towns and small cities where large scale builders do not operate but builders of 10 to 20 homes a year prosper.

**Gold in the sticks**

Says Hugh Curran, head of Mobilehomes Corp. of Bakersfield, Calif.: “Big on-site builders aren’t interested in smaller places because demand for housing isn’t enough to justify volume production. But I’ve found we can do our best business there.”

Curran estimates his firm will sell 2,000 prefabs this year. Some will be sold direct to home buyers in a project Curran is starting in Bakersfield on his own. Others will be sold through associated merchant-builders, all with-in 200 mi. of Bakersfield. Mobilehomes assembles its houses at the plant, hauls them to sites on huge rubber-tired dollies that require wide highways—or one-way traffic.

Most West Coast prefabs operate, like Curran, in a limited area around their factories. Two exceptions are West Coast Mills of Chehalis, Wash. and Westway Homes, Inc. of Los Altos, Calif.

**Market in the Midwest**

West Coast Mills, in fact, sells most of its houses in the Midwest, ships by rail as far east as Ohio. Says Ben Jones, one of the owners: “We can compete in the Midwest because west-coast freight rates are very competitive. Rates going south into California, though, are so high and the market is so highly competitive there that we have never made any attempt to sell it.”

Jones’ company has 72 models in production, priced from $8,000 to $28,000 retail.

Eight-year-old Westways Homes, Inc. claims to cover 11 western states. Donald M. Grant, director of design and engineering, believes the point is nearing when prefabs in the west will be able to compete with volume builders. “Most of our business is done with small builders but I believe that some big tract builders will gradually turn to prefabs out here as they have in the Midwest.”

All the West Coast prefabs credit better design for their recent sales success. President E. L. Schutt of Modular Homes of Del Paso Heights, Calif. (near Sacramento) believes prefab designs on the west coast today are on a par or perhaps even better than those being produced by tract builders. “When prefabs started out here in the 40’s, their homes were just boxes, so prefabs got a bad name. Now I think we’ve overcome that.”

Both Schutt and Curran use a modular system of construction which they believe can lead to a better and less expensive home—cheaper by 10% than the best efforts of on-site builders.

Schutt, who has six basic plans retailing for $8,000 to $35,000, says he has perfected a modular scheme which lets him use less materials than in a conventional home.

**Growth in components**

Curran thinks western prefabs will eventually become the biggest in the industry, marketing not only houses but also modular panels—component parts for walls, roofs and floors—which can be shipped and sold everywhere in the country.

“We’re in the heart of the country’s biggest lumber producing area,” he added. “Metal construction—prefab component parts becomes big business, as I’m sure it will, it seems obvious that the center of that business will be out here.”

Two more firms enter prefab school field, third ready to

Despite controversy in Maryland, two more prefab firms have entered the prefab school arena and a third is about ready to. Calcor Corp. of Los Angeles is marketing a classroom unit designed by Earl Heitschmidt, FAIA, long an influential figure in West Coast architectural circles and retiring first vice president of AIA.

The modular unit, with glass fiber insulation and incombustible doors, sash, roof, walls, flooring, canopy and cabinets, has an interlocking mechanism which Calcor says makes it easy to dismantle and move.

Vaughn Millwork Co. of Reno has a wood panel school with laminated wood arch roof. It says it erected a grammar school for St. Albert’s Parish for less than $11,000 per classroom, or under $10 per sq. ft.

US Steel Homes is about ready to announce plans to sell prefab schools, as part of a program of prefab commercial buildings. The US Steel Corp. subsidiary already sells prefabs for churches. In two years, it has found customers for some two dozen, nearly all in the Southwest.

Hicksville, Long Island, schools are buying prefab classrooms from American Houses Inc. The units, designed by Architects Knuppe & Johnson, sell for $9 to $10 per sq. ft., the company says.

Prefab— or semi-prefab — schools have been around for a good many years without threatening traditional piece-by-piece construction methods. But now that building enough classrooms to keep pace with multiplying subdivisions and enrollment hinges more on costs, their chances may be better. National average per classroom has climbed to $37,000. And it is still rising.
Sell 'em faster—

Moduflow, with indoor and outdoor thermostats, glamorizes your heating-cooling systems, gives you a wonderful new selling story.

Moduflow brings the selling promise and glamour of electronics to your homes in a way your customers clearly see and understand.

First they notice the Weathercaster outside. Then, inside the house, they see the handsome Honeywell Electronic Golden Circle Thermostat. Both these features plus the unusual clock control, help you dramatically convince your prospects that Moduflow gives the ultimate in advanced home comfort.

You highlight your heating-cooling system and give your salesmen new comfort to sell.

Let Moduflow start helping you sell more homes. See your Honeywell salesman or dealer, or write Honeywell, Dept. HH-6-55, Minneapolis 8, Minn.
Honeywell Electronic Moduflow varies the temperature inside as the weather changes.

1. Electronics
New outdoor Weathercaster is eight times more sensitive than ordinary thermostats; continually adjusts indoor thermostat to compensate for changes in outdoor temperature.

2. Temperature
With this beautiful Golden Circle Thermostat, day and night indoor temperatures are set once. Thereafter, the outside thermostat raises or lowers settings automatically.

3. Time
This handsome electronic wall-clock automatically lowers night temperature for comfortable sleeping, fuel savings. Available in chrome, copper or ebony black.

with Electronic Moduflow

Add these other Honeywell features to your homes

Tap-Lite Wall Switch
Completely new. Tap—it's on! Tap—it's off! Transparent wall plate makes it easy to decorate with wallpaper, drapery material, or the colored inserts supplied with each switch. Adds a low cost feature to every room.

Fire-Belle Alarm
Attractive fire alarm panel is wired to fire-detector elements in attic, basement, closets, etc. Should fire start, bell rings and a light goes on, locating the fire instantly. An impressive home safety feature.

Electronic Moduflow by Honeywell
Weldwood paneling helps sell homes. V-Plank, shown here, gives this whole room an air of charm and spaciousness.

Watch sales resistance come down—when Weldwood V-Plank goes up!

What woman could help falling in love with your model home—when she sees the warmth and snug simplicity of this fireplace wall? And what practical male could keep from admiring those modern-as-tomorrow built-ins? Yet all the sales-quickening cherry V-Plank* shown costs only $105.

How about labor costs? Don't let that look of random planking fool you! V-Plank is actually 4' x 8' x 1/4" thick panels that have been v-grooved for that plank effect. Nail through the grooves (they fall on 16" centers) and you won’t have any nail hole problem either.

And V-Plank is expertly prefinished. No staining, waxing, priming or painting. Just nail it up—and fill your fountain pen; because the dotted line on that sales contract won’t be blank very long.

See V-Plank and other Weldwood paneling at your lumber dealer’s, or at any of our 37 offices in principal cities. In Canada: Weldwood Plywood, Ltd.

WELDWOOD—The Best Known Name in Plywood
Don't be fooled by light reflection demonstrations. It's heat (not light) reflective power that counts in reflective insulations—and that's what you get from Silvercote.

Fifteen layers of millions of tiny aluminum flakes bonded to a heavyweight sheet give Silvercote the heat-reflective power of a million miniature mirrors.

Silvercote is a natural insulation for the air conditioning age. Properly installed it keeps homes up to 10% cooler in summer, cuts air conditioning equipment and operating costs; saves fuel warmth in winter, too. It's available in rolls, or as a facing on brand-name blankets. Silvercote is a "breather" sheet—many times more permeable than required for classification as such. Also available as a vapor barrier.

Write for a free sample, today—Silvercote Products, Inc., 161 East Erie Street, Chicago 11, Ill.

REFLECTIONS CAN FOOL YOU...

(and so can reflective insulations)

It's heat (not light) reflective power that counts...and

SILVERCOTE®

has the heat reflective power needed—especially in air conditioned homes!
Six reasons why G-E built-in

California builder sold 132 homes in 22 days. He writes “G-E built-ins and color did it.” The response to these $13,500 to $17,500 homes at West Covina is one of dozens of examples of how colorful General Electric ranges help close the sale for builders.

5 Mix-or-Match colors

“General Electric appliances are selling our homes” comes the enthusiastic report from 7 builders in the Chicago area. Here is a canary yellow General Electric built-in range in a Brynhaven Happiness Home. It styles up the kitchen, makes selling the rest of the house easy.

“Out of 36 homes, 30 ordered built-in ranges” wired salesmanager of Currey—a successful Denver, Colorado development. “And,” he adds, “only one specified white.” Home builders coast to coast agree G-E built-in ranges are selling homes almost on the strength of the kitchen alone.
ranges belong in your kitchens

Mix-or-Match colors give the range and its surroundings an expensive "decorator" look that helps attract prospects. Ovens and surface units are also made in satin chrome and stainless steel.

Easily installed. Surface unit assembly fastens with a few thumb screws.

Spacesaving G-E built-ins don't take space for separate broiler. So they allow more storage room.

Twin oven-venting system keeps cabinets and walls from streaking.

Popular with women. 55 out of 100 questioned said they believe General Electric makes the best appliances.

NO OTHER BUILT-IN RANGE HAS ALL THESE FEATURES

Easiest built-in ranges to install!

Oven installs easily with only one rough-in opening in a 27-inch cabinet or is made to fit (and made to match) General Electric Cabinets. Put oven at any height, practically anywhere in the kitchen. And you can build luxury sales appeal into your homes by installing a pair of General Electric built-in ovens, above each other or side by side.

Install cooktop in minutes. Sealed-tight, sink-rims installation in a 36-inch base cabinet lets you mount cooking surface flush with countertop. The whole surface unit assembly drops neatly and quickly into place.

Simply reach through to fasten. Counter gripper thumb screws give easy, "stand up" installation—cut installing time in half.

Install pushbuttons anywhere on wall.

Same wide 21-inch oven as General Electric uses for all its ranges. Holds a huge meal. Lined with eye-catching "starlight" grey enamel. Calrod® bake units and "Focused Heat" broiler are enclosed. No old-fashioned open coils.

Multiple-position pushbuttons can be mounted in front of cooktop cabinet, or in any back wall position. Switch box fits between studs on 16-inch centers. Special plug permits installation in the wall without disconnecting surface units.

GENERAL ELECTRIC
Air-Conditioning underlines the advantages of aluminum!

Aluminum contributes to the economy and efficiency of air-conditioning in two important ways: by improving insulation, and by eliminating possible damage from moisture condensation.

As a facing for bulk insulation, aluminum adds the TRIPLE PLUS*: Plus #1, up to 95% Radiant Heat Reflectivity; Plus #2, Best Moisture Vapor Barrier; Plus #3, Added Flame Resistance. Leading manufacturers of batts and blankets are now featuring this TRIPLE PLUS...which Reynolds promotes in national consumer advertising.

For ductwork, the moisture condensation inevitable with air-conditioning makes rustproof aluminum essential. Its importance is emphasized in Reynolds consumer advertising. Builders can make a sales feature of it.

For these and all building materials made with Reynolds Aluminum — hardware, storm-screen windows and doors, threshold, and other shapes—call your regular supply sources. For other product requirements, call the nearest Reynolds office listed under “Aluminum” in classified telephone directories. Or write to Reynolds Metals Company, General Sales Office, Louisville 1, Ky.

Because redwood grows differently — behaves differently — and should be manufactured differently from any other wood, it possesses certain highly desirable qualities. But these advantages can be realized fully only when specifications call for the grade and type best suited to the intended service. In brief, simple form, The Pacific Lumber Company has outlined some basic considerations not generally known — and fully recognized only recently even by the Redwood industry itself. This information is now available to the builder or architect who specifies redwood in Section 5a-Pa of the 1956 Sweet’s Architectural File — or as a direct reference bulletin available on request. Send the coupon at right for your personal copy.

JUNE 1956
CONVENTIONS:

Architects ponder how to bring better design to suburbia

“American architecture is now mature; it needs only to become great,” said John Ely Burchard, MIT’s dean of humanities and social studies, in keynoting 99-year-old AIA’s 88th convention last month.

To see what they could do about making US architecture great as well as mature, a record 2,000 architects and their wives gathered at Los Angeles’ Biltmore Hotel, spent a good part of the week listening to experts’ advice, participating in panel discussions, checking up on what had been done in southern California to create an “Architecture for the Good Life”—this year’s convention theme. Reason for much of the soul-searching: next year will be the AIA’s centennial with a big exhibition and an even bigger stock-taking yet of the architect’s contribution to the American scene.

How to make good taste popular

To evaluate that contribution, according to Burchard, was not a matter of adding up the good gimmicks, of pointing to our physical ease and to our high averages. “It is a matter of things that uplift the spirit.” It was a matter, too, of taking a stand on America’s architectural heritage (as one Round Table pointed out), a matter of trying to integrate painting and sculpture with architecture (as another Round Table suggested), and, finally, a matter of getting architecture more deeply involved in the major forces that are shaping the American scene—the rapid expansion of cities and the growth of large suburban communities.

This problem—what to do about bringing architecture to suburbia—was the underlying theme throughout the convention.

It was faced squarely by a Round Table on “The Architect’s Big New Challenge—better design for a million homes each year,” and it was given added importance by the award of this year’s AIA Gold Medal to Architect-planner Clarence Stein, America’s leading prophet of a better town for a better life (H&H, May).

Round Table participants P. I. Prentice, editor and publisher of HOUSE & HOME; Proctor Mellquist, editor of Sunset; Architects Morgan Yost, Quincy Jones, Neil Connor; Builders Fritz Burns and Tom Coogan and Savings and Loaner Howard Edgerion all agreed that the Good Life in suburbia would come about only through 1) better architect-design of individual houses, and 2) better planning of entire communities. Chief problem: too few architects seem interested in—or qualified for—this new exacting science of production housing.

Yet as the Round Table pointed out, here is a brand new field for a profitable practice and a great new opportunity to bring the Good Life into many new communities. Prospects for more architect-participation in home building were better among the younger men, some of whom are being trained specifically to design for production.

To dramatize the new challenge of home building, the AIA (in collaboration with HOUSE & HOME, Sunset and 13 national organizations) this year initiated a “Homes for Better Living Program” (see p. 141). Outgoing AIA President George Bain Cummings presented the awards to the winning West Coast architects.

Chatelain named president

Elections brought no more competition for top officers than is expected at the Republican convention this year. Unopposed were Leon Chatelain Jr., of Washington, D.C., for president; Toledo’s John N. Richards for first vice president (he beat Hugh A. Stubbins Jr. for second vice president last year; and famed school designer Philip Will Jr., of Chicago, for second vice president. In other no-contests, Edward L. Wilson, Ft. Worth, was named secretary and Raymond S. Kastendick of Gary, Ind., a former president of the Indiana Society of Architects, replaced new President Chatelain as treasurer.

Good citizen Chatelain has a lifetime record of participation in Washington community and charity organizations. His wide range of outside-the-profession contacts are relations impact of AIA’s centennial year in 1957. Not bound to an ivory drawing board, Chatelain is director or trustee of banks, counted on to bolster the publicity and public S&L associations, insurance companies, was president (in 1948-49) of the Washington Board of Trade.

Good friend of both modernists and traditionalists in AIA, he has served on almost every committee, just finished two years as treasurer.

Planners agree suburbia needs new planning, zoning tools

The collision of housing with industry in the suburbs has created an entirely new problem in planning which demands an entirely new approach, says the American Institute of Planners.

During a conference on zoning standards at AIP’s convention in Providence, R. I. last month planners agreed strange new nuisances being set up by industry leave their old limits.

Said one planner: “Perhaps we need a new approach, based on performance standards instead of the old classifications of industry by name.”

Thus a modern factory, now labeled simply as heavy industry, could conceivably be ranked quite high from a performance standpoint, thanks to modern techniques. It would be an unobjectionable neighbor for residential areas.

On the other hand uses now rated as harmless might rate low on performance because of blaring radios, traffic congestion or sign glare.

Planners agreed that California was setting the pace for the nation in adapting its zoning scheme to modern conditions. One Californian noted that in one section of the state 45 communities and the unincorporated areas around them are all served by one regional zoning pattern. No nonconforming zoning uses are permitted and those which preceded the zoning are being eliminated.

The AIP urban renewal committee called neighborhood playgrounds a must in residential areas if blight is to be forestalled. “We believe that any residential area lacking a playground within a quarter mile of every dwelling is obsolete,” the report said.

The same committee recommended that AIP members use their influence to consolodate diverse programs such as highways, schools, bridges, parking lots, playgrounds into unified larger objectives so that all might have a better chance for accomplishment.

Martin Meyerson, professor of planning at the University of Pennsylvania, urged planners to broaden their functions to in at least five ways.

He suggested a central intelligence function, consisting of yearly market analyses; a pulse taking function, watching for signs of blight; a policy advisement function, giving city leaders detailed appraisals of various proposed courses; a feed-back review, an assessment of plans already in effect; and a watchdog function, helping to prevent costly errors before they happen.

Ladislas Segoe, a private consultant for the City of Cincinnati, told his fellow planners that the best way to overcome urban traffic problems is to bring people and their jobs closer together by reversing the movement of families from urban area to suburbs.
Government says it may boost mortgage interest

Canada's government will see that there is enough mortgage money to keep house-building rolling at its present healthy clip even if this means upping the interest rate on National Housing Act mortgages from 5 1/2% to 5 3/4%.

So says President Stewart Bates of Central Mortgage and Housing Corp., Canada's housing agency which functions as a kind of combined HHFA and FNMA.

Last year, Canadians started 138,000 houses—a per capita rate which would mean 1,458,500 million starts in the US. And experts have predicted a 20% increase in over-all construction financing may be the No. 1 reason for tight mortgage money.

Keep housing rates in line

Says Bates: "There will be a big—some think impossible—demand on capital this year. If this forces up the general rates on investment money, interest on housing mortgages will go up, too. The relationship between going rates for housing and other types of investment must remain constant if we are to get our share."

Actually, Bates' comments do not have the same weight as official pronouncements by an HHFAdministrator. Bates is the nation's top permanent civil servant in housing, but not a political appointee. The government spokesman on housing is Public Works Minister Robert Winters. But Bates, who was deputy minister of fisheries, got the $22,500-a-year CMHC job 18 months ago partly because he is one of Canada's brightest economists. And he is not afraid to speak his mind.

Interest: 5 to 5 3/4%.

Interest on NHA mortgages has varied between 5 and 5 3/4% since the act was revised in 1954 (March '54, News).

Under the old system, CMHC took 25% of a mortgage and a private lender took 75%. There was no guarantee or insurance, but the private lender got 5 1/2% interest on his share while the government loaned its share at 3 1/4%. The cost to the borrower: 5 3/4%.

But the government was using up big chunks of taxpayer money to support the plan, so it switched to mortgage insurance—with notable improvements over the FHA setup in the US. Biggest item: the insurance premium of 2% is paid in one piece and thus capitalized into the loan at the outset. A 20-year $10,000 loan costs a borrower $10,200. It is thereby insured for its duration. Under FHA's 1 1/2% premium paid on declining balances, insurance on a $10,000 loan would cost about $655—more than three times as much. In two years, CHMC has had no claims on its insurance reserve fund.

If they had complaints, home owners in one of Louisville's most attractive subdivisions would not have to travel far to lodge them. The builder, Jack T. Durrett, lives in his own project.

The entire development, soon to reach 150 homes, is insulated exclusively with Alfol Reflective Insulation.

"Low heating bills."

"When you live in your own project," writes Mr. Durrett, "it pays to stick with the best. . . . In the case of Alfol, my own low heating bills reflect the satisfaction of others . . . and in the summer time, I have the happiest neighbors in Louisville!"

Naturally, Mr. Durrett also welcomes the initial savings provided by Alfol. And the way its remarkable application speed helps keep him on schedule. But his choice of Alfol was based primarily on its proved, thorough-going efficiency.

Foil sheets self-spacing.

"First in Reflective Insulation," the Alfol blanket consists of multiple aluminum foil sheets that space themselves automatically, reflect 95% of all radiant heat. A tough duplex-and-kraft backing is built in to offer full application support, provide America's finest vapor barrier.

Clean, non-irritating, Alfol takes the "itch" out of insulation. And its amazing compactness (500 sq. ft. to the roll) minimizes handling and storage expense. That's why Alfol usually costs less. Your dollar buys less labor, less "overhead" . . . more and better insulation.

Above: group of Alfol-insulated Durrett homes—builder's own in foreground.

Inset: Alfol Type 2, dished into the ceiling of one of the homes in progress.

"When you live in your own project, it pays to use products like Alfol!"
Light for Living sells homes

Home buyers from coast-to-coast are asking for Light Conditioning

Light for Living gives homes a visible, low-cost sales plus. It's a proven traffic-builder in model homes. Makes houses in any price range more desirable.

Light for Living has given lighting new importance in the mind of the consumer. It's a vital part of the Live Better Electrically program—advertised and promoted nationally. From coast to coast television and national magazines are selling the consumer on the importance of planned lighting. Showing him that Light for Living makes homes more comfortable, more attractive, more useful.

More and more prospective home buyers are shopping with Light for Living in mind—asking for it, asking about it. Here's a kit that will give you all the information you need to put the extra sales value of light conditioning in the homes you build. Seven idea-packed booklets covering every phase of lighting indoors and out. How to make rooms seem larger with valance or wall lighting. How to dramatize decorative accents with downlights or spots. How to make porches or patios more useful, how to glamorize gardens with outdoor lighting. Give your homes the sales plus of light-conditioning. Send for the builders' package. Put Light for Living to work for you. It will help you sell more houses faster—for greater profit.
faster — in any price range

Complete builder's package shows you how to put the visible sales features of Light for Living to work for you

BUILDERS BOOK OF LIGHTING — Facts and ideas to help builders use better lighting to add more sales value to both merchant and custom-built houses. Shows 10 basic plans for structural lighting in complete detail. Compares Light for Living costs with cost of 39 other home sales features and shows effect of each on mortgage payments.

SEE YOUR HOME IN A NEW LIGHT — The "how to" of Light for Living. A basic handbook on light-conditioning with tested recipes for every room. 31 information-packed pages with illustrations and diagrams show you how to select and place lamps for comfort and beauty.

WALL LIGHTING GUIDE — The a b c's of wall lighting. Shows a variety of ways to give your homes a sales extra that is especially appealing to women. Specific detailed instructions for installation of wall lighting. Beautifully illustrated with full-color photographs.

LIGHTING FIXTURE GUIDE — Choose the right fixtures for best illumination — maximum customer appeal. Complete guide to fixture selection and placement, with lighting recipes and lighting fixture and wiring specification list.

DIMMING SYSTEMS — A dimming system will put your home in the "House of Tomorrow" class — but it need not be expensive. Complete instructions show you how to install and use dimming systems for lighting flexibility, dramatic effects.

SELLING SENTENCES — A 12 page pocket size booklet of tested sentences to help real estate salesmen demonstrate the advantages of light conditioning most effectively. A useful check list of the plus features of the light-conditioned home.

Mortgage Banker Ferd Kramer, pioneer in renewal, winds up a 17-year civic job

by Roy Fisher

Mortgage Banker Ferd Kramer became president of Chicago's Metropolitan Housing & Planning Council in 1939, when urban blight was a favorite topic for women's afternoon teas. The council consisted largely of the women who attended such teas, a few social service workers and a smattering of businessmen with a joiner instinct. It was a do-good group with more "good" than "do."

Last month, Kramer retired from the council's presidency. In the intervening 17 years he has helped give birth to a new era for the American city. Across the nation, cities are earnestly at work planning, conserving, rebuilding.

"I have contributed to this," says the quiet, 54-year-old president of the real estate and mortgage firm of Draper & Kramer, "I think it is simply that I have helped to awaken the business and industrial leaders of our city to its importance."

What he meant—but characteristically didn't say—was that the arena of urban blight has moved from the tea circle to the action council, the city hall, state legislature and congress.

The membership of the Metropolitan Housing & Planning Council reads today more like a roster of the Chamber of Commerce than of a woman's club. Among its most active workers have been the presidents of such firms as Marshall Field & Co., Swift & Co., and Sears Roebuck & Co.

Most of them were there because Kramer had helped them to see what he saw 20 years ago: that the future of business depends much on the future of its city and that this depends upon its housing.

Even before he became president of the council, Kramer was jockeying then-Mayor Ed Kelly of Chicago to reorganize his plan commission, which hadn't met in nearly a year. He decided then that the city's (and with it Draper & Kramer's) future depended upon putting this jockeying on a more business-like basis. So he joined the council.

Under his administration, the council in 1947 developed the nation's first urban redevelopment law, prototype for parts of the Housing Act of 1949.

In 1954, the council turned its attention to conserving those neighborhoods too good to tear down but not good enough to compete. The result was Illinois' pioneering Community Conservation Act, which provides new and stronger tools for fighting encroaching blight.

Recently the council has turned to the need for coordinated planning among the 100-odd communities that make up greater Chicago.

"This," Kramer says, "is the next great challenge to the American city." He thinks the problem in Chicago may require a bi-state action with Indiana joining Illinois in the over-all metropolitan plan.

Kramer was born in Chicago Aug. 10, 1915 and educated at the University of Chicago. He married a Chicago girl and they have three children. The eldest, a girl, plans to enter Harvard school of city planning and landscape architecture in the fall as a graduate student.

Kramer will remain on the council's board of directors and keep his active post as vice chairman of ACTION.

As head of Draper & Kramer, the slender, soft-spoken Kramer does business also in St. Louis, Minneapolis, St. Paul and Milwaukee.

He managed the development of Chicago's biggest slum clearance project (New York Life's Lake Meadows), built the city's largest private apartment development, is agent for Field's Old Orchard Shopping Center (1,000,000 sq. ft.), with Dovenmuehle & Co. financed the $70 million city of Park Forest, and has a new, 1,500-unit slum clearance project almost ready for announcement.

To devote more time to these—and to give the council the "benefit of new leadership"—Kramer turned over the gavel to Joseph Pois. Pois is symbolic of Kramer's success at interesting Chicago's business leaders in urban problems. At 51, he is a successful industrialist, vice president and treasurer of the Signode Steel Strapping Co.

FHA Sec. 220—heart of renewal—picks up speed

FHA's Sec. 220 program—considered by many experts as the heart of urban renewal—is picking up momentum. By last month, FHA was considering applications for 12 projects representing 3,357 units. The agency had made eight commitments—seven on multifamily projects and one covering 88 single-family units.

HHFA was beginning a "full-scale reappraisal" of renewal procedures aimed at cutting red tape that Congressional and other critics charge is thwarting renewal efforts.

LABOR:

Building labor winning pay boosts from 7 to 35c an hour

Labor costs are taking another upward surge across the nation this spring as the building trades demand, and in most instances get, wage boosts.

Most increases are from the 7½ to 15c per hour. A few go as high as 25c to 35c. Union demands are nearly all for basic hourly wage increases without fringe benefits.

Several areas were crippled by strikes. In Cleveland, 16 building trades won a whopping 34c an hour pay increase (17½c new and 16½c next May 1) after a two week strike that idled 32,000 strikers, brought layoffs for 26,000 nonstrikers in allied industries and idled 32,000 strikers, brought layoffs for

Laborers, operating engineers and cement finishers were given 12½c increases in New Mexico. They will get 7½c more next year as provided in the two year contract.

Laborers in Colorado won boosts of from 7½c to 15c, the lower figure applying to workers in Denver whose scale is already 7 to 15c over that of laborers outside Denver.

Plumbers and steamfitters in Portland were given a 20c boost, including 10c for vacation pay.

Carpenters in southern Oregon accepted a 20c increase (to $3 an hour) as proposed by federal mediators after a three-week strike.

Building trades wage scale up 2c in 1st quarter of '56

Hourly wage scales of union building trades workers continued upward during the first three months of 1956.

They rose 0.7%, approximately 2c per hour, bringing the average wage for all union construction workers to $2.96 an hour.

Scales were up for one-sixth of the construction workers included in the Bureau of Labor Statistics quarterly survey. Among the individual trades hourly wage scales rose 10c to 13c an hour from April, 1955, to April, 1956.
MATERIALS' PRODUCERS:

Appliance, plumbing firms cut back production

Mounting inventories have forced cut backs in production by several home appliance manufacturers. Norge division of Borge-Warner Corp. and GE's Hotpoint division were among those curtailing operations. Commented one midwestern appliance manufacturer: "People just aren't buying."

A reduction in production of brass fittings and plumbing fixtures at American Radiator's Louisville plant has resulted in the layoff of 380 of the plant's 2,850 workers. Company officials blamed the cut back on poor building weather this spring.

But other manufacturers expand, build new plants

While some materials and appliance makers were worrying about poor sales, production cut backs and layoffs, others were expanding plants to increase production. Items:

- Kaiser Gypsum opened an addition to its Long Beach, Calif. plant, increasing gypsum-board production there 60%.
- Whirlpool-Seeger, now RCA's appliance division, started work on a 90,000 sq. ft. addition to its Evansville, Ind. plant, first step in a $19 million improvement program.
- General Electric, with demand for washers and dryers up, is adding to that division of its Louisville appliance plant for the second time.
- Murray Corp. of America will expand its Salem, O. plant to increase production of cast iron plumbing fixtures for its Eljer division. Cost of the addition: $2,500,000. The plant expects to add 350 employees when expansion is completed.
- Armstrong Cork Co. found the market for acoustical tile so good that it has enlarged its new Macon, Ga. plant twice.

The plant was enlarged first while still in the blue print state, expanded again when only nine months old.

Two western lumber firms merge to form new giant

Merger of two of the northwest's oldest lumber firms this month will make a new giant in the forest products industry—but not the biggest.

M and M Woodworking Corp. of Portland, one of the three top plywood companies in the country, is being acquired by the Simpson Timber Co. of Seattle for $50 million.

The deal will not be completed until June 21 when M and M stockholders meet in Portland but approval is regarded as a certainty. The merger is generally considered a wise one for both firms. Simpson is a pioneer in timber management with huge timber holdings. M and M lacks timber reserves but was one of the first plywood firms to go into a nationwide sales and advertising program.

Simpson is expected to keep the M and M name, operating it as a wholly-owned subsidiary. Simpson is controlled by William R. Reed, board chairman, of Seattle. M and M is headed by Clay Brown.

Bildrite cuts 10 hours

Easy to cut, carry, place and nail. Bildrite cuts quick and clean with power saw or handsaw. One man handles large panels with ease. On Crowell homes, sheathing time is cut 60% as compared with wood.

Good under any exterior finish. With brick, wood or shingles you save because felt or building paper is not needed. Bildrite is protected throughout against moisture with asphalt, yet is permeable to vapor.

INSULITE, Made of hardy Northern wood

Insulite Division of Minnesota and Ontario Paper Company, Minneapolis 2, Minnesota
work to 4...saves $115 per home

Savings of $38 per M in labor costs alone—E. H. Crowell reports this difference between Bildrite Sheathing and wood. “Add to this all the other economies of 4’ x 8’ Bildrite,” says Mr. Crowell, “and the total saving on sheathing cost can easily amount to $115 per home.

“Since the day we started in business,” he says, “we’ve used Bildrite under both brick and wood siding. The 4’ widths eliminate need for corner bracing. I have thoroughly checked the strength, weathertightness, and reduction of waste offered by Bildrite Sheathing; and am proud to say we are consistent users.” Mr. Crowell builds 20-25 homes, like the one below, each year.

Look at the detail pictures at left. Then send for complete information, actual on-the-job pictures and construction details.

build better and save with INSULITE
**PEOPLE:** Walter McAllister offers resignation as head of federal Home Loan Bank Board; successor sought

Walter W. McAllister has sent to the White House his resignation from the Home Loan Bank Board, say unimpeachable sources. McAllister, 67, has been chairman of the board during his three years as a member. He succeeds Allen H. Generes of New Orleans, and former president of the San Antonio Federal Savings & Loan Assn. before appointment to HHLB July 1, 1953. His term has one year to run.

One problem holding up White House acceptance of McAllister's resignation is the difficulty in finding a successor. There was strong pressure to get someone with a name new head men

Nine building and mortgage lending industry trade groups named new leaders.

**Natl. Savings & Loan League,** cruising to Bermuda for its spring meeting, installed George W. Greenwood as head man. He is president of Topeka (Kan.) Savings Assn. He succeeds Allen H. Generes of New Orleans. New vice president: W. Franklin Mor-

**GREENWOOD**

**Manske**

**Schoemaker**

**Blucher**

**CLOSE-UP:** Fred A. Manske, production expert and research engineer, becomes president of National Gypsum

Fred A. Manske, 55, a research engineer who worked his way up through the ranks from new products trouble shooter, became president of National Gypsum Co., nation's second largest manufacturer of building materials. He succeeds Lewis R. Sanderson, retiring at 65 in accordance with company policy.

Chicago-born Manske (pronounced Manski), paid for his early education by delivering newspapers, developing a handbill business and working at 16 as a bill collector. At Armour Institute of Technology, where he graduated in 1923 as a mechanical engineer, he earned tuition grading physics papers, became student assistant to President Frank Gansauald. Sandwiched between those jobs, he found time to develop a 12-section engineer's slide-rule course which he sold through correspondence schools.

In 1933 Manske met President (now board chairman) Melvin H. Baker of National Gypsum at the World's Fair in Chicago. A year later, he was hired as assistant to the vice president for operations. His climb up the executive ladder was as methodical as befits a man of whom one admirer recently remarked: "He's a smart guy who worked damn hard." He became production manager in 1935, general production manager in 1949, vice president in charge of manufacturing in 1950, and a director and vice president for operations in 1951, executive vice president in 1954.

Manske is an early riser, gets to his desk at 8:15 a.m., works until 6 p.m.—1 hr., 15 min. after the office closes. Frequently he's in the office on Saturdays. Neither a golfer nor a clubman, Manske relaxes by swimming or working in the garden of his suburban Buffalo home.

Manske helps lead a company undergoing big growth. National Gypsum has doubled in size in the last five years and is amidst a $95 million expansion program. Board Chairman Baker (who remains chief executive officer) bases the growth plans on an expectation that full employment and "continually increasing wages" will continue the nation's enormous upsurge in consumer buying power, creating more demand for new and modernized homes.

National Gypsum's sales and earnings for the first quarter of 1956 were highest in its history. Sales of $39,509,051 were 18% above the same period last year. Earnings jumped to $4,577,694 or 28% above the corresponding 1955 period.

The story continued from p. 95...
NAMED: William H. Hackman, 45, for nine years a staffer in Cleveland's FHA office, as Cleveland district director, succeeding Ernest G. Davis; James V. Cunningham, executive director of the Independent Voters of Illinois, as executive director of Chicago's Hyde Park-Kenwood Community Conference, pioneering neighborhood conservation group, succeeding Mrs. Julia Abrahamson, who resigned (April. News); Irving Crown, executive vice president since 1919, as president of Chicago's Materials Service Corp., the city's biggest building materials' merchant.

One reason the daily press covers housing so clumsily is that many publishers regard real estate sections as a pasture for hacks. Another is that the industry itself grabs off able newsmen almost as fast as they learn their way around its labyrinths.

Last month provided a good example. Young (28) William Kerwin, Washington correspondent for Hearst's International News Service and one of the capital's handful of press men with housing background, quit INS to become public relations boss for the Natl. Savings & Loan League.

Kerwin began writing a weekly column of Washington housing news for INS in 1949. The column, first of its kind for any major wire service, succeeded well enough so United Press later followed suit (and UP's Bob Loftus soon moved over to NAHB's public relations staff).

Virginia-born Kerwin, who joined INS as a copy boy in 1943, has turned out his housing stint as a part-time assignment while helping cover everything from The Treasury to the Senate.

DIED: Mark Levy, 76, former president of the Chicago and Cook County Real Estate Boards, April 13 of a heart attack in Chicago; William A. Eckel, 47, Santa Clara (Calif.) builder, April 14 at Santa Clara in what police said was suicide after slaying his wife, Ellen Ann, 38; Leon Fleischmann, 77, civil engineer and former president of the Ninth Federal S&L Assn., April 16 in New York City; Architect Albert F. Weber, former mayor of Linden, N.J., April 22 at Linden; Eldin H. Louisee, 87, retired realtor and president of Council Bluffs (Iowa) Savings Bank, April 21 in Council Bluffs; Realtor Joseph P. Grass, 60, developer of several big Milwaukee subdivision, May 5 in Milwaukee; Woodson D. Upshaw, 63, Phoenix real estate developer and former co-owner of the Tucson (Ariz.) Daily Independent, May 11 in Phoenix; six top executives of the Crane Co., May 15 in the crash of a company plane near Louisville, Ky. The dead: George L. Erwin Jr., 60, vice president; James A. Dwyer, 59, vice president; J. A. McMurry, 59, director of branches; Charles E. Towner, 42, asst. to the vice president; George G. Lindholm, 54, dept. manager; Fred J. Wilkey, 47, special representative. All lived in the Chicago area.

Now EVERY home you build can have All Aluminum, Sliding Glass Doors AS LOW AS $9000* LIST PRICE

Whether you are building 1 or 100 homes... price no longer restricts you from including aluminum sliding glass doors. Here is the ultimate in sliding doors... LOW COST combined with MAJOR FEATURES usually found only in higher priced doors.

You can specify Sun Valley jr. without budget fears. It's priced especially for the economy budget minded. This is the door both builders and architects have been looking for. It's SLIM and TRIM... rugged construction with built-to-last quality. Check these list prices... see how easily Sun Valley jr. can be included in your building plans.

add 50% greater FIRE SAFETY to lath and plaster ceilings

The simple addition of Keymesh galvanized reinforcing lath over gypsum lath increases the fire rating reference of a ceiling from one hour to one and one half hours, when finished with 1/2 inch of lightweight aggregate plaster. This increased fire safety is further evidence of the exceptional value Keymesh reinforced lath and plaster adds to every building, from the low cost home to large commercial and industrial buildings. It's another reminder that Keymesh costs so little, but adds so much.

PLUS positive protection from cracking

When Keymesh lath is used, your entire ceiling and wall surface is reinforced with a vast network of multi-directional reinforcing wires, adding far more protection from cracking. This protection that stops cracks before they start, costs so little, but adds so much.

PLUS greater over-all strength

Keymesh lath helps the plasterer get a full, uniform thickness of plaster. With its open mesh, each wire is fully embedded, while serving as a gauge to assure the full 1/2" thickness of plaster specified. Full, uniform thickness assures greater over-all strength. Yes. Keymesh costs so little. Keymesh adds so much.

Recommended and used by America's leading lathing and plastering contractors.

KEYMESH
GALVANIZED REINFORCING LATH

Here's all you do! After gypsum lath is applied, cover it with Keymesh. The exclusive reverse-twist weave makes it unroll flat; go up flat. It's so easy to apply. Then it's plastered, following customary practice. Proved through the years as a superior reinforcement for stucco, it now brings new value to lath and plaster construction.

it adds so much, it costs so little.

For highest quality at lowest cost, use the 3 KEYS TO STRONGER PLASTER

KEYMESH lath for over-all reinforcement. Made of galvanized woven wire. Especially recommended for ceiling construction.

KEYCORNER strip lath, preformed to fit snugly in corners. Lies flat when applied to joints. Galvanized to prevent rust streaks.

KEYBEAD corner lath with precision formed bead for outside corners. Open mesh assures strong, solid plaster corners.
Builders Know Famous Brands
Make Quicker Sales!

• New-home prospects have confidence in trusted brand names like Orangeburg Root-Proof Pipe. Its reputation for high quality has helped many a builder “close the sale.”

How Orangeburg Pipe saves trouble, cuts costs and builds profits for builders is a story of modern construction practice. It takes modern materials and time-cutting methods to reduce costs today. That’s why home builders and general builders everywhere are turning to Orangeburg Root-Proof Pipe.

Orangeburg’s long 8-foot lengths are easy to install—so strong and resilient that lines in service 50 years operate like new. Famous Taperweld Joints seal root-proof with a few hammer taps—no cement, no compounds. Orangeburg is readily cut with a coarse tooth saw and, where necessary, quickly tapered on the job with a lightweight tapering tool.

Orangeburg Root-Proof Pipe is made in 2”, 3”, 4”, 5” and 6” sizes. Use it for house-to-sewer and septic tank connections, downspout run-offs, storm drains and other outside non-pressure underground lines. Orangeburg also comes Perforated in 4” size for foundation drains, septic tank filter fields, draining wet spots everywhere. Look for the Orangeburg trademark. Be sure you get the genuine. For more facts write Dept. HH-66.

EASY TO HANDLE
EASY TO INSTALL

ORANGEBURG
ROOT-PROOF PIPE AND FITTINGS

OPINIONS:

These intellects shed the following light on matters of moment to housing:

Joseph P. McMurray, New York State Commissioner of Housing, in talk to the Natl. Savings & Loan League:

“It is disheartening to see subdivision after subdivision being built along the same old lines as they were 30 years ago. We should not repeat the mistakes of the past, but we are. For example, we have cut up miles of open land in Queens and Nassau Counties, into gridiron subdivision of 50’ lots. We are failing to provide space for schools, playgrounds, parks and other community facilities. Often adequate streets and sewers are not being provided. Industrial and commercial encroachment is not properly prevented. Construction standards are low.

“Yet enormous amounts of mortgage investment are going into these areas, into the slums of the future. The money which you put into these developments can only be safeguarded if you insist on better planning standards. This is certainly one area in which all of us—builders, bankers, and government—have a common stake.”

Corwin Mocine, Oakland, Calif., planning engineer, in SRA’s The Review:

“The problem [of planning good subdivisions] is creating a complete and adequate environment for Twentieth Century life. It only begins with the building of houses. Planning, government and private enterprise are failing to meet the challenge. It will only be met when the scope of government and planning are made more nearly equal to the task, when citizens wake up to the disastrous consequences of inaction, when private enterprise is willing to accept a larger responsibility for its action, instead of building a house and moving on.”

E. A. Leonard, president of The Lehon Company, Chicago:

“Builders will receive no thanks from the public for putting up the slums of the future. Instead of building flimsy, minimum houses in pursuit of a low price tag, builders would be better off to recondition older houses for the mass market. Many cities are helping by making slum landlordism unprofitable. To net a profit on a cheap house a builder has to leave out too much basic value. Best business opportunities lie in the direction of well-planned remodeling and better-type new housing. This also is what the nation needs.”
Spring home shows drawing record crowds lured by give-away houses, design contests

Home builders, who learned some time ago that nothing perks up a slow market more than a home show, are going all out this spring.

From Atlanta to Seattle, from Albany to Houston, builder associations have put on shows which they uniformly describe as "the biggest ever." Crowds seem to back up the claim.

Biggest show of them all—probably the biggest home show in history—was in Manhattan's new Coliseum. Exhibits covered 300,000 sq. ft. of floor space (see p. 00). Newsworthy items from other shows.

Chicago's show, which covered 180,000 sq. ft., featured 20 model rooms, furnished and decorated. There were 350 exhibitors. In addition, 114 builders held special showings of model homes in the area.

Seattle's 12th annual Home Show was marked by a 2,000 sq. ft. model home on the floor of the Washington State Armory. Builder Tom Paulsen put it diagonally on an "inside lot" to show how such sitting can create more space for patios and gardens. Landscapers Miller & Hansen.

New Orleans' show included scale models of homes which won a special architectural design contest. First place winner was Walter G. Schleif, Tulane University junior.

Spokane's second home show drew 27,000 visitors, double last year's attendance. Most spectacular exhibit was a $40,000, three-bedroom home with interior walls and ceilings finished in plastic tile. Viewers, though surprised, liked the effect. Their only critical question: "What if I want to change colors?"

Answered Tile Distributor Ben J. Thompson, who sponsored the house. "You don't."

Louisville's show was billed as a home improvement exhibition and was sponsored by the Associated Home Improvement Contractors. Key exhibit was "The House Divided," consisting of two homes—one a typical old home, the other the same house after remodeling.

Milwaukee realtors gave away a three-bedroom home valued at $17,600, donated by builder Don T. Allen. The winner and winners of other prizes valued at $8,500 were picked on the basis of 15-word written statements on better living.

Kansas City builders created an "Avenue of Homes" exhibit—featuring photos and models of builder-produced houses.

Atlanta's annual show, with 200 displays, included a $12,000 luxury kitchen.

Dayton, Ohio builders featured scale model homes designed and built by high school students. Prizes totalling $3,000 in cash were awarded to the winners.

Houston builders gave away a $20,000 home, complete with a swimming pool.

Albany, N. Y. builders had a scale model village containing various types of northern home styles. But the real sensation of the show was a woman's hat (see photo) sporting a scale model home atop it.

Greater Eastbay builders in California had four model homes, a swimming pool and a 50-year-old remodeled home on the grounds of the California International Home and Garden Show in Oakland. Landscape Architect Howard Gilkcy, who designed the show, predicted gardens will become part of every home exhibit from homes to industrial machinery within 10 years. The show was timed to coincide with the Western Home Builders Forum, which drew 500 building men from 11 western states.

Omaha's show drew 30,000, up 2½% from 1955 and largest in its 25-year history except when holidays were allowed and autos given away. Most popular items: electronic ranges and screen-enclosed patios. Patios are popular in Omaha because summer insects pester outdoor eaters.

FHA chided Milwaukee builders for not using architects

FHA chided Milwaukee builders for not using architects more often.

Chief Underwriter Elmer Rathke, speaking to the Milwaukee Builders Assn., conceded "architects have been a little uppity in their attitude toward designing lower-priced homes." But he added his office was giving full credit for architects' fees in valuations. "We want to encourage a closer relation between the home builder and the architect."

Replied Roy Healy, executive vice president of the association: "Wisconsin architects have yet to show any willingness to cooperate with builders."

Realtor, only 3 years in field, sells 33 subdivisions

Many real estate firms have learned there is gold in project homes but it's doubtful whether any of them have found as much as Fred W. Maisel of Walnut Creek, Calif.

The 31-year-old Maisel is head of the fabulously successful firm of K.R. Maisel. His company currently has exclusive sales agreements for subdivisions encompassing 11,000 proposed new homes which are to sell for $165 million. But the amazing aspect of Maisel's story is the fact that his firm got into the project home market only three years ago. Maisel, himself, has been in the real estate business only five years.

The key to Maisel's success is simple: he is a merchandiser, not simply a sales agent although his staff of 70 salesmen and women, operating out of 14 offices in the San Francisco bay area do a lot of selling, too.

Maisel's business starts literally from the ground up. He and his aides study markets and population trends, find available land which seems ripe for development. Sometimes a home builder will take part in this pre-development study. Other times Maisel invites a builder to come into the plan after he has spotted the land. But the builder buys the land, not Maisel.

Maisel plans the subdivision and even helps plan the home designs, if the builder

Marlite Modular walls and ceilings

for greater economy, wide flexibility of design

Dimensioned for standard modular sizes, Marlite plastic-finish paneling fits right, looks right, goes up fast with minimum cost "in place." This means wider flexibility in the design of imaginative interiors ... greater economies all along the line. And Marlite means lower maintenance, too. The baked melamine plastic finish wipes clean with a damp cloth; stays like new for years. For modern commercial, as well as residential interiors, plan on modular Marlite ... available in Planks, Blocks, large Panels, and hollow-core Korelock in a wide range of distinctive Loewy colors, wood and marlite patterns. Consult your building materials dealer, refer to Sweet's File, or write Marlite Division of Masonite Corporation, Dept. 622, Dover, Ohio.

that's the beauty of Marlite® plastic-finished wall and ceiling paneling
PRACTICAL FLOOR of Atlas-White-Cement terrazzo adds beauty and distinction to home in Scarsdale, New York.

For durable floor beauty—terrazzo

This floor will give a lifetime of good looks, with less care and cost, because it's terrazzo.

More architects are discovering that terrazzo is as comfortable and easy to live with as it is attractive. Smooth terrazzo saves cleaning time and effort for busy housewives. Rugged terrazzo takes all kinds of hard use from children, or adults, and yet stays new-looking. Terrazzo floors need little or no maintenance... cut the owner's cost in the long run.

Architects like terrazzo's flexibility of design. So include terrazzo in your house planning. When you use Atlas White Cement in terrazzo, you have a wider range of color possibilities. Get better-looking terrazzo by specifying Atlas White Portland Cement, for its quality-controlled uniformity of color, performance, and permanence.

WATCH WESTINGHOUSE! WHERE BIG THINGS ARE HAPPENING FOR YOU
AWARD-WINNING

PITTSBURGH COMMUNITY FEATURES

FENESTRA COLOR-STYLEDS WINDOWS!

Garden City is a 1500-home development located in Monroeville, Pennsylvania, a suburb 15 miles east of Pittsburgh. The builders, Sampson-Miller Associated Cos., Pittsburgh, received an NAHB Award of Merit for their planning and merchandising of this outstanding new community. It is a prime example of how progressive builders give their buyers more than just a house on a street.

Under the direction of Jennings F. Stright, President, Community Planning Service Inc., Garden City is care-
fully laid out on rolling, beautifully wooded land where every tree was saved. It is a self-contained community with its own water and drainage system, sewage treatment plant, 17 miles of paved street and full provision for parks, schools, churches, swimming and wading pools, firehouses, a civic center and shops.

The houses, selling from $12,500 to $22,500, were designed by Architect Richard B. Benn to nestle into the hills. They are well zoned; plumbing facilities and storage are generous; most rooms are cross ventilated and all are well lighted. All the homes feature Fenestra Steel Windows, color-styled to harmonize with the interior and exterior. All windows are installed with Fenestra inside-outside metal trim. Screens and storm panels are included.

Fenestra Windows give Garden City families slim-trim modern design, big glass areas for more daylight and easy finger-tip operation for a lifetime. The expert use of color-styling accentuates the careful planning which has made Garden City so successful. Buyers are enthusiastic and sales are running far ahead of construction.

Set off your homes with Fenestra Color-Styled Windows!

Whether you're building 10 homes or 1500 homes, you can "build-in" an extra selling feature at no extra cost with Fenestra Color-Styled Steel Windows.

National Advertising—To help sell your homes, Fenestra is showing your best prospects the new window beauty of Color-Styled Windows with six full-page color advertisements in Better Homes & Gardens. Your Fenestra Representative can show you how to cash in on this powerful promotion program in your model home. Call him today, or mail the coupon below.
doesn't have his own architect.
He arranges the financing, both construction loans for the builder and mortgages for the buyers. He handles the paper work and FHA and VA applications.
He and his staff set up the advertising campaign and prepare the brochures. And finally he closes the deal, bringing the builder, purchaser and title company together for the closing.
His operations are a proven success. K/R Maisel had a sales volume of $32 million in 1955, handling 27 different projects. In 1956 Maisel expects to sell 4,000 homes for a volume of $50 million. He now has 33 subdivisions under his wing and more in the planning stages.
Maisel's rapid rise in the world of real estate has been phenomenal, even by California standards. He arrived in the state five years ago with a brand new degree in economics from the University of Texas. His main reason for settling in the bay area was to attend the University of California so he could get a PhD in economics.
While going to school part time, he took a job with the real estate firm that sold him his home in Walnut Creek. In two years, he was president; six months later, he was sole owner. That was less than three years ago. Maisel recognizes his business as something unique—neither a building firm but neither simply a real estate office. His description: "It's a clearing house, taking in all the factors in planning and building a home and selling it to the buyer."

Air conditioning reaches the New York snow belt

Air conditioning has reached the snow belt in a big way.
Two new housing developments in Syracuse, N. Y. are offering air conditioning to their buyers.
Air conditioning is optional in three of the four models in Byberry, a 1,200 home subdivision of Scholz prefabs priced from $13,000 to $20,000. In the fourth model it is standard equipment.
Even where cooling is optional, the Buckley Construction Co. is building so air conditioning can be added easily later—by adding a cooling unit to the gas fired conversion heater. The installation will involve no change in duct work or wiring.
Buyers who take the air conditioning equipment as original equipment will pay approximately $900 for it. But buyers who choose to add it later will pay the same price.
Orchard Village, a 400 home project of Builders Ted Chapman and George Gloves, has optional air conditioning in all models with no provision for later installation.

Levitt starts grading for his third Levittown

Big Builder William J. Levitt began preliminary grading for his third big project, Levittown, N. J. Actual construction of houses is still perhaps two years off, but bulldozers are moving earth in one part of the 4,000-acre tract that Levitt acquired in Willingboro Township, Burlington County (Mar. '55, News).

Conversion of two-story Levittown homes into split-levels becomes big business

Popularity of the split level home is being made retrospective in Levittown, L. I.
A new firm known as Split-LeveT, Inc. has been organized there to convert groups of the development's original two-story homes into larger split levels.
The company has 40 Levittown home owners have signed up for the addition at prices varying from $4,890 to $5,990 depending on the size.
Split-LeveT, Inc. was started more by accident than plan. It began when Mr. and Mrs. Herman Fried decided they wanted more living space in their Levitt home, a two bedroom model for which they paid $9,800 five years ago.
They retained Architect Herman H. York, who planned a two level addition across the rear of the existing home. The addition measures 32' x 20' and includes a basement recreation and utility room, an upper-level living room and new master bedroom. The home's original living room became a large dining room.
Enthusiasm of other Levittown residents who looked at the result prompted the Frieds to organize Split-LeveT, Inc. in cooperation with a group of Long Island builders who will do all the actual building work. By doing the conversions in volume, the Frieds figure they are offering an addition which would cost up to $8,000 if made to any one home individually.
Only apparent drawback to the Fried's plan is that owners have to give up a 640 sq. ft. hunk of their back yard for the addition. Levittown lots range upward from a minimum of 60 x 100.

Student builders put up this 1,008 sq. ft. house in California. Model is built on blocks so it can be moved away easily after public inspection it for two months.

Future builders at work: California college students build own house as class project

You won't find "home building" as such on the curriculum of Pasadena City College in California. But in truth it is as much a part of the school's course of study as rhetoric or history.
Every year for the past six, students of the building construction class at the two-year college have actually designed, built and sold a home.
The annual project was originated by Dean T. Reinhold, instructor of the building construction class. He decided in 1949 that the best way to let his students put their book-learning to practical use was to have them build a house—right on the campus.
The idea was endorsed by the Pasadena Board of Education, which pledged funds to buy materials. Reinhold found, however, that many local dealers were more than willing to donate some materials for the project, cost free, in return for the publicity they could get when the completed home was put on display.
Each year since then Reinhold's class has built a completely new home. It's a student project from start to finish.
This year, for example, 20 young men took part. All 20 submitted a basic plan for the house—one of which was selected by Reinhold.
Thirty-one firms supplied materials and accessories. There is no plumbing course at Pasadena College, so this work was let out on contract. Except for minor details, this was the only part of the project done by nonstudents.
The home, finished last month, contains 1,008 sq. ft. and has two bedrooms and a den, convertible to a third bedroom, a living room-dinette, kitchen and one bath. It has a counter-top stove, intercommunications system...
Laboratory tests prove—

3M ceramic tile adhesive holds more than 1½ tons per tile

CTA 11

Offers shear strength of 150 p.s.i.; guards tile against settling cracks, vibration and water!

For your protection, testing experts put CTA 11 through its paces.

Resists Shearing

They measured the shear strength of CTA 11 bonds at normal room temperature, found CTA 11 holds more than a ton and a half per tile.

Here is strength rugged enough to keep tile from cracking with foundation settling or shaking loose under conditions of extreme vibration.

What's more, they found that CTA 11 protects installations through the whole temperature range from 20° below zero to 125° F.

Resists Water

Then they proved that rubber-based CTA 11 doesn't dissolve in water, doesn't support mold growth, stores without deteriorating.

In addition, CTA 11 is easy to handle, spreads like "butter" right out of the can, doesn't ball up under the trowel. It's vermin-proof, dries odorless.

Gain Durability Plus

What other ceramic tile adhesive offers you such dependable performance, along with all the cost-cutting ease and speed of "thin bed" setting?

Next time, use CTA 11. Try CTA 12, the 3M companion adhesive for ceramic floor tile! Both are available at your local tile distributor's. And get free literature fast on CTA 11 and CTA 12! Fill out and send the coupon below today!
Why are so many builders

Typical homes in Hillcrest and Country Gardens housing development, Prospect Heights, Illinois. Approximately 300 homes will be built, equipped with B&G Hydro-Flo Systems.

Builders: Ehler and Wenborg, Prospect Heights, Illinois
Architect and Engineer: Jack Wenborg, Prospect Heights, Illinois
Heating Contractors: Reliable Heating Company, Park Ridge, Illinois

The “sold” sign on your homes is the result of many factors—good architecture...convenience features...known brand appliances...functional excellence.

You can add to these another sales appeal which lifts your homes out of the commonplace class—gives them a quality touch impressive to every prospect. The B&G Hydro-Flo System enables you to make a key selling feature of equipment you may have previously dismissed with the brief statement, “This is the heating plant.” It adds another convincing reason why your homes offer more value for the buyer’s money.

Greater comfort and convenience can’t be bought at any price, yet the advantages of the B&G Hydro-Flo System are within the cost range of the modest home. This system permits you to offer not only the best in heating, but an option of additional benefits, such as summer cooling and snow melting. These features can be built-in originally or added as the owner’s budget permits.

The B&G Hydro-Flo System is virtually a lifetime installation—no frequent repairs and replacements. That’s why Hydro-Flo equipped homes command better mortgage terms—greater resale value.

For further information, call your local B&G Representative or write to the factory.

The heating plant in Ehler and Wenborg homes takes a minimum of space.
switching to

B & G Hydro-Flo SYSTEMS?

...because only water offers the sales appeal of ALL FIVE

**HEATING**
Radiant, draftless warmth, controlled to match the weather, produced at low cost.

**COOLING**
Separately engineered to more accurately answer the differing problems of heating and cooling.

**SNOW MELTING**
Water in pipes is the only practical method to convey the heat needed to keep sidewalks and drives clear of snow and ice.

**B & G BOOSTER**
...key unit of the B&G Hydro-Flo System
This electric pump circulates water for heating the house in winter, cooling it in summer and for snow melting panels. The B&G Booster has a solid reputation for quiet, dependable and long-lived operation...that's why over 2,000,000 units have been sold to date.

**YEAR 'ROUND HOT WATER**
The same boiler that heats the house can be used to heat an ample supply of summer-winter hot water for kitchen, laundry and bath.

**ZONING**
Easy to divide the piping system into zones for better temperature control and fuel economy.

Bell & Gossett

Dept. EJ-10, Morton Grove, Illinois

Land for one-family houses brings $30,000 an acre in N. Y.

Builder Jack Parker of New York City is putting single-family houses on $30,000-an-acre land.

It is precisely because land costs so much that the single-family, detached home is almost a thing of the past in teeming New York City (where population densities run as high as 436 persons per acre).

Parker paid the stiff price for the 100-acre Bayside Golf Course at the eastern edge of the city. He plans to build a $20 million tract of 600 homes selling from $21,000 to $28,000.

It will be the largest private residential community in the Borough of Queens in nearly 20 years. To keep the price under $30,000 ("glamor for the middle income group," Parker calls it), Bayside Country Club Homes will have to be squeezed in six to the acre, which means 40 to 60 lots. To offset postage-stamp lots, Parker is retaining the golf course club house, adding a swimming pool, keeping these recreational facilities running as a private club for subdivision residents only.

Parker, former president of Empire Park Square Lumber Co., hired Land Planner Leo Novick to get rid of the gridiron street pattern originally plotted for the tract during the twenties so the subdivision can "hold to every roll we have in the land." He admits that one big reason he decided on single-family development for such expensive land is because of the "very bad situation with FHA multi-family building"—the reaction to 1954's Sec. 608 windfall scandals.

Public shunning traditional design, realty editors find

Traditional house design is losing public favor, says the Natl. Assn. of Real Estate Editors.

Home buyers have switched heavily to ranch and contemporary models with low, wide lines, the association reports after a survey of its members.

Some cities are bucking the trend, among them Tulsa, Okla., where only 11% of all homes were ranch or conventional, Chicago, 55%; Grand Rapids, 55%; San Diego, 30% and Fort Worth, 60%.

In every other major city on NAREE's list, ranch and contemporary homes account for 75 to 96% of all new homes being built.

Split-levels are holding their own, but are only a fraction of output in most cities.

Supersale: Chicago Builder Norman Winston sells 423 homes ($23,000 up) on rainy week end

A unique psychological buildup helped a Chicago builder, Winston Park Corp., sell 423 homes priced from $23,600 to $29,900 over a notably cold and rainy April week end.

The six month buildup was so successful that 500 persons gathered in the cold pre-dawn hours, waited in line to put a deposit on one of the homes that will require down payments from $3,800 to $7,400.

Winston Park started its campaign last September after it sold out its first 300 home section of Winston Park, northwest of Chicago, in one day. The firm (Norman K. Winston, president; David Muss, vice president) was left with a waiting list of 1,874 families who wanted to buy in the second section of 600 homes.

To hold these potential buyers six months until the next section opened, General Manager Robert Richards:

> Sent each family a monthly newsletter giving a progress report.
> Gained extra attention by announcing (in full page newspaper ads) that he would sell all 600 homes in one week end.
> Put a packet of home buying materials and information in the final newsletter.
> Telegraphed a reminder to each family on the list the day before sales were to begin.

First to plunk down his $100 deposit was Lawrence Sommers, 30, a high school teacher. He had arrived at Winston Park's sales tent at 4:30 p.m. the previous day, waited all night with his wife, keeping warm by a kerosene stove. Said he: "I've looked at all the houses in the Chicago area. To get any house similar to those in Winston Park you'd have to pay $10,000 more." Another buyer commented: "It's not hard to see why we'd wait so long for these houses. These are the best."

The Winston Park homes, designed by Architects Edwin Gerber and A. Pancani, are tri-level brick and wood models with three bedrooms, two baths and a recreation room, built-in kitchen equipment and built-in radio with speakers in every room. Financing: VA or conventional, with Oak Park Federal S&L.

Crowd lines up to see Winston Park's $29,900 model. Reversed first floor plan below.
Make the wiring plan a sales plan

In every woman's mind, a new home means new appliances. Your assurance that she can use these appliances, that you've supplied sufficient power for them, makes her more receptive. You can drive your sales point home with wire insulated with BAKELITE Brand Vinyl Plastic.

With this modern insulation, years of added service life result from inherent resistance to aging—resistance to cracking, stiffening and oxidizing. It retains electrical and mechanical properties longer. BAKELITE Vinyl Plastic is listed by UL for 60 deg. C. (140 deg. F) building wire and for non-metallic-sheathed cable—including the new all plastic types UF & NMC.

Your electrical contractor can install wire with insulation of BAKELITE Vinyl Plastic faster because it is smooth-surfaced, easier to pull through conduit. This thinner-walled insulation strips and splices fast, has no fabric covering. There's less weight than with other types.

Let this wiring plan help pull your sales through. Tell your electrical contractor to install wire insulated with BAKELITE Vinyl Plastic.

Remember—everyone benefits from ADEQUATE WIRING insulated with BAKELITE Brand Vinyl Plastic

The term BAKELITE and the Trefoil Symbol are registered trade-marks of UCC
Illinois builder of 350-home project sold on Worthington units

Any home that costs $12,000 or more to build should be air conditioned!
That's how builder L. B. Pooley of Aurora, Illinois sees it. Air conditioning not only protects the buyer's investment, but also makes a home easier to sell.

Most convincing proof of this is offered by the quality 350-home development now under construction by builder Pooley and his son Bob. Worthington's Year-Round unit has been speeding up sales ever since the project first got underway.

Pooley explains his choice of Worthington equipment like this:
"Worthington's Year-Round unit makes it easy for me to offer air conditioning as an optional feature. Heating and cooling sections come in one trim-looking cabinet that's a cinch to install. If a prospect wants to hold off on air conditioning, I install the heating unit first. The cooling section can be added at any time!"

Like Mr. Pooley, you can make Worthington air conditioning the feature that sells your homes this year. Call your Worthington dealer. He'll be glad to go over installation and cost details . . . and show you how Worthington's Year-Round unit will pay off in quick sales for you. You can also get full details by returning the attached reply card.

Worthington Corporation, Air Conditioning and Refrigeration Division, Section A.5.45-PB, Harrison, N. J.
Heating Split-Levels with a combined floor panel and baseboard system

A. AUTOMATIC AIR VALVE
B. BALANCING COCKS
C. CIRCULATOR
D. PROPORTIONING VALVE
E. BYPASS VALVE
F. BASE RADIATION CONTROL VALVE

The wafer temperature and flow in the floor coils is regulated by adjusting valves D, E and F.

Anaconda Pre-Formed Panel Grids of Copper Tube to heat lower level give builder big sales advantage. One big problem in split-level homes has been the cold floors of below-grade rooms. In Builder Joseph Fleming's homes, babies play in comfort on all floors. Drawing shows how Mr. Fleming and his plumbing contractor, Joseph Forrest, designed the floor radiant panel installation and upstairs baseboard system to operate with one circulator.

Typical home in Builder Fleming's "Shipley Heights" development, Wilmington, Delaware.

Anaconda Panel Grids (PG's) are machine-formed radiant-heating coils containing 50 linear feet of Type L Copper Tube. Available in two nominal sizes, $\frac{5}{8}$" for ceiling installations and $\frac{1}{2}$" for floor panels, they come to the job ready to install.

Plumbing Contractor Forrest (above) says, "The saving in installation time using Anaconda Panel Grids enabled us to give Mr. Fleming a better heating job at lower cost. I knew what PG's could do in the way of cutting costs, for I had used them in my own home."

ANAconda® COPPER TUBE PRE-FORMED PANEL GRIDS FOR RADIANT PANEL HEATING
Available through distributors of Anaconda Pipe and Tube
DESIGNED FOR BUILDERS...

the great new bryant

the new stars in Bryant's complete line of

Here's good news! Two brand-new Bryant Gas Furnaces — downflow and upflow, each in three popular sizes — have just been introduced in time for homes being built right now. Loaded with Bryant features and carrying the famous Bryant brand name, they are low, low priced to help sell your homes faster... with a minimum investment. You'll be delighted at the rock-bottom cost of these handsome, dependable units. Ask your Bryant Distributor right now for a quotation!

... more stars in BRYANT'S complete line for builders of one to 1000 homes.

BRYANT DOWNFLOW SUBURBAN MODEL 384
Three sizes — 75,000, 100,000 and 125,000 Btu/hr. Built-in Draft Diverter, Bryant Diaphragm Valve and Pilot, Cast Iron Drilled Port Burners, "Straight-Through" Heat Exchanger, Built-in Side or Bottom Return.
PRICED FOR BUILDERS

SUBURBAN FURNACES

heating and cooling equipment for builders

Low First Cost: We assure you the price is right.

Easy To Install: Completely factory assembled and wired, including burners and controls. The built-in draft diverter cuts installation time. No more on-the-job assembly problems.

Flexible in Application: Compact design and close-clearance approval permit installation in any closet, alcove, utility room, attached garage or basement.

Service-Free Operation: Dependable Bryant diaphragm valve and 2H pilot, cast iron drilled port burners are standard equipment. Front-of-the-unit accessibility to all controls.

...AND TO HELP YOU SELL YOUR HOMES—a broad range of hard-hitting promotion materials. These enable you to give star billing to the Bryant name and the finest in heating and cooling equipment. They talk product advantages while they tell the story of your homes. They are tailored exactly to your needs whether for use in a model home or in advertising to draw prospects.

JOB-SITE SIGNS  PERSONALIZED BROCHURES  DIRECT MAIL  PUBLICITY PROGRAMS  LOCAL ADS
— as well as room cards, handout literature and furnace display cards. All these items are available to you through your Bryant Distributor. If you wish, he will assist in preparing your complete program.

BRYANT UPFLOW SUBURBAN MODEL 385
Designed for overhead ducts in one-floor, basementless homes. Same sizes and features as the Bryant Downflow Furnace Suburban MODEL 384.

For complete information on products or promotion materials for builders, call your Bryant Distributor or write: Bryant, 48 Monument Circle, Indianapolis 4, Indiana.
LONG LENGTHS are assembled on the ground, lowered into trench, and tapped into position to make a root-proof, watertight joint. Easy to handle, quickly installed. Only Perma-Line is available in 5, 8, and 10-foot lengths.

L-o-n-g lengths make PERMA-LINE® the quickest sewer pipe to install

Perma-Line is the only fibre pipe available in 5, 8, and 10-foot lengths. It goes in fast, resists ground heaving; tapered joints are root-proof and leak-proof, and the pipe lasts for a lifetime. It can’t rust, shatter, crack, or leak. It’s strong, light, tough. In solid pipe for sewers and drains; perforated for field tiling, footings, and septic tank beds. Full line of couplings, fittings, bends, and adapters to connect to soil or sewer pipe. Many uses, in homes, farms, industry.

Write L-M, or mail the coupon. PERMA-LINE® Pipe

LINE MATERIAL COMPANY
Milwaukee 1, Wisconsin

SEND full information about Perma-Line Pipe and name of nearest distributor.

LINE MATERIAL COMPANY
(a McGraw Electric Company Division)
THE BIG NEWS in circuit breakers is this BullDog Two-Pole, Common Trip Duo-Guard Pushmatic. Simplifies home wiring. Makes installation easier and faster. The new terminal screw retainer (circled) ends fumbling and wasted time... you get a bolted connection fast. Your buyers profit from push-button convenience and dual circuit protection.

New Two-Pole
"Common Trip"
Duo-Guard Pushmatics

The heavy-duty, safe, positive switching and protective device

There's real convenience, real safety in two-pole breakers now. BullDog's new Duo-Guard Pushmatic® Common Trip breakers for Electri-Centers® are now available for two-pole, 220V circuits (15 to 50 amperes)—for residential, commercial, institutional and industrial applications.

Operation of this new two-pole Common Trip Pushmatic is simple and safe. (1) A push of the button gives simultaneous "ON" or "OFF" operation. (2) In the event of an overload or short circuit, both poles are automatically de-energized.

Of course, Duo-Guard protection is built into each Common Trip, too, just as it is into single-pole Pushmatics—your assurance of automatic, two-way protection in any circuit.

Ask for a demonstration of the new Common Trip now. See your qualified electrical contractor, BullDog field engineer or write BullDog Electric Products Company, Detroit 32, Mich.

COORDINATED COMPONENTS

Are they the on-site builder’s answer to prefabrication?

Yes, says the NAHB Small Builders Committee

The less pieces we have to handle at the site the better. I hope the day will come when we won’t have to use a saw on the job. The best way to save on-site labor is to have the size of all our components coordinated to fit together right. I wish more prefabricators would sell us separate components in coordinated sizes. They could tap a whole new market among builders who are not ready to buy the whole house prefabricated.

Ernest Zerble, Chairman

Yes, says the Lumber Dealers' Research Council

Coordination is the whole idea behind our Lu-Re-Co panels and the reason for their success. They are all presized to fit together with a minimum of on-site labor and a thousand Lu-Re-Co dealers can tell you they are cutting costs for thousands of builders.

Clarence Thompson, Chairman

Yes, they say at FHA

A prefab house is essentially an assembly of coordinated components made in the same factory. Once the local builders accept coordinated dimensions they can get coordinated components from many different sources.

Neil Connor, AIA, Chief Architect

Yes, say the builders' architects

Coordinated components give the builder the advantage of prefabricated parts that fit together quickly and still leave him free to 1) select his components from many manufacturers and 2) work with his own local architect to develop an imaginative design solution suited to local needs and markets.

Morgan Yost, AIA Chairman, AIA Home Building Committee

Yes, says the Small Homes Council

Builders can no longer afford to put thousands of pieces together on the site. Coordinated components are a system that has proven its economy.

James T. Lendrum, Director

Yes, says the NAHB Research Institute

Components let the small volume builder take advantage of quantity production in factories where quality can be controlled better. They allow him more flexibility of design if he buys them all as a package from a prefabricator. Components can be assembled a lot cheaper at the site if their sizes are coordinated.

Theodore Pratt, Chairman

No, say the prefabricators

Coordinated components would help the on-site builders match one economy of the prefab house. But the prefab builder would still have the advantage of national advertising, packaged merchandising, packaged financing, packaged design by the very best architects, lower overhead, and lower capital needs. The on-site builders' best answer is to join the prefabricators instead of trying to compete with them.

George Price, President

Prefabricated Home Manufacturers Institute
Here are a few of the components that could cut your costs

Components for the outside walls
- Framing panels (usually 9 x 8)
- Interior drywall (mostly 4 x 8)
- Sheathing panels (mostly 4 x 8)
- Punched, glazed windows (60" sizes)
- Punched doors (mostly 6 x 8 or 7 x 36)
- Exterior finish panels (mostly 32 x 8)
- Insulation, bats (mostly 15 wide)
- Modular brick (mostly 9 x 4 x 6)
- Modular block (8 x 8 x 16)
- Garage doors (14 x 8, 16 x 8, etc.)
- Ceiling door assemblies (common sizes)

Components for the roof
- Trusses (mostly 24, 26, 28 & 32)
- Gable ends (same length as trusses)
- Plywood sheathing (mostly 4 x 8)
- Insulating sheathing (14 x 8)
- Skylights (in many sizes)
- Composite shingles (mostly 35 shingles)
- Prefab chimneys (in many sizes)

Components for the bath (not all available yet)
- Wall panels (20 x 8-ceiling high)
- Ceiling panels (20 x 8 most needed)
- Tub enclosures (cutting high around tub)
- Shower stalls (usually 42 x 36"
- Vanities (why are they so low?)
- Plumbing assemblies (but will plumbers use them?)
- Medicine cabinets (should fit snad spacing)

Components for the wall-to-wall built-in kitchen
- Gas ovens (24" wide 24" deep)
- Electric ovens (mostly 20"
- Refrigerators (in many odd sizes)
- Base cabinets (mostly 24 x 24 x 36"
- Wall cabinets (should be 44 high to reach ceiling)
- Dishwashers-sinks (36" high, 40" wide)
- Burner plates (12" math module recommended)

Components for the other rooms
- Storage walls (mostly 9 wide, 8 high)
- Fireplaces (in various sizes)
- Fixed stairs (need standard riser height)
- Disappearing stairs (height adjustable)
- Punching doors (mostly 24, 30 or 36 wide)

But...
Let's get our two heads together when we think about components

With one head

Almost every builder says he wants components, so he can build with parts instead of pieces. That's another way of saying he knows components can save him money by eliminating costly on-site labor.

But what about the other head?

How many builders realize components could eliminate twice as much on site labor and save twice as much money if they came in coordinated sizes, so they would all fit together like a prefab house, without a lot of cutting and piecing on the job?

When we put our two heads together

Anyone can see that cutting costs with components calls for coordinated sizes and dimensions. And we can't do much about coordinated dimensions until we all agree on a few standard dimensions to coordinate: a few standard dimensions for components and, even more important, a few standard dimensions for the builder's house in which they will be used.

For example:
Sometimes it's cheaper to size the room to fit your components, as:

**Example No. 1**

Commonest component of all is a sheet of drywall. With drywall two carpenters need only a day (after framing) to get all walls and ceilings of a seven room house ready for taping and painting, and now you can buy your drywall with a good vapor barrier of aluminum foil built-in at the factory.

Standard drywall comes dimensioned to even feet—2' or 4' wide, mostly 8', 10' or 12' long. You get the maximum drywall savings if you dimension your room to fit the drywall. (With wet plaster it made no difference if your room was an odd size.)

**WASTE ON DRYWALL**

If your ceiling is more than 8' high you must either stretch 8' drywall with an extra slice or cut a sizable piece off 10' drywall.

If your room is 13'4" wide (commonest width with 14' joists) your 12' drywall will need an extra 16" insert at one end.

**SAVING ON DRYWALL**

If your ceiling is 8' high, you can cover the wall with a single 4 x 8 vertical piece or two 4' wide pieces laid horizontally.

If your room is 12' wide, 4 x 12 drywall will span it. If window sill is 4' above the floor, drywall can run right past it without cutting.

**Example No. 2**

Storage walls are a component more and more builders want to use. Most of them are 8' ceiling high; 90% are 4' wide but you can also buy 2' and 3' units.

In a room 12' wide, you can often cut your costs by leaving out the partition behind three 4' storage wall units.

But what happens if your room is 13'4" wide? Would you have to build a stud-and-plaster wall the whole width of the room just to cover the odd dimension?

**Example No. 3**

Most carpet is woven 12' wide. Most linoleum and vinyl flooring is made in rolls 6' wide. Few rooms are dimensioned to get an economical cut out of any of these better floor coverings. Most rooms waste labor and material cutting off or adding a narrow strip to make them fit.

**WASTE OF FLOORING**

Too often builders size their rooms to use the full length of 12' or 14' joists. That gives them an odd dimension of 11'4" or 13'4" that will not fit carpets or any other component.

**SAVING ON FLOORING**

Maximum economy with better floor coverings comes when one dimension of the room is 12' so standard width carpet just fits. Second most economical dimension is 9'.
Sometimes it's cheaper to resize the components to fit the room, as:

Example No. 4

Windows prehung and preglazed cost a lot less than the same window put together at the site.

But builders could save $100 per house if they could buy these windows sized to fit the wall instead of cutting and patching the wall to fit windows whose sizes are not coordinated with the other wall components.

Example No. 5

Standard length for precut studs is 8'—but you can't use an 8' stud with 8' drywall under an 8' ceiling, because the stud, sole and most of the plate must fit the 8' height of the framing. So carpenters must recut millions of studs. For conventional framing under a double 2" x 4" plate you need studs precut to 7'9". For framing under double 2" x 6" header developed for Lu-Re-Co you need studs precut to 7'6" or less and you can use the same length studs and trimmers all around the house.

Example No. 6

A good built-in medicine cabinet is a component that can combine sales appeal with money saving, especially if it includes a double electric socket, a good mirror, and a projected low-intensity light source. It should be a lot bigger than yesterday's cabinet, for we use more medicines and toiletries. It is one of many bathroom components whose size is not yet coordinated with the others. Some manufacturers make 22 sizes.
Doors are almost the hardest component to coordinate

**Example No. 7**
The prehung door is another fine component. It saves a lot of time and labor assembling the door itself BUT . . .

Its usual 6'8" height is 16" too low to reach the ceiling, and its usual 36" width (for outside doors) or 30" or 32" width (for inside doors) is too wide to fit between studs 32" on centers, but too narrow to fit a 48" wide panel. They won't fit the width module of any other component. So all doors—prehung or not—have to be framed into the wall the expensive way with a cripple above an off-module stud (besides the trimmers) alongside.

Builders could save the on-site labor cost of this framing if on prehung doors the door framing were coordinated with a standard ceiling height and doors prefamed to fit into the wall from floor to plate.

Exterior door panels 4' wide are one of the big money savers in Lu-Re-Co.

Because the many doors along the bedroom hall (there are often six or more) usually come in pairs, builders might save still more if they could buy ceiling high panels with two doors prefamed into an 8' panel. One smart prefabricator is now developing two-door panels.

The built-in wall-to-wall kitchen calls for new thinking about sizes

**Example No. 8**
In a free standing kitchen it makes little difference if cabinets and appliances come in odd sizes. But with built-ins the builder must know, often before he buys his appliances, how big a wall space they will need and where to rough in the plumbing. He can often save the cost of a plaster wall behind if the wall cabinets come ceiling high. And the home buyer also needs standard sizes, for before long he may want to replace a cabinet with an appliance or an out-of-date appliance with a new model.

**KITCHEN MISFITS**
It costs good money to fur the ceiling down to the cabinets instead of carrying the cabinets up to the ceiling for extra occasional storage.

**KITCHEN COORDINATION**
The 24" width of all these units lets the builder plan a room where they fit exactly wall-to-wall. 44" high wall cabinets reach ceiling.
For years everybody had been talking about
the need of sizing components
so they would fit together easily

Trouble was 1) no component manufacturer knew what size to make to fit the house and to fit the other components, and 2) everybody measured a different way, for the industry had no common language of measurement. 3) Site builders allowed such easy tolerances (whereas component users like the prefabricators allow only 1/2" tolerance in 48').

So last spring H&H joined up with the American Standards Association and the Research Institute of NAHB to clear up this confusion. Under the joint sponsorship of ASA, NAHB, and H&H five Round Table conferences* were called to work out the basis for industrywide agreement of room modules and component sizes. Each of these meetings brought together:

1. official representatives of the architects, the builders, the lumber dealers, the prefabricators, mortgage lenders, realtors to tell manufacturers what they wanted, and

2. representative manufacturers to tell these customers what sizes it would be economical for them to coordinate on and what sizes would be too costly.

At each Round Table the first consideration was to translate existing practices into usable working standards wherever possible. All the dimensions recommended conform to the 4" module.

The unanimous recommendations of these five industry Round Tables have since filled 35 pages of H&H with 23,000 words.

Here, briefly, are the modules the Round Tables recommended to the American Standards Association as a starting point for setting industry standards.

1. For flat ceilings—a standard height of 8' plus a tolerance (an 8' wall height under sloping ceilings). (H&H, Apr. '55)

2. For windows—six standard widths to fit the stud spacing and three standard heights—3' for privacy, 4' for living rooms, 6' for glass walls. All these sizes fit the 4" module. (H&H, June '55)

3. For outside doors—two standard heights—6'8" and 7'; one standard width—36". (H&H, June '55)

4. For bathrooms—A 32" module, with a 16" half module. This would fit both the stud spacing and the common dimensions of present bathroom fixtures. It would permit standard templates to simplify the rough plumbing and standard prefabricated hard surface panels for walls and ceiling. (H&H, Aug. '55)

5. For kitchens—two new standards: a standard 24" cabinet width with a 12" half module; an alternative wall cabinet height of 44" to reach the standard 8' ceiling. Only other change proposed in present industry standards was a 24" base cabinet depth instead of 241/2", to make corners easier where two 24" cabinets meet. (H&H, Sept. '55)

6. For the other rooms, a 4' module, with even-foot fractional modules. (H&H, Mar. '56).

Said Frank Cortright, founder of NAHB: "These Round Tables were among the most important home building developments of the year."

*For its part in this program H & H received an Editorial Achievement Award from the Associated Business Publications.
Here, for the first time ever, is a

**Directory of coordinated components**

Here, and on the next two pages you will find the sizes recommended by the American Standards Association—NAHB—H&H Round Tables for all the major components of the house. *After each item you will find noted whether or not a questionnaire sent to 1,765 manufacturers showed it to be available now.*

Because most of these dimensions are still tentative, this year's directory does not list by name the manufacturers whose products do or do not conform. Next year, however, we hope to include in our directory of coordinated components complete information as to where each can be bought.

With these coordinated components and coordinated room sizes . . .

For easy understanding all
rooms on this floor plan are
dimensioned from wall to
wall, instead of following
the recommended ASA prac­
tice of including one or
more wall thicknesses. Parti­
tions are assumed to be 4" instead of 4½" thick, except
the 8' wet wall between
baths.
Partition thickness always
put one room off the even
foot module if the house it­
self is planned on an even
foot module of interior
measurement. So in this
house, whose inside dimen­
sions are 28 x 44', the bed­
room hall is 40" wide in­
stead of 48"; the living room
is 19'4" x 19'8", instead of
20 x 20'; the closets off the
entry are 34" deep.
this house could go together almost as neatly as a meccano set

Here are the width modules used:

FOR THE WINDOWS—16" with three heights—3', 4' and 6'....

FOR THE BATH—32". This would fit both fixtures and stud spacing.

FOR THE BUILT-IN KITCHEN—24". This would fit almost every appliance except some electric ovens.

FOR THE OTHER ROOMS—4'. This would require changing few standard dimension except the 9" of acoustical tile and some floor tile....
Q. How fast are manufacturers adopting these modules for components?

A. Faster than you might expect

Says G. F. Hussey Jr., managing director of the American Standards Association: "The past year has seen a great new interest in standardization among suppliers of the home building industry."

Progress towards standardization has been fastest on window sizes and built-in kitchen components, for exactly opposite reasons:

**Windows** were in such a costly chaos of odd sizes that anyone could see the need and economy of concentrating on the few sizes architects and builders really need. Without this concentration no window maker can hope to cash in on the big savings offered by automation.

So as soon as the window Round Table recommendations were published the three window associations—wood, steel, and aluminum—began working with the ASA-a62 committee and the NAHB Research Institute. Says Ralph Johnson, NAHB research director: "It looks as if we'll soon have an agreement on even fewer standard sizes than the Round Table proposed."

Meanwhile two manufacturers have stolen a march on their competitors by adopting the Round Table standards independently. These are the F. C. Russell Co., in aluminum (see page 204) and the A. T. Rydell Co., of Minneapolis in wood. Builders who use these sizes should be able to save about $100 a house on the cost of fitting their windows into the wall.

**Kitchen** built-ins, unlike windows, were already so precisely standardized that the Round Table found only two new standards and a small change in one present industry standard were needed to coordinate wall-to-wall and floor-to-ceiling cabinets; so it will be relatively easy for manufacturers to adopt the Round Table recommendations as they tool up for new models.

**Appliance makers** have referred the Round Table suggestions to the major appliance division of NEMA in the hope of getting a more official industry standard for all manufacturers to work towards as they bring out new designs.

Meanwhile several appliance and cabinet makers have moved fast independently to put their own new lines on the 24" width module. Frigidaire gave the lead with its new Holiday kitchen. Now Westinghouse has adopted the 24" module for its new kitchen units (but its washer will stay 25" wide). Kelvinator, Servel, Youngstown, and Curtis all say they are moving the same way.

**Bathroom** standardization has made no visible progress since the bathroom Round Table found that standardization in this most standardized room needed only a few refinements to give builders great savings in the rough plumbing, walls, and ceilings. This is still an outstanding case of so near and yet so far.

The other rooms are up to the architects and builders

As long as they dimension their rooms to save money on joists (one of the cheapest components) almost nothing else will fit. And as long as they allow careless tolerances nothing at all will fit. But if they learn to put components together even half as accurately as the prefabricators and if they dimension their rooms to the 4' module (recommended by the Round Table) and its even-foot fractions—

They will find that under an 8' ceiling the present sizes of almost everything except joists, asphalt tiles and doors (see pages 127-129) are coordinated for them.
Is your house one of the best
57 houses for '57?

Are you proud of your houses? Do you feel they are making a significant contribution to housing progress? If so, now is the time to enter them in HOUSE & HOME's annual competition in which the editors will select the 57 houses that make the biggest contribution to housing progress for '57.

- These 57 houses will all be published in a special Hall of Fame Issue of HOUSE & HOME in October.
- They will all be exhibited in the National Housing Center, Washington.
- From these award winners the National Broadcasting Co. will select the very best houses to feature on national television hook up.
- All award winners will be publicized not only in HOUSE & HOME but also in your local newspapers.
- Architects can enter the houses they design; builders can enter the houses they build; lenders can enter the houses they finance; realtors can enter new houses they sell; lumber dealers can enter the houses they supply materials for.

Both merchant builder and custom-built houses are eligible. There is no limit to the number of houses you may enter. Entries for each house should include: 1) interior and exterior photographs; 2) floor plans; 3) descriptive data.

While we will accept snapshots (but not renderings), we urge builders to employ the most experienced architectural photographers they can find. Poor or homemade snapshots never do a good house justice. Photographs should not be mounted, but should have your name on the back. You may number photographs on the back and write captions in an accompanying letter or attach a brief explanation to the back of the photo itself. You may include sales data, prices, newspaper clippings and anything helpful that tells more about your houses. Send a land plan too, if you are proud of it.

Deadline is July 15—plenty of time for you to get new houses finished and photographed. Address all entries: Hall of Fame Editor, HOUSE & HOME, 9 Rockefeller Plaza, New York 20, N. Y.

—The Editors
These women are talking about you

The 103 delegates to the first Women's Congress on Housing had a lot to say about US home building.

- Some of what they said was wishful.
- Some was pure gripe.
- Some was misinformation.
- But most of what they said made good sense and all of it was earnest and worth listening to—if only to learn how consumers are thinking.

The congress met in Washington last month at the invitation of HHFA Administrator Albert M. Cole who wanted “to obtain the ideas of American housewives on home planning and design.”

For the asking, Cole got plenty of advice (more than HHFA has yet had time to sort out and put into a formal report). He heard a lot about what the women don't like (much of it aimed at the typical builders' house of 1946-50). He learned still more about what they want today. But when the delegates were asked to translate their ideas into a specific $10,000 house, the ladies found themselves in trouble.

This is what housewives dream about

Forgetting all about price, space is the magic word. With more children and more possessions than her mother had, today's housewife must put up with more crowding and more noise. The first thing she wants in her new house is "more space—space for things, space for people, space for escape."

So the delegates asked for plenty of storage—at least 5' of hanging closet space per person, with extra facilities wherever they can get them.

They want a family area and a quiet area, each well separated from the other.

They want the kitchen at the rear of the house with a window facing the yard. They want a separate utility room so the kids won't track mud through the kitchen.

They want a place for casual meals (but no snack bars), plus other room for formal dining.

They want three bedrooms and at least one and a half baths.

They want to avoid extreme styles. They prefer their house all on one floor, but they'll go to a second story to get the space they need.
Irate delegates to Women's Housing Congress urged builders of today's house to avoid postwar mistakes like:

- stingy storage space
- row-on-row, look-alike houses
- postage-stamp lots
- inadequate wiring
- streets without sidewalks
- lack of privacy, peace and quiet
- tree-stripped lots
- traffic-corridor living rooms
- gridiron streets
- too few bedrooms
- cell-like bathrooms
- picture windows without pictures

And they want this house not too close to its neighbors, on a lot where the trees have been spared and the sod put in, but without other landscaping.

They can find what they want—at a price

In most parts of the US the delegates could find plenty of houses like the one they described: architect-designed, builder-built—well-planned and handsome—but because of today's soaring land and building costs, rarely priced anywhere near $10,000.

The house the women wanted added up to 1,200 to 1,500 square feet. By the end of the second day of the three-day congress, the $10,000 house was being called "the $10,000 to $15,000 house" and the serious, intent delegates you see here were caught in what several of them called "the straight jacket of designing a specific house for a specific price."

The women themselves felt they had neither the time nor the training to design a house. On top of that, the standard of living of many, if not most, of the hand-picked congresswomen was well above the $10,000 house market. This made it extra hard for them to decide what to put in and what to take out to meet the $10,000 price tag.

Trying to cut costs, one delegate suggested leaving out window screens. (The idea was turned down because "screens are a health essential.") Some delegates thought they might make do for a while without a garage.

Another woman said she could save money by buying the range and refrigerator from a "discount house" instead of having the builder put them in. Still another asked for just the bare essentials at the start: "My husband and I can give each other garbage-grinders and automatic dishwashers for Christ-
modate any extra equipment they might get in the future.

The congresswomen had surprising things to say about the bath: they called it "the most neglected room in the modern house."

They asked for bigger, brighter baths with more colored tile, a high sink with shelves on either side and a cabinet below, a wall-hung toilet, a floor with rounded corners for easy cleaning, and a glassed-in shower-tub with a shelf at one end for children's toys.

**Here's more that the women had to say...**

"We all want a family room. Some think it should be part of the kitchen; others want a separate room."

"... I want to be able to feed the whole family in it — a family living room in the fullest sense — space for playing games and watching TV."

"We want a separate dining room, too ... a formal area with a nice tablecloth to teach the children manners, to bring the family together pleasantly and comfortably."

"If we must have the living and dining room combined, then the dining ell should be planned so you don't always look straight into it."

**... about the new-fashioned parlor:**

"The living room should be the quiet room — a place for 'gracious living'. This would be the room for books, music and 'special belongings': It must not be in the traffic ways of daily living and house care."

"I want the living room smaller, formal, for when the minister visits."

"It should be the place where ma and pa can sit and relax or entertain their guests while teen-agers are occupied in the family room."

"Parents are valuable, important people. Fewer would go to our mental wards if they had one room, even a small one, just for themselves ... peace and quiet without the television and radio."

**... about bedrooms:**

"Large ones are nice, but not necessary."

"Even if you don't need three bedrooms, you must have them for resale."

"Every child should have a bedroom ... minimal in size but large enough for a bed and storage."

"Children require some privacy. I want movable walls between their bedrooms so that each little room would be almost cell-like, but could be opened up for more play space."

**... about design:**

"With today's big families, you have to build up instead of out, to get the space you need."

"I know this will cost the builder more, but I want a community where every house is different and you have a choice."

"I want my house to express my personality and my neighbor's to express hers."

"Individuality is very desirable if the styles are compatible."

"A two-story house is good when you have a growing family. I want a bedroom and bath downstairs for a sick child or an adult with heart trouble."

"I like the split level's division between living and sleeping ... the split is a good idea since it saves steps."

"I know some people who live in a one-story house and they would welcome the feeling of change you get in a two-story structure. I like going downstairs from bedroom to kitchen. And, by golly, if we're not careful, we'll lose the use of our legs!"

"Instead of calling it contemporary or traditional, why not just say we want good honest design?"

**... about basements:**

"Don't give us those 3'×5' FHA closets! ... We want a basement."

"A basement is a place where kids can let off steam and relax. I'll sacrifice the formal living room for it."

"We want it for storage, for bad weather play, workshops, roughhousing."
AIA judges choose best 23 houses in the West

Design contest co-sponsored by House & Home and Sunset magazines brings in 325 entries, produces newsworthy winners

On the next 12 pages are the 23 houses a distinguished AIA jury picked as the best in the West.

Under the auspices of the American Institute of Architects, the jury pictured here made awards to "Homes for Better Living" in a regional design contest limited to architect-designed houses built since Jan., 1953, in Arizona, California, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington and Hawaii. Eight awards were made for custom-built houses; 13 for merchant-built houses; two for land planning.

The Jury: (seated, 1 to r) Clarence Stein, FAIA; Morgan Yost, FAIA; Joe Haverstick, president NAHB; Neil Connor, chief architect FHA; Earl Smith, past president NAHB; Mary Hamman, Modern Living Editor, LIFE magazine; (standing) Peter Blake, architectural editor, HOUSE & HOME; Charles Goodman, AIA; Pietro Belluschi, FAIA, Dean School of Architecture, MIT; Worley Wong, AIA; Perry Prentice, editor and publisher, HOUSE & HOME; Paul Groesse, architect and art director, Metro-Goldwyn-Mayer; Proctor Mellquist, editor Sunset magazine; Prof. H. L. Vaughan, chairman, Dept. of Landscape Design, Univ. of California, Berkeley,

HOUSE & HOME and Sunset magazines were co-sponsors of the competition which was held in cooperation with these 13 national associations:

American Bankers Association
American Society of Landscape Architects
Institute of Life Insurance
Mortgage Bankers Association of America
National Association of Home Builders
National Association of Mutual Savings Banks
National Association of Real Estate Boards
National Retail Lumber Dealers Association
National Savings & Loan League
Prefabricated Home Manufacturers’ Institute
Producers’ Council, Inc.
US Savings & Loan League
US Chamber of Commerce

With this strong backing, AIA received more than 325 entries—the largest number ever entered in an AIA regional design contest. Builder houses were divided into three price classes and custom houses into three sizes, as indicated on the following pages.

The winning houses and the jury’s comments on each deserve careful study. They show what constitutes the best western regional designs of recent months and they point out good design trends for the future.
First Honor Award, Custom House, under 1,600 sq. ft. Architect: Roger Lee; Contractor: Basic Homes Industries, Inc.; Orinda, Calif.

Nestling on hillside, this 1,100 sq. ft. house is protected from possible earth slide by 6' concrete wall covered by redwood fence.

**Patio house set on a hillside ledge**

Citation: "This two-zone house was picked unanimously for the clarity of its plan, for its elegant and sensitive detailing, for its handling of a difficult hillside site, and for the successful way the architect made his landscape patterns an integral part of the over-all design."

First Honor Award, Custom House, 1,600 to 2,800 sq. ft. Architects A. Quincy Jones & Fred Emmons; Contractor Morris Pynoos; West Los Angeles, Calif.

Glass-walled house has vertical eave which shades glass from west sun until 5 p.m. House on 4-acre site has fine view of mountains.

**Steel house advances home building**

Citation: "This steel and glass house was chosen unanimously because, among all the entries, it seemed to represent the most dramatic technological experiment in residential architecture. There was some question as to whether the strength of the steel framework and decking had been exploited to the full. Some jurors thought that fewer supports and larger spans might have been feasible without any increase in the sizes of the steel sections."

Two-zone plan is entered through a glass link which, in turn, opens onto a charming little patio placed between the two wings of the house.
Award of Merit, Custom House, 1,600 to 2,800 sq. ft.
Architects Jones & Emmons; Landscaping Eckbo, Royston & Williams; Contractor Pat Hamilton; Pacific Palisades, Calif.

Fred Emmons' own house is on an heavily wooded 85 x 150' corner lot. Minimum windows to street, fences, patio walls give privacy.

House of many patios on corner lot

Citation: "This patio house was chosen primarily for its thoughtful plan which shows how much can be done on a relatively small lot to create a series of 'outdoor rooms' for different and specific needs. Some jurors felt that certain details in the execution of the house fell short of the high standard set by the plan and that the photography did not, perhaps, do complete justice to the important qualities of the house."

Award of Merit, Custom House, 1,600 to 2,800 sq. ft.
Architects Dorman & Morganelli; Landscaping Robert Carter; Contractor & Owner Neal C. Lakenan; Los Angeles

Handsome glass-walled house has a 7' beam module utilizing 4 x 16' beams tapered to 8' at eaves; wood posts are 4 x 6'.

"Japanese pavilion" in two zones

Citation: "A house in the Japanese tradition, with a fine vocabulary of details. The jury was particularly impressed by the detailing of the textured fireplace wall (above, right), and by the simplicity and clarity of the plan. Some jurors felt that a few of the Japanese devices, particularly in the landscaping, were a little overdone."

Two-zone plan has entry in connecting link, small patios (one for dining) on either side. Each bedroom has pair of sliding glass doors.
Award of Merit, Custom House, 1,600 to 2,800 sq. ft.
Architects Wurster, Bernardi & Emmons; Landscaping Lawrence Halprin; Contractor Peter O. Mattei; Marin Co., Calif.

Big porch with wide overhangs cuts sky glare, makes outdoor living pleasant even on cool, windy days. Swimming pool is at left.

**Week-end house planned around a pool**

**Citation:** "This L-shaped house was chosen for its sculptural qualities—the excellence of its scale and the elegance of its rather stately proportions. Since the house was designed for a mild climate, some of its planning features (e.g. the open corridors) may not prove applicable to other regions."

The plan shows two houses: a guest cottage with two bedrooms, main house for owners. Continuous open passages link the two.

Award of Merit, Custom House, over 2,800 sq. ft.
Architects Smith & Williams. Landscaping Eckbo, Royston & Williams; Contractor & Owner Robert Crowell; Pasadena

**Hilltop house set on edge of ravine**

**Citation:** "This Japanese-influenced house was chosen primarily for the consistency and high quality of its simple detailing, and for the manner in which it adapted an Oriental idea to the requirements of California living. The jury felt that certain elements, particularly the heavy masonry pier supporting the principal roof, were out of keeping with the otherwise successful details."

Approach to the L-shaped plan is from a level hilltop. Living room porch projects out over a steep slope and toward the view.
Award of Merit, Custom House, under 1,600 sq. ft.
Architect George T. Rockrise; Structural Engineer William B. Gilbert; Contractor L. A. Van Wetter; Tahoe City, Calif.

High Sierra house has steep roof designed to direct snow away from major windows, decks and entrances. Interior has 1,425 sq. ft.

**Ski lodge for a mountain setting**

Citation: "This teepee ski lodge was picked by a majority of the jury (over the opposition of the rest) for the convincing way in which it carried out a single, simple and strong idea, for the pleasant atmosphere created here, and for its deliberately rough detailing—which seemed justifiable in view of the nature of the house and the use to which it was to be put."

View down from sleeping balcony shows tall living room and sun-deck which looks across the valley to the south.

Award of Merit, Custom House, over 2,800 sq. ft.
Architect Robert B. Price; Landscaping Lawrence Halprin; Contractor Swen Johnson; Tacoma, Wash.

House is 35' above lake, was pushed as close to water as possible to give view from big windows above and for supervision of swimmers.

**2-level house fitted on a narrow lot**

Citation: "This house was chosen because of the success with which different levels in the garden were turned into useful and interesting outdoor spaces closely related to corresponding areas inside the house. In view of the restrictions placed upon the architect by the narrowness of the lot, by the single view and the difficult grades, the jury felt that the landscaping showed much ingenuity."

Two-level plan has several courts at uphill level (where you enter the house), another patio at the lower level overlooking the lake.
First Honor Award, Merchant Builder, under $15,000

Enclosed patio is between living room and street. Brick fireplace wall has a second, highly useful fireplace/barbecue facing patio.

Living room (looking toward kitchen and dining room) has unusual sense of spaciousness, helped further by glass gable, high ceiling.

Privacy between two patios

Citation: for its unusual use of two patios to create privacy and its skillful use of glass walls and overhangs to integrate indoor and outdoor living areas. The open planning, high ceilings, glass gable-end, and big windows give a feeling of spaciousness to the relatively small living-dining-cooking space.

Award of Merit, Merchant Builder, under $15,000
Architects: Anshen & Allen, for builder Elmer Gavello, Sunnyvale, Calif.

Trees in this old cherry and apricot orchard were saved whenever possible. Wide overhang (on all four sides) makes house seem larger.

Living-dining room is 36' long, can be divided into two areas by movable case or screen. Big windows usually face south or east.

Small house with big house look

Citation: for a tight plan that gives good circulation with almost no bedroom hall and so permits a living area large for so small a house; for good indoor-outdoor integration; for handsome design under a wide overhang; for saving the trees.

Location of kitchen flanking living room is handy to garage, front door. Traffic crosses living room only at one corner.
First Honor Award, Merchant Builder, under $15,000

Garage entrance like this usually sells well in California. Houses have 1,175 to 1,200 sq. ft., sell for $11,750 to $12,000.

Flexible plan for 2 to 4 bedrooms

Citation: for clean and simple design in front; for pleasant indoor-outdoor relationships in the rear; for a plan that lends itself easily to several different uses of space and permits two, three, or four bedrooms.

Award of Merit, Merchant Builder, under $15,000
Architects Charles and Arthur Schreiber for Payne Construction Co., Phoenix

Carport has fenced side to street which helps hide unsightly objects. Sun-bouncing white roofs are Phoenix standard.

Phoenix house has front TV room

Citation: for integrating both covered and open outdoor areas with an indoor living area which can be developed as one space or three; for good location of the big kitchen, handy to front door, carport door, or covered terrace; for good use of overhangs.
Award of Merit, Merchant Builder, under $15,000

Handsome rear glass wall added to air conditioning problems but helped architects to get away from "typical tract look."

In wide open plan, kitchen can be seen from both living and dining room. House has mechanical air conditioning, is on 80' to 90' lot.

Big, air conditioned, for $14,250

Citation: for an open plan that permits full use of space; for good circulation with minimum halls; for good indoor and outdoor integration.

Plan shows third bedroom separated from living room by folding door, salable in 1954 when this house was built but less so now.

Award of Merit, Merchant Builder, under $15,000
Architect: Edward H. Fickett for McDonald Brothers, Los Angeles.

This 1953 design won praise from AIA judges for good plan, good appearance. Big windows are protected by unusually large overhang.

Houses were designed for simple construction so they could be prefabricated in a shop. Glass end faces rear of lot.

House designed to be trucked to site

Citation: for smart and simple design; for an open plan that lets small spaces seem bigger; for good relationship between the big window, the covered porch, and the grounds outside.

Architect's assignment was to design a 1,150 sq. ft. house not deeper than 26'6", with three bedrooms and two baths.
Award of Merit, Merchant Builder, $15,000 to $20,000
Architects Anshen & Allen for Joseph L. Eichler & Sons, Palo Alto, Calif.

1953 design for famed Joe Eichler has considerable charm. Fenced patio plus paving at rear helps give full use of lot.

Eichler trademark is huge window wall with sliding doors to rear patio. Newest Anshen & Allen designs for him are hillside houses.

Spaciousness indoors and out

Citation: for dramatic integration of indoor and outdoor living; for maximum privacy from the street; for a plan that needs no hallways, for good circulation; for a family room especially well suited to children, where they can be watched from the kitchen.

Plan shows all-purpose room separated from kitchen. Anshen did one of first family rooms for Eichler as early as 1950.

Award of Merit, Merchant Builder, $15,000 to $20,000
Architects Smith & Williams for George D. Buccola, Los Angeles.

This is a "Sherwood Forest" model, reported in H&H, February, 1956. Because of double garage and long, low roof, house looks enormous.

Well designed and equipped kitchen is between living room (seen in background) and family room. Living room can be shut off.

Luxuries for less than $20,000

Citation: for clean and handsome design; for an unusual plan centered on the two-way kitchen; for privacy in front and good indoor-outdoor living provision in the rear.

Excellent plan has entrance court with overhead trellis, two-terrace living room, luxury baths, family room away from living area.
First Honor Award, Merchant Builder, over $20,000
Architect George T. Rockrise for Sharp & Robinson, San Francisco

One of a group of waterfront houses on Belvedere Island. Excellent design, fine siting, drew buyers who wanted individuality.

Waterfront houses have a fine plan

Citation: for excellent integration of indoor-outdoor living, taking good advantage of the view; for a centrally located kitchen that looks just right in the living area; for a convenient plan that wastes no space.

Award of Merit, Merchant Builder, over $20,000
Architects A. Quincy Jones and Frederick E. Emmons for Pardee-Phillips Construction Co., Los Angeles

Big roof stretching over lowered carport gives an impressive, spacious entrance. Front block wall creates privacy.

Slab houses to fit hillside lots

Citation: for a visually exciting solution for a series of shallow sloping sites; for achieving both privacy and openness in front by a narrow patio; for taking full advantage of old planting for pleasant indoor-outdoor living across the rear.

Key to plan is lowered carport, with main entry to house from this location. House has 1,346 sq. ft., sold for $20,000 to $27,000.
First Honor Award, Merchant Builder, over $20,000
Architects Anshen & Allen for Herbert A. Crocker Co., San Francisco.

Design feature is a broad roof extending well over paved terrace. Big house has 3,016 sq. ft., sells for $39,900 on $10,000 lot.

Smart design for a narrow lot

Citation: for skillful use of structure as decoration and for unusual integration of indoor and outdoor areas both visually and functionally.

Award of Merit, Merchant Builder, over $20,000

Design problem of how to create an integrated porch is neatly solved here by extending roof, supported by three posts.

Decorative structure indoors and out

Citation: for good integration with a big, well-wooded site; for attractive landscaping; for handsome and functional use of overhangs; for good space planning with halls small for such a big house.
Award of Merit, Merchant Builder, over $20,000
Architects A. Quincy Jones and Frederick E. Emmons for Joseph Eichler, Palo Alto, Calif.

This house has 1,770 sq. ft. plus 419 sq. ft. in garage. Rear patio has sun-trap formed by L of projecting bedroom wing.

Four bedrooms and a family room

Citation: for a front patio plan giving immediate access to living room, kitchen, and bedroom hall; for decorative use of structure; for good indoor-outdoor living.

Family room adjoining living room is more popular than family room separated from living area.

Special Award of Merit for land planning
Architects Bassetti & Morse for Builder Theo Caldwell, Seattle, Wash.

As both photograph and plan show, houses are staggered on lots for privacy, to save trees and to give better views on all sides.

Big lots, big trees, small houses

Citation: for spacious arrangement of houses in relation to each other and to the fine old existing trees. In this subdivision the planners placed comparatively small houses on unusually large plots.
Small lots laid out for big views

Citation: For development of hilly subdivision site. Houses are located so as to open on unbroken, interesting views, (including a park) and at the same time are located to maintain privacy. However, lots are small in relation to size of houses.
Here is a follow-up Round Table that has already started important action.

Last Fall a Round Table jointly sponsored by the Lumber Dealers Research Council, the Prefabricated Home Manufacturers Institute, and HOUSE & HOME found that “mechanized materials handling could cut home building costs at least $1 billion a year.”

This spring this Round Table reconvened with representatives from the railroads and the manufacturers of building products, especially lumber. Purpose of the second meeting: to plan immediate action to change that billion dollar saving from a hope to a reality.

To that end, the Round Table’s first recommendations fixed responsibility for the first steps as follows:

**Recommendation**

1. The National Retail Lumber Dealers Association should questionnaire all its members right away to find out how many are already equipped to handle unit loads and how many more expect to mechanize this year.

2. The National Retail Lumber Dealers Association should assume immediate responsibility for educating and persuading its members to order lumber in standard units.

3. Before dealers can order their lumber in units we need an industry-wide agreement on the right size for these units. This is a job for the National Retail Lumber Dealers Association and the National Lumber Manufacturers Association, in consultation with the Forest Products Committee of the American Association of Railroads. The Lumber Dealers Research Council and the Timber Engineering Co. should make available the necessary research.

**Action taken**

1. The questionnaire is being prepared with expert guidance and will be sent out this month.

2. The NRLDA Convention will feature unit ordering in a big way.

3. NRLDA promptly set up a top ranking committee to work out answers with a group from NLMA. Chairman is Jay O’Malley, first vice president. Members include three members of the Round Table, John Moeling, Clarence Thompson and V. J. Wardein, plus W. F. Mullin, president of the Southern California RLDA, long chairman of its car loading and materials handling committee, E. R. Titcomb of Cleveland and S. S. Caves of Honeoye Falls, N. Y.
Materials handling is mechanizing so fast that lumber mills, yards, and railroads have no time to lose

1. Mechanization has suddenly begun to catch on in a big way in the lumber yards

When this Round Table first met in September we were told that only about 2,500 (10%) of the yards were equipped to handle unit loads. Since then mechanization has so accelerated that before the end of next year twice as many yards may be able to handle unit loads. This would still be only 20% of the yards but that 20% might well account for 80% of the volume.

In the past 12 months, we hear, many yards have begun buying mechanical muscles secondhand. This demand for used lifts suggests that mechanization is reaching down into the smaller yards, which might hesitate to pay $6,500 and often much more for new equipment.

2. More and more building materials are being shipped to the yards in unit loads

Already almost all gypsum products are unitized. About 80% of all asbestos siding and asphalt roofing, most plywood, most sheathing, most insulation board, and most flooring, could be shipped in units if the dealers would order in units and the railroads would provide the right cars to carry them. About 35% of the brick yards are now ready to ship palletized brick and now even pipe is beginning to come in big unit loads.

The manufacturers' faster trend to unit load shipments is one big reason lumber dealers are stepping up their purchase of fork lifts to handle them. (The other big reason is the education campaign launched by the National Retail Lumber Dealers Association at their expositions in New York and Cleveland to help its members see how mechanical muscles could cut their costs and improve their service.)

3. Rising labor costs will further speed the substitution of fast mechanical muscles

Lumber yards must learn to order standard units before they can expect mills to spend to unitize

7. Lumber is almost the only building material that is not unitizing fast

(Today plywood is about the only lumber mill product regularly shipped in units.)

8. The lumber mills' delay in switching to unit loads is most unfortunate

Lumber accounts for 60% by volume of all the materials used in a house and more than 60% by volume of all the materials handled by most lumber dealers.

So until lumber is unitized lumber dealers can use their mechanical muscles on less than 40% of the materials they distribute and get less than 40% of the potential benefit of their investment in mechanical handling equipment.

9. Lumber mills will soon face an urgent demand for unit load shipments

More and more lumber yards, prefabricators and industrial users are mechanizing. The lumber mills would be wise to get ready for this demand without delay. Eventually, why not now?

10. Best way to encourage unit shipments is to place unit orders

We cannot expect the lumber mills to unitize their shipments until the lumber dealers change their buying habits, and unitize their orders.

11. Eventually most of us believe unit loading should be cheaper for the lumber mills

It has proven itself cheaper for everyone else, but during the transition period lumber dealers would be smart to encourage the lumber mills to convert faster by sharing with the lumber mills their own saving on unit loads. To that end, we repeat the unanimous recommendation of our previous meeting—that lumber dealers should temporarily agree to pay not more than $2 m.b.f. extra for unit loads. Already some mills are offering unit loads in boxcars at $1.50 m.b.f. extra and encouraging their customers to expect that this surcharge may soon be reduced to $1.
12. Even now, unit loads of construction lumber involving relatively few items should cost the mills less than $2 m.b.f. extra

On bulkhead flatcars strapping and securement costs about 52c m.b.f. extra for material plus say 25c for strapping labor, in boxcars securement costs substantially less. Damage in boxcars can run as little as 15c-25c m.b.f. On bulk flatcars it has been held as low as 10c m.b.f. Hand labor to make up the unit loads a board at a time in the planing mill should cost less than the same hand labor to loose-load boxcars a board at a time. The only other major cost involved in unit loading is putting the unit load aboard the car with a fork lift. For this the average time is about 40 minutes for the 18 units that go into an average car or about two minutes of fork lift time per unit.

A few mills are already making up unit loads without hand labor by putting a mechanical sorter and unit loader right back of the trimmer.

13. In fixing unit sizes some consideration should be given to the use of dividers

These could make it easier for lumber dealers to break out smaller quantities mechanically. For example, the average small house uses something over 130 studs 7'8" long. In a unit load 4' wide and 4' high, these 130 studs would stack ten deep (16¼"), so lumber yards might prefer units with two dividers, to make it easy to break out smaller units of 130 studs each.

**Flatcar conversion to meet freight car shortage would be a big spur to unit lumber shipment**

14. The shortage of freight cars that can handle unit loads is the other big problem.

That means either bulkhead flatcars or boxcars with 15' double doors, preferably staggered. There are only 5,000 bulkhead flatcars all told today. One company alone (US Gypsum) expects in time to need 10,000 of them! There are only 97,000 wide-door boxcars (out of 740,000). Our industry could use twice as many.

There is no use arguing now whether we would rather have bulkhead flatcars (which are easier to load and unload but cost money to protect the load against rain and dirt), or wide-door boxcars (which offer better protection but are a little harder to load and unload). We can and must use as many of each type as we can get as fast as we can get them.

A new wide-door boxcar costs about $9,100 compared with about $8,500 for a boxcar with 8' doors and $7,900 with 6' doors.

15. Quickest solution would be to convert present flatcars to the bulkhead type

This costs anywhere from $400 to $1,800, depending on how good the condition of the old flatcar is and how much it has to be strengthened. The average cost for reconditioning and bulkheading combined would run around $1,100 (compared with about $2,500 for converting a boxcar with 8' doors into a boxcar with 15' double doors).

We believe the railroads would find both types of conversion profitable. As more and more industries adopt unit loads the demand for wide-door cars will increase rapidly. Their faster loading and unloading will reduce their dead time and make them more profitable.

16. Bulkheads eliminate the only serious objection to flatcar shipment

More than 180 test shipments have arrived without transit damage and without transit delays due to the load shifting. Average time from Alabama to Chicago of these test shipments has been three days.

17. Unit loads should be the same for both boxcars and flatcars

The railroads present regulations for the packaging and securement of lumber on flatcars call for units narrower than those commonly used in boxcars. For flatcars they call for a loading 9' wide consisting of two units roughly 3' wide with one slightly narrower unit in between. Unit loaded boxcars usually carry two units 4' wide with a 1' passage between. The railroad representatives at our Round Table say there is no reason a satisfactory loading specification cannot be worked out for 4' units on the bulkhead cars, and the strapping manufacturers at our Round Table say an economical strapping could be worked out for 4' wide units on flatcars.

We believe it would be much easier to sell the 27,000 lumber yards the idea of ordering units if they can order the same sized unit for delivery on either type of car. Unit loads 4' wide would fit on the lumber dealers' 8' wide tracks better than unit loads 3' wide, and the home builders at our Round Table point out that houses are standardizing so fast on a 4' module that they would prefer to have the widths of the lumber units conform.

18. There is no reason why 90% of all lumber shipments should not be unitized

This 90% could include all boards and all dimensioned lumber, even in random lengths. Some items like molding will probably have to be loose-loaded but this 10% should not be allowed to delay the development of unit load shipments for the other 90%.

19. Bulkhead flatcars could carry 75% of all lumber if weather protection against rain and dirt can be worked out economically

This 75% compares with less than 10% on all flatcars today. Today, gypsum products are shipped under a paper shroud that covers the entire carload and costs something over $5 a car. Plywood is shipped under a car-size shroud that costs about $10. Lumber units, however, are shipped with a separate StakKraft wrapping for each unit which costs from $2 to $5 a car, depending on whether the unit is completely wrapped or is protected only on the top and partway down the side.

Once standard unit sizes are adopted for lumber, we believe the wrapping manufacturers should be able to develop standard wrapping at a considerable saving. The present $20-$50 cost (only 1% to 2% of the product value) may not be excessive for dealers who can take advantage of it to store the lumber in the open, but dealers with covered yards will hesitate to pay this premium just to give flatcar shipments the same protection boxcar shipments get without extra cost.

20. For the guidance of the railroads and car manufacturers we suggest that:

Bulkheads should be 8½' high and bulkhead cars should be long enough to provide 48" clearance between bulkheads. A clearance of 52" would be equally satisfactory to us if that extra space is needed to make them all-purpose cars.
In 1953 a young Ohio businessman built his first house—and lost $19

Today, Phil English is No. 50 among Cleveland’s 300 builders

with one tract sold out, one selling, and land enough for a third

Phil English says he grew from building two houses in 1953 to 60 last year by trying not to make the same mistake twice.

He made plenty—but his mistakes taught him these two rules:
1. "The cheapest way is not always the best."
2. "A smart builder uses every means he can to save his own time and energy and to hold down his overhead expense."

English’s first house was a prefab and today he is still a prefab dealer. But he’s a prefabber with a difference—and the difference is one of the most newsworthy items in this get-big-quick story. For details, see next four pages.
By 1954 English was finishing this first development...

Westchester Estates is mostly prefab but has some conventional houses built to compare costs. Prices range from $15,300 to $21,000. English stressed location (33 minutes from downtown Cleveland) and terms (30 year mortgage).

... and learning the wide range of a builder's interests

English's earlier business experience was invaluable in getting money for his first development.
As an ex-president of Cleveland's Junior Chamber of Commerce, he was well known. So, even though he had built only two houses before, he was able to borrow $40,000 from four or five people to start Westchester.
The money was spent on land and improvements. He chose a tract which had city water and gas, but he installed septic tanks and storm sewers himself.

First mistakes involved costs

When English started building, his costs were often figured wrong, and he had trouble evaluating bids. With little previous experience it was hard for him to tell whether bids were high or unrealistically low.
Now he is careful to pin down costs as much as he can but, more important, he allows for unforeseeable items.

About his first house, English says: "When I started out, I wanted to build a house that sold fast, so I priced it down below a sensible level. I wasn't realistic. As a result I cheated myself." Even today, with his corrected pricing policy, English says, actual profits per house are far less than many people seem to think a builder makes.

Prefabs make planning easier

Buying prefab packages helps English keep track of what he spends on materials and, by standardizing building methods, prefabs help him estimate construction costs more closely. Careful comparison has convinced English that conventional construction is slightly cheaper than prefab. But the extra time involved in buying materials and in supervising conventional construction, in his opinion, eats up the slight cost advantage.

English knows the value of keeping credit high. (He says: "without a way to get money a builder is dead"). He processes his subs' and suppliers' bills for payment promptly, keeps controls on each house.

English is considering selling some of the raw land he now holds and using the profit for improvements on the balance..., a compromise aimed at balancing his two big needs: land to build on and cash to improve it for building.
English: “To grow fast:”

1. “Allow for ‘unforeseeable’ costs”
   English had to learn to include overhead, as well as materials and labor cost in estimates. He once underestimated the gravel fill he needed for a slab, now knows he can’t always judge the exact cost of leveling.

2. “Cut down errors by preplanning work”
   English buys from prefabbers partly to cut down costly estimating, sizing errors. If he built conventionally, he would pay extra for precut lumber for the same reason.

3. “Never underestimate the power of your buyers’ pocketbooks”
   At Cambridge Village every buyer ordered optional extras which raise the price. These extras help sell houses.

4. “Use your model house as an office”
   For English this has two advantages. It cuts expenses and keeps him right on the job. A telephone answering service records messages and a part-time clerk handles typing and invoicing.

5. “Follow-up every prospect”
   Because English uses part-time salesmen who merely show prospects through the houses, he is extra careful to follow up every lead with a telephone call or visit.

6. “Seize every opportunity for promotion”
   English’s first development had a Living for Young Homemakers model. He is building a House & Garden promotion house in his current tract. Because he hunted up buyers for both before houses were built, he risked no money, got good publicity in both cases.

7. “Don’t waste time on poor land”
   To English poor land means poorly located land. He feels builders today have too little cash on hand to sit around and wait until land they hold becomes valuable.

8. “Location of house on site is vital”
   English still stakes out each house personally, sells buyers on their lot and house as an integrated package.

9. “You need day-to-day records to keep a close schedule”
   When pressure is heavy, English uses work progress chart—doesn’t save it for slack times when he has more time, less need for records.

10. “Build a neighborhood while you are building your houses”
    Buyers are shopping for a good place to live, not just a shelter. English is planning a swimming pool for Cambridge Village.

11. “Be ready to change plans quickly”
    English built a “shell” house, which buyers were to finish themselves. He found that this idea didn’t sell so the house was quickly finished and sold without difficulty.

English’s trouble-shooting partner supervises construction

English’s brother-in-law, Hal Farver, joined the firm a year ago, had previous building experience in Dayton. He is the chief “trouble-shooter,” likes prefabs because they require less supervision and work scheduling is easier. He gets “adequate-to-good” delivery on prefabs and finds that prompt delivery is often the most critical item in his schedule.

Head carpenter bosses ten-man crew

Head carpenter Ray Motsch carries out carpentry work standards set by English, who adapted time and motion study ideas to incentive program. Incentives speed output, but work requires more checking for quality. Men use power saw, automatic floor nailers, jigs. Young and old found it easy to adjust to prefab construction. Two laborers supplement carpenters and one service man handles any fix-ups new houses require.

Subs are chosen for service, quality, price

Work with subs was school where English learned that the cheapest is not always the best. He switched subs frequently until he settled on firms he could count on for quality. Service is the other deciding factor in his choice of subs. He looks for firms that deliver on time, do the job quickly. He returns this service by processing bills for prompt payment.
Today, English mixes three brands of prefabs in a single tract

English mixes prefab brands because he finds it increases his sales and solves his design problems. Because he chooses from among a wider range of models, English can pick houses with quality features which he knows have buyer appeal. And by careful planning he gets attractive design variation. This variety is especially important in a quality subdivision like Cambridge Village, where his buyers expect to get houses that "look a little different from the neighbor's."

Buying from several different manufacturers makes English a smaller customer with each one, but he gets uniformly good service, has never had a serious delay. English feels that by selecting from several prefab brands he emphasizes his own identity as a builder—and can select and promote his houses and community with complete flexibility.

Choosing from several prefab sources adds little to ordering time, nothing to costs, English says. Most of the models he selects are contemporary homes with features that appeal to Cleveland buyers: big houses, lots of bedrooms and a generous share of appliances.

Houses are turned on site to get maximum privacy, and each house is placed on the lot that suits it best, as the site plan at the top of the page and the photo above indicate. Trees are saved whenever possible.
Brand 1: Scholz hillside house emphasizes rolling land

Hillside model by Scholz helps emphasize a feature that buyers like. They also like large lots and the fact that the development is near the city. This house sells for about $30,000, depending on optional extras. Some selling points: Tappan built-in range and oven, General Electric dishwasher, built-in Revco refrigerator, Briggs fixtures, Thermopane window wall, plastic ceiling in bath, wall-to-wall carpeting. In Cleveland, buyers expect enclosed garages, like big bedrooms, separate dining space.

Brand 2: Thyer house features activity room next to kitchen

Planned for family living, this model appeals to mothers who like the family room near the kitchen so they can supervise play. In selling these houses, English makes sure the model is not crowded with furniture because, he says: “I'm not in the furniture business.” He uses wallpaper and paint to help decorate, puts in just enough furniture to indicate uses. He posts room sizes, has a display showing alternate options. He neither stresses nor plays down prefab construction. Price, $27,000 up.

Brand 3: Midwest house has lots of salable space

Now under construction, this Midwest model has four bedrooms, two baths, to meet English’s buyers’ desire for lots of usable space. The garage has a generous workshop area. Washer and dryer are tucked into the bedroom hall, where soiled linen is apt to accumulate. Kitchen is centrally located to provide easy access to family room and dining area, has skylight for daytime lighting. Without a basement, the house sells for about $25,900. The model now being built was sold before framing was started.
How the Boester system works: When timer switch (a) is turned, waste from toilet flushes through grinder (b) down into treatment tank. Waste from other bath fixtures, kitchen and laundry flow through pipe (c) into treatment tank also. Air compressor (d) constantly forces air into tank compartment through porous stone (e). The bubbling air dissolves oxygen in the liquid to feed bacteria which convert sewage solids into harmless, odorless gases. Treated liquid flows under tank divider (f) into settling compartment. Undigested solids settle to sloping bottom (g) and back into treatment chamber. Excess liquid flows out drain pipe (h) to underground tile field. Gases escape outdoors through vent (i).

Secret of the water saving is that the processed, odorless liquid in the settling chamber is used over and over for flushing the toilet. The liquid is pumped to the toilet through pipe (j). Timer switch (a) starts both flushing pump (k) and grinder (b).

Originally designed just for toilets, the Boester system now handles all waste from the rest of the house (except for garbage grinder). See next three pages for more details.

Now you can buy a sewerless toilet

New device opens up "unusable" land

“A self-contained toilet system needing no sewer connection and only a small disposal field or none at all is essential to the development of large areas on the outskirts of our cities.

"It should be inexpensive, efficient and durable. Almost equally important, it should offer substantial savings in water, a resource we can no longer afford to waste in the primitive function of moving sewage through pipes."

Burnham Kelly, associate professor of city planning, Massachusetts Institute of Technology, Cambridge

The sewerless toilet is a reality.

Five years of research have developed Carl Boester's sewerless toilet into a revolutionary system for the whole house.

This one-house sewage treatment plant should go a long way to solve two of the biggest problems home builders face today—how to meet the growing water shortage, and how to get rid of the water after it becomes waste.

High cost of getting and distributing water perplexes many builders. High cost of sewage collection plagues many others. And failing septic tanks are causing trouble in all parts of the US.

This remarkable new sewage disposal system may solve these related problems because:

1. It cuts water use in the average home by about 50%.
2. It probably will work on land where septic tanks won't.
3. In soils where septic tanks cause troubles, the sewerless toilet's effluent reportedly will never have an odor if it rises to surface (chief cause of septic tank troubles).
4. It works wherever electricity is available, i.e., practically everywhere.
5. It is easy to install in any house, old or new, but you need a competently trained dealer to do the job.
6. It costs no more than a septic tank system at the outset and its operating cost can be paid for from savings gained from lower water bills.
7. Where existing codes permit, it can cut plumbing costs in a new house.
8. It has been tested for five years at Purdue University by Prof. Don E. Bloodgood, one of the nation's outstanding sanitation engineers. Thus it has considerable scientific backing and some state and county health boards approve it.
9. It doesn't use chemicals, doesn't have to be cleaned or overhauled.

Four years ago in Mar., 1952, HOUSE & HOME first broke the startling news of Boester's research. That report was widely reprinted, and Engineer Boester got hundreds of thousands of inquiries at Purdue. Now his perfected product has been thoroughly tested not only at Purdue but in many homes around the country for over a year.
When failing septic tank systems caused trouble like this

Dr. W. R. Taylor (foreground), county health officer in Wayne County, Ind., last year banned septic tanks in much of suburban Richmond after seeing evidence like this of tile field failures. This raw sewage drained from systems installed for houses built in 1955. Failures occurred even after percolation tests indicated the systems would work.

The sewerless toilet made 200 houses like this possible in Richmond, Ind.

This Scholz prefab was the first house in a 200-lot tract purchased a year ago, shortly before the ban on septic tanks made it unusable for home building. The house went in only last month. N. P. Dodge Co., the developer, learned about the Boester system, later interested Dr. Taylor in it. Taylor’s reaction: “It’s the best thing I’ve seen.” Builder Ed Nicholson, who put up the Scholz house and installed the sewerless toilet himself, is already sold on its merits. First, he found it easy to install and it cost no more than local septic tanks. Second, the master plumber who installed his other plumbing charged him about $300 less than Nicholson expected to pay for this house. Chief reason for the lower charge: no need for 4” pipes for any part of the drainage system.
Here's what you need to know about the Boester system

Q. How does the system dispose of waste?
A. This one-house sewage treatment system handles all waste from bathrooms, kitchen and laundry (except garbage disposal). It is an adaptation of the method used in city sewage plants.

A large supply of air is pumped into the waste liquid to feed bacteria which in turn convert solids to odorless gases. These bacteria are aerobic (living only in the presence of oxygen), in contrast to the anaerobic bacteria which treat solids less effectively in septic tanks. In the improved Boester system, all waste is discharged into the treatment tank, the toilet waste first passing through a grinder. The constant flow of air enters the tank through a porous stone, producing a vigorous turbulence. Digested solids change into nontoxic odorless gases, are vented outside through a breather pipe.

The tank has two compartments. One returns undigested solids back to the aeration chamber. Liquid in this settling compartment is pumped up to flush the toilet. Excess liquids, including bath, kitchen and laundry water flows out to a drainage field. This tile field is constructed exactly like a septic tank tile field but can be much smaller, because less effluent flows to it and the effluent contains much less solids. The sewage processing is claimed to remove about 92% of solids. A septic tank removes only about 50% on the average.

Q. Are motors used?
A. Three electric motors, all standard makes on the market, are used. One 75-w. air compressor operates constantly. One motor operates the water pump, and one operates the grinder.

Q. How much does the electricity cost?
A. The system uses about 100-w. per hr. Depending on local rates, the electricity will cost from less than $1 up to $1.50 per month.

Q. What about repairs?
A. Most dealers will include follow-up service calls in the installation price. If the system is not abused, repairs should not be costly or time consuming, manufacturer says.

Q. What does the complete system cost?
A. Dealers will install it at prices competitive with septic tank systems. Average price nationally may be $600.

Q. How large a house can it take care of?
A. It will serve any size family.

Q. Can two toilets be connected to the treatment tank?
A. Yes, and from any floor.

Q. Does the system cut plumbing costs?
A. Yes, if city codes recognize that standard plumbing procedures do not apply to this entirely different system (in which explosive gases and odors are not involved). As the diagram shows, the system eliminates the need for a large-size vent pipe to the roof, lines and traps for various sinks. 4" line from toilet to treatment tank, water connections to the toilet. And, of course, a regular toilet is not needed. These savings can amount to $300, as they did in the Richmond, Ind. house shown on page 163.

Q. Do you save on water?
A. Yes. all the water you use to flush the toilets. Residential water consumption varies from city to city and from family to family. Possibly the national average ranges from 50-80 gal. per person per day in the home. No one knows what percentage of this is in toilet flushings. One flush of the toilet uses from four to six gallons of water. Boester estimates that about half of all water consumed in most homes is for toilet flushing.

Q. What does the US Public Health Service say about it?
A. The PHS has made the following statement about this system:
The PHS is interested in any design for sewage treatment which promises a more economical solution to problems of disposal of individual household waste while at the same time providing protection of the public health. A satisfactory system should have a long life, operate economically and be relatively trouble-free. While recognizing that the present design holds promise, the service does not have knowledge of test results, and therefore is unable to comment. The PHS is pleased to see a continuation of efforts along these lines by various investigators. The ultimate application of these devices will depend on their acceptance by state and local authorities.

Q. Does sludge or scum accumulate in the tank as they do in a septic tank?
A. Tests at Purdue show no signs of this.

Q. Do VA and FHA accept it?
A. No, although a few VA loans have gone through in several districts. The FHA has taken no position on it because no applications have come through on homes having this sewage system.

Q. Do any state or local health officers endorse or approve it?
A. Yes.

Q. Can you install the system in any house?
A. Yes, an old one or a new one. In the photo above, you see it installed in a slab house. Here, the waste flows from toilet through grinder below the slab, then to tank installed in the ground outside.

Q. What do homeowners who have used the system say?
A. H&H questioned several who have used the sewerless toilet system for a year. None had ever noticed any odors; none had had trouble with tile fields (although in two cases their next-door neighbors had trouble with septic tank tile fields). One family said its flushing pump motor failed to stop pumping once and needed a quick service call. Another needed a new baffle in the toilet bowl after it had been broken. Said one owner: "I wouldn't take $1,000 for it."

Q. Can you get the system now?
A. Yes, through trained, authorized dealers. But only a few dealers have been appointed. Booster is now naming others in various territories. Dealers at present include plumbers, home builders, and realtors. The mobile display shown above is available to them for selling purposes.

Q. How large a tile field do you need?
A. It depends on soil percolation tests, and a dealer will use the same basic data as used to determine septic tank tile beds. However, field sizes will be less because less liquid flows through the system.

Q. Is the toilet noisy?
A. No more than usual toilets, but you might notice the different sound at first.

Q. Is the flushing liquid colorless?
A. Not usually. At the installations observed by H&H the liquid had an amber color.

Q. How is the toilet flushed?
A. A hand operated timer switch beside the toilet starts the flush pump and grinder motor at the same time. The switch may be set to flush the toilet and grind the waste for any period up to a minute (45 seconds is recommended).

Q. Can children use it easily?
A. Yes. Parents questioned by H&H say their children have had no trouble with the timer switch.

Q. What if the system breaks down or electricity fails?
A. Then it won't work, temporarily.

Q. Do odors ever occur?
A. They shouldn't unless the system is faultily installed or if the air compressor fails—or if users do not treat it properly (i.e. throwing unusual loads of grease in it). If the air supply fails and the system is not used while the air is shut off, no odors develop.

Q. How were the tests made, and what is the technical report to date?
A. Tests have been made at Purdue University for five years under supervision of Prof. Don E. Bloodgood, a member of the Indiana State Board of Health. The photo above shows some of the test devices used over the past five years. Reports show the biochemical oxygen demand in the treated waste is about 20 parts per million; solids in the aeration compartment range from 1.000 to 6,000 ppm, and dissolved oxygen is maintained at 2.5 to 8.0 ppm. Efficiency in solids removal compares well with that of large municipal sewage treatment plants. END
Today's house uses more metal than you think

wire mesh
expanded metal (for light reinforcements)
anchor bolts, braces

**STANDARD ITEMS**
windows: movable or fixed
sliding glass door
fixed glass door
window hardware, fasteners, fins, clips
doors, closet
door bucks
screens
venetian blinds
hardware:
lock sets: including knobs, escutcheons
push, kick, protection plates
doors stops
nails, bolts
hinges, screws
joist hangers

**ACCESSORIES:**
chutes, laundry, coal
awnings, canopies, shutters, sun shade louvers
mail receivers
garage door mechanisms
railings, stair, exterior, interior
curtains and blind rods and fixtures
curtain track system
storage cabinet units
storage shelving
sills, thresholds, saddles
ceilings: hung and acoustical panels
area walls
weather vanes, TV antennas, lightning rod
accordion wall partition
planter box, knockers, bells

**MECHANICALS**
Plumbing:
waste lines
vent lines
mains
hot and cold lines
valves
traps
meters
tanks
tube and sheet
Bath:
hardware
fixtures: tub, sink, etc.
tub enclosure panels
metal-backed wall tile
cabinets
cabinet jams, hangers
trim
Heating:
furnace, tank, lines, gauges, motor, meter
steam and water lines
enclosures
radiators
registers
tubing, coils
water heater
Air conditioning:
unit, ducts
fans, ventilators
louvers, louver screens
enclosure, lines, etc.
Electrical:
wiring
receptacles
wall plates
light fixtures
conduit, armored cable
panel, fuse, meter, etc., boxes
Kitchen:
refrigerator, freezer
even, range, broiler, barbecue
washer, dishwasher
dryer
cabinets
cabinet jams, hangers
ventilators
garbage disposal
trim
metal-backed tile

**PROOFS**:
insulation (foil)
termite shield
flushing
gravel stops
copings
roofing
siding
 gutters, down spouts
splash pans
straps, nails

**PLASTER and BRICKWORK**
lath: expanded, wire, punched sheet
corner bead, corners
hangers, channels, tie wire, nails
stools, window sills
picture rail, base molding
access doors
fireplace hood
flues
brick ties
anchors: joist, buck, etc.
On the way:

New uses for metals in tomorrow's house

Would it surprise you to know that the average 1,200 sq. ft. "wood house" built in 1956 has around four tons of metal in it? And do you realize this is twice as much as was used just 15 years ago? These facts may seem startling at first glance; but when you look over the lists of metal house products on the opposite page, you can see that iron, steel, aluminum, copper and brass have invaded almost every single facet of house construction. They have done so for several reasons:

- because metals are precise, and production houses call for precision building;
- because metals are easily fabricated into building parts, and production houses are best built with fabricated parts instead of pieces;
- because metals are strong, stable, easy to finish —and they are getting cheaper to use.

To date, metals have been used helter-skelter in home building: most often metal products are used as substitutes for wood products—which may mean that they are not being used as efficiently as they could be. In other cases, metal products are borrowed from other construction fields—which may mean that they are not dimensionally coordinated with home building modules. And in still other instances, metal products are being used to replace worn out siding or roofing—which means that they are being given a bad name (because people have started to associate them with shoddy construction).

But here and there, metal is beginning to come into home building in a systematic, logical and often handsome fashion. On the way are aluminum and steel curtain walls that will revolutionize home building in a matter of months, not years. On the way, too, are metal roof sections, exterior and interior metal wall finishes, metal ceilings with integral lighting for houses, metal components of every type, size and color.

Few men in metal industries believe that houses will be—or should be—all metal: most pioneers in this field now agree that the emotional functions of the home will continue to call for warm, traditional materials and finishes in many places.

Precision is metals' unique advantage

But to anyone who has seen the kind of precision work that goes into our planes, trains and trucks—to anyone, in short, who recognizes how far and how fast home building must go to catch up with the precision of the rest of American industry—there can be no question that metals are an integral part of home building's future.

The next 14 pages are a crystal ball gaze at that future. They are an attempt to answer five questions about metals in home building:
1. Will metals take over house framing?
2. What kind of skin for tomorrow’s house?
3. What about more metals for interior surfaces?
4. What’s changing in home utilities?
5. And, finally and most importantly, how will the public feel about a metal house?

Much of this discussion is, of necessity, an educated guess. But the guessing is based upon the best information available today from US metals industries. To the leaders of those industries the question is not whether metals will enter home building in force, but whether it will happen this year or next.
Metal framing faces two problems: first, how to get away from the habits acquired through centuries of wood framing and, second, how to get interior and exterior sheet materials big enough and strong enough to profit from the wider stud and joist spacing. One possible answer: forget about metal framing (in the traditional sense), sheet materials big enough and strong enough to profit from the wider stud and joist spacing.

Will metals take over house framing?

Too many designers of metal framing systems have jointitis. "Jointitis" is a disease caused by trying to make a metal stud or a metal joist as flexible as a wood stud or a wood joist. Its victims are obsessed with the idea they must equal the dimensional flexibility of wood by making their metal framing system out of many small pieces assembled together by means of little connectors and joints. Result: prohibitively high cost.

Three truths about metal framing

Metal framing systems for houses will never become competitive with wood until their designers and manufacturers observe three basic rules:

1. Metal framing cannot equal the on-site flexibility of wood framing, because you cannot cut 1" off a steel stud as easily as you can saw 1" off a 2 x 4".

2. Instead, try to concentrate on those qualities of metal that make it superior to wood framing—i.e., dimensional stability, rigidity, strength, ease of painting, elimination of much site labor.

3. And when you do that, you will come up not with little pieces of metal that need to be bolted together on the job, but with large metal components. And the only way you can get large preassembled metal components into houses is to accept, in full, the discipline of modular coordination.

Tomorrow's metal house will be framed not with little bits and pieces of metal, but with large, factory-welded or factory-riveted metal assemblies of great strength and stability, all coordinated to fit into a modular system that recognizes that metal is basically different from wood.

Some makers have come out with factory-assembled wall frames (see cut), but even those frames are still made of little steel studs spaced 16" or 24" on centers—hardly complete exploitation of steel's great strength and rigidity. What is keeping the fabricators from making full use of steel's unequaled potentialities?
Steel frame house in Houston Parade of Homes, 1955. Burdett Keelher, architect. Buck King, builder. Brick walls are treated as large panel inserts set between exposed steel columns.

174-180 do not use traditional, small-scale finishing materials at all: instead they use a series of panel inserts or industrial curtain walls with enough lateral strength to stand up without backing. And they use them in large sizes.

So when you talk about the metal-framed house, you should also talk about the skin for the metal-framed house. Every fabricator knows what he could be doing with steel or aluminum—if only somebody would make a new house-skin that would fit into the much larger modular grid called for by metals. The skin that needs the least backing would be metal—perhaps a skin braced throughout by rigid insulation.

Metal load-bearing panels may be answer

US Steel's Male thinks that the answer may be a different type of metal structure altogether. Says he: "The future of metals in housing lies in a load-bearing panel containing, integrally, its own structural members. It is quite feasible to build a house out of panels that have their own exterior skin, insulation, interior finish and structural members all in one package." The kind of panel Male is thinking of would be self supporting and strong enough to support the roof as well. Like structural engineers in other fields, US Steel's experts think the skin is too valuable, structurally, to throw away, and sure it can do half the job of holding up the average one-story house.

Abe Charles, director of architectural design and research at Reynolds Metals, is thinking along roughly similar lines. According to him, "the use of the 'electronic brain' will help us explore new structural forms and techniques by relieving designers of the complex mathematics of analysis. Core panels, aluminum-clad steel, stainless steel and aluminum framing members, plastics and adhesives will permit construction of lightweight, high strength, low maintenance structures." These structures, according to Charles, may be far removed from the present day post-and-lintel forms used even in metal framing.

Right now, Architect Eduardo Catalano is working with an aluminum company to develop warped thin-shell forms that will use an aluminum skin structurally—the next logical step beyond Catalano's famous hyperbolic paraboloid house (H&H, Aug. 1955).

Developments like this are more important to home building than to heavier construction: for the house, unlike the tall apartment or office building, does not really need a structural framework independent of the curtain wall. The two can be combined without trouble, and that—according to US Steel and Reynolds experts alike—is exactly the way house construction in metals is going.

Prefabricated aluminum cabana, designed to be added to typical trailer. All wall panels are 3" thick, with honeycomb core and aluminum skins. Edges of panels interlock. Walls are load-bearing, carry aluminum roof.
With present metal or wood framing methods, the skin can be made of any suitable material—including metal. But the metal curtain wall needs new dignity and greater decorative qualities to find public acceptance. This need is all the more urgent since experts believe the metal skin will be an integral structural part of tomorrow's metal house and hence very much in evidence.

Metal skins for houses got off to a bad start. Aluminum siding (made to look like clapboards), aluminum roof shingles (made to look like wood shingles) and other metal products (made to look like anything except metal) have given the metal skin a bad name. People associate it with cheap remodeling of old houses because most of these products were designed for the replacement market.

Advantages should be exploited

Even more important, these imitative aluminum products do not make the fullest use of the material.

According to engineer Paul Weidlinger, who has made an intensive study of the architectural uses of aluminum, the ideal type of aluminum roofing would be a series of sheets with batten bar joints. This could be used for as low a pitch as 1½ in 12. The batten joint would work well in siding, too, since it serves to stiffen the metal sheet at regular intervals.

So the widespread imitative use of metals for house skins is not only questionable esthetics; it is also questionable engineering.

Do metal skins really make sense for houses? If they do, what kind makes the most sense?

Steel studs and joists don't need metal skins

If you accept present steel stud and joist framing systems, there is no good reason why those systems should be covered with metal skins. In fact, a wood skin, brick skin, stucco skin or plastic skin will make just as much sense—and, in some cases, more sense since some of them do not require a backup every 16", and other skins (like stucco) will benefit from the dimensional stability of the framework and work even better than they would on a wood frame.

But if you believe, as do many advanced thinkers in the metals industries, that the next step in metal houses will be a complete structural wall panel, with the skin doing much of the structural work, metal skins of some type are inevitable.

Right now the biggest advances are being made with honeycomb core panels using new "miracle" adhesives to hold the actual metal surfaces. These panels have paper or aluminum cores, are very light, rigid and have good insulating values. Other new panels have foam plastic cores, still others are ribbed and filled with glass fiber insulation.

Metal core panels are available today

Anybody can build an aluminum-faced, paper honeycomb core house. The materials are still expensive but, since nobody really knows how much a traditional exterior wall costs to build, nobody can tell exactly how much more expensive an equivalent aluminum wall would be.

There are great hidden savings in the new curtain walls. Designer William Corns (p. 174) saved enough space for a 70 sq. ft. guest bedroom by using a thin metal skin in his experimental house in place of a wood frame wall. What an aluminum house could save in foundation costs (because the wall is lighter), in initial finishing costs, in site labor and in long-term maintenance is anybody's guess.

Finishes now available make the metal skin impervious to almost anything under the sun, and to the sun as well.

Porcelain enamel on steel or aluminum, epoxy plastic paints, aluminum finishes and colors (and special paints, designed for aluminum surfaces)—these are just a few of the new treatments available. Add to them the more familiar metal skins (e.g. copper roofing) and you have a design vocabulary as complete as any in wood and masonry.
Decorative metal surfaces inside the house are not yet fully accepted by a public that often finds them too cold to the touch and too cold to the eye. To date only prehung metal doors, special metal ceilings and metal surfaces in kitchen and bathroom areas have been widely accepted. But more interior metals are on the way.

Embossed aluminum sheets showing patterns ranging from "leathergrain" to ripples and ribs. Courtesy: Reynolds Metals Co.

### What about more metals for interior surfaces?

Many people think metals are "too cold" to use on wall surfaces inside the house.

If "too cold" means "too cold to the touch," the answer is that metals are indistinguishable to the hand from plaster surfaces, glass surfaces, stone surfaces, brick surfaces or tile surfaces. (They are colder to the touch than wood surfaces.)

If "too cold" means "too cold to the eye," the answer is that the metal makers are trying to correct that with new decorative patterns and colors.

**Many new finishes are being developed**

In the Alcoa building in Pittsburgh, dozens of different aluminum wall finishes and ceiling finishes were used experimentally and they have shown how versatile and attractive metal interiors can be.

In addition to the more obvious uses of metals inside the house, there are two—relatively new—that have proved successful: prehung metal doors, and metal ceilings.

Michigan builder Bob Gerholz believes that metal doors, despite their higher initial cost, save money in the end because once in place they need no further attention. (Warping or swelling of some wooden doors is a major complaint among home buyers; and fixing such doors after buyers have moved into the house can become a big cost item for a builder.)

**Acceptance is often slow**

Other builders, on the other hand, think more highly of wooden doors because they can be planed down to clear whatever floor finish is used—from an unfinished slab to carpeting on a finished wood floor. Still, with lower costs and some built-in flexibility in the door size, prehung metal doors should become more and more popular.

Metal ceilings for houses are still in early stages of development—not because the metal fabricators don't know how to make them (they have been making handsome metal ceilings for commercial structures for years), but because the costs are still high. Yet, as of today, sound absorbent metal ceilings (for use over open kitchens and family rooms) and luminous ceilings (made, for example, out of aluminum honeycomb sheets, which also have a good acoustical rating) are getting close to the cost range of the average house.

Whether houses should be illuminated according to lighting principles first developed for offices and stores is another question. In kitchens, bathrooms and laundry areas such illumination may make good sense; elsewhere a more intimate form of lighting may be preferable.

**Coordination of sizes is vital**

As metal doors and metal ceilings become more common in houses, some popular prejudices may disappear.

There are already successful insulated metal sandwich panels with nonmetallic surfaces (generally of a plastic) glued to the metal skin. Here, as in other uses of metal in houses, the key to success lies in dimensional coordination as much as it does in gaining popular acceptance.

Few experts in the metal industries believe that metals are the answer to all problems of interior or exterior finishes. Most of them recognize that wood and other finishes will be preferred by many people and for many places. And they point out that the metal framed house of tomorrow can easily use such interior finishes: for the development of fasteners and new adhesives now makes it possible to attach veneer plywoods to a metal structure without the slightest trouble.
The biggest news about metals in plumbing, wiring, heating, air conditioning and insulation is that the old standbys may soon encounter serious competition from aluminum and plastics. One reason is the currently high cost of copper: another is that both aluminum and plastics can do a better job in some places than the metals presently in use.

What’s changing in house utilities?

There is no appreciable increase in the use of metals for plumbing, wiring, insulation and ductwork. In fact, plastics are beginning to invade some of these fields to replace metals.

What is happening within the metals family is that aluminum and its many alloys are becoming competitive in areas where copper, brass and steel once reigned supreme.

**Aluminum piping may cut costs**

Copper pipe costs about four times as much as aluminum pipe and the latter can do as good a job in water supply and sewage as copper or steel. Judging by what happened in the ALCOA building in Pittsburgh where much of the piping is aluminum, builders estimate that plumbing costs in similar office buildings can be cut 25% through the use of aluminum pipe. Savings in houses should be even greater because of proportionately fewer connections.

Sole problem: galvanic action between aluminum and other metals to which it may be joined. This does not occur with zinc, lead or stainless steel connections—but all other direct metal connections spell trouble unless a nonmetallic gasket is used. Pipe anchors and supports should be of aluminum or galvanized steel.

Tomorrow’s house may well be entirely wired with aluminum. Reason: copper wiring, right now, costs at least 50% more than aluminum, and copper costs—especially at the source—seem to be going up. Aluminum’s resistance to current flow requires thicker wiring than copper. This causes some difficulties at terminal connections where the wire has to be bent and twisted.

However, with the advent of new terminal connections, which eliminate all bending of wires (see cut, left) this is no longer a serious problem.

**Foil works with air conditioning**

Aluminum foil insulation can do a very good job—but only if it is properly used. The foil is very effective in reflecting the sun’s rays in the summer, but in the winter it may conduct inside heat to the outside—unless the foil has been backed up with another form of insulation that will prevent direct loss of heat in this fashion. In addition, aluminum foil is a superior vapor barrier.

Because aluminum gains heat more slowly than steel, aluminum ducts are much more efficient than steel ducts. For this reason aluminum ducts can be small, and less cool or warm air needs to be supplied to the ductwork to do an efficient job.
Let's not fool ourselves: people will not accept exposed metals in houses unless metal makers set their sights on the highest possible design standards. Unfortunately, most Americans associate metal shelter with diners and gas stations, insist on being shown that the metal house will be a lot different. Meanwhile, traditional materials will find many uses even in metal houses, both to lend warmth and to add contrast.

5

How will the public feel about a metal house?

Each year 200,000 shiny metal trailers are bought in the US, many for full-time occupancy. By comparison, less than half as many prefabricated houses were sold last year.

This does not, of course, prove that all (or even very many) Americans are ready to move into shiny metal houses. Neither does the fact that 90% of the buyers of Lustron houses said they would buy a porcelain enamel and steel house again.

**Design is big factor**

Trailers are among the best planned dwelling units on land, sea or in the air. The Lustron house was, for its time, a remarkably well-designed product. And so are many of the exposed steel-frame houses admired at recent Home Shows (see above) and some of the steel houses now being promoted by West Coast Builder Joe Eichler (see below).

The metal house needs good design not only to overcome a public preference for warmer, cozier materials; it also needs good design because most people associate metal shelter with diners and gas stations—examples of some of the worst design in the US. Metal advocates must prove to a skeptical public that they can do better than that.

They can, as architect Eero Saarinen showed with his beautiful porcelain enamel curtain wall for the General Motors Technical Center.

But, the process of acceptance will necessarily be slow. Steel framing with a traditional skin of brick, wood or stucco is the first step (and it makes sense, too—see below). Even in houses using exposed metal for framing or for the skin, traditional materials can be used for warmth and effective contrast.

How handsome such combinations can be is shown in two of the three houses on the next few pages. And on pp. 174-175 is a house that demonstrates a further advance, still far beyond public acceptance, but not beyond our present-day capabilities: a completely industrialized house of steel and aluminum.
Five steel “Ys”, planted in concrete piers, carry the floor and roof. Pairs of tie rods help to support the floor girders.

This house experiments with steel frame.

Butterfly roof lets in plenty of daylight on uphill side (east). South end of house (below) is open, serves as carport.
... and an aluminum curtain wall

The aluminum curtain wall that sheaths this house was borrowed outright from today's most advanced industrial construction.

Its light weight enabled Designer William Corns to hang his hillside house from a cantilevered steel frame. With the curtain wall he used aluminum roofing on steel purlins. Result: a 2,500 sq. ft. house that weighs only 32,000 lbs., with furnishings—about one fourth of the weight of an equivalent house of traditional materials.

Here is how the house stands up. A single row of five piers, resting on bedrock, is the only foundation Corns needed on a site with a 45° slope. Into these piers he planted five symmetrical, Y-shaped steel frames, and the house is hung from those frames. The steel structure cut down foundation costs.

The curtain wall saves space as well as weight. Here is a house with an exterior wall only 1 1/2" thick (in most areas), stiffened by aluminum extrusions that hold sandwich panels of aluminum, glass fiber insulation and plywood (the latter glued to the back of the panel). Result: a space-saving of about 70 sq. ft. over a traditional frame wall—enough for an additional guest bedroom!

Corns' house looks like something out of a science fiction. It isn't. All he did was to translate into home building engineering principles that every aircraft, train, truck or trailer maker has practiced for years.
Exposed steel structure, here at corner of house, frames glass walls. Beam made of timber and two steel channels supports 4" roof planking.

Aluminum frames for glass walls are screwed and caulked to painted steel structure.

Here are four good ways to join wood and glass...

1. ROOF PLANK CONNECTS TO TIMBER & CHANNEL BEAM.
2. SLIDING DOOR FRAME CONNECTS THROUGH WOOD BLOCK, WHICH, IN TURN, IS BOLTED TO WEB.
3. FIXED SASH ALSO CONNECTS TO ANGLE, WELDED TO COLUMN PLANGE.
Glass walls on open living-room side of house look out on garden court. Steel framing extends out to serve as trellis. Sun shade (left), is flue tile.

The architects wanted to combine the warmth of tile, brick and wood with the grace of glass and steel.

This posed the problem of joining the walls and roof to an exposed, welded steel frame. The solution is seen in four basic details.

Two steel channels, bolted back-to-back with wood blocking between them, make up each roof beam. The 4" roof plank is fastened directly to the timber.

Metal lines are clean. In joining the aluminum sash and steel structure of this glass-walled house, intermediate connecting members, even when used, are not noticeable.

Most of the sash is screwed directly to the exposed steel with nothing other than the calking joint as a barrier between. Where glass walls frame into the web of a steel column, the aluminum sash may fasten to wood blocking or a small angle welded to the flange.

The whole house is laid out on a pattern of squares. On the living side, a garden court lies partly under the overhanging roof, almost like part of the interior.

Floor plan shows three courts, two of them inside. Column spacing determines wall lines. Brick hallway sets off terrace floor used in the rest of house.
Steel frame takes inserts of block, wood or glass just like panels

In materials and methods this house sums up...

Photos: Jason Halley

In living room, black steel columns are handsome feature of the window wall. Fireplace hood is black sheet steel, wall is clay block.

This house is aptly named a "Case Study."

It shows how a steel grid system helps achieve the freedom of design demanded by today's open, flexible plan.

It shows how less than 2 sq. ft. of steel can support over 5,000 sq. ft. of roof.

And it shows how steel and traditional materials like wood, block and glass each can contribute to the structure without encroaching upon one another.

The walls are as flexible as the plan. Any kind of wall can be used any place. Storage walls, partitions of clay block and wood paneling—none of them load-bearing—are set up wherever desired on lines established by the steel grid.

Fixed and sliding window walls, framed in trim aluminum extrusions, fit neatly between steel columns, open up the open plan still more. The regular pattern of black H-columns gives unity to a facade of many different materials.

The only fixed elements are the pinpoint column supports for roof and plumbing stacks.

Designer Craig Ellwood planned the house for the magazine *Arts & Architecture* as the 17th in
Window walls, framed in aluminum and set between 4" steel columns, line the open sides of living area, right, and bedrooms, left

the position of metals today

its series of "Case Study Houses." Its teaching ideas do not end with the structure and the plan.

Inside the house a white cement terrazzo floor ties together a series of open areas, flows on into the patio. The floor's polished texture is set off by the ceiling of Douglas fir which extends outdoors to create broad roof overhangs. Interior partitions successfully mix a variety of materials.

4" steel columns support the roof. The roof is framed by light steel girders supported on 4" H-columns. The girders support the secondary framing of 2 x 6 joists. Bolts welded to the steel beams support joist anchor plates.

All roof edges are finished with a 5" steel channel fascia painted black. Lighting is recessed into the underside of the overhangs.

Plastic skylights in aluminum frames are set into the flat roof over baths, hallways and pantry.

By fitting wood, block and glass into the light steel grid, Ellwood gave his house a warmth uncommon in a steel structure.

For data on techniques, turn the page.

Plan shows roofed area totaling about 5,300 sq. ft., most of it supported by an open grid of 4" steel columns. House has five courts, aside from terrace.
Glass wall of children's bedroom is made up of sliding panel and jalousie, both framed into H-column. Double-deck beds are cantilevered from wall.

Walls frame easily into steel grid

Designer Ellwood anchors traditional materials to steel columns through bolts and plates welded to their flanges and webs.

His masonry block is hollow so a simple mortar joint forms an anchor to hold a plate which is welded to the H-column. Masons make the mortar anchor as they lay up the wall.

Aluminum frames for all the glass in the house are fastened to the steel H-columns by wood blocking. The wood keeps the aluminum from direct contact with the steel so there is no danger of electrolytic corrosion. The wood blocking, in turn, is fastened to steel by bolts welded to the columns. Stud and lath partitions are also anchored through similar wood blocking held by bolts to the column.

Jalousie in master bedroom is inserted between steel column, at end of block wall, and wood paneled partition. Partition extends out into private court.

H-column is key to system

For corner, a 4" continuous plate is welded to web of H-column for clay block wall anchor. Bolt for window blocking is welded to flange.

Partition wall of terrazzo (for bathroom) is anchored by blocking to bolt welded to column web. Bolts on flange hold window blocks.

Stud-framed wall at corner is anchored to bolts welded to column flange. Fixed sash is fastened to column web by block and bolt.
What of the future of metals?

No metal maker thinks of metals as a panacea for everything in the house.

But most metal makers are sure they could do a lot of house building jobs better than they are being done today. Their chief argument: dimensional stability is just about the No. 1 construction requirement for production houses, and metals readily can meet it.

Most metal makers think their future in house construction will be a two-phase process: a gradual improvement of existing methods, and—almost simultaneously—a radical change involving all structures.

The gradual improvement will, undoubtedly, continue for many years to come. Post-and-beam systems, stud-and-joist systems, skin-and-bone systems of construction will all be improved—and all will improve in direct ratio to the improvement of other home building techniques. Example: stud-and-joist framing in steel will become more economical with much wider spacing of both studs and joists which, in turn, will become feasible when stronger, bigger sheet materials are developed to fill in the steel bays. The Ellwood house on the preceding pages is a demonstration of the gradualist approach.

New technology coming?

Meanwhile a more radical change in all structures is well under way, according to most steel, aluminum, plastics and shell-concrete experts. This change, as Abe Charles of Reynolds Metals points out, is the result of a new understanding of the enormous strength inherent in skin structures alone.

Designers in advanced metals research are fast learning to compute skin structures that were barely understood a mere dozen years ago. And their computations, it is claimed, may soon render obsolete all the steel post-and-beam structures that have created such a stir in the past few years.

New forms are on the way

What these metals, plastics and concrete engineers are saying is that with the coming of continuous skin structures, the rectangular cage of wood or steel—so radical today—will become as quaintly old-fashioned as the gingerbread house of 60 years ago.

At least one architect understood this fact quite some time ago. "Of course, this primitive post-and-beam construction will always be valid," said Frank Lloyd Wright in the early Thirties, "but both support and supported may now . . . be plastered and united as one physical body; ceilings and walls made one with floors and reinforcing each other by making them continue into one another . . . A new world of form opens inevitably."/END

New forms of the future, like this elevation of 18 complete hyperbolic paraboloids, may give wonderful new possibilities to designers of metal skins.
H&H's Round Table on Mechanization reported (Jan. '56 issue):

"The new portable tool that builders and prefabricators are most eager to use is not yet available—a self-feeding pneumatic (or perhaps electric) nailer as light as a portable saw, that will drive 60 or more regular nails a minute. Not just down, but also up, or at any angle..."

Now three makers offer you...

Common nails can be uncommonly expensive, not in themselves, but in the labor required to drive 50,000-100,000 of them in the average house (an all-nailed experimental house used 67,000). Even in assembly line production, builders must count on 80-90 hours of nailing time alone in their carpentry bills. And every one of those nailing hours costs an average of $3.04 (BLS Jan. '56).

Two other basic carpenter skills, fitting and cutting, have already benefited from Twentieth Century technology. Off-site fabrication and modular components have cut layout time; the electric hand saw is now almost an extension of the carpenter’s hand and has reduced on-site cutting time to a minimum.

Nailing has lagged behind. Each nail has had to be driven home by hand, an operation practically unchanged for centuries.
THREE portable, air-driven nailing machines are now coming on the market. They may save as much as $175 per house.

Made by three different companies, the new machines are light and fast. They meet all the other basic requirements set down just five months ago by members of HOUSE & HOME’s first Round Table on Mechanization (see quote on opposite page).

The lightness and portability demanded in the tool could only be achieved by divorcing the nailing head from the weight of both the nails and the power source. All three of the new devices use the same general means: a central hopper for nails, equipped with an automatic sorting device that separates the tangled nails and feeds them—point first—to the hammer through lengths of flexible hose.

At normal production, a hopperful of nails (8-10 lbs.) will last several hours.

The machines shown above and on the next page are light (from 5 to 8½ lbs.). They drive nails up, down, or at any required angle and have safety devices that make it impossible to fire the nailer unless it is in contact with the work. The same impulse that drives the nail home pulls the next one into place from the hopper. Hoses range in length from 12' to 25', but longer lines can be used as long as the required pressure can be maintained.

How the nailers work

Power for the nailers is provided by a conventional compressor (3 h.p.) that can furnish the 90 psi. pressure required. In constant operation, the machines will use 10-15 cfm. of air.

The 60 per minute capacity asked by H&H’s Round Table can be met easily by any of the nailers on bench jobs, but few on-site operations permit the machines to be operated at top capacity. Usually, the capacity is limited by the time spent moving the head to each nail location. But 30 per minute is quoted as “average,” and that means a reduction of ½ in nailing time.
One blow and it's nailed!

The Morgan Nail Driver is a single-blow machine that punches the nail home in one motion. Using 4d to 8d nails, the machine will drive up to 60 per min., with an average of 40. The driving head weighs 8½ lbs., and the feeding unit 65 lbs. Nose adapters permit nail driving at almost any angle. Hose lengths range up to 50'. Price: $1,200.

Morgan Machine Co., Rochester, N. Y.

Nailing, woodpecker style

An oscillating hammer in the Nail-A-Matic hits the nail head 70 times per second and three driver sizes handle all nails from 2d to the 16d nails used for framing. Nails can be driven flush, countersunk (as for drywall), or left extended. A detachable hopper can be dumped whenever nail sizes are changed. Price: $980-$1,080.

Matrix Engineering Corp., Minneapolis, Minn.

One hand for the job

Power tackers, long used in the furniture industry are lineal ancestors of the Power Nailer, just being put into pilot production. First models, which weigh 5 lbs., will accommodate nails only up to 1⅜”, but will drive over 100 per minute. The feeder-separator holds 10 lbs. of nails and feeds them through a plastic tube to the nailing head. Price: $950.

United Shoe Machinery Corp., Boston, Mass.
When they look for clues to quality
here's a convincer!

Millions of prospects for new homes or for remodeling—including your prospects—are learning about this seal.

They are learning that the AWWI Seal of Approval on wood window units is a convincing mark of quality in a house—windows which comply with the quality specifications of U.S. Commercial Standard 190-53. They are getting the AWWI seal story in the big national magazines they read—LIVING FOR YOUNG HOMEMAKERS. . . . HOUSE BEAUTIFUL. . . . HOUSE & GARDEN. . . . SMALL HOMES GUIDE.

It's all part of a nationwide promotional program. This program can work for you by furnishing instant identification of quality in windows—and by identifying YOU as a quality builder. Included in the program is a special certificate of window quality, proving that the windows you install, bearing the Seal of Approval, comply in every respect to U.S. Commercial Standard 190-53. A mighty valuable sales tool—as builders are finding out.

How can you tie in to this promotion? By asking your supplier for wood windows bearing the AWWI quality seal. Certificates of quality for home owners will gladly be furnished you through the same source.

American Wood Window Institute Seal of Approval Division, Ponderosa Pine Woodwork, 105 West Monroe Street, Chicago 3, Illinois.

What the AWWI seal of approval means for wood window units

1. Correct in design and construction
2. Made of carefully selected lumber
3. Preservative treated for lasting durability
4. Equipped with properly balanced sash for easy operation
5. Efficiently weather-stripped for weather-tightness

This full-page ad is typical of AWWI Seal of Approval advertising in big national magazines reaching home owners.
Beautiful Ador Custom Handle adds distinctive note of luxury. Ador doors are found in all types of construction — from project homes to luxurious custom residences.

$10,000 Project Home offers owners indoor-outdoor living with competitively-priced Ador sliding glass door.

$20,000 Custom Residence on the coast has beautiful aluminum all-aluminum sliding units by Ador.
Luxury Look of Sliding Glass Doors
Sells Buyers in '56 market

More luxury is the home buyer's greatest demand. It is the home builder's key sales secret. Foremost among "demand extras" are sliding glass doors.

Every day more and more Americans are buying homes that offer the luxury of indoor-outdoor living provided by sliding glass doors. These buyers judge the sliding glass door by the quality and appearance of its handle.

Outstanding in the field is the distinctive custom hardware on Ador sliding glass doors. The beautiful lucite grip handle, with its luxurious satin-silver finish, is an appealing sales argument for the home buyer.

Good design is a characteristic of the Ador door. Custom details include snap-on glazing bead for finished glass lines; rigid, tubular aluminum design; and a lustrous alumilite finish which resists corrosion indefinitely.

Custom hardware is another example of Ador's design leadership. Yet, with all these custom features, Ador units are priced to meet competitive conditions.

For information and specifications, write to Ador Sales, Inc., 2345 West Commonwealth Avenue, Fullerton, California.
...a Style to blend with any architecture
...a Size to fit any opening, both residential and commercial

ALL DOORS FEATURE THE FAMOUS Wedge Tight TRACK
for fast installation, easy operation. Even a child can open and close a Calder door, yet it fits like part of the wall.

House & Home
Take a minute to consider what you expect from a prefabricated home manufacturer.

If it's merely the delivery to your site of a well-designed house package at the right price, we certainly welcome your inquiry.

We at Heritage Homes believe, however, that our role is far more than that. We stand ready to serve you as a close business partner, on the sound basis that "business is service". As a result, we offer a rather unusual combination of services in company with our basic house package.

Our parent organization is the Peter Kuntz Company, which operates more than fifty lumberyards throughout the Midwest. An affiliate is the North Central Mortgage Acceptance Corporation.

You will find that your problems receive individual attention... your requirements quick, personal service. It is our firm purpose to work closely with our builder-dealers, counseling on cost-cutting construction methods, creating promotions for each project. Our success must be based on your success.

This partnership concept can mean a progressive step-up in starts and sales. Dealerships for Heritage Homes builders are available, particularly within our five-state delivery area. Fill out the coupon now to learn more about this truly rare business opportunity.
TRIM A DOORWAY IN JUST 4 MINUTES with USG® Snap-on Metal Trim. Saves up to 50% in labor time, up to $1.70 per opening in materials cost. No special tools required, no nail holes to fill. Side trim comes ready-mitered; head trim requires only rough mitering. Snaps in place easily—and it’s bonderized, easily painted.

REINFORCE CORNERS FASTER with DUR-A-BEAD® Metal Corner Reinforcement. It nails on outside corners, combines maximum protection with ease and speed of application. Provides true, impact-resistant corners; requires only a minimum amount of cement.

MACHINE-FINISH JOINTS AT THE RATE OF 3 MPH! Joints can now be taped at a workman’s walking pace, thanks to new joint reinforcement and finishing tools. Taping machine automatically applies PERF-A-TAPE® reinforcement and PERF-A-TAPE Cement to the joint (cement is fed by battery powered
NEW ONE-COAT TEXTURE PAINT. Just one coat of TEXOLITE® Texture sand finish latex paint beautifully conceals minor surface imperfections and taped wallboard joints. No priming required. Flows on freely, leaves no "painty" odor, and it's washable. In 17 ready-mixed colors and white.

SALES BUILDERS FOR HOME BUILDERS

Gypsum wallboard finishing system—available from your U.S.G. building materials dealer—speeds construction of quality walls and ceilings

Your work is faster and easier when you deal with the builder's most dependable manufacturer—United States Gypsum. Your sales are made more quickly when your interiors have the smoothness, the uniformity, the beauty that say "superior quality"... United States Gypsum quality!

the greatest name in building

What's the secret behind the home that "sells like crazy"?

Better living—today's most important buying motive.

Why is it some new homes move slowly while others with fairly high cash requirements "sell like crazy"? The difference is often "better-living" extras. People today want to live better, and to most people this means live better electrically.

Housewives and mothers are convinced that a work-saving, time-saving electric kitchen is worth every penny it costs. Where weather is a problem, electric air conditioning becomes a "must," not a luxury, in a better-living home.

They've been reading mouth-watering advertisements for years, selling themselves on electric dishwashers, clothes washers, dryers,

National Magazine Campaign. Beginning in April, millions of prospects have been reading colorful "spectaculars" in Life, Saturday Evening Post, Look and leading women's service and shelter magazines. Big ads like these sell Live Better Electrically in a dramatic, convincing and memorable manner.

indirect lighting, remote-control wiring, all the wonderful, comfortable features that only electricity makes possible. They want them now in the house they are willing to buy.

Living better electrically — that's the key to buying appeal. It's a feature that smart builders include and promote in the homes they offer. It's a feature that prospects look for and when they find it — they buy!

Offer better living ... electrically and you'll sell more houses!

A national advertising and publicity campaign will be working for you year in and year out to promote the theme "Live better your homes, and they'll "sell like crazy." That's the secret.

Send now for the 72-page full-color book "New Step-by-Step Ideas to Help You Live Better Electrically" — the same book your prospects will be reading. For your copy call or write your local electric utility, or write Live Better Electrically, P. O. Box 505, Great Neck, L. I., New York, enclosing 10 cents to cover the cost of handling.

National TV Campaign. Every month over 30 million people will see and hear the Live Better Electrically story on the full CBS network. Electric utilities throughout the country will broadcast the same message on local television and radio.

... electrically." When you identify your homes with this campaign, you're on the way to closing a sale. Build better electrical living into your homes. Tell about the modern electrical features, the up-to-date wiring in

Billboards. All over the country electric utilities will be displaying this "Live Better Electrically" message where your prospects will see it. They'll see it when they're on the road, looking for that "better-living" home!

Display the LIVE BETTER...Electrically symbol at all your homes. You'll appeal to your prospects' desire for better living.
How to "Comfort-Condition"

**the OPEN PLAN HOME**

for greatest heating efficiency in winter...coolest living in summer!

With its outstanding physical advantages, the open plan home represents one of the most important trends in modern residential design. It adds a new, sweeping spaciousness... makes even limited areas seem roomier and more extensive. By borrowing space from outside, it adds extra liveability inside! But there are objections to the open plan home—especially when it comes to heating and cooling. To assure winter warmth and summer coolness, special design principles must be closely observed. If these precautions are followed, the open plan home can be heated and cooled efficiently and economically. In fact, in Minnesota—where the outside winter temperature skids to 20° below—one builder is heating his 1,250-sq. ft. open plan homes for as little as $84 a winter! And in 100 cities across the country, Owens-Corning Fiberglas* is now conducting tests to prove that the average home, if adequately insulated, can be heated and cooled all year round for $120!
SUMMER DESIGN also solves the winter problem

---

Winter or summer, the job of insulation is the same...

...to prevent excessive heat flow through walls and ceilings! Actually, the load caused by air temperature differences is approximately the same, winter or summer. But since sun heat load of roofs is an added consideration in summer—and since the cost of cooling exceeds the cost of heating—the summer problem ranks most critical. Therefore, proper design for summer comfort will assure maximum winter protection anywhere!

The winter heat problem varies geographically. But strangely enough, the summer heat problem is about the same everywhere. Based on U.S. Weather Bureau records for July, the average daily sun load falling on a flat surface is about the same in southern states like Alabama and Louisiana, as it is in northern states like Maine, Minnesota and Washington! Regardless of location, a 1,000-sq. ft. roof is exposed to almost 2 million B.T.U.'s daily. To offset this problem in the design of open plan homes, consider these factors:

**START WITH THE ROOF:**

In summer, sun load is worse on roofs than on any other part of the home. In winter, roofs account for up to 25% of the heat loss.

The solution: Good design; good ventilation; and maximum insulation! Heat-flow tests show the best year-round performance is with adequate thicknesses of insulation combining aluminum foil, to reflect radiated heat, with a mass material like Fiberglas, to reduce heat flow. Specially recommended: new Fiberglas Foil-Enclosed Insulation to reduce heat gain in summer and heat loss in winter to a minimum. Ventilation of attic spaces removes heat, improves performance.

**THE WALLS:**

In open plan homes, where large proportions of wall areas are glass, the solid walls must be insulated with great care. While walls receive less sun heat than the roof, there is still a 15° to 20° temperature difference between inside and outside air. In winter, good insulation keeps walls warm, removes the "discomfort zone" present along poorly-insulated walls.

The solution: Use insulation to cut down the flow of transmitted heat. Here, standard Fiberglas Insulation with a Kraft paper vapor barrier serves well to cut heat loss or gain. Foil-Enclosed Insulations add extra value. Maximum thicknesses provide best results.
The Floor Problem:
In summer, heat gain poses a problem where ducts run in slabs. In winter, uninsulated slabs lose heat from the edge. Such slabs are cold and uncomfortable and may cause moisture to condense and stain floors, start rotting or loosen floor-covering adhesives.

The solution: In slab homes, an effective perimeter insulation such as Fiberglas Perimeter Insulation is vital. The National Warm Air Heating and Air Conditioning Association lists such insulation as essential if air conditioning ducts are part of the slab. Crawl space walls call for Fiberglas Perimeter Insulation, plus a ground cover of roofing felt.

Windows Are Trouble Spots:
Glass admits sun and air heat—and winter cold—many times faster than even uninsulated walls. Thus the problem becomes critical in open plan homes with extended glass areas.

The solution: Double-glass, insulating glass, or storm windows cut heat transfer as much as 50%. Whenever picture windows are used, specify beautiful, translucent Fiberglas draperies to reflect radiated sun heat. Orientation of large windows away from the south and west helps keep off sun heat. Artificial exterior overhangs or awnings of Fiberglas-reinforced plastic are very helpful.

How Insulation Serves in Comfort Conditioning

Saves Money on Equipment!
Insulation saves money immediately by reducing the cost of the heating and cooling plant. With B.T.U. heat loss or gain reduced, unit-sized pipes, ducts and other equipment can be cut down. Reduction in unit size can save up to three times the cost of insulation. Maximum insulation helps bring insulation first cost within the range of more buyers.

Save Up to 58% Operating Costs!
By insulating with maximum thicknesses of Fiberglas Insulation, up to 58% can be saved on air conditioning operating costs! Smaller units cost less to operate and run for shorter lengths of time. And the savings in winter heating costs further help return the insulation cost to the owner.

It's Like Getting a 3½-Ton Air Conditioner Free!
Insulating the open plan home with maximum thicknesses of Fiberglas Insulation instead of minimum thicknesses will keep out as much sweltering summer heat as a 3½-ton air conditioner can remove! Even without air conditioning, this brings comfort. And with maximum insulation, air conditioning can be added later at lowest cost.
MEMBER THESE MATERIALS...
for extra comfort, beauty and economy in OPEN PLAN HOMES

Fiberglas Draperies—do more to meet the demands of living in open plan homes than any other. They are the most care-free decorative fabrics on the market...completely washable. never need dry cleaning, never shrink, stretch. Absolutely fire-safe, too!

Fiberglas Screening—the fabulous new screening that's rust-proof, bugle-proof, fire-safe, won't stain, never needs painting. Specify it for patios, porches, Bermuda houses, and in screens for the prime or combination windows for the homes you design.

Fiberglas-Reinforced Paneling—colorful and translucent...lets you select the light transmission you require! Extra-strong, but extra easy to use. Recommended for room dividers, partitions, wall panels, roofs, patio coverings, wind breaks and awnings.

Fiberglas Dust-Stop* Air Filters are key factors in assuring comfort and cleanliness in forced air conditioners. Dust-Stops are extra efficient because they trap dust, dirt and pollen all through the filter...not just on the surface.

Fiberglas Acoustical Tile keeps the home quiet, peaceful, restful. Absorbs up to 80% of unwanted noise. Comes in a variety of patterns and colors that match any decorative treatment. Economical, easy-to-install Fiberglas Acoustical Tile is fire-safe, dimensionally stable.

This outstandingly helpful booklet covers the design problems of air-conditioned homes. Specially written with charts, diagrams and other valuable information.

FREE BOOKLET: "Insulation design for the air-conditioned home"

Fiberglas Duct Insulation—(1) prevents excessive heat loss in ducts; (2) eliminates the sound of air movement in ducts. Fiberglas complete line of duct insulations—rigid or flexible, sprayed, or uncoated.

OWENS-CORNING FIBERGLAS

build faster...  
sell faster with the

BEST-VENT
PRIMAR Y ALUMINUM WINDOW

like this successful builder!

Spencer Qualls, operative builder in Forest Hills Addition, Springfield, Ohio, says:

"I build quality homes on a speculative basis. To insure fast sales, I put only top-quality products into my houses—products like the Best-Vent Aluminum Window. "Best-Vent's ease of operation and appearance really make a hit with home buyers! Best-Vent is an easy, time-saving window to install—I know, because I've installed this window myself. And its ruggedness prevents call-backs which would delay my new construction."

build faster— 25% to 50% savings in window installation time!

Finished window can be installed and trimmed in minutes—here's how: Best-Vent arrives individually cartoned, ready-to-install. Simply snap on pre-cut fin trim and lift into place. Drive one nail through sill fin and sheathing into framing; with nail as pivot point, level frame, square and plumb; then finish nailing around extra-wide fin trim. Aluminum interior finish trim or plaster trim is available and fits quickly into place; no cutting needed. No hardware to install, no final adjustments to make. Snap-on mullion covers unify multiple installations.

sell faster— Double-Ventilating Action gets fast sales action!

Prospective home buyers love Double-Ventilating Action—exclusive with Best-Vent by Per-Fit. Freshens the air in any room automatically, when a fingertip touch opens top and bottom sash at the same instant. Hot, stale air "piled up" at ceiling level is quickly released, instantly replaced by fresh, cool air flowing in at the bottom. This is just one of Best-Vent's exclusive features... and Best-Vent is just one of the fine primary aluminum windows in the Per-Fit Line. If your dealer isn't acquainted with them, let us know—or have him write to:

PER-FIT PRODUCTS CORPORATION  1129 E. 52ND STREET • INDIANAPOLIS 5, INDIANA

JUNE 1956
New machine cuts costs, speeds output of rafters

Automatic wood cutter precuts timber

2½ times faster, 50% cheaper than handwork

This new lumber cutter automatically precuts and notches 250 rafters an hour. The cost of cutting rafters can be reduced by more than 50% per house and the machine is “two-and-a-half times faster than previous methods.”

Designed especially for builder needs, the machine can also speedily turn out quantities of other precut timber like posts and headers, according to Stanley W. Sampson, President of Pittsburgh’s Glenn Lumber & Supply Co., who showed it to local builders last month.

Developed in 18 months. Sampson began looking for a machine to cut and notch lumber fast and automatically several years ago, found none on the market. About 18 months ago he met with the Delta Power Tool Co. and Grand Rapids wood machine maker C. O. Porter, who jointly agreed to tackle the job of making a special design for Sampson. How well they did can be seen by the machine shown on this page.

It is about 40’ long, fully conveyorized and costs $12,000. It is built around two standard 16-20-in. radial saws which can be moved back and forth to handle lumber from 3’ to 20’ long. The machine can be automatically set to make “an unlimited variety of straight cuts, angle cuts and notches.”

How it works. One man at a centrally located control board operates the machine. A second man feeds in raw timber at one end, a third man removes and stacks finished pieces at the other end. Wood fed to the machine is drawn into position by belt-driven rollers, see below. At a predetermined point in the wood’s travel, it is stopped and held firmly in position by automatic clamps from the control board.

Tough, vinyl screening helps add outdoor living to builder houses

A vinyl-coated Fiberglas screening makes it possible to add large outdoor living areas to low cost builder houses.

Trend to screened patios, like this one, is growing. Note wide wall panels, right; screening can span up to 6’ wide in walls with no cross members, no sagging.

The new material is cheaper and easier to fabricate in panels than other screenings. It is lighter, and is claimed to give a tighter, more taut span which does not scar easily.

Builders are using the coated screening in new houses priced as low as $10,000. Elmer Findley, Florida screening contractor who pioneered in the development, says screened patios and porches are being added to houses for as little as $250 cost to the builder. His own business to builders in the Miami area has skyrocketed “30 times over” in the last two years.

The boom is not confined to Florida, Findley adds. He is even shipping quantities of the screening, which he buys in large lots at rock-bottom cost, as far north as New York.
Now... over 8,000,000 REZO door installations

backed by 103 years of woodworking craftsmanship!

THE PAINE REZO
air-vented, all-wood grid core
FLUSH DOOR
is by any standard of comparison

America’s Finest

Thousands of architects, builders and dealers know — from long experience — flush doors may look alike but none can equal a Paine REZO Door for beauty; strength, all-climate stability, trouble-free service. Made to standards which far exceed CS 200-55, a Paine REZO Door is backed by 103 years of millwork experience and over 8,000,000 successful installations the world over. A REZO Door is, by any standard of comparison, America’s Finest flush door!

Available in all standard sizes or custom-made to fit your needs.
Write for descriptive literature today.

A standard 2-6 x 6-8 door weighs only 30 lbs. It’s easy for one man to install a REZO door.

Fully ventilated, all-wood, grid core allows rapid stabilization of moisture content throughout the door in any climate.

All-wood grid core is mortised into stiles and rails for added strength and durability unobtainable with an implanted or floating core. Stiles are 1-1/8" instead of the 1-1/2" minimum required by the new standard CS 200-55.
A REPUBLIC STEEL KITCHEN IN COLOR!

AT NO EXTRA COST TO BUILDERS

Kitchens sell homes—and it costs not one penny more for you to dramatically create a Republic Steel Kitchen in Prelude Pink, Tempo Turquoise, or Largo Yellow . . . the lovely new Harmony Hues. Soft, subtle shades that folks buy without question—without request for change—because they're styled to answer modern kitchen decor. Harmony Hues blend with new-trend appliances in color, and go so well with today's fashionable decorating materials.

REPUBLIC STEEL MEANS SERVICE, ECONOMY

Republic Steel, the only company in the industry offering the economy of "mine to market" production, provides distinct advantages to builders. Dependable service. Planning guidance. Economical installation. Quality that eliminates expensive call-backs. Get the complete story from your Republic Steel Kitchens distributor, or use the coupon.

**Creo-Dipt OPTIONAL KOLOR PLAN**

on all jobs calling for red cedar shingles and shakes

---

**THE PLAN ... IN A NUTSHELL**

Under the Optional Kolor Plan, red cedar Pryme-Shakes or Shingles, factory-primed (gray), are sold as a unit with Fynal-Kote, a heavy-bodied linseed oil base finish coating. Formulated for uniform, one-coat coverage, Fynal-Kote is available in 22 modern colors.

---

**PLEASES "STYLE-CONSCIOUS" HOME BUYERS**

With the Optional Kolor Plan expanded to include the entire Creo-Dipt line, you can offer your customers an unequaled selection of 8 styles of red cedar shingles and shakes in 22 attractive pastel and deep tone colors. Every architectural need can be met with ease.

---

**NEATNESS INSURED WITHOUT "EXTRA EFFORT"**

Since Fynal-Kote conceals construction blemishes, shake application and trim painting can be speeded. Color matching problems and touch-up time are both eliminated. In most cases, these savings in labor and materials more than cover the costs of applying Fynal-Kote.

---

**WINS QUICK APPROVAL**

The Optional Kolor Plan provides the sure way to harmonious sidewall beauty. When your customer sees the results, he will be quick to give you an unqualified "OK." So, too, will the FHA, for the Optional Kolor Plan fulfills 2-coat minimum requirements.

---

**NO DELAYS ALONG THE WAY**

Although Pryme-Shakes (or Pryme-Shingles) and Fynal-Kote are sold together, Fynal-Kote colors can be requisitioned after shakes are delivered. Construction can proceed without waiting for sidewall color selection. With top quality materials assured, work moves smoothly from start to finish.

---

**NO "LEFT-OVERS" TO WHITTLE DOWN PROFITS**

With Pryme-Shakes and Shingles furnished factory-primed in gray, on-the-job inventories are cut 75% to 90%. By the same token, you won't be loaded with an odd assortment of shakes pre-stained in a variety of colors after each job is completed. Balance can be used on the next job.

---

**PRYME-SHAKE STARTER STRIPS**

New, easy way of applying the first course

(Sold under the Optional Kolor Plan)

All-in-one units consisting of 18" processed red cedar Pryme-Shakes, backer board and wood strip, Pryme-Shake Starter Strips are the perfect choice for the first course wherever scored red cedar shakes are used. They're big, easy to handle and easy to line up. They're permanently assembled, too! Heavy duty stainless steel staples go all the way through shakes, backer section and wood strip to form a permanent lock.

A. Shure-Set fastening tool has a base plate designed to level the tool at right angles to the work and protects the surface from misaimed hammer blows. Neoprene hand grip is comfortable, keeps hand from sliding. Top guard protects fingers. Illustration above shows how to use. With it, you can seat a specially-constructed fastener into a variety of materials—concrete, block, cinder block, brick. $27.95 price includes hand hold, finger guard and attachments for several standard size fasteners. Ramset Fastening System, Olin Mathieson Chemical Corp., New York 22, N.Y.

B. Lightweight Titeflex 500 tubing is manufactured with external ridges that make tube resistant to crushing and enable it to be self-supporting for long lengths so it can be mounted in concrete forms with few supports. You can form tube by hand to complex layouts and it stays put in bent shape, is easily cut with a knife. Sizes shown are 3/8", 1", 1 1/4", 1 1/2" and 2" ID. Tube's corrosion-resistance makes it a good weather-protective duct for exposed wiring or piping lines. Price not given. Titeflex, Inc., Springfield, Mass.

C. Grand Screen houses add outdoor rooms, open up a house's space. All-aluminum prefabricated screen house is 9 x 12', can be a porch, a playroom, a bedroom. Insects can't come through the fine mesh, heavy canvas waterproof roof keeps out sun and rain, eaves on roof give extra protection. Entrance door slides to open, locks from either side of the screen house. Accessories are available. Grand Sheet Metal Products Co., Melrose Park, Ill.

New Servel "Sun Valley" 3-ton All-Year® air conditioner
both heats and cools with a single system!

One... is the magical number that makes this new Servel unit your best air conditioning bet. Just look at these advantages:

The whole unit comes in one crate... eliminates losing parts in shipment. Speeds uncrating, too. Just put the packaged unit in place.

One hour... that's all it takes to uncrate this air conditioner, hook up ducts, vent and utilities... and turn it on.

One system... the same coil cools the air in summer that heats the air in winter with no moving parts—nothing to wear out. All other air conditioning uses two systems, even when packed in the same "skin". And the new Servel model heats and cools with one fuel. No expensive 3-phase current is needed.

Add these advantages together... plus compact, space-saving design (only 10.4 square feet)... and you can save hundreds of dollars on each installation. Mail coupon for complete information.

ONE sure way to more profits
with Servel All-Year Air Conditioner

ONE CRATE
Because this new model is a single system, it is shipped in just one crate.

ONE FUEL
Amazing new unit heats and cools with gas... there are no moving parts to wear out.

ONE SYSTEM
Revolutionary single-system design greatly simplifies installation... cuts service problems.

SERVEL, INC., Dept. HH66
Evansville 20, Indiana
Please send me complete information on the revolutionary new 3-ton "Sun Valley" air conditioner.

How to Save Over $200 per House

New Hough Door Construction System Saves and Sells

Actual on-the-job cost comparisons including paint, trim, labor, etc. prove that you can save hundreds of dollars with the Hough Door Construction System. The secret; using both Hufcor and Ra-Tox Fashionfold doors instead of space-consuming swinging and sliding doors. The floor plan above is an actual illustration of the system. Seven Hufcor doors, one Hufcor room divider and seven Fashionfold doors were used for a net saving of $323.79. Find out now how this system works. Ask the Hough distributor in your area to help you make a cost analysis of your own floor plans, or-

Write today on your letterhead for details of the Hough folding door Construction System

a. Square socket can be used with all watt-hour meters with a capacity of 100 amperes or less. Symmetrical location of terminals in the S-1 makes wiring easy. Conversion is simple, since each individual terminal block assembly is held by two screws. To convert from vertical to horizontal, unscrew blocks, remount 90° from initial position. Four-terminal without sealing ring, $2.96; with slip-lock sealing ring, $3.11; with snap-action sealing ring, $3.31. General Electric Co., Somersworth, N. H.

b. Vertical discharge attic fan combines ease of installation with low cost. Fan rests on framed ceiling opening, eliminating need of plenum chamber. Balanced, deep-pitch blades deliver large volume of air at low operating speed. Ball bearings in fan shaft and motor end shields are sealed in, have lifetime lubrication. Fan rests on rubber cushion which absorbs sound, vibration. 24" model about $76.55; 30" model, $85.30. Both have 3/4 hp motors. Emerson Electric Mfg. Co., St. Louis, Mo.

c. Compressor-condenser unit of Janitrol cooling system is factory assembled and wired. Louvered construction protects against elements. Air flow pattern gives maximum cooling capacity with minimum power consumption. Unit gives uninterrupted performance with outside temperatures up to 125°. Weather-resistant construction is designed for outdoor mounting. Evaporator coil mounts easily in outlet air duct, above or below furnace, is in a compact, all-steel cabinet. Surface Combustion Corp., Janitrol Heating & Air Conditioning Div., Columbus, Ohio.

NOW...RUSCO ALUMINUM PRIME WINDOWS
MEET STANDARDIZATION for window openings recommended by HOUSE & HOME ROUND TABLE

Drawings indicated at right illustrate the complete schedule of sizes available. Fixed-lite, horizontal and vertical slide units may be combined in a wide variety of window designs.

New “Redi-Fin” construction saves time—Rusco “Redi-Fin” aluminum prime windows are complete units, with exterior casing and nailing fins an integral part of the window frame. Can be installed in minutes. Windows are completely glazed, screened, and have all hardware attached. Movable panels slide on felt, never stick or rattle, and can be removed from the inside for easy cleaning. Built-in felt weatherstripping gives complete weathertightness.

Rusco Redi-Trim Interior Casings are optional, and are designed for installation after the application of the finished plaster or dry-wall is applied.

Already proved in use!
These new Rusco Windows are now in use in many housing developments. Rusco “Redi-Fin” Windows reduce costs and make new homes easier to sell! Write for free catalog.

Elastizell
... the perfect answer to the residential slab-on-grade problem!

Concrete made with this material is...

• HIGHLY MOISTURE-RESISTANT
Elastizell-type slab is dry. On it can be used any kind of floor covering—cork or rubber tile, linoleum, parquet-type wood flooring, wall-to-wall carpeting!

• SELF-INSULATING
Elastizell-type slab, with its “warm-to-the-touch” feel, permits maximum performance of whatever the heating system. Hence, floor-to-ceiling living comfort!

AMONG OTHER USES OF ELASTIZEIL-TYPE CONCRETE...

• as light weight, easy-to-handle floor fills in multi-storied construction.
• as light weight, insulating roof fills.
• as light weight structural members.
• as insulation for underground pipe lines.
• as precast slabs and panels.

HOUSE & HOME
WEATHERTRON
THE GENERAL ELECTRIC ALL-ELECTRIC HEAT PUMP

A fully automatic, all-electric heating and cooling unit

- a single unit—not a combination of units
- uses no water... no combustible fuel
- filtered, forced-air circulation

GIVES NEW DESIGN FREEDOM

Complete flexibility of placement. Weathertron can be placed anywhere—in closet, crawl space, basement, attic, garage, service area, even outdoors! Weathertron thus allows more square footage of usable living space in homes of every design.

Elimination of installation complexities. Weathertron needs no water towers, pumps, wells or ground coils... no fuel tanks, fuel lines, gas connections, exposed piping or flues. All Weathertron needs is connection to outdoor air, to power supply and to indoor duct system, plus a simple drain for condensed moisture.

Thousands now in use prove dependability. Weathertron installations in thousands of homes, stores, offices and factories have not only proved the design benefits of Weathertron in a decisive way...they have established an excellent record for dependable, trouble-free performance.

See Sweet's File 30—51. Complete Weathertron specifications are listed in Sweet's File. For additional information, call your local G-E Weathertron representative, listed in the Yellow Pages under Air Conditioning, or write L. Kress Carlbon, General Electric Company, Weathertron Department. 5 Lawrence Street, Bloomfield, New Jersey.

---

j. Six-foot folding wood rule has special markings on the reverse side to make it easy to lay out rafters (common, hip, valley and jack) with speed, accuracy. Master Framing Rule works by manipulating angular folds to form triangles, bases of which are held along the side or edge of lumber. Adjustment for each triangle is made by notching in metal end of rule over correct bull's-eye on reverse side and holding adjustment under the thumb while the angular cut is being marked. $2.95. Harry W. Smith, Inc., New York 17, N.Y.

k. Dish-Quik is an efficient extra for a new house display. Spray-brush head scour s dishes, pots and pans. Water is triggered on and off by means of a lever built into handle. By pressing red button on handle, you can feed detergent from plastic cup to spray as you need it; button release clears water for rinse purposes. As replacement package, unit costs $9.95. Installed on new sinks as part of original equipment, price determined by package. The Dish-Quik Co., Div. of Modern Faucet Mfg. Co., Los Angeles 1, Calif.

l. Push-button Spotnailer has a pneumatic attachment on a standard mallet-drive unit that speedily fastens hardboard or plywood paneling, sidewall sheathing, lath, etc. since you can hold material with one hand, operate machine with other. Spotnailer magazine holds as many as 200 fasteners, reloading is simple, fast. High velocity principle means you can drive a variety of fasteners including heavy gauge staples and sash pins up to 1 1/4". MHL model about $135. Spotnails, Evanston.
These extras are the brand name accessories your customers know and want. Such things as Frigidaire full-home air conditioning... summer and winter for year 'round comfort.

Air Conditioning? We'll agree air conditioning alone may not sell a house. But it can help you sell more homes in 1956 more quickly, more easily! What's more, this valuable experience will guarantee you the ability and local reputation to keep pace with residential air conditioning.

Frigidaire has a complete line of air-cooled and water-cooled residential units for add-on, combination, self-contained and remote-type installations.
Craig Ellwood specifies Harborite's extreme versatility.

Greater strength, super-durability, are fully utilized by Craig Ellwood, noted architect, in the new prefabricated wall panels he has designed for Case Study House 18. Throughout the house, all walls will have both interior and exterior facings of Harborite. The diagram at right shows the structural details of Ellwood's patented design.

Harborite provides new advantages in conventional applications, too:

- Lapped Siding
- Soffits & Gables
- Interior Paneling

Harborite Plywood Corporation
Aberdeen, Wash.

Sales Offices and Warehouse Stocks in: Aberdeen • Atlanta • Chicago • Cincinnati • Houston •
Case Study House 18 uses Harborite for both facings of pre-fab panels in amazing new dry-wall construction...

This is Harborite
Super-Resistant to Wear, Weather and Water!

A super-strong, lightweight structural panel... finest exterior grade plywood plus a tough, abrasion-resistant overlaid facing... with weather-proof, split-proof, check-proof qualities... ideal for a multitude of uses in both pre-fab and conventional construction.

Build it Better! Harborite is stronger than steel... impervious to moisture and weather...defies even severe extremes of tropical heat and arctic cold! Users report swelling, shrinking, buckling, warping and grain-raise are virtually eliminated! Harborite's hard, smooth, grainless face takes paint better... holds it years longer!

Save Money! These large, lightweight panels are easy to handle... easy to work... with standard tools and techniques... Harborite cuts labor and paint costs to the bone!

Available in standard and special sizes and thicknesses... also special sizes in lapped and grooved siding.

Now Competitive in Price with Finest Marine Plywood

Here's how the floor can help make one room

The easiest, and often the most dramatic, way to give a room a 2-in-1 feeling is to change the color of the floor in each of the areas. Here, Armstrong Excelon Tile was used, but this effect may be achieved with any type of Armstrong resilient flooring. Thus, expensive partitions or room dividers can be eliminated.
seem like two

Few things impress prospective buyers so much as a house that offers more glamour than other houses they've seen—especially when they're priced the same. One way to build this extra glamour into your houses without increasing costs is to make use of the great color and design flexibility of resilient floors.

There's almost no limit to the exciting effects that can be created with resilient floors to add extra appeal to your houses. A most favorable impression can be made by using the floor to outline the areas of an open plan house—to make one room seem like two.

The photographs on these pages show some of the ways in which resilient floors have been used to create two or more distinct areas. The effect is achieved merely by the use of different colors or designs of the same flooring material. There is none of the loss of spaciousness that a partition would involve—and, of course, there is no added construction cost.

Your flooring contractor can help you

With his knowledge of the floor colors and designs that are most popular with homemakers in your area, your flooring contractor can help you select effective color combinations. He can show you many ways in which Armstrong Floors can be used to give house areas a two-rooms-in-one feeling.

Resilient floors meet modern living requirements

When you feature Armstrong Floors in your houses, you add far more than eye appeal. These floors provide the durability and easy cleaning that home buyers want for today's casual living and entertaining. You give your houses extra prestige, too, when you feature Armstrong Floors. Thirty-nine years of consistent advertising in the magazines that influence your prospects have made Armstrong the best known name in floors. Home buyers associate the Armstrong name with extra quality.

Free design and decorating service available

The Armstrong Bureau of Interior Decoration will be glad to help you or your color consultant create exclusive floor designs and color schemes for your next model home. For this service or special merchandising assistance to help sell your houses faster and more profitably, get in touch with the Architectural-Builder Consultant in the Armstrong Office nearest you or write direct to Armstrong Cork Company, Floor Division, 1606 Sixth Street, Lancaster, Penna.

Armstrong

THE MODERN FASHION IN
FLOORS
LINOLEUM • PLASTIC CORLON® • EXCEilon® VINYL-ASBESTOS TILE
CUSTOM CORLON PLASTIC TILE • RUBBER TILE
CORK TILE • ASPHALT TILE • LINOTILE®

An effective way to create one "room" within another is to outline one area with a contrasting border. In this home, it was accomplished by installing a row of straight-grain pink tiles in Armstrong Excelon Tile in a field of charcoal-and-pink Sputter tile in the same vinyl-asbestos flooring.

To convey a feeling of spaciousness, this floor was divided diagonally, using two colorings in Armstrong Rubber Tile. For all its distinctive appeal, a floor design like this costs little more than a floor with a single over-all pattern. Such ideas add glamour that can help sell homes faster.
with quick drying ARCO Alkyd House Paint

Most leading prefab manufacturers like Admiral Homes Inc. choose Arco. Never before has there been a paint for home exteriors like it.

- No danger of rain spotting should showers interrupt painting. Dirt, dust, leaves and bugs have little chance to adhere.
- Dries rapidly. May be recoated in only four hours.
- Resists moisture, mildew and other destructive elements.
- Flows on easily with no brush drag. Gives rapid and thorough coverage.

- Fade-resistant colors defy wind, rain and snow—keep that fresh new look for years.
- Available in many dramatic accent trims... also subdued background shades.

Send today for Arco’s free color styling kit complete with 111 professionally styled color schemes and 30 swatches to guide you in your own color styling and plot development. Also don’t forget to ask for information on amazing new Arco Interior Alkyd Ripple Texture Wall Finish—the ultimate in one coat protection over dry wall or plaster.

Don't Gamble

on your home building program

...team up with 21 years of know how... build P&H Homes!

Home building doesn't have to be risky as a crap game. You can cut risk to the bone, know costs before you begin, make your capital build two to three times more homes—at greater profits.

How? Team up with a pioneer in prefabrication. Build Harnischfeger P&H Homes—and take advantage of our 21 years' experience.

You'll follow a carefully-planned, proven success formula that has brought greater profits at less risk to Harnischfeger Dealer-Builders over the years: To begin with, your capital turns faster; there's less money tied up in inventory, development and payroll. Overhead and on-site costs are lower. And architect-styled P&H Homes offer a quality of craftsmanship and materials that builders recognize and buyers prefer. You offer a home value that outsells competition at every price from $10,000 to $20,000.

Finally, Harnischfeger offers you personalized field counsel in planning, financing, merchandising and construction to make your whole program more efficient. Join the swing to safer, more profitable P&H Home building. Phone, wire or write for details now:
Harnischfeger Homes, Inc., Department HH-566, Port Washington, Wisconsin. Phone 611.

HARNISCHFEGER HOMES, Inc.

For 21 years, better value for the owner, better business for the builder
Sad, isn't it — when a modern home becomes electrically out-of-date through the addition of just one major appliance. Yet it happens every day all over the country!

Homeowners—more than 34,000,000 of them — have discovered how important it is to have a home wiring system that will stand up under the load of present-day electrical living. An adequate
homes grow old overnight!

service entrance, plenty of circuits and outlets and strong, copper wires all add up to a convenient, comfortable home.

Plan your own homes for power — and plenty of it. Specify at least a 3-wire, 100-ampere service. Remember to include an abundance of outlets. Insist on an adequate number of circuits — plus extra circuits for the house “to grow on!”

Such planning not only makes your houses easier to sell — it also adds to your reputation as a builder of quality homes!

Free Home Wiring Wall Chart! Send today for handy wall chart showing typical home circuit loads. Use it as a check list when planning home systems. Write Kennecott Copper Corp., Dept. HH6, 161 E. 42nd St., New York 17, N.Y.

Kennecott Copper Corporation

Fabricating Subsidiaries: CHASE BRASS & COPPER CO. • KENNECOTT WIRE & CABLE CO.
"Best construction we've ever used," reports Ken Larsen, president, Continental Construction Co.

COST STUDIES conducted by Continental Construction Co., Seattle, show new "panel and girder" system (2.4.1 panels over supports 48" o.c.) cuts costs 7 ways over conventional "shiplap and joist" construction.

1. Savings in material and labor costs in subfloor and framing ..... $ 78.00
2. Eliminate underlayment in kitchen, bathroom. Labor and material ..... 30.00
3. Eliminate need for underlayment beneath 5/16" strip flooring. (Note: system permits premium strip flooring to be used at price competitive with ordinary 25/32" flooring). Labor and material @ 20c per square foot ..... 170.00
4. Savings afforded by ease of access to work by heating and plumbing subcontractors. (Panels can be taken up as needed during job) ..... 60.00
5. Savings in framing, sheathing, siding due to 12" less exterior wall height. Labor and material ..... 40.00
6. Elimination of concrete steps and landings in three places due to lower floor. Labor and material ..... 90.00
7. Savings on painting contract, staging, etc., due to 12" less exterior wall height. Elimination of framing around heat openings in floor. Labor and material ..... 32.00

*TOTAL SAVINGS REPORTED BY CONTINENTAL CONSTRUCTION CO. ..... $500.00

Other builders report varying savings depending upon local labor and material costs, type of finish flooring, and type of construction formerly used (i.e., slab, plank and beam construction).
revolutionary new plywood subfloor-underlay

up to $50000 per house

2 · 4 · 1 is combined subfloor and underlayment in one material. Panels are 4' x 8' x 1½" thick. Finish floor may be hardwood, tile, linoleum or wall-to-wall carpet. Apply direct. No additional underlayment or building paper needed.

FOR MORE INFORMATION, write Douglas Fir Plywood Association, Tacoma 2, Washington
Harry F. Manning, noted Chicago architect, says:

"I BUILT THIS
LOW-COST COOLING
INTO MY OWN HOME"

Mr. Manning writes:
"I would like to take this opportunity to let you know how pleased I am with the operation of my R & M Attic Fan. You'll recall, I was prepared at one time to invest in a room unit cooler. However, during the extreme heat of last summer, your equipment was subjected to a rather rigid test, and I now find the fan operation alone produces a very satisfactory cooling effect. In view of the low initial cost and low cost of operation, I'd call this a 'gilt-edged' investment!"

IMPRESS YOUR PROSPECTS with cool sleeping, cool living, for as little as $145.00 list—including automatic ceiling shutter! Your prospects may not have Mr. Manning’s technical background, but they certainly share his desire for cooling every room in the house for so little money! Fan requires only 18" attic clearance; fits narrow hallways, 5,000 to 16,000 CFM. Available with or without automatic ceiling shutter. Fan guaranteed 5 years; motor and shutter, 1 year. Write for full details about this built-in sales talk!

EASY TO INSTALL—1-2-3!

Fan and shutter arrive set up. Simply place fan over framed ceiling opening. Rubber cushion makes it self-sealing!

Complete automatic shutter unit screws to ceiling opening frame; flange forms trim. No finishing needed.

Ready-made attic louvers can be installed quickly by one man. Sizes for each of various fan sizes.

p. "Dandie" concrete mixer is easily maneuverable on the job. Mixing blades added to customary mixing buckets inside the drum give a sideways action that mixes concrete thoroughly. Discharge chute is tilted to reach deep into drum, empties fast. Controls, levers are designed for easy operation and readability. Mixer needs only one man to operate, has one bag capacity, and is powered either by 10- or 16 hp gas engine. Kwik-Mix Co., Port Washington, Wis.

q. Trimming kit and guide for laminated plastics simplifies flush and bevel trimming by eliminating adjustment. Designed for use with Models 511 and 100 portable electric routers, kit makes plastics trimming accurate, easy. Single bit handles both level and flush trimming. Once bit is centered over roller, a locking screw sees to it that adjustment does not change. Micrometer-type threads on centering screw permit fine adjustment. Complete information, prices, catalogue from Porter-Cable Machine Co., Syracuse, N.Y.

r. White T-3 troweler incorporates a safety throttle control in its design, eliminating danger of machine getting away from you. When you let go of handle, troweler slows to idle, stops rotating. You can also adjust blade pitch during operation by pulling up on handle lever for full pitch, releasing for flat blade. Machine covers 28" circle with enough weight to hard trowel, is small enough to carry through a door, take up and down steps. 2.2 hp engine. Price not given. White Mfg. Co., Elkhart, Ind.

Canvas Shading

the economical solution
to any problem of
SUN CONTROL

You'll enjoy greater freedom in building orientation, greater freedom in the use of glass areas when you specify canvas sunshades, whether for commercial, institutional, or residential structures. Since unshaded windows are the greatest single source of heat gain, you need protection for every square foot of glass exposed to hot sun rays. And canvas provides the economical solution.

With canvas awnings screening out 65 to 75 per cent of the sun's heat, capacity requirements for cooling systems are lowered and expensive accessory equipment often eliminated. Thus, a canvas installation more than pays for itself with money saved on the initial purchase of air conditioning equipment, plus affording a continued savings over the years on operating expense.

Your local canvas goods manufacturer is equipped to fabricate canvas installations designed in any shape or size, as an integral part of the original plan or added to meet problems of sun protection that arise after construction. Look for him listed under "Awnings" in the yellow pages of your phone book.

JUNE 1956

See our catalog 19F/Ca in Sweet's Architectural File or write for a free copy. It contains original and practical ideas, plus helpful instructions for specifying canvas.

"We put a lifetime of good looks and fire-safety into our roof"

Say Sherman Huffman, Melvin Huffman and Z.G. Huffman, Jr., of Huffman Bros., Charleston, West Virginia, builders of this hillside ranch house.

Gold Bond "Economy 250" forms an attractive, maintenance-free roof

"We used Gold Bond Corrugated Asbestone to give this fast-selling Charleston house a roof that will stay bright and fresh looking permanently and stand up in all kinds of weather. 'Economy 250' has a heat reflective value that keeps homes considerably cooler. These features mean a great deal to prospective home buyers.

"We used a staggered joint method of roof construction, putting on 24" by 42" panels of Gold Bond Corrugated Asbestone with an 18" exposure and 6" lap. Roof sheathing was eliminated and the factory pre-cut sheets went up fast and easily. As a result, we not only put up a beautiful roof, but saved on materials and labor at the same time. There's a very definite place in today's home construction for Gold Bond 'Economy 250'."

See how this economical roof can help you build your home sales. WRITE Dept. HH-66 for full roof construction details on the Charleston House.

NEW Caloric built-in gas ranges with THERMO-SET

Make the convenience of THERMO-SET and the Caloric built-in gas range the most powerful selling feature of your homes! Housewives everywhere are demanding this year-ahead concept of cooking ease.

The housewife simply turns the automatic dial to the desired temperature. The THERMO-SET Sensing Element presses against the bottom of her cooking vessel and keeps food temperature constant. No burning, no scorching, no boilovers, no smoke, no spatter!

And the new Caloric top burner unit is color-keyed to match or mix with the separate oven broilers. Beside the popular satin metal finish, both the oven broiler and the top burner unit are available in porcelain enamel, in pastel shades of pink, green, yellow, and blue as well as coppertone, black and white.

Caloric has given the top burners a whole new look! Top burners are incorporated into a single 4-burner unit; grates are slimmed down; porcelain enamel drip pans are added. It all means easier installation, easier cleaning... and more sales!

The separate oven broilers, installed at any height, eliminate stooping, thanks to Caloric's eye-level controls.

One look at this marvelous new built-in gas range and you'll discover why now, more than ever, in the homes of today, the call's for Caloric!

building
inside
and out

exterior Latex masonry paint
provides maximum beauty and
durability in minimum time

When your plans call for exterior masonry surfaces, it will pay you to call for Latex paint! Thousands of jobs have proved that paints made with Dow Latex not only look beautiful, but stay beautiful year after year. They’re weatherproof, alkali resistant, self cleaning. They let masonry breathe . . . no ground stains, no blistering or peeling over properly prepared surfaces. And work schedules never wait for Latex paints—they dry quickly and a second coat can be applied before the scaffolding is removed.

2
guaranteed Styron® plastic
wall tile makes
luxurious walls practical

Installation is quick and easy, goes right on regular walls without wire lath or special structural detail, is especially practical for dry walls. Styron leads the field in color styling... tile made from it is durable, satin smooth, moisture-proof. Now your Certified Dealer can guarantee that Styron plastic wall tile meets Department of Commerce standards and the minimum property requirements of the F.H.A. It will pay you to specify plastic wall tile made of Styron.

3
lifetime Styrofoam insulation
goes in quickly for important savings
in labor costs

You'll share the benefits with your clients when you specify permanent insulation made of Styrofoam for perimeter, cavity walls and basements. Styrofoam® (a Dow plastic foam) resists rot, mold, deterioration... and vermin. It's an excellent water vapor barrier. It gives your clients a lifetime of comfort and reduced fuel bills. And it's easy and economical to install because this feather-light foamed plastic is so clean and easy to handle, so structurally strong. Ask Dow for details. THE DOW CHEMICAL COMPANY, Midland, Mich., Dept. PL583Q.
New Products

for further details check numbered coupon p. 295

s. Fireplace form cuts down on masonry construction costs four ways. Masonry can be laid straightaway with no diagonal courses, unit gives extra heat when it is needed, stops cold drafts along floor. Form has a complete smoke funneling chamber which gives a smooth smoke flow all the way up. Sealing flange around front and bottom seals against heat and smoke leaks. Six sizes, square shape make bigger air chambers, larger heating capacity. From $49.30 to $112. Bennett-Ireland, Inc., Norwich, N.Y.

t. Lightweight structural panel is a sandwich of paper honeycomb between Conolite plastic laminate. Panels are in continuous lengths for seam-free application. Conolite surfaces come in a galaxy of colors, resist liquids, chipping, acids. For greater strength, depending on use, panels are sometimes faced with Masonite next to honeycomb, then covered with Conolite. Prices depend upon application, thickness, lengths. You can use panels all over the house—in kitchens, baths, as wall partitions. Continental Can Co., New York 17.

u. Wall peninsula cabinet stows away kitchen staples, makes it easy to get at them from either side of unit. Cabinet shown above is 24" wide, 13" deep, 30" high, equipped with two shelves that can be adjusted to varying depths. Unit is suspended from ceiling or soffit, double doors swing fully open for easy access above a snack bar, over a room divider or a food preparation island. Model here costs about $64.50; 24" high cabinet is $56.50. Republic Steel Kitchens, Republic Steel Corp., Canton 5, Ohio.

HOUSE & HOME
The pre-selling power of LIFE is a sure path to faster sales . . . and more of them.

Why? Because LIFE reaches 3 out of 5 households in the average community in the course of 13 issues* . . . 38.2% of the people living in households with $7,000-a-year-and-over income.†

Many of these people are your prospects. And every week more of them are pre-sold on LIFE-advertised building materials and equipment.

By featuring these same LIFE-advertised products in the homes you build—your chances of making sales are greatly increased. The strong consumer demand for LIFE-featured products invariably helps sell the total house.

NOW-

another new product by Kawneer...
a unit wall with
call the features you need
for contemporary
construction

Kawneer announces another new creative tool for the architect
... the KAWNEER UNIT WALL. This versatile exterior wall
system is composed of standard components that provide com­
plete flexibility of design. There is a wide selection of modular
components, window units, both operable and fixed, solid
panels with colored porcelain and insulation, and a complete
variety of flush or glazed doors available in many types and
sizes. There is a choice of proportions within the units them­
­selves. All parts are readily available because of the stand­
ardized program.

Standard units are factory assembled and shipped complete
with insulated panel, sash and doors. Now you have complete
design flexibility with attractive window, wall and door panels.

MODULAR COMPONENTS. Standard units are provided in modular sizes.
Special filler widths are available where required.

SPLIT MULLION DESIGN. Interlocking mullions provide for horizontal expansion
and contraction.

CLEAN SIGHT LINES. Glazing beads for fixed sash are recessed to be flush with
the mullion, providing clean sight lines and unobstructed vision.

PUTTYLESS GLAZING. Vinyl weatherstripping throughout, reduces glazing
time and provides a clean permanent and easily replaceable glazing system.

NO EXPOSED FASTENERS. Units are assembled with concealed fasteners and
glazing beads are installed by a positive toe-heel interlock.

FLUSH INTERIOR DESIGN. Interior face of mullion and muntin bars lie in the
same plane, facilitating the installation of interior furnishings.

STANDARD DOOR UNITS. Factory assembled door units are offered as an
integral part of the program and are interchangeable with wall units.

QUALITY SASH. Specially designed operable sash is provided with double vinyl
weather seal and rugged lifetime hardware.

COMPETENT WORKMANSHIP. Closely controlled fabrication and assembly in
the factory result in tight, accurately fitted joints and a high quality uniform finish.

RAPID INSTALLATION. A minimum number of parts handled on the job site
and adequate provision for building tolerance insure simple accurate installation.

quality BATHE-RITE shower cabinets

Introducing the new Brooklyn shower cabinet for the home of distinction

The new Brooklyn all-glass front, corner cabinet is designed to add beauty to bathrooms and save space without sacrificing comfort.

"Refreshing as the Ocean Breeze"

Now you can feature this lovely corner shower cabinet in bathrooms or master bedrooms. The Brooklyn, corner entrance cabinet needs only a 36” x 36” area — can even be used in extra bath where space is at a premium.

The custom-built Brooklyn features modern plate glass panels mounted in extruded aluminum. Rear panels consist of colorful marbleized consowell to harmonize with bath and bedroom color schemes.

The floor receptor is available in the finest precast twinkling terrazzo or porcelain steel for leakproof service. All fixtures are chrome plated for lasting beauty.

Easy to erect, the Brooklyn looks like it is custom-built right into the walls. Remember a Brooklyn corner cabinet can be installed in a 36” x 36” area.

When you sell or specify BATHE-RITE shower cabinets your jobs stay on schedule... because we ship over 95% of all orders within 24 hours.

REVERSIBLE DOORS made for finished opening of 22, 24 and 26 inches. Extruded aluminum satin finish or chrome polish frames and 3 types of glass doors — hammered, louvered and clear.

FLOOR RECEPTORS come in porcelain enamel steel, grey cement, buff and black granitex, and rich looking black and white terrazzo.

For the irresistible Selling appeal of Beauty where it Counts . . . you can depend on ROYAL OAK FLOORING

That’s because the beauty and dignity inherent in oak are brought into full play by refinements conforming to Crossett standards, developed through intensive research. And it is the sum of these refinements, reflected in the finished floor, which sparks the spontaneous admiration for Royal Oak Flooring and converts your prospect into a buyer.

CROSSETT LUMBER COMPANY
A Division of The Crossett Company
CROSSETT, ARKANSAS
Continued Mr. McFarland, "The use of radiant heat panels gives the architect practically unlimited flexibility in design. And the selection of copper tube for those panels virtually assures an installation that is completely satisfactory in every respect."

In this home designed for the M. C. Purcell's of Flagstaff, Arizona more than 1800' of Revere Copper Water Tube were used for the radiant panel heating system and the water supply lines.

The satisfactory performance turned in by copper water tube for hot and cold water lines and underground service lines over the years led to its ready adoption by architects, contractors and builders when heating by radiant panels came into vogue. Now copper is being used in increasing quantities for drainage, waste and vent stacks . . . uses which you should investigate immediately. Send today for folder giving details on Revere DWV Copper Tube.

REVERE COPPER AND BRASS INCORPORATED
Founded by Paul Revere in 1601
206 Park Avenue, New York 17, N.Y.

WHY REVERE COPPER WATER TUBE IS PREFERRED BY ARCHITECTS, ENGINEERS, BUILDING AND PLUMBING CONTRACTORS

SOLDER OR COMPRESSION FITTINGS—
Need Less Work Room . . . Save Metal. No worry about wrench room when you use Revere Copper Water Tube with solder fittings. Compression fittings can also be used. No threading is necessary with either type. Wall thickness of tube used can thus be less than for threaded pipe.

HANDY LENGTHS—
Save Fittings...Labor. Revere Copper Water Tube comes in straight lengths of 20' in hard and soft tempers. 60' coils of soft temper reduce the number of fittings needed.

EASY TO BEND—
Saves Time. Revere Copper Water Tube is easy to bend. Soft temper can be bent by hand to meet installation conditions.

NON-RUSTING—
Rustable pipe eventually clogs as shown in drawing at top. Non-rustable Revere Copper Water Tube suffers no loss of flow or pressure as shown at bottom. No allowance in pipe size need be made for rust accumulation with Revere Copper Water Tube.
"This is the best," say 2,000 contractors. This Los Angeles fairgrounds model house was built to say one thing ... "This is the finest." It shows. It shows in the imaginative planning, craftsmen construction ... and the selection of quality materials ... like Crane fixtures.

The new look in bathrooms. No longer is the bath the unmentionable room. It's the room guests see and judge. No wonder 2,000 contractors put their best foot forward with this Crane-equipped bath.
A dream house to end all dream houses... That's how you could describe the model home of the Building Contractors Association of California. It was built in the Los Angeles fairgrounds to say but one thing... "This is the very best."

Look, for example, at the big double bathroom... each with two Crane Criterion lavatories in a sweeping counter-top that sets a tone of quiet elegance. Both rooms are equipped with a Crane Criterion water closet. A tub in one and a shower in the other prevent a "bottleneck" at breakfast time.

These Crane fixtures are styled by Henry Dreyfuss to look modern years longer. They are engineered by Crane to last longer, too. You can give your customers Crane fixtures without adding to your construction costs. Crane fixtures are priced to meet every budget. And throughout the line... Crane quality costs no more. Why not get details from your Crane Branch or Crane Wholesaler today?

CRANE CO. General Offices: 836 S. Michigan Ave., Chicago 5 • VALVES • FITTINGS • PIPE • KITCHENS • PLUMBING • HEATING

CRITERION 1-80, on metal legs. A striking vitreous china lavatory. Exclusive Dial-ese controls and lever-action Secura waste. Satin finish chromium plated Criterion trim has clear Lucite handles. Spacious rectangular basin, splash lip and front overflow. Sizes: 21½" x 17 3/4" and 30½" x 22".

CRITERION 3-102. A distinctive modern closet with correct-posture seat. Bowl has elongated rim, Matching tank of gleaming vitreous china. Efficient siphon jet with quiet whirlpool action. Flat-topped cover telescopes over saddle-shaped seat.

CRITERION 2-80-LC. Finest of all Crane baths. Glistening porcelain enamel over heavy cast iron. Available in right- or left-hand corner styles, 5' long. Recess styles 5' and 5½'. Has broad rim seat, flat safety bottom. Deviator overrim supply and shower. Easy-action Dial-ese controls.
Best way to put up ceiling tile: Use a Bostitch T5-8 Tacker with Bostitch 9/16" or 1/2" staples. Press nose of tacker firmly into cove formed by tile flange. Squeeze the lever. You can drive three staples 4" apart in about three seconds and go on to next tile. You never mar the face of the tiles, and you can wear gloves to keep them clean.

Fastest way to apply insulation: Use either the Bostitch T5-8 Tacker or H2B Hammer, with Bostitch 3/8" staples. The hammer is faster with a little practice. You can drive staples with a flick of your wrist—much faster than hammer and nails. One hand is free to position the insulation. Available at your building supply dealer or local Bostitch office.

Install ceiling tile and insulation
the way leading manufacturers approve

In co-operation with leading makers of ceiling tile and insulation, Bostitch has prepared a booklet which gives detailed instructions for installing these materials. The following firms have contributed important information for this booklet and approve this method of installation.

- Armstrong Cork Company
- The Celotex Corporation
- Infra Insulation, Inc.
- Minnesota & Ontario Paper Company
- National Gypsum Company
- Reynolds Metals Company
- Simpson Logging Company
- United States Gypsum Company
- American Sisalkraft Corporation
- Wood Conversion Company

- makers of Temlok® Tile, Temlok® Plank and Cushionstone®
- makers of Celotex Tile Board and Finish Plank and Celotex Regular and Reflective Rock Wool Blankets
- makers of Infra Multiple Aluminum Thermal Insulation
- makers of Insulite Tile Board, Plank, and Interior Board
- makers of Gold Bond Insulation Board Products and Rock Wool Insulation
- makers of Reynolds Reflective Aluminum Insulation
- makers of Decorative Tile Board, Acoutical Tile, and Insulating Board
- makers of Twin-Tile, Panel-Tile, Quietone, Auditone, USG Insulation Plank, and Red Top Insulating Wool
- makers of Sisalkraft and Sisalation
- makers of Balsam-Wool and Nu-Wood Ceiling Tile

New low-cost way to lay
Strip Oak Floors over concrete

Proven successful in thousands of homes
Wherever homes are built on concrete slab foundations this economical "screeds-in-mastic" method of installing Strip Oak Flooring is being used.

By eliminating the subfloor, it cuts construction costs and saves time. Builders can afford to give even lowest-budget homes the proven sales appeal of Oak Floors.

If you haven't tried this money-saving, fully-approved construction method, be sure to mail the coupon below for free installation manual. Simple step-by-step instructions and photographs enable any carpenter or floor layer to use the "screeds-in-mastic" method successfully . . . without previous experience.

Oak floors add to the salability of slab foundation homes because of their beauty, durability, high insulating value, and natural resilience which counteracts the uncomfortable hardness of concrete. They're preferred by 8 out of 10 home buyers, builders and architects.

sells finer looking homes faster!
WHITESTONE ROOFING MARBLE

because it's lasting
All the wearability of genuine marble. No seams to bulge, nothing can rot, and there are no overlapping edges to loosen or lift.

because it's practical
Whitestone is self-insulating. It lowers heating bills in winter and keeps interiors cooler in summer, cutting air conditioning costs.

because it's beautiful
Whitestone's gleaming whiteness complements any design, any colors. And it will stay beautiful. The fine crystalline grains of marble will remain fresh and unstained through the years.

bb. Snap-on gutter guard keeps leaves, debris from clogging up gutters. Guard snaps on lip of gutter, outer edge is turned up to prevent water running down and staining house. Guard also keeps gutters free of water so they cannot freeze in winter. Made of 1/4" mesh wire screen with aluminum molding, guard fits 4" or 5" gutters, can be used on either box or round type. Prices vary from 47¢ to 69¢ ea. for 2' section by 5" wide. Lockhart Mfg. Corp., Detroit 12, Mich.

c. Dryer-vent kit works equally well for gas and electric clothes dryers. Exterior hood style blends with house; concealed floating valve retards back draft, gives better performance, according to manufacturer. Kit contains all-aluminum Leigh Dryer-Vent with flanged plate in 3" or 4" diameter components, 8' length of flexible duct and two clamps. Connector kits are available for longer runs. 3' kit costs about $7.25; 4' model sells for $8.75. Leigh Bldg. Prod. Div., Air Control Prod., Coopersville, Mich.

d. Verti-Line package pump is pre-engineered for ordering by unit number and delivery as a complete package, can be used for wells as small as 4" in diameter. Pumps are available from 2-7 1/2 hp sizes with heads to 340', capacities from 200 to 7,500 g.p.h. GE VHS weatherproof motor gives 60 cycle, 3,600 rpm operation. Column and shaft assembly, equal to setting specified, are equipped with 5" bearing centers, 3/4" stainless steel shaft and rubber bearings. Two sizes, 4" and 6". Prices depend upon requirements. Layne & Bowler Pump Co., Los Angeles 22, Calif.
NOT THIS! Many heating systems make you uncomfortable. It's too cold at the floor, just right in the middle of the room, too hot near the ceiling.

BUT THIS! Waterbury COMFORTROL By-Pass Heating gives constant comfort. Tests have shown less than one degree temperature variation from floor to ceiling.

New kind of heating gives home buyers the constant comfort they want

The family at left complains. The family at right recommends the builder of its home to friends. Reason? The family at right has the constant comfort every home buyer expects.

To help you deliver constant comfort, Waterbury has developed COMFORTROL By-Pass Heating.

COMFORTROL works on a very efficient principle. It mixes cool air with warm air in a ratio that provides the exact temperature called for by indoor-outdoor thermostats. It supplies this warmth continuously at the same rate it escapes through walls and windows. Waterbury COMFORTROL By-Pass Heating takes maximum advantage of perimeter heat distribution and zone controls.

Your buyers get absolutely constant comfort in every room. They have a continuous supply of fresh, clean, humidified air. There are no hot and cold cycles or drafts. In tests, temperature has varied less than one degree between floor and ceiling.

If you've ever needed an extra feature to close a sale, you'll appreciate the talking points alone of Waterbury COMFORTROL. COMFORTROL combines perfectly with a Waterbury cooling unit.

SEND FOR FREE 32-PAGE BOOKLET!
"It Takes More Than Heat To Be Comfortable". It's packed with interesting information that will help you sell more units. Write Waterman-Waterbury Company, 1150 N. E. Jackson Street, Minneapolis 13, Minnesota.

Waterbury helps you sell homes!

Waterbury COMFORTROL

By the makers of world-famous Waterbury furnaces and air conditioners
Here's window beauty that says, "this is a quality home"
Here's a dining room with a magnificent view, framed by Andersen Flexiview and Flexivent Units. The Flexivents open wide to admit a flood of fresh air. Yet they close tight to form a weatherproof barrier. They're both walls and windows... Andersen WINDOWALLS, made of toxic-treated, insulating, beautiful wood. Yes, the charm and beauty of Andersen WINDOWALLS quickly convince customers that homes are quality-built throughout!

For information on how you can create quality with Andersen WINDOWALLS in the homes you plan or build, see your lumber and millwork dealer, Sweet's Light Construction File or write Andersen. WINDOWALLS are sold throughout the country, including the Pacific Coast.

When a prospective buyer goes through your house, first impressions count. Built-in wall ovens and ranges... lighting fixtures... modern ROTO-GLO Quiet Switches—all create the feeling you’ve taken extra pride in the house bearing your name, that you’ve insisted on the finest electrical equipment available. That’s why you’re many steps ahead when you specify ROTO-GLO Quiet Switches to your electrical contractors.

Consumers are being told and sold on ROTO-GLO by the biggest national advertising and merchandising promotion in the wiring device industry. Millions of pre-sold consumers are reading about ROTO-GLO Quiet Switches in leading shelter magazines. The response for Pass & Seymour’s booklet, “Modern Electrical Living,” has been overwhelming. Certainly this proves they’re interested in the whisper-quiet roto-type switch that glows in the dark... that costs only a few pennies more.

Send today for complete information on the ROTO-GLO Quiet Switch and for a folder on modern Despard wiring devices, to Dept. HH-13.

New Products

ee. Acrylite plastic panels form room dividers, screens and decorative accents all over the house. With them, you can screen-in privacy, still let in softly diffused light. First panel has butterflies, Japanese Ginko leaves and maple leaves in an airy, gossamer design. Second panel plays up the natural texture of woven straw. Butterflies comes in sheets 23” x 35” x .100 and 23” x 17½” x .100. Straw sheets are 35” x 60” x .100 and 35” x 72” x .100. From $1.25-$1.50 per sq. ft. Wasco Prod., Inc., Cambridge, Mass.

ff. Parquet floor can be laid quickly over concrete, plywood or wood subfloors. The hardwood slats come in units 2½ sq. ft., held intact by paper glued to face. Once you install in position, paper is easily removed and you move squares into place, seated and finished according to color desired. Bond-Wood comes in oak, walnut, maple or beech. Estimated installation varies from 53¢ to 90¢ per sq. ft. depending on species, grade and job type and location. Harris Mfg. Co., Johnson City, Tenn.

gg. New KenCork floor tile now comes in a range of natural cork colors from light to dark. Tile is now made in ½” thickness as well as 3/16”, 5/16” and ¾” gauges. A plastic-fortified factory finish makes new KenCork easier to maintain. ½” thickness is available in 6” x 12” tiles, plus 9” and 12” sq. sizes. 3/16” gauge comes in 6” x 12”, 9”, 12”, and 12” x 24” tiles. Price of ½” tile is approximately 50¢ per sq. ft. unstained. Color range makes it possible to vary floor patterns from room to room. KenTile, Inc., Brooklyn 15, N.Y.
BUILDERS GUARANTEE THEMSELVES AN EXTRA PROFIT ON EVERY HOUSE!

Here's how!

STOP trying to save a couple of bucks on buying furnaces. Start making a healthy profit on them instead. The sure way to do it is this Perfection way...

FEATURING a better furnace can help you sell your house. And, when that furnace is a Perfection with Regulaire Modulated Heat, you realize an extra profit in your pocket, too.

THERE'S NO MYSTERY ABOUT IT! Houses equipped with Perfection Regulaire furnaces bring a higher loan appraisal. You can figure out the profit for yourself.

The extra profit you make with every Perfection installation is only one reason why it pays to use Perfection in your new homes and modernization jobs.

You automatically qualify for a brand-new, workable, home selling idea, the Perfection "GUARANTEED COMFORT" home. This "hot" new promotion helps attract more prospective buyers, assures them that their comfort is your prime consideration. So go with the furnace that's going all out to help you.

See your Perfection guaranteed dealer or write Perfection Industries,
Division of Hupp Corporation, 7706-C Platt Avenue, Cleveland, Ohio.
Double Hung Wood Windows Add Beauty to 174-Year-Old Peirce-Nichols Home

Peirce was a man who could afford the best—and in this case got it, because this was considered about the finest wooden house in America. Not only was it McIntyre's design, but every important piece of carving was done by his own hands, from the original urns that capped the fence posts to the doorways, cornices and mantels within. You can be sure it pleased Mr. Peirce.

Adding to the beauty and design of the Peirce-Nichols house are the double hung wood windows... permitting ample light and ventilation for every room. The natural insulating property of the wood helped keep the interior cool because the heat of the sun could not readily penetrate.

Today, double hung wood windows are still the most popular type of window for the modern home; and their efficiency has been increased by the addition of modern spring sash balance and metal weatherstripping to bring weather-tightness, seasonal adaptability, and economical maintenance.

Architects, builders and home owners know that double hung wood windows with metal weatherstripping are best for durability, structural correctness and operational efficiency.

MODULAR CONSTRUCTION
and MASONITE PRESWDWOOD panels

Made for each other...

The 4-inch module and the 4-foot Preswdwood panel are in perfect agreement—they both help you build good houses at less cost.

In pre-assembling components, Preswdwood offers a true-dimension panel that fabricates cleanly and quickly. Every square inch is as strong and sturdy, as usable as the next. Preswdwood is readily and securely fastened; it won't split, splinter or crack.

At the job site, Preswdwood demonstrates other advantages: dense and hard, it contributes to structural strength, resists dimensional change and does not deteriorate. It offers a superior base for surface finishes. Many varieties are available with Primecote, a smooth, factory-sealed first coat that speeds up the painting job, saves important dollars.

There's a type, texture and thickness of Preswdwood for every panel job, inside or out. Smooth on one or both sides. Leather-textured, comb-textured, perforated, tile-patterned or grooved. Exterior lap siding, shingles or panels.

The Preswdwood family can fit into your modular plans. Send the coupon for a free, illustrated booklet.

SARGENT LOCKS
"Sign of a well built house"
VITRIFIED CLAY PIPE
first choice for Another BIG Housing Project!

TORRANCE, CALIFORNIA is attracting new families by the thousands with an unusual combination of job opportunities, ideal climate, and beautiful beaches. To meet the tremendous demand for modern housing, the vast Southwood Homes project is well underway, with a total of 2200 new homes planned and 816, comprising the first unit, already under construction. More than 67,000 feet of 4 through 18-inch Vitrified Clay Pipe have been installed as house connections, feeders, and mains.

Like many other mass-construction builders, those in charge of Southwood Homes know that it pays to use the best in sewerage materials. It pays in faster, more economical construction, as well as in dependable, trouble-free service—since Clay Pipe is the only sewerage material that is guaranteed . . . and never wears out.

Owner, developer, and contractor: Milton Kauffman—Don Wilson Co.
Sewer system designer: The Engineering Service Corp.
Sewer contractor: N. A. Artukovich Construction Co.
Here’s why G-E Remote-Control Wiring SELLS HOUSES
As determined from interviews with 555 owners of new homes equipped with G-E Remote Control

Like other reliable electrical control systems — for example, your dial telephone — G-E Remote-Control Wiring uses low-voltage operated relays to do the control switching of line voltage circuits.

Luxury — at Low Cost

With this modern wiring system, the home-owner can turn one light OFF, or ON, from many locations. He can also turn a number of lights ON and OFF (as many as 25 with the Deluxe Master Control) from one switching point.

G-E Remote-Control Wiring is economically practical for homes of any size — or price. You can add this dramatic sales feature to your homes at a cost only slightly more than regular wiring.

A Real Selling Feature

So install G-E Remote Control of lights in the homes you build. Let this convenient system of wiring prove to you that it speeds home sales. The “G-E Remote-Control Wiring Manual” shows how to layout, estimate, and install this modern wiring system, with easy-to-follow, step-by-step instructions. Write Wiring Device Department, General Electric Company, Providence 7, R. I.
Two Philadelphia builders—Bob and Dick Fox—have always dreamed of homes—priced within the reach of most families—that would contain many of the luxurious details generally found only in more expensive dwellings.

Today—in Plymouth Meeting Park—suburban Philadelphia—Fox-Bilt Homes, Inc. is erecting the first group of 315 unusual split-level homes containing many of the Fox Brothers' ideas.

Designed to sell at a low $14,850, these homes incorporate many luxury features... among them AllianceWare Champion bathtubs—two AllianceWare Linda lavatories and two closet combinations in each home. All AllianceWare fixtures are in color.

Fox Brothers chose AllianceWare, they tell us, because of AllianceWare's quality construction, decorator styling and wide color selection—sound reasons why they expect AllianceWare bathrooms to be an important sales feature of their unusual homes.

**kk. Woodco sectional windows** can be matched, stacked, used like blocks for any kind of arrangement you want. Sections are single light units that join for straight-line or bow-bay windows or a combination of both. Rotor operated awning unit, stationary unit and hopper unit can be mixed, matched in hundreds of combinations. Prices vary according to the type of unit, glazed, with Thermopane, and with storm panels. Manufactured by Rockwell of Randolph, Inc., Randolph, Wis.

**II. Thriftee Pak sliding door hardware** accommodates both 3/4” and 1 1/4” door thicknesses. All you do is interchange hangers for 3/4” or 1 1/4” doors. Package includes aluminum track, steel hangers and two steel door guide plates (for each door size) with three nylon guides to be inserted through bottom of steel plate. With Pak, doors can be hung or removed after hangers are attached, and cannot jump the track. Five different sets for doors of various widths range from $5.50 to $11. Sterling Hardware Mfg. Co., Chicago, Ill.

**mm. Sliding glass door-wall** is weather-sealed for year-round protection from weather. Constructed with heavy gauge, anodized extruded aluminum, unit needs no paint or upkeep. Its other features include easy sliding screens for summer months, built-in locks, Schlegel wool pile weatherstripping, sloping sill drains. Available in Thermopane, Twin-dow or plate glass. 4-panel unit 12’ x 67-10” costs about $372 in plate glass, 13’-1/4” x 6’-9 1/4” Thermopane unit is about $422. Other sizes available. Modern Shower Door Co., Cleveland.
This brand name brings you a report on...

Glued-Up Lumber

The public finds many uses for wide Glued-Up Lumber

- People are doing interesting things with glued-up lumber. Here are just a few of the uses that have been reported to us recently—uses which reflect the confidence of the public in Weyerhaeuser 4-Square Glued-Up Lumber.
  - "I'm buying 1" x 30"—5' B & Btr VG stock for use as surfboards." This is a good demonstration of the strength of the glue joint on exposure to water.
  - "A considerable amount of 1" x 12" and 1" x 14" VG is going into the construction of flower boxes and housing for window cooling units." Most builders who have had experience with glued-up lumber order "glued-up and/or regular" when they need wide lumber for interior or exterior use.
  - "Around here, people are using glued-up for such things as bleacher seats, feeding racks, and trailer side boards." One of the most common uses reported was for grain wagon boxes and similar farm construction.
  - "A lot of glued-up lumber goes to small cabinet shops for use in cabinet doors, counter tops and shelves." Glued-up is equally popular for exterior use, with many builders reporting they use it for siding, fascia, trim and soffits.

It will pay you to discuss the advantages of using Glued-Up Lumber, with your Weyerhaeuser 4-Square Lumber Dealer.

- Completely prefinished and ready to install—no further finishing or waxing required.
- V-Grooved on the veneer joints to simulate random planking.
- Edges of panels eased for continuous plank effect.
- Back sealed for stability.
- Packaged for panel and surface protection.
- 4 ft. by 8 ft. and 4 ft. by 7 ft. sizes available in ¼-inch thickness.
- Budget-priced all-hardwood panels.
- Big panels go up fast, cost less to install.

GEORGIA—PACIFIC
PLYWOOD COMPANY
What makes one home sell faster than another?

Even though the rest of the house is the same...a modern convenience like a KitchenAid Automatic Dishwasher built into the kitchen will make the difference...bring immediate and enthusiastic approval from house buying prospects. But it will pay you to make sure it's a KitchenAid—not just a dishwasher! Only the KitchenAid has the exclusive Hobart revolving power washing action that positively removes even the toughest dried-on foods...greases.

Only the KitchenAid has the separate motor and blower fan that circulates electrically heated air for clean, quick, sparkling dryness. The KitchenAid front-loading feature and the two independently sliding cushion coated racks give convenience, greatest capacity, quietness and assurance that even the most delicate glassware will be perfectly safe.

The KitchenAid is simple to install in any model—undercounter, free standing, sink-dishwasher combination, built-in counter height (illustrated)—whether gravity drain or automatic pump-drain style. The KitchenAid undercounter model comes in a variety of beautiful front finishes—Copper, Satin Chrome, White or a color can be arranged to match any kitchen decor.

Try adding a built-in KitchenAid Dishwasher to your sales talk; you'll find it a mighty good sales clincher.

Halstead & Mitchell Residential Cooling Towers are engineered to cut 95% from the cost of air conditioning cooling water. This they do by re-using the precious—and expensive—water which without cooling towers would be wasted to the sewer.

So efficient are they that in a recent research project in Texas water costs with cooling towers for the five-month summer season were as low as $2.00 for the entire summer. That low cost opens the doors wide to water-cooled air conditioning, still the lowest cost system devised. It also means compliance with municipal ordinances aimed at avoiding waste of water.

There's nothing experimental about these units. You are protected by Halstead & Mitchell's exclusive 20-Year Guarantee on the wetted deck surface against rotting or fungus attack... and you gain by the many other features which have made Halstead & Mitchell industrial and commercial cooling towers nationally known and respected.

Small in size, and thus easy to hide by proper landscaping, H & M Residential Cooling Towers are built in a complete size range from 2 through 7½ tons. Extra-quiet centrifugal fan units are available for inside installation. You will find them at your nearest leading refrigeration or heating wholesaler.

Upgrade the value of your kitchen with a Broan Motorodor Fan

Cash in on the sales excitement of the Broan automatic door

Wherever obvious quality is essential and basic dollar counting a necessity — a Broan Motorodor Fan is your first choice for a kitchen, especially a built-in kitchen. Here one Broan fan with economical stove pipe ducts and adapters can do the work that two fans should otherwise be called on to do. This innovation — and one application is illustrated here — provides effective ventilation for the kitchen. It upgrades the value of your work, just as the Broan Motorodor upgrades the service of the fan. When the motor is turned on, the door opens automatically ... and it closes automatically when the motor shuts off ... a patented feature that fascinates all homemakers.

Write for the name of the Broan distributor in your area and for a factual bulletin that details and illustrates all of the engineering firsts that make Broan fans superior.

There's no doubt that the words "two baths" add considerable selling oomph to any builder's home.

Space and cost are probably the first objections that come to mind. But, consider a Weisway cabinet shower for the second bath.

Even the most luxurious of the Weisway line is not "expensive." And all models, even the lowest priced, are made to uphold the integrity of this fine old name. There are 24 glamorous colors from which to choose.

Then, too, a Weisway cabinet shower can be fitted into almost unbelievably small floor space... as little as 32" x 32".

Why not call in your Weisway representative and talk it over? Or send coupon for illustrated catalog.

Revco Bilt-In Refrigerators and Freezers open a new world of design and color possibilities for both new and remodeled kitchens. Revco Bilt-Ins—the first truly built in refrigeration products—have been tested and proved in tens of thousands of fine homes throughout the country during the past two years.

- Easy to install
- Choice of location and arrangement
- Built to fit standard cabinet dimensions

Get the full Revco story today and have the information readily available for your clients—right in your file. Revco has prepared a special architects file with all of the information you will need on built-in refrigeration. Send the coupon below for your free copy of this complete information kit.
Homes look richer when interiors are decorated with styrene wall tile in Granite Tone colors!

Entirely new concepts in building and construction are forecast for plastics in the near future as the result of current research in many areas. Out of this exploratory work may well evolve a broadened functional use of plastics for exterior and interior walls, and even entire housing units.

Meanwhile, exciting new decorating effects are now possible through recent coloring developments in plastic wall tile. Dramatic depth of color and texture, for example, is added to all the well-known advantages of plastic wall tile through these new color tones which are being featured by leading manufacturers of plastic tile in their new lines.

Granite Tone Colors. Plastic wall tile in new coloring effects developed by Monsanto color research has a depth of tone and richness desired by homeowners. Tiles molded in these new "Granite Tone" colors have the textured beauty of polished granite to create handsome, luxurious bathrooms and kitchens. The development of these "Granite Tone" colors was pioneered by Monsanto, a major supplier of styrene plastic from which guaranteed-quality tile is molded.

Coming soon! Another new Monsanto styling project promises to further extend the decorating uses of plastic wall tile. The design possibilities of tiles molded in unusual shapes—triangles, trapezoids and curved forms—are being explored, and forecast a wider use of plastic tile.

Plastics in construction—Because of the increasing interest in plastics as basic materials in construction, Monsanto has formed a Structural Plastics Engineering Group to study the functional uses of plastic materials. Architects and builders are invited to write for counsel on technical aspects of plastics for building and construction.

A NEW REPORT, "Plastics in Housing," has recently been published by the Department of Architecture of The Massachusetts Institute of Technology. The M.I.T. study was made possible by a Monsanto grant-in-aid. Copies are available at $2.00 each. Address Monsanto Chemical Company, Plastics Division, Room 505, Springfield 2, Mass.

FASTEN TO CONCRETE OR STEEL THE NEW WAY

WITH Shure-Set
—THE HAMMER-IN FASTENING METHOD

WOOD TO MASONRY
shelves
paneling
partitions

WOOD TO STEEL
furring strips
signboards
panel boards

STEEL TO STEEL
wire mesh
window guards
pipe straps

STEEL TO CONCRETE
conduit
clips
downspouts

Where nails fail and Ramset® is not required, Shure-Set fills the bill. It's the in-between tool that handles countless jobs better than concrete nails or drilling.

Here's a new fastening tool, essential to everyone who works with concrete or steel! Just pick up a hammer and your Shure-Set kit and you can fasten into cement block, masonry, 1/2" steel, mortar joints and other hard materials.

Shure-Set supports and guides the fastener straight and true with pin-point accuracy. No bending, buckling, bouncing—fasteners sink into hard materials as if by magic.

Uses no outside power; just makes your hammer power more effective. It's a "must" tool for every carpenter, electrician, plumber or builder of any kind. Especially valuable where Ramset may be too powerful.

Ask your supplier. Shure-Set gives you a real advantage over old-style methods. Get the jump on your competition. Write now for full details.

HABITANT factory fabricated wood fence

The attractive “extra touch”, the air of privacy and luxury that adds so much to the salability of any house, can be achieved easily with handsome Habitant Fence. You can use Habitant Fence in any manner you wish...for surrounding whole yards, or in limited segments as outdoor room-dividers. It's an ideal means of setting off patios, breezeways, house fronts. Habitant Fence is factory-fabricated to the exact ground plan and comes complete with gates and all hardware.

Habitant Fence around industrial buildings looks friendly and attractive...improves public relations. Surely too, the fence serves an important protective purpose...a firm barrier against intruders.

Shown here with extension arms and barbed wire, Habitant Fence is both a great landscaping and utilitarian asset.

In some selected areas, Habitant Fence dealer representation is still available...if you are interested, write for details.

Ladies love the luxury look...

builders love the cost!

The luxury look of a Mutschler Kitchen is not the result of dollars... but ideas.

After all, how much dough can you put into a cabinet, even a superior product like Mutschler? It makes one whale of a difference, though, how you put your kitchens together. And, of course, a great deal depends on what functions the cabinets perform.

Mutschler makes cabinets for any built-in appliance of any manufacture... cookery, refrigeration, laundry and the rest. Wall and floor cabinets also provide dozens of latest work-saving features the ladies love.

Why Mutschler? One word sums it up... experience. Since 1893, in fact.

High budget, low budget (building or remodeling) if you'd like to give your kitchens that luxury look, send along the coupon. Let's see if we can't get together.

**Mutschler Brothers Co.**
Dept. 6656 Nappanee, Indiana

We'd like to talk about getting a luxury look in our kitchens.

VITROLINER CHIMNEYS — THE LOGICAL CHOICE

The Architect has flexibility and choice. He can specify 2 types “E” and “L” for ceiling and basement installations—3 Designs, as illustrated above—5 Diameters (6", 7", 8", 10" and 12") for correct size—UL listed for 4 Fuels—oil, gas, coal and wood.

The Builder prefers lightweight Vitroliner (10 to 15 lbs. per ft.) which is easy to handle and quick to assemble.

The Home Owner enjoys a neat modern design. His Vitroliner adds distinction to the appearance of his home. He also enjoys the safety and long life VITROLINER provides.

Investigate this low cost, quality chimney—write for literature today.

Vitroliner is not only the first and Pioneer Chimney but still the finest quality-built class “A” Chimney on the market for one and two story homes and buildings using all fuels.

Of course, Vitroliner provides complete chimney functions, venting combustion gases from Heating Plant, Water Heater and Incinerator.

NATIONALLY ACCEPTED
Listed by Underwriters Laboratories—accepted by Local and State Building Authorities—Insurance Rating Bureaus—and the Building Officials Conference of America.

For fast quotation, send us “X”, “Y” dimensions and flue diameter.

HOUSE & HOME
Modern builders in tune with contemporary design advantages and buyer desires know that successful building is possible only with up-to-date materials and techniques. Today's builders know today's buyers want the advantages and quality made possible by recent technological advances. Successful builders know that in a more competitive market with more selective buyers, profits lie in using the quality and economy of the technological advance.

Sta-Dri paints, masonry finishes and surface treatments were developed, are produced and marketed as a result of knowledge of the best material performances of the past plus creative formulation for even greater performance. Sta-Dri building products are quality first. They produce more lasting results, make it possible to drop old wasteful methods, and offer faster, more economical techniques.

Sta-Dri Masonry Paint is the standard for beauty and protection against water by which others are judged. Sta-Dri Link makes plastering fast and economical because it permanently bonds finish plaster to any surface. Sta-Dri Clear-Coat saves the natural beauty of masonry, but keeps water out and prevents efflorescence. The latest Sta-Dri development, Acryllcote, gives the building industry the most perfect paint yet, a non-fading, non-toxic, odorless, fast drying, washable, durable paint for both interior and exterior. Ask your local supplier for specifications and details or write to:

American Sta-Dri Company
Brentwood, Maryland

Fi-Re-Sist meets and exceeds all the requirements contained in Federal Specs SB-A-118a (toughest fire test), TT-P-26a (toughest painting test for painting and fire retardant qualities) and Air Force Regulation 89-8 (the latest Government Criteria for painting and fire retardance). It is a fine oil and alkyd base paint that is fire retardant and smoke preventive on any surface where conventional paint is used.

Fi-Re-Sist has these additional features:

- LOW ODOR
- NON-TOXIC
- WASHABLE
- APPLIES WITH BRUSH, ROLLER OR SPRAY
- PROTECTS UNDER SURFACE FROM FLAMES

Available in flat, semi-gloss and gloss in white, tints and deep tones. Also in non-yellowing gloss enamel.

Write today for complete information and test results conducted by an independent testing laboratory.

The Everett® Trencher
equals the work of 25 pick and shovel men!

Engineered and designed for the great new FORD and FERGUSON (as well as MASSEY-HARRIS MH-50) TRACTORS.
The Everett Trencher cuts clean straight trenches up to 42" deep, 12" to 18" in width, 10' from the power take-off of the tractor—raised and lowered by built-in hydraulic system. Quickly installed. A "V" belt safety slip feature is built into the drive of the trencher which automatically stops the bucket line and prevents damage when obstructions are encountered.

Note these advantages:
• NEW built-in Rock Guard
• NEW single wheel design gives factor penetration
• NEW "V" Power Drive with V Belt Safety drive
• NEW easily accessible controls

THE EVERETT TRENCHER
MODEL 60 DIGS TRENCHES UP TO 5' DEEP AT LESS THAN HALF THE COST OF COMPARABLE MACHINERY.
The Model 60 will do a big digging job at a sensible price. Hydraulically operated it will dig close to buildings, pipes, etc.

How to build more bathroom appeal into your homes at no extra cost!

High quality, moderate price of Gerber Plumbing Fixtures lets you add extra bathroom appeal without increasing costs — 1½ baths instead of 1, colored fixtures instead of white, 2 lavatories instead of 1, full size tub instead of a "miniature" — are a few examples.

Gerber's complete line gives you a complete "packaged" bathroom from one source—a bathroom in which all fixtures harmonize perfectly, install economically. All fixtures delivered direct to your job site in one truck from a conveniently located Gerber plant.

Free Booklet
Send today for special builder booklet, "How to build more bathroom appeal into your homes."

THIMBLE MAGIC
A New Kind of Louver
. . . the Midget Thimble lets air into places no other louver can reach, protects paint, wood and metal from excess heat and moisture.

Thimble Louvers are always used with regular Midget Louvers, feature same easy push-in installation, hold securely without nails or screws. Perforated design is insectproof, won't clog when painted.

Put Extra Sales Appeal in Your New Home!

Specify CLAY FLUE LINING
— for Added Fire Protection!

One out of every five destructive fires results from faulty chimney flue and furnace installations! That's why Clay Flue Lining is the mark of a quality home—with important extra sales appeal for any buyer. It's 100% fireproof—can't crack or melt under heat. And its smooth inner surface can't accumulate dangerous quantities of soot. Be sure to specify Clay Flue Lining in every home you build, and use this important safety feature to help you sell.

You Can Trust This Mark of Quality

MODULAR FLUES

Write for "Recommendations for Chimney and Flue Lining Construction," containing sizes, dimensions and details on modular flues. This Bulletin also is a manual for safer chimney construction and a practical guide for those concerned with design and construction.

JUNE 1956
PUT “SELL” IN YOUR STREETS WITH CEDAR

These beautiful homes—featuring textured roofs of cedar shingles and colorful walls of cedar shakes—were built by Randolph Parks, Sacramento, California.

Home buyers everywhere are asking for more quality, more variety, more that is genuine in their new houses. That makes cedar a natural for your basic roof and wall material. Because cedar is the genuine article—the real McCoy! Cedar shingles for roofs give you obvious quality...a wide variety of application techniques...and the personable warmth of genuineness that no other material even approaches. And, in the phrasing of the architect, cedar side-wall shakes complete the “wedding of wood with wood” effect that is gaining so much favor among both contemporary designers and traditionalists. Let cedar shingle roofs and cedar shake walls put new “sell” in your streets. For that’s where the sale begins!

RED CEDAR SHINGLE BUREAU
5510 White Bldg., Seattle 1, Wash.
550 Burrard St., Vancouver 1, B.C.
Gentlemen: I’m interested in ideas for increasing the visual impact of my roofs. Please send my free copy of “Distinctive Roof Applications.”

YOUR BEST “OUTSIDE SALESMAN” IS CEDAR
Clear “sailing” with this children’s bathroom idea by ELJER!

Now! Eljer launches an all-out advertising and promotion drive to tell your prospects that this children’s bath is more than a second bath. It’s a practical, hard-selling idea from Eljer that’s certain to move your houses faster . . . certain to brand you as a man who builds more value into his homes.

Look to Eljer fixtures and brass goods for more quality in the homes you build . . . for the extra sales-appeal of smart styling, skilled workmanship, and lasting durability. Eljer Division of The Murray Corporation of America, Three Gateway Center, Pittsburgh 22, Pennsylvania.

Choose from six lovely fashion-keyed colors and snowy white

* ELJER—the only name you need to know in plumbing fixtures
You can BUILD TO YOUR MARKET with National Homes

Every National Homes builder-dealer, regardless of his location, enjoys tremendous competitive advantages. He can build to his market in a wide range of designs, and prices... offering far more in exterior styling, interior features, and all-around living convenience. By actual comparison, the National Homes builder-dealer can offer more house for the money—anywhere! This is one of the big advantages helping National Homes builder-dealers win an ever increasing share of the market.

SOME OF THE MANY OTHER ADVANTAGES ARE:

- **Trained Organization** to assist with land acquisition, site planning, and the dealer's entire building program.
- **House Package** that represents two-thirds of the building job. This is delivered to the site on schedule for the most economical use of labor. There is no need for warehousing or inventory.
- **Faster Completion Time** that means a more rapid turnover of capital and higher dollar volume of profit.
- **Favorable Financing** of VA or FHA-Approved Mortgages by the National Homes Acceptance Corporation and more than 600 leading financial institutions.
- **Advertising and Sales Promotion**, on national and local levels, of our brand-name National homes.
- **Homes Professionally Designed** by Charles M. Goodman, AIA, and color-styled by Beatrice West, foremost authorities in the home field.
- **Dozens of Floor Plans** and hundreds of exterior variations to suit every need and desire.
- **Homes Produced Better** and more economically... by modern assembly-line methods... which means a lower selling price.
- **Mass Purchasing** of brand-name materials results in higher quality and in important savings that are passed on to the home-buyer.
- **All the Advantages** of a 25,000-house-a-year builder regardless of the size or location of his community.
