## The dollars and cents of recreation

#### FREE PLAYGROUND **DESIGN SERVICE**

Send a rough drawing of your playground space and list the equipment you are interested in and we will design a playground that will give you the most fun, safety and esthetics for the children within your budget.

Earthtone Jack & Jill Model 500-2

Tennis Posts Model 351-304

## **Miracle's Tenant Attracters Make Them Stay with You**

THE CHILDREN -Fill their hours with fun with safety-engineered Miracle playground equipment. Miracle's body-building babysitters convert childrens' restless energy into constructive, imaginative, developmental play.

A variety of basketball backstops, tennis net hardware, handball backstops and heavy duty tether ball equipment are ideal for teenage children.

THE ADULTS - Adults can relax and find more time for their own activities knowing that the children won't stray and that they are engaged in wholesome, safe fun. Miracle equipment is so well designed and safe the children can practically play without supervision.

Adults will also love Miracle's colorful array of park benches, tables, pool equipment, poolside tables, sun decks and barbeque grills.

YOU'LL SMILE TOO! - Many owners and renters say Miracle mini-playgrounds for multiple housing complexes are the deciding factor in choosing a residence. Miracle equipment is practically maintenance-free thanks to sturdy construction and the best protective finishes on the market-new MIRACOTE® (seven times thicker than paint), "PERMA-GLASS" with TEDLAR® and Miracle's exclusive "Perma-Lok". All equipment is delivered directly to the site. Installs quickly and easily. Order the complete package or start small and reserve space for future equipment installation . . . then sit back and watch the smiles.

Call or Write Today for your FREE 4-color catalog of 166 pieces of the world's finest play, park and athletic equipment.

# NuTone gives you 23 reasons to install Garage Door Operators in your homes

#### 1. NuTone 580

The top of the line. With exclusive safety-plus features including automatic reverse, safety manual time/delay light and sleek, functional styling.

11110

1

### 2. NuTone 575

The intermediate workhorse. With powerful 1/3 HP motor and a wide-range-of-safety-features package, including automatic security lock.

NuTone 570

NuTone

### 3. NuTone 570

The economical powerhouse. With rugged ¼ HP motor, plus an impressive safety and convenience package.

#### From NuTone-the industry innovator of built-in products like Radio/Intercom and Central Cleaning Systems comes an all-new built-in convenience with dependability and reliability assured by a network of national service centers.

4. Increased sales appeal . . . home buyers look for extra convenience features. With the push of a button, you can move the largest single moving part of the home and dramatically show that you've thought of everything.

5. Guarantee for one full year. 6. Guaranteed profit for you . . . the cost to you is exceptionally low especially in terms of the convenience, safety and security features it adds to the home.

7. Belt/chain drive assembly. 8. Automatic light lets owner see inside garage BEFORE he enters . . . plus no stumbling or groping around when he's inside.

9. Automatic security lock adds more appeal. You've virtually eliminated an "easy entry" to the home .... helped to protect possessions AND the family. 10. UL Approved. 11. Solid-state, FCC-approved radio controls. 12. Maintenance-free nylon carriage. 13. 24 stock frequency combinations.

- 14. Easy installation by one man.
- 15. Optional key activators.
- 16. Door automatically reverses
- or stops if it strikes an
- object during closing
- or opening cycle.
- 17. In case of power failure,

# NuTone completes the system:

19. Service - More than 1,200 service centers coast-to-coast plus factory-trained service managers in strategic locations mean you install with confidence.

20. Distribution - A national network of distributors stocking all models, controls and accessories. Quick service and delivery when you need it. 21. 'Sales Power' -NuTone factorytrained sales personnel - there when you need them . . . to help you with your planning or your problems.

NuTone . . . the automatic garage door operator system.

22. National Advertising and Promotion preselling more than 12,862,132 prospective home buyers. All learning about the advantages of homes equipped with the NuTone Operator System.

23. The Brand — NuTone — after more than 35 years of servicing the home building industry, you know you can depend on NuTone products for reliability, service and profit!

#### **NEWS/CONVENTION**

Houston '73: Romney's bomb-builders' outrage-and a turn to moderation

Storm warnings were up long before George Romney braved a confrontation with the nation's homebuilders at their 29th annual convention to confirm that President Nixon had decreed a temporary hold on subsidy housing starts and a freeze on water-sewer grants and public facility loans.

Even before the ruggedly handsome Romney sauntered into the minefield of the Astrohall, the NAHB had voted a resolution expressing a "deep sense of outrage" over the rumored cutbacks.

**Protest.** On the same day Stanley Waranch, the NAHB's outgoing president, had described the cutback reports as "disastrous," "catastrophic" and "calamitous."

Wright Patman (D., Tex.), chairman of the House Banking and Currency Committee, and John Sparkman (D., Ala.), chairman of the Senate Banking, Housing and Urban Affairs Committee, also deplored the reports.

Patman solemnly promised that his committee would not sit quietly while the Administration "destroyed" the programs.

Sparkman announced: "We cannot let stand this arbitrary exercise in executive power taken in violation of the housing needs of the poor and ill-housed of our nation."

Cloud over the big top. So it was no wonder that the builders were apprehensive, reflecting the somber skies of Houston, in striking contrast to the glitter of the exhibit area where more than 500 building-materials and equipment suppliers displayed their wares. Doubt and uncertainty about what Romney would say and what it all might mean to housing were probably reasons why registrations reached an all-time high of 56,-

A call for an apology

Dramatic confrontation came between Secretary Romney, who disclosed freeze on subsidy starts (above left), and former NAHB President Leon Weiner, who took to microphone to criticize action. A shouting match erupted, and Romney stalked out in a fury.

219—some 1,416 over last year's record. Figures on the total number of actual builders present were not available, but past years' audits suggest from 15,000 to 16,000.

Fear. Builder Vondal Gravelee of Birmingham, Ala., seemed to sum up builders' worst fears: "It's not just a moratorium. They're saying, 'Let's cut the programs off.""

Romney first assured the builders that subsidized housing starts would continue at an annual rate of 250,000 HUD units for the next 18 months—about the time required to enact new legislation—and that the temporary halt would not keep total new starts from exceeding two million units for the third year in a row. The 250,000 would exclude mobile homes and farm units.

The hold. Romney then spelled out details of the freeze. He said all HUD offices had been directed to place a temporary hold on all subsidy-housing applications that had not received feasibility approval, or a preliminary loan approval contract in the case of public housing, by the close of business January 5.

The hold covers the FHA sections 235 (purchase) and 236 (rental) programs, public housing and rent supplements, and it will be extended to model cities and urban renewal July 1.

Romney also said a freeze had been ordered on water-andsewer and open-space grants and public facility loans until they can be folded into the President's Special Revenue Sharing program. Some observers felt that the freeze was a means of forcing Congress to act on revenue sharing legislation at this session. Farm moratorium. Romney

made his announcement on January 8, and the next day the Agriculture Dept. said virtually all housing loans and grants being made by the Farmers Home Administration would be suspended.

The rural housing suspension was more severe than HUD's. Romney termed his agency's freeze "a temporary hold of indefinite duration," and he stressed the consideration that many applications in process would proceed. Farmers Home decreed an 18-month moratorium on rural housing subsidies and said only those applications certified for approval by January 8 would be honored.

Romney endorsement. "I am personally delighted that the Administration had decided to stop doing business as usual on these programs," Romney said, because-as he had often charged-"by 1970 it had become crystal clear that the patchwork, year-by-year piecemeal addition of programs" over a 30-year period had created a "statutory and administrative monstrosity that could not possibly yield effective results with the wisest, most professional management systems."

Citing the ravages of several of the programs in the cities, Romney warned:

"The time has come to pause, to re-evaluate and to seek out better ways."

Romney also waved off the cries of anguish from the home builders with the comment:

"That just goes to show you how quickly people can feel deprived if their pipeline to the public treasury is affected in any way."

Bitter reaction. Waranch, who followed Romney after the secretary's press conference, was asked if he didn't think "disastrous, catastrophic and calamitous" were not silly assessments in view of the assurances the secretary had just given.

"No," Waranch snapped. "When people who are already committed to tract planning must stop, that's catastrophic."

Housing had been made the "scapegoat," he said, and he charged that "the Administration has no program. All it wants to do is stop everything." He warned:

"You just cannot turn off the switch and expect, when you turn it back on, that housing will spurt."

Romney first disclosed the hold in the press conference. He then went before a session of 3,200 builders, and his speech led to the convention's most dramatic confrontation.

**Explosion**. Leon N. Weiner of Wilmington, Del., a former NAHB president whose company does about 60% of its building in low and moderate-TO PAGE 8

# Introducing a beautiful side of

We don't have to tell you about GAF's existing roofing, flooring and siding products. Judging from the way you've accepted them, we know they've done a good job.

That's why we think you'll be pleased to hear that GAF is now in the vinyl siding business.

The name of our vinyl siding is Vanguard<sup>™</sup>. And that means leader. Unlike non-vinyl sidings, Vanguard keeps its good looks all by itself.

That's because the colors, (there are 4 of them) go clear through the vinyl. So Vanguard won't show scratches, and never needs painting or finishing.

And since it's weather resistant, it won't rot or corrode either. Which means it'll last as long as the house you put it on.

What's more, Vanguard's lightweight panels are much quicker and easier to install than most other types of siding. They can be cut and worked with ordinary tools. Special nailing flanges and preformed nailing slots help you put it up quickly and neatly. And, of course, there's no on-site painting or finishing for you either.

Finally this great new siding comes

with GAF's 20 year warranty against manufacturing defects.

Vanguard Vinyl from GAF. We think you'll be glad to have us on your side.

For further details, call your GAF Building Products distributor or write: GAF Corporation,

Building Products Division, Dept. HH-23 140 West 51 St., New York, New York. 10020

The NAHB leadership now has a Hart-and a new beat on subsidy policy

John C. Hart of Indianapolis, Ind., was elected vice presidentsecretary of the NAHB at the Houston board meeting after he criticized the present leadership for "overreacting" to the subsidy halt (see p. 4)

The directors chose Hart over Ernie Becker of Las Vegas, Nev., who billed himself as the "independent" candidate, and Larry Simons of Staten Island, N.Y., who was backed by last year's challenger, Merrill Butler of Anaheim, Calif.

There were no contestants for any of the other posts and George Martin of Louisville, Ky., became president, Lewis Cenker of Atlanta, Ga., became first vice president, and J.S. (Mickey) Norman of Houston, Tex., became vice president and treasurer by unanimous vote.

Politician. Hart, who is serving his third term as a Republi-

**NAHB's '73 team** is led by President George C. Martin (*left*), with First Vice President Lewis Cenker, Vice President and Treasurer J.S. (Mickey) Norman and, stepping aboard the electoral ladder, Vice President and Secretary John C. Hart of Indianapolis, Ind.

can member of the Indiana House of Representatives, based his campaign on the value of his political experience to the NAHB. He revealed his differences with the present leadership when he told the directors:

"I felt we would probably overreact to the president's decision [on the subsidy halt]. I'm sorry we did."

Hart made clear his belief that

the solutions to the industry's problems do not lie in Washington and that, in fact, some of the problems are caused by Washington.

"Builders are attempting to cut red tape to reduce costs in order to deliver their products at a price consumers can afford without subsidy," he said. "Restrictive and costly government policies are thwarting this." **Resolutions.** The NAHB board passed resolutions expressing "outrage" over the subsidy cutback, calling on President Nixon to lift his embargo on sewer and water funds, urging continuation of the Farmers Home Administration in its present form; asking that Title VII legislation be amended to include developments in outlying areas as well as the inner city and supporting wage stabilization.

The board called for a "March to Washington" to protest lumber prices and recommended a series of changes in the Economic Stabilization Program dealing with the lumber industry.

Finally, it recommended that no one be confirmed as secretary of HUD who does not support the housing goals called for in the Housing Act of 1968.

-NATALIE GERARDI

#### Houston '73: Romney's bomb-outrage-and turn to moderation . . . continued

#### FROM PAGE 4

income housing, had taken to the microphone to challenge Romney on the 250,000 HUD starts. Weiner said such a level was inadequate to the nation's needs: 800,000 would be more like it. Parenthetically, Weiner said he did not agree with Romney on the success of Operation Breakthrough—Romney's pet project.

Romney, on his way from the hall, ran back to interrupt: "Let's don't be demagogic about it. Let's be practical."

He said the 250,000 included HUD starts only, and he shouted that "until we can get rid of restrictive building codes and zoning restrictions and other things hamstringing the housing industry, we are not going to meet housing needs except on the taxpayers' pocketbooks."

Applause thundered, but Weiner returned to the dispute.

"And when will we see a program that advances to that?" he demanded above the din.

Romney whirled, jabbing a finger angrily in the air.

"You kicked my Operation Breakthrough around," he stormed, "and no other single program had done more to focus attention on the need to get rid of construction obstacles than had Breakthrough. "When I took office, there wasn't a state with a state-wide building code. Today there are 27. And you stand up here and kick me around for it.

"And I don't appreciate it."

With that, he stomped out to a roar of cheers and applause.

An apology. A stillness fell on the crowded hall as Romney left, and then a lone voice spoke as if in shock.

Dan J. Brutger of St. Cloud, Minn., softly urged that Waranch apologize to Romney.

"I think the occasion could have been different," Brutger said. "I think it's an unnecessary way to attack somebody who has supported this group."

Brutger, 42, a subdivision and apartment builder, said later in an interview:

"It was a matter of etiquette. From the applause I got, I wasn't the only one who felt that that was not the proper place.

"It was like inviting someone to your home and then attacking him."

Weiner later maintained that Romney had not let him finish what he was going to say. He had been about to ask Romney to join "with us" in going over the head of the Bureau of the Budget and urging the President to allow more subsidized housing.

John B. Connally, the former

Texas governor, went to great pains the next day in order to reassure the builders. He represented the hold on subsidy starts as reasonable and desirable in the context of the fight against inflation.

Connally pointed out that the builders had enjoyed three years of unparalleled prosperity, and he replied to a question: "I think the boom will continue. I'm sure it will."

He was also asked:

"The NAHB has described the President's action as disastrous and calamitous. Do you see it as anything like that?"

"I certainly hope not," came the reply.

"I don't think they [builders] ought to assume that this will be disastrous or calamitous, because I don't think it will [be]."

Division in ranks. Throughout the Romney-Weiner confrontation and the Connally appearance, there was strong evidence that dismay with the Administration's freeze was far stronger in the NAHB leadership than among the rank and file, most of whom do not build under subsidy.

George C. Martin of Louisville, Ky., the NAHB's new president, told newsmen that "disaster" threatened, a position that seemed to contradict that taken a few minutes earlier by John Hart of Indianapolis, Ind., the newly elected vice president, who thought the NAHB might be overreacting to the hold order. He declined to elaborate.

Martin said he would press the bid made by Waranch for a meeting with President Nixon, and he promised to talk with HUD officials to find out just how subsidized starts would be kept at their present levels through fiscal 1974.

Most economists had forecast a decline of about 10% in housing starts in 1973 after a record 2.3 million starts in 1972. But the NAHB and several builders interviewed on the convention floor after the freeze announcement predicted the decline might now run to as much as 20%.

Snowedout. The convention's last day brought Houston's first snowfall in 22 years, decimating the crowds to a thin red line of hearty souls.

One suitcase-laden man in a balaclava bounded off an Astrohall bus and blurted into the deserted registration area: "The convention. My God, where is the convention?"

"It's still in there," an observer grinned. "Somewhere."

-Bob Lee McGraw-Hill News, Houston

# NEW KWIKSET DOUBLE SECURITY LOCKSET PROTECTS TWO WAYS

It protects against burglary. It protects against panic. Unlike ordinary deadlock and lockset combinations, Kwikset's new Protecto-Lok can be opened from the inside by simply turning the knob. No need to turn both the thumbkey and knob before the door

Maybe this doesn't sound important. Until you think how vital it can be to someone inside a room where fire has broken out. Then the simplicity of Protecto-Lok, and the seconds it saves could very well be the difference between life and death.

Protecto-Lok is just as effective at keeping people out. Up top, is Kwikset's all-new cylinder deadlock with a 1" brass deadbolt, that contains a hardened

KWIKSET DAL

steel rod and a solid brass cylinder protected by a heavy-duty steel cylinder guard. Below, a rugged, reliable Kwikset entry lockset equipped with an extra security deadlatch. Both cylin-

ders are keyed-alike for ease of use. In between, on the interior, is a handsome decorative metal cover protecting the precision mechanism. There's also a choice of distinctive trim rosettes for the

All together, it's quite a lock. Looks good any way and protects two ways. Maybe it should be called Protecto-People

#### **NEWS/CONVENTION**

#### The subsidy cut-off: The builders don't take it as hard as their leaders

Builders interviewed on the convention floor found it hard to believe that an Administration that had treated them so well in recent years could suddenly turn around and shut off subsidy funds. Still, most did not share the NAHB leadership's sense of "outrage" and "disas-

ter" [see p. 4] over the halt, although many-whether or not they built subsidy housing-were apprehensive about its effect on the industry. Here are reactions from two men who are directly affected by Washington's decision to halt subsidies, and six who are not.

The first reaction was panic. But after talking with knowl-edgeable people immediately below Romney, I understand they're going to work it out so that there's no real hardship for anyone involved. If everything were cut off immediately, it could be disastrous for me; but they're going to make a smooth transition period.

-HAROLD VAN WERDEN Van Werden Construction Co. Kalamazoo, Mich.

It's something that had to be done. A period of readjustment is necessary. We've just turned over the last phase of a turnkey project and we don't have any others in the pipeline. The regular market is quite substantial and there's really no need for us to become involved in subsidy programs, so that may influence me a bit.

> -HARRY HOFFMAN Hub Hall Co. Lincoln, Neb.

I don't build under section 235-236 and it hasn't affected me at all. Naturally the builders who are in the program are upset. I think there's enough inventory to last for the next 12-14 months and then the government will probably come up with a substitute program because they can't cut off production just like that. -LEE A. GIFFORD Lake Smith Terrace Virginia Beach, Va.

What Romney said here is contrary to everything he said last week. I think it's a terrible thing that the government has such a low priority on housing. We don't build under the programs, but I'm aware of the need for them.

-SAMUEL M. TRIVAS Robert & Harry Meyerhoff Bldrs. Baltimore, Md.

I'm sure some compromise can be effected that would serve the Administration's need to be frugal, to hold to the budget line, but I think it's a serious mistake to shut off the entire program. I hope that they will reconsider. -JOHN A. STASTNY

John A. Stastny Co. Berwyn, Ill.

-WILLIAM LYON WL Builders Corp. Newport Beach, Calif.

I don't know what impact it's going to have on my projects but I'm afraid the FHA people are going to become uncooperative again. I think the Administration is trying to use the housing industry as a whipping boy, and that's not the thing to do.

> -WILLIAM A. WILSON Wilson & Associates Raleigh, N.C.

It doesn't affect me because I'm on the other end of the price scale, but I'm sure it will have a tremendous effect on the industry. It could almost put the largest builder in our area out of business.

> -GERALD EDWARDS Edwards Construction Co. Ft. Smith, Ark.

## HOW WE CAN PROMISE YOU NOW THAT WE WON'T RAISE OUR PRICES ALL YEAR.

Telling you now what our cabinets will cost in December — and guaranteeing it — let's you make commitments you couldn't make before. And in this business, commitments are important.

By knowing your costs now, for the whole year, you can better plan your business for the whole year.

As the leading manufacturer of kitchen and bathroom cabinets, Triangle Pacific is not only able to make long-term promises. We're able to keep them.

For one thing, because of our size, we're less affected by unforeseen circumstances. Six factories, strategically located, make us less vulnerable to local problems than if we had only one.

Also because of our size, we're better able to offset increases in the cost of labor and materials by greater productivity and volume.

And even if we promise something and later find out it was a mistake we have

the resources to be able to live with our mistake. We've held our prices since the middle of 1971, while at the same time making improvements in our line.

Our plastic drawer, for instance. While it cost a lot to develop, it costs less to assemble. Net result: no increase in price.

Enthusiastically accepted by both builders, and consumers, it's just one example of how we can pass advantages on to you without charging you for them.

But there's another area of our business that's just as important as price.

Delivery.

At Triangle Pacific, we never promise you cabinets faster than we know we can deliver them. Even if it means having to turn down business.

We honor our commitments, so you can honor yours.

So, write or call and ask us to send you more information. One of the things you'll get is our price list.

It could turn out to be the only one in the business that will be good all year.

# Evans introduces Bright-Ons'

Now you can design, build, decorate and remodel as bright as your imagination with Bright-Ons. Bright-Ons join the Grand Illusion Line to let you offer homes, restaurants, offices, motels and apartments a low cost, but beautiful new idea in decor.

This brilliant new breakthrough from Evans comes in a rainbow of House & Garden colors, in solids, patterns and

textures — so you can mix and match and coordinate with hundreds of manufacturers using House & Garden colors. Bright-Ons also work beautifully with all other panels in the Grand Illusion Line. What's more, Evans offers matching moldings; colored nails; adhesives; and accessories. Plus — Evans offers you the largest line of prefinished wood paneling. Now you can brighten your building capabilities with Evans new mix 'n match lightweight plywood panels...

Motels/Hotels

Bright-Ons – they're available through any of Evans 54 distribution centers. And they're going to mean a bright future for you and your customers. For further information about Bright-Ons, write to Evans Products, 1121 S. W. Salmon St., Portland, Oregon 97205 or call your local Evans

#### NEWS/POLICY

#### New housing handbook details subsidy program failures and backs allowances

**Question:** How could a major piece of legislation zip through the Senate smelling like a rose and then stink up the House of Representatives so badly that some members finally walked away, thankful that they didn't have to vote on it?

Answer: Most of the 80 senators who voted for it had only a vague idea what they were voting for when they voted for the 1972 Housing and Urban Development Act. But the next time around, whether this year or next, several more senatorsand House members too-will have to pack in some basic knowledge about housing programs, how they're supposed to work, how they actually do work and what is the best housing that the federal government can buy for the few billions of dollars each year that is going to be spent on them.

Politics. The senators and congressmen now know that housing programs pack a political wallop that can hurt. That means that more of the leaders who have paid little attention are now going to learn something about them and have something to say about them. No longer can they safely leave it all to the committee chairmen and a handful of their colleagues.

It's a good guess that President Nixon and his top man on housing policy, John Ehrlichman, would like nothing better than to wipe the slate clean and start again from scratch. It's also a good guess they will take their time, though, as they plan for some nugget of a program to replace the subsidy programs that have gone so badly awry that Congress last year gave them only a temporary six months' lease on life.

A guidebook. For the senator, homebuilder, banker, college professor, college student or housing bureaucrat who seeks a guidebook to this suddenly prominent but largely unknown territory, a best buy is Dr. Henry Aaron's Shelter and Subsidies: Who Benefits From Federal Housing Policies?

Aaron's book, published by the Brookings Institution for which he works, is 170 pages of prose split into ten chapters entitled Taxes and Housing, Low Rent Public Housing, Housing Policies and Income Distribution and, finally, Home Delivery: How and for Whom?

All that sounds like heavy going. But it averages out at about 17 pages per chapter, and they're about as easy to read as it's possible to make a book on a subject that is inherently as complex as brain surgery.

Allowances. Aaron says it's an overstatement to call him the leading exponent of the housing allowance—as was suggested when he appeared recently as a panelist before Senator William Proxmire and the Joint Economic Committee.

But he admits he is red hot for the housing allowance experiments that are now being financed by the Department of Housing and Urban Development. He also believes that it is neither necessary nor desirable that implementation of housing allowances (on a larger scale) await the completion of these

CRITIC AARON Guide to housing program maze

allowance experiments.

Aaron is well aware that "as a practical matter, a universal, full-scale allowance (program) is unlikely to be proposed because of budget limitations." But he does believe that a gradual introduction of such a scheme should begin soon, without dumping existing programs.

Failure of subsidies. Aaron agrees that existing housing programs have added "significantly to the stock of housing available to low income households," but

#### The latest in condominiums—a hotel: Marriott converts its Camelback Inn

Marriott's 408-room Camelback Inn in Scottsdale, Ariz., is the first U.S. hotel to convert to condominium ownership.

The company has come up with a new twist on the condominium approach, however. The purchase price—which ranges from \$40,000 all the way to \$275,000—entitles the buyer to use his unit only four weeks of the year. During the rest of the time, Marriott treats the unit as an ordinary hotel suite and rents it to the general public.

Benefits. The company believes its plan will appeal to potential investors because, says Fred Boulineau, vice president of Marriott Corp., "owners should qualify for tax deductions that the federal tax law normally prevents second-home owners from taking."

Buyers will receive a share of the income derived from operating the hotel, which Marriott will continue to manage. This, is another major selling point:

"The problem with buying a conventional condominium is that you rarely have professional management and you're never certain what will happen in the long run," he explains. "Devela profit. Once you buy, they moveout of the picture. We have a track record as successful resort managers and we'll continue to manage."

**Builders' rival.** The Camelback conversion is the beginning of Marriott's bid for the secondhome market. Eventually the company hopes to develop a worldwide string of condominium hotels and perhaps to offer an exchange option that would allow owners to exchange vacation time in their condominium for time in another location.

#### Fed lets Arkansas bank buy mortgage banker

The Federal Reserve Board has approved the application of First Arkansas Bankstock Corp. of Little Rock, Ark., to acquire L.E. Lay & Co., a mortgage company also of Little Rock.

First Arkansas controls three banks with total deposits of \$305 million. L.E. Lay services \$82.1 million in mortgages.

Earlier the board had turned down the application of Crocker National Corp. of San Francisco to acquire the Ralph C. Sutro Co., a Los Angeles mortgage he contends that subsidies tied to new construction—the approach that the homebuilders and their allies defend with all the fervor they can muster— "use more real resources than necessary to raise housing standards to existing levels." He correctly points out that these programs "create inequities and arouse political opposition that will lead to their curtailment."

He also sees the block-grant approach, as a replacement for present programs, as "an abdication of federal efforts to solve the housing problem" by tossing the responsibility to state, local or regional authorities.

**Program direction.** Further decentralization (which is likely to be a major focal point of the upcoming housing battles in Congress) "could only occur if the federal government abandoned all efforts to assert a national interest in housing," Aaron asserts, "since the administration of most programs is already effectively decentralized."

Regardless of one's own view on all this, Aaron's handbook, including its 50 pages of appendices, is a bargain at \$7.95 for the hard-cover and \$2.95 for the paperback version.

To the homebuilder who wants to fight the housing allowance, the book is the place to learn what the enemy has going for him. To those who want to know what makes the huge housing industry work the way it does, Aaron tells who benefits from the tax dollars and what it costs.

Misdirected aid. As Aaron points out, most federal housing policies "directly assist groups whose incomes and housing are adequate by most standards. Many federal programs subsidize costs of construction, in general, instead of low income or badly housed families."

That's because, he suggests, the taxpayers who would have to pay for a system of housing allowances "may have aims better served" by the kinds of subsidies that have created our present housing problems.

The book is available from the Brookings Institution, 1775 Massachusetts Ave. N.W., Washington, D.C. 20036.

## JENNIAR The highly visible 'extra' that prospects talk about... and come back to.

In an age when *outdoor* char-flavor grilling has become a national pastime, Jenn-Air brings the pastime *indoors*... and stirs your prospects imagination.

Jenn-Air's grills, ranges and range-grill combinations give your "modern living package" a powerful added appeal.

At very first sight, your prospects can picture themselves enjoying the fun and flavor of Char-Flavor grilling year 'round in their new home.

What makes it possible is a unique, new ventilating principle. The Jenn-Air "proximity vent" lets smoke bathe foods with charcoal flavor, and then quietly and efficiently exhausts it outdoors. Proximity ventilation replaces the

overhead hood and allows for more imaginative kitchen plans.

So outdoor grilling truly comes indoors . . . for en-

tertaining, for family fun, for good eating any time. The possibilities are fun to think of.

And that's the beauty of it. Even while your prospects are "just looking", their imagination has already moved in. Jenn-Air models include the exciting new range that converts to a grill in seconds plus a single grill version and free standing or drop-in range/grill/oven combinations. There's a model to fit every builder's budget.

For the name of the distributor serving your area call TOLL FREE:

## It's easier to sell a house when it looks as if it's worth the price.

Most people don't know much about building, but they do know something about brick.

They know that, unlike aluminum or wood, brick is durable, provides good insulation and is almost maintenance-free. And that it is the ultimate in fire protection. When potential buyers see brick, they're impressed.

So a smart builder uses brick. Especially in exterior walls.

He knows that the outside of a house is good for about 80 per cent of a buyer's first impression. And only about 5 per cent of the house's cost.

He also knows that if the first impression isn't a good one, he usually won't get a second chance.

A smart builder uses brick for inexpensive custom touches, too. To make the house look as valuable as it is.

After all, a buyer doesn't know as much about your house as you do. So you have to give him a little help.

#### NEWS/POLICY

Making an Impact: An editor tells HUD's most embarrassing secrets

Al Louis Ripskis is a \$21,000-ayear program analyst who is fast making a name for himself at HUD.

His fame springs from his role as the muck-raking editor of a monthly newsletter called *Impact*. It has carried a whole series of provocative stories to the effect that:

• A "very high HUD official cavorted with his female assistant all over the country at taxpayers' expense."

• A confidential memo from one of George Romney's area directors, William Whitbeck of Detroit, contained some of the severest criticisms ever made of Romney and his administration.

• The \$7-million-a-year output of the Urban Institute, which is supported primarily by HUD funds, is nothing but a "torrent of verbiage."

• Top officials at HUD hurriedly approved expenditure of \$20,000 for two new 80 foot flagpoles which appeared across the street at the headquarters of the Department of Transportation.

Sense of mission. Since September these and other stories have been winning favorable publicity from Washington's newspapers and the wire services. The Ripskis name is now at least as well known among HUD's 13,000 employees as that of incoming Secretary James Lynn.

Ripskis' \$5 - a - subscriber newsletter is personal journalism of the Jack Anderson variety but it's a rare variant, since the editor is openly engaged in hitting at the brass that run the department he works for.

Ripskis doesn't think he's biting the hand that feeds him. He's working for the taxpayers, he says, and they have first claim on his loyalty. He urges other HUD employees to look at things the same way.

Tipster network. Ripskis admits that he has already become a minor folk-hero at HUD for his zeal in needling top officials, including the secretary. The newsletter prints information fed surreptitiously to Ripskis by HUD staffers in Washington and in regional and local offices. An official who has watched the operation concedes that Ripskis and his allies know enough about HUD's operations to get in some sound licks-and

HUD's gadfly editor, Al Ripskis: "Mismanagement, incompetence, waste, corruption."

for a lot of reasons it may be difficult for Secretary Lynn to fire or restrict his own critic.

Ripskis says he is exposing "mismanagement, incompetence, waste and corruption at HUD." He's trying to organize an underground grapevine of like-minded bureaucrats to help him out. Besides his following at HUD—where employees give wide circulation, via Xerox, to his newsletter—Ripskis claims he's getting subscriptions among the "builders, bankers and real estate speculators" who, he says, deserve the lion's share of the blame for "the mess at HUD."

Results. The newsletter is read attentively, and Ripskis claims he gets feed-back indicating that

#### Rents freed; lid kept on pay, prices

The great gamble on voluntary self-restraint, which President Nixon has announced for wages and prices in phase three of his anti-inflation campaign, extends to rents but not to construction.

Construction prices and wages remain controlled, as they have been since March, 1971, by the Construction Industry Stabilization Committee.

Mortgage and other interest rates, which Washington never subjected to mandatory controls, will continue to be monitored closely, as before, by the jawboning Committee on Interest and Dividends.

Interest rates. Since wage and price controls were deemed by many observers to be worth as much as 1% of the 3%-to-5% inflation rate, however, yields are expected to move up faster now than they would have done if wage-price controls had been restrained—in part because the Federal Reserve may opt for a more stringent monetary policy. Within 24 hours of the President's announcement that controls generally were going voluntary, the Fed announced it was raising the discount rate it charges commercial banks for loans to 5% from  $4\frac{1}{2}$ %.

Rental market. Rents are not expected to rise.

One deterrent is the sheer excess of rental dwelling space in most areas, a factor that has already caused a tapering of multifamily building. Too, revenue sharing money from Washington will curb the upward pressure on rents exerted by rising property taxes. And mortgage rates aren't rising at a clip that would push rents up much.

Lumber. The general lifting of mandatory controls had another consequence that may increase construction costs. The special surveillance launched four months ago by the Cost of Living Council and the now defunct Price Commission into lumber pricing, after evidence of evasion of controls, has been killed. This means lumber producers, processors and suppliers will be left to comply voluntarily with the price limits they were not observing on a mandatory basis.

—STAN WILSON McGraw-Hill World News, Washington

his exposures have brought corrections of difficulties that would otherwise have been swept under the bureaucratic rug. But the question remains:

How long can he keep it up without being cut down?

Ripskis says he is careful to do all his work on his own time, and he asks:

"What grounds can they use?"

Siberia? Ripskis had a predecessor, Jay Thal, who edited, with Ripskis' help, a newsletter called *Quest*. Thal suddenly drew a four-month assignment to Alaska, during which time *Quest* foundered.

Ripskis, who was born in Lithuania, says he was incensed at this treatment, which he compares to the exiling to Siberia of some of his relatives by the Russians. He stepped into the breach with *Impact*.

The new editor is frank about his willingness to put his job on the line. He's a 35-year-old bachelor, and he is seemingly stirred by the same motivations that drive Ralph Nader. He thinks he can do a better job, since he's already had 11 years experience with HUD. He also feels he can be more effective by working on the inside the way he does.

Pledge from Romney. Ripskis has even won recognition from Romney, who made both favorable and unfavorable comments about *Impact* during a holiday get-together with employees in the HUD cafeteria. People such as Ripskishave aright to publish, Romney said, and in no way would he try to block them.

Whether Secretary Lynn will find a way to squelch Ripskis remains to be seen, of course. Ripskis says he's already getting information on Lynn from Lynn's fellow bureaucrats at Commerce—data that could turn up at Lynn's confirmation hearings.

With Romney gone and Lynn expected to be much more responsive to White House direction, Ripskis may find himself reorganized out of his job, or perhaps riffed (for reduction in force) during the shakeup that Lynn is expected to make at HUD.

And yet again, Ripskis may continue to enhance his stature in the role he likes to describe as that of the taxpayers' editor. —D.L.

Dick Prows and the Nord Classic entry door used in his 222 unit condominium, Three Fountains East.

### "4 reasons why we like Nord doors."

Richard Prows, President of Richard Prows, Inc., Salt Lake City, has designed and built more than 2,500 residences. He buys Nord doors for 4 reasons. He likes their design and appearance, their ready availability, their competitive prices, and, as he says, "a stability of quality we can depend on."

#### The Prows total living concept

Today, all of Prows' homes reflect his philosophy of the total living concept. His firm develops the land, then designs, builds, and markets the residences. One outstanding example is Three Fountains East in Salt Lake, a 222 unit condominium, priced from \$20,000 to \$45,000. Each unit has the Nord Classic carved entry door shown left as its "focal point of interest." Inside, Nord louver doors continue to complement Prows' imaginative design.

#### A parallel philosophy

Nord's philosophy is as basic as Dick Prows'. Nord combines natural wood with modern technology and old-world craftsmanship. So electronic gauges reject any air- and kiln-dried lumber still retaining undesirable moisture. But in the end, all Nord doors are hand-finished by skilled artisans, and builders get doors of distinction at "commodity" prices.

Our new full color brochure, "33 Ways Nord Makes It Better," tells the story and illustrates the variety of Nord designs. Just put your name and "33 Nord" on your business letterhead and mail it to E. A. Nord Company, Everett, Washington 98206.

NORD makes it better-naturally

### Molding that's even easier to use than wood!

Georgia-Pacific's new Vinyl Shield® polyvinyl chloride moldings have the advantages of wood without the disadvantages. They cost no more than many wood moldings. Resist splitting, scratching and denting. They're flexible. Easy to cut, nail and paint. And come in lengths up to 16' with no shorts to sort out. Prefinished in off-white and woodgrains. Can be left as is or painted to harmonize with room decor. A gypsum fire and sound control system that saves you up to \$36 per thousand square feet of wall area!

Georgia-Pacific's gypsum system for fire and sound control gives you a one-hour fire rating (U.L. Design ULU312), and an STC of 45. And it costs \$36 per thousand square feet of wall area less than using a comparable wood fiber sound control system. It saves you installation costs too, because it's so easy to install.

# Doors that are prefinished and pre-hung!

Georgia-Pacific's Vinyl Shield<sup>®</sup> pre-hung doors are already finished. No painting or staining, so you save installation costs. And there are tough vinyl surfaces on both the door and the jamb/casing so dirt and stains wipe clean quickly. Easily. Units are available in woodgrain patterns, plus new solid white.

# Real hardwood paneling\* at an imitation price!

New Renaissance<sup>™</sup> paneling. It's the new antique look. At old-fashioned prices. Renaissance comes in six warm shades of real hardwood face veneers, for as little as \$8 per 4'x8' panel. Georgia-Pacific makes other kinds of paneling, too. In fact, paneling in every style. Every price range. For any type of home.

\*Simulated antique finish plywood 1/4 "

#### California builders get a 120-day delay in environmental impact ruling

California has enacted a 120-day moratorium in enforcing the state Supreme Court's decision requiring environmental impact studies before construction begins on any private project that could have a significant effect on the environment [NEWS, Nov. '72].

The new law\* legalizes all projects on which construction had started before the court decision, and it spells out steps to be followed by the State Office of Planning and Research in developing guidelines for local agencies' requirements.

Guidelines. The court's precedent-setting decision had created a near panic among builders, who feared that every governingbody could interpret it in its own way. The guidelines, which are to be drafted by February 1, should ease that fear.

The new law requires that guidelines specifically include criteria to be used in determining

\*Assembly Bill 889, signed by Lt. Gov. Ed Reinecke in absence of Gov. Reagan. whether or not a proposed project may have a "significant effect on the environment." A significant effect may mean that a project has the potential to degrade the quality of the environment, curtail its range or achieve short-term instead of long-range environment goals.

Projects halted. The Supreme

#### California sets stiff new insulation standards

Governor Ronald Reagan has signed a bill that requires the Commission of Housing and Community Development to establish minimum insulation standards by Jan. 1, 1974 for new hotels, motels, apartment houses and homes. The purpose is to conserve fuel and save the home buyer money.

California is the first state to establish such standards. The bill says the new rules can match or exceed FHA's minimum property standards for most housing but that completely new requirements must be set for buildings more than three Court's decision had halted some \$1 billion in construction. Among the larger projects that may now proceed under the new law are two Lan-Ron developments totaling \$17 million in Orange County, a \$12.5 million El Dorado Homes project in Riverside and a \$6.5 million project in San Bernadino, three K-A-E

stories high.

"Proper insulation could eliminate the need for one new power plant every three years," says Senator Alfred E. Alquist (D., San Jose), the bill's author and chairman of the Senate Public Utilities and Corporations Committee.

Alquist also pointed out that adequate insulation would lower energy demand during hours of peak use and that the home buyer would recoup the initial cost in a year or two because of lower heating and air conditioning costs.

-T.A.

Inc. projects totaling \$16 million in San Bernardino, and \$5.5 million worth of Ponderosa Homes projects in Santa Clara County.

Builder Frank Tobin was able to resume work on 112 apartment units in Riverdale; he's in doubt about 354 in Newhall.

Proposition 20. A developer took aim at another California building ban when his 100-unit apartment project became bogged in legal action because of the new coastline protection initiative (Proposition 20), which California voters had approved in November [NEWS, Dec. '72]. Great Lakes Properties filed a \$705 million crosscomplaint to halt 50 other projects in the state, basing its action on grounds that the coastline law forbids the beginning or continuation of any construction within the 1,000-yard-deep coastline zone before the permit system begins-projects begun before last April 1 excepted.

### Boise Cascade agrees to \$58.5 million settlement of land sales lawsuits

The company will set up a \$24million fund to cover the cost of refunds to buyers who want their money back, set aside \$21.5 million for administration and maintenance of the properties and earmark \$13 million for completing improvements.

Misrepresentation. Six lawsuits had been brought against Boise or its subsidiaries charging misrepresentation in the sale of recreational lands in 19 California subdivisions and one in Nevada. The suits included civil actions filed by the California attorney general's office and the Contra Costa County district attorney plus three class action lawsuits filed in state courts and two in federal courts.

The suits charged that the company had not provided the promised recreational facilities, had misrepresented the value and investment potential of the land, given false information about possibilities of lot-splitting and made empty promises about plans for access roads and highways. They also charged that sales personnel had used two-wayradiostoimplythat lots were selling fast.

No wrongdoing. The settlement must still be approved by the six different courts, but no difficulty is expected.

"It will avoid lengthy and costly litigation and provide a fair and speedy way of settling outstanding land sales claims," said George McGown, vice president of Boise Cascade and gen-

California Attorney General

Evelle Younger, who had filed

some of the suits. "Those who

want out are getting out and

others who didn't want out but

"It's a complete settlement as

part of Boise or its salesmen.

McGown emphasized that the

HALLCRAFT'S CEDERQUIST Into the president's chair

wanted improvements are getting those."

Statewide problem. Younger called rural second-home subdivisions one of the major environmental and investment problems in California. He noted that difficulties with such subdivisions are not peculiar to Boise Cascade's projects, but that Boise probably was the number-one developer of such lots and had sold more in a short time than other companies. Younger indicated that his office will soon initiate action against other land developers as well.

Boise sold over \$360 million of recreational land in California and Nevada from 1967 until July 1972, when it announced it was discontinuing its sales program [NEWS, Nov. '72]. At the time the company announced a \$200 million extraordinary charge, most of which was intended to cover the cost of withdrawing from land sales. Disbursements resulting from the \$58.5 million settlement will fall within reserves created at that time.

#### **NEWS**/FINANCE

#### Hottest question in mortgaging: Will housing lose its special lenders?

At the very time when Congress is least willing to take up the Nixon Administration's proposals to make mortgage-lending thrift institutions more like banks, the institutions themselves are ironically indulging an urge to dabble more widely in banking.

The stakes for the housing industry are high. The basic questions are whether the nation's whole financial structure may be rearranged along lines suggested in the well-known Hunt Commission report, and whether such restructuring may in time erode the specialization of institutions in mortgage finance.

As the Nixon proposals shape up, savings and loan associations and mutual savings banks would be given the same checking account, consumer lending and credit card powers that their rivals, the commercial banks, now have. In return, thrift institutions would give up tax and deposit yield ceiling advantages that have always protected them, as specialists in mortgage lending, from bank competition for deposits.

The swap would create a homogenous army of diversified lending giants, all able to thrive in a credit squeeze but none with any last-ditch loyalty to housing.

**Check mates.** However cautious Congress may be about picking up this risky proposition—even hearings will be delayed until late 1973 at the earliest—thrift institutions themselves are developing a mouthwatering interest in a key component of it, checking accounts. The thrift men call them "thirdparty payments."

The reason is clear. The thrift men fear that commercial banks will take a quantum jump ahead in the competition for savings by going to electronic fund transfer systems. The EFTS will be the base for the cashless, checkless society that is believed to be only a few years off.

The thrift men are afraid that, if they are frozen out of the dazzling conveniences of the new technology, their own onequarter percentage point deposit yield advantage will mean little to depositors. The specter, then, is a loss of lending funds.

Savings banks. With its eye on the struggle for deposits, the National Association of Mutual Savings Banks was the earliest backer of the Hunt Commission package. Says its vice president and chief economist, Saul Klaman: "If all the money goes to commercial banks, we can't do mortgage loans. One hundred percent of zero is still zero."

Klaman takes the view of the Hunt report authors, also shared at the Federal Reserve Board, that diversified institutions bulwarked by a secondary market for mortgage securities can do more to insulate housing finance than specialized lenders.

But the savings banks draw the line at business credit, and their leaders expect that such banks will always be consumer institutions.

The S&Ls. The savings and loan profession is more circumspect, but it also feels the lure of the EFTS. Neither of its two trade associations has endorsed the Hunt Commission package because S&Ls regard their present deposit yield advantage over commercial banks as essential. But at the same time, they want to join the new EFTS society and they want more consumer lending powers.

"The trick," observes an industry source, "is to do anything necessary to protect the rate spread while getting a foot in other doors."

The S&Ls still see themselves destined to play a specialized role, says the source, sticking to real estate, savings and consumer loans. "Basically and philosophically," he says, "even the young guys in the industry realize the grass isn't all that green in banking."

Warning. The hankering of S&Ls to move on the EFTS front still worries a friendly official, who believes that their specialization remains the base of their prosperity and thinks they risk the loss of that special housing status in the eyes of Congress. With misgivings, the Federal Home Loan Bank Board's Thomas Hal Clarke concludes: "A good portion of the industry is heading down the third-party path."

Texas, Florida, Indiana, Kansas, Minnesota, Missouri, North Carolina, Ohio, Oklahoma, Utah, Washington and California have all given the S&Ls leeway to venture into third-party payments.

HLBB's CLARKE A word of warning

The same is even more true of savings banks. In Massachusetts and New Hampshire already, and perhaps soon in Connecticut and New York, they are waging battle for the right to offer something very much like interestbearing checking accounts —the negotiable order of withdrawal, or NOW. This development is viewed with alarm by commercial bankers, who haven't been paying interest on checking since the Depression.

"They're driving us up the wall in New England," one banking source in Washington says.

Sophisticated attack. Elsewhere, there has begun a sort of general seepage of savings banks in the direction of what bankers accusingly call checking accounts, albeit without interest. All the mutuals in Maryland offer these, and all but one in New Jersey and in Indiana. In Rhode Island all seven of the savings banks offer checking accounts through controlled commercial banks, and the way has been cleared for S&Ls to do likewise.

A Delaware savings bank, the Wilmington Savings Fund Society, has unveiled a complete funds transfer system-run on paper for now but designed by computer specialist Dale Reistad to be put on an electronic basis when a computer hook-up is available. It offers a free checking account, a related savings account paying a good yield and a commitment to the saver to permit the savings account to back up check overdrafts. With a plastic identification card, the depositor gets guaranteed credit and check-cashing privileges with all merchants signed up for the bank's program.

Discrediting the card. The Wilmington Plan gives the depositor a 2% discount on merchandise purchases, which is credited to his savings account. Says George Oram of the Federal Home Loan Bank Board: "Wilmington is wiping out Bank-Americard (in that city). They have cut all the profit out of the credit card, giving a powerful incentive to the merchant and the customer, and all the merchants are signed up."

The S&Ls are trying to persuade the Justice Department and Congress to help them join the two regional commercial bank EFTS networks already in service, centered on Atlanta and San Francisco. The U.S. Savings & Loan League's executive vice president, Norman Strunk, sees S&Ls moving quickly via the networks into automatic payroll deposits, then into pre-authorized electronic payment of their customers' repetitive bills (utility, etc.) and ultimately into full third-party electronic payments.

The profession hopes Rep. Fernand St. Germain (D., R.I.) will move legislation making clear the right of thrift institutions to enter the Atlanta and San Francisco complexes.

**Risk for housing.** At the Fed, where Hunt Commission thinking finds a congenial reception, the new trends are welcomed. Says one Fed source:

"The large S&Ls will go for the Hunt Commission proposals on purely economic grounds if given half a chance. You can't force them to make mortgage loans or to want advances from the Home Loan Banks. And with money running out their ears, they ought to have flexibility to diversify out of mortgages."

Clarke is of opposite mind. He takes pains to warn S&Ls that their flirtation with the purely banking aspects of EFTS may lead Congress to scrap their tax and yield advantages. "Once certain steps are taken, there may be no turning back," he says.

And the point of no return?

Clarke thinks it would come if S&Ls asked Congress to whittle back their obligatory requirement to keep a high percentage of their loan portfolio in mortgages. And temptation to ask this favor intensifies as thrift institutions become further involved in EFTS.

### Concrete block + mortar.

### Concrete block + new BlocBond.

Owens-Corning announces Fiberglas\* BlocBond\*\*—the new way to build concrete block walls.

Here's how it works: The first course of block is laid in a bed of mortar for leveling purposes. After that, each course is dry stacked. BlocBond is then troweled onto both sides of the wall.

Result: a wall that's three ways better than conventional concrete block and mortar construction.

A BlocBond wall is better because it's stronger. Specially developed fibers of alkaliresistant glass in new BlocBond help give walls twice the flexural strength of concrete block walls built with conventional mortar. Which means a block wall built with BlocBond can take punishment no similar wall built with mortar can withstand.

A BlocBond wall is better because it's water-resistant under normal conditions. BlocBond is applied to the *surfaces* of the wall, not between the blocks. It acts as a moisture-resistant barrier. A BlocBond wall is better because it helps you save time and money. It eliminates the need for a brown coat if stucco is specified. It's easier to paint than a bare concrete block wall. Or it can be left ''as is.''

Want to know more about the new way to build concrete block walls? Write for a free BlocBond information kit. Owens-Corning Fiberglas Corp., Att: B. J. Meeks, Fiberglas Tower, Toledo, Ohio 43659.

# Welcome to the condominium field.

This is no place like home-building. Or any other kind of development or construction.

So if you've never been here before (or even if you have) you'd better bring along someone who's been around condos from the beginning.

Namely your nearby First Mortgage Investors man. He's part of the first nationwide field service force in the mortgage investment trust business.

The group who's provided hundreds of millions of dollars in condominium development and construction all over the U.S. going all the way back to when America first discovered the condo concept. Nobody, but nobody, knows the pitfalls, snares, hurdles and snags of condominium financing better than FMI. And nobody expends more time and effort to get you

around and over them than your FMI field service man.

Don't sign another thing until you have your broker write or call First Mortgage Investors, 801 Forty-First St., Miami Beach, Fla. 33140. Phone: 305/532-7361.

Or contact one of our Regional Offices.

# Heh heh heh.

More than ten years ago, Jack was the first builder in America to apply it.

"The home still looks great," Jack says, "and I've used Vinyl-Bond ever since."

Like quality builders throughout America, Mikkelson Builders backs its homes 100%.

"We expect the same high quality from our materials as our home buyers expect from us. Vinyl-Bond 15 gives us the quality and durability we need."

Winter applications? "Vinyl-Bond's four factory finishes help keep my crews working... in rain, sleet or snow!"

Get the whole story about Mikkelson Builders' years of success using Vinyl-Bond Insulite Siding. It's a great one! Simply drop this coupon in the mail.

#### **NEWS/FINANCE**

#### Mobile home shares plunge 28%-

The five mobile home stocks on HOUSE & HOME's housing-share index fell to 1,140.53, from 1,590.01, in the month ended Ian. 3.

The 28% drop was the sharpest for the mobiles since their movements were factored into the index in January 1965. The mobiles' loss was largely responsible for depressing the HOUSE & HOME composite index of 25 stocks to 529.13, from 559.47.

Skyline triggered the debacle. It lost 147/8, to 325/8, on Dec. 27 in reaction to lower quarterly earnings. It came into 1973 at about 29, or 3 points below its 1972 low of 321/4. It had sold at 74 earlier in the year.

Here's the graph of 25 issues.

How the five stocks in each category performed:

#### When is the condominium a security? The SEC spells out the specifics

Resort condominium developers have been playing a kind of cat-and-mouse game with Securities and Exchange Commission staffers, who think that many of the projects, and the rental contracts typically offered buyers, are securities [NEWS, May '72].

Staffers from regional SEC offices have been prowling the country sniffing out deals that they think should be registered with the agency. But many developers have not registered largely because the commission itself has never ruled on the question, its staff's own views on the subject have not been consistent and further, no one has ever been hauled into court by the SEC for failing to register a condominium.

The three tests. Last month the commission finally stepped in to end the game. It issued a four-page document, Guidelines as to the Applicability of the Federal Securities Laws to Offers and Sales of Condominiums or Units in a Real Estate Development. The document spells out three specific conditions under any one of which a condominium will be considered a security. They are:

• The offering or sale of a condominium with any kind of rental arrangement in which emphasis is placed on economic benefits to the purchaser that are to be derived from the efforts of the promoter or other persons.

• The offering of participation in a rental pool arrangement.

• The offering of any rental deal in which the purchaser must hold his unit available for rental for any part of the year or must use an exclusive rental agent.

Few surprises. The SEC guidelines should come as no surprise to condominium promoters. They follow closely the recommendations made last year by the SEC outside Real Estate Advisory Committee. And some of the points have been made by SEC staffers all along in discussions with promoters and in noaction letters in which the staff agrees not to recommend that the SEC take action in specific cases.

The guidelines, which can be obtained free by writing to the publications unit of the SEC, 500

First trade on Big Board for CMI Investment Corporation's shares is observed (l. to r.) by Vice President Merle Wick of N.Y. Stock Exchange with Chairman Fred Kramer and President Bruce Thomas of CMI. The ticker symbol is CML, which appears on the trading post board. The stock opened at 80½ on Dec. 11. CMI has headquarters in Madison, Wis., and it is the holding company for Continental Mortgage Insurance Co.

North Capitol St., Washington, D.C. 20549, make clear that the SEC has not attempted an all inclusive definition of just what condominium securities are.

"Whether an offering of securities is involved," the SEC said, "necessarily depends on the facts and circumstances of each particular case. The staff of the commission will be available to respond to written inquiries on such matters."

Safety points. The agency did spell out some of the arrangements that would not run a condominium promoter afoul of the federal securities laws. The staff

#### Can-do house can do many things

It can solve a major environmental problem and provide work for the unskilled and low-cost housing for the poor.

So low in cost, in fact, that a house large enough for a family of four can be built with \$3,500 worth of materials.

Of course such a remarkable solution to so many problems must contain a secret ingredient. But would you believe the lowly beer can is the secret?

Alvin Miller, a professor of architecture at the University of Arizona, says that beer and soft drink cans can be stacked and then covered with a mixture of cement and fiber glass to produce an inexpensive, waterproof block that can be used for outdoor walls.

"You can have the cheapest patio wall in town and nobody will know what's in it," he says. Blocks can easily be made by unskilled workmen.

Miller is devising a lowcost housing plan that will stack the blocks, employing the geodesic dome concept. The unit is designed to be erected with as few skills as possible.

Miller is trying to get his idea patented. —N.G.

must be convinced that "no plan to avoid registration is involved." In the absence of a scheme to avoid registration, the owner of a condominium unit may enter into a non-pooled rental arrangement so long as a particular agent is not designated or required to be used as a condition of the sale.

The fact alone that a rental agent is affiliated with the promoter does not in and of itself turn a condominium or a rental deal into a security.

And now-the flood. The guidelines also deal with situations in which commercial facilities, such as stores and shops, are an integral part of a condominium project. To avoid the need to register the condominiums, the income from commercial facilities must be used only to offset common area expenses and the operation of the facilities should be only incidental to the project as a whole. This means, among other things, that commercial facilities cannot be a primary income source for the individual owners of the condominium.

The SEC is bracing itself for a flood of registrations now that the guidelines are finally out. Many promoters began preliminary work on their registration statements late last year after the Real Estate Advisory Committee report. One reason was that their own lawyers saw the handwriting on the wall.

On the darker side of the picture the industry can expect to see the SEC start hauling into court those promoters whose condominiums it thinks should have been registered but were not.

The big question yet to be resolved is whether developers who issue condominium securities must register as brokerdealers. The commission has not ruled and may not for some time.

For now, the SEC staff is issuing no-action letters to promoters who can show that the selling of the securities is only incidental to a *bona fide* real estate deal and that the units are sold by the developer's own employees. The need to register as a brokerdealer is decided only on a caseby-case basis.

If you're thinking about color ... ... for the exterior of homes and apartments, for interior paneling, or doors or ceiling beams, then think about the REZ Color Collection—it's a new and exciting array of earth tones and wood tones that enhance the natural beauty of wood.

In the REZ Color Collection you'll find quality colors—colors that are inspired by the latest in fashion for exterior and interior home decor.

And it's easy to put on fresh new color.

There's a variety of REZ Natural Wood Finishes ... to match the type of wood to be stained and to simplify the work. Here are two that are brand new:

REZ Exterior / Interior Solid Color Latex Stains—ideal for the rough sawn woods or textured sidings that are so popular today . . . give you solid color rustic beauty, and go on fast because they're latex. Clean up with soap and water. REZ Exterior / Interior Semi-transparent Latex Stains—these permit the natural wood grain beauty and texture to show through. Easy application and cleanup. Last longer than conventional stains. On exterior surfaces, REZ Latex Stains form a tough, flexible film that clings to the wood and resists cracking and peeling they're even mildew resistant.

Which REZ Stain should you use? Detailed information on the complete line of REZ Natural Wood Finishes can be found in Sweet's Catalog (9.9/Re). Or, write to The REZ Company, One Gateway Center, Pittsburgh, Pa. 15222; or Box 3638, Torrance, CA. 90505.

# 2 builders who found steel makes

In Wake-Pratt's Royal Coachman Apartments, Troy, Michigan, (below), 28-foot Super-C Joists are used with <sup>3</sup>/<sub>4</sub>" plywood decking, adhesives and self-drilling screws. These long lengths are much easier to handle than wood, and come with prepunched holes for wiring.

In their Indian Valley Townhouse project in Kent, Ohio (bottom), Irving Botnick and Associates are using Super-C Joists in 34-foot lengths, and saving \$190 per unit.

# better joists.

# This booklet has the facts.

In the middle of a 545unit apartment complex in Michigan, Wake-Pratt switched from wood joists to Super-C Steel Joists. Why? Their analysis showed steel joists *install faster and easier than wood*, and give them a better floor system.

Irving Botnick and Associates, in Kent, Ohio, made the same switch. They're now saving 25% of the cost of a wood joist system, using Super-C joists and a concrete deck.

Developed by U.S. Steel, these joists are hot dipped galvanized steel. They don't shrink or warp. So floors don't squeak. Nails don't pop. A growing list of builders around the country are now using Super-C joists . . . in applications from single family houses to apartments.

This experience is summarized in a highly factual 10-page booklet, which shows typical applications, load span tables, and prices. You also get the name of the nearest manufacturer of Super-C joists serving your area . . . who can help you buy them for your current and future projects.

## Andersen Wood Casements make easy living beautiful.

Laurentian Commons Condominiums, a fifty unit development of two-story townhouses in Flint, Michigan, is comfortable, carefree condominium living in a rustic, natural setting.

The architecture of each home is varied with design changes in win-

dows, balconies, roof slopes and staggered pavement. Yet, each home is compatible with the adjoining one through expert use of quality exterior materials.

Because the rustic quality of the architect's design suggested the need for a variety of wood windows, he selected Andersen Wood Casement Windows and Gliding Doors.

The architect was familiar with Andersen quality construction and

warm wood detail. Andersen Wood Casements bring the charm, character and elegance of wood to interior and exterior trim that can be painted or stained to match any decor . . . making condominium living carefree and beautiful.

Architect: Tomblinson, Harburn, Hanoute & Associates Inc., Architects, Flint, Michigan. Builder: Genesee Commercial Builders, Inc., Flint, Michigan.

## Andersen Perma-Shield Casements make easy living beautiful...and easier.

Hilltop Place, the new condominium residences for adults in New London, New Hampshire, brings modern, maintenance-free condominium living to the relaxed, friendly environment of a small New England college town.

When completed, Hilltop Place will consist of six clusters, each with approximately twenty-five residences of individual character and design.

Because the architect wanted buildings that are as maintenancefree as possible, Andersen Perma-Shield<sup>®</sup> Casement Windows and Gliding Doors were a natural choice.

All the exposed portions of these Perma-Shield units are enclosed in a sheath of tough, durable, attractive vinyl that does not rust, pit or corrode, and won't need painting. And Andersen double-pane insulating glass does away with storm windows, cuts cleaning chores in half.

Used singly, in pairs, in rows, in bow windows or with fixed windows, Andersen Windows will fit almost any design.

Architect: Edward C. Collins II, Associates, Lincoln, Massachusetts Builder: McGray and Nichols, Inc., Newport, New Hampshire.

Andersen Wood Casements make easy living beautiful. Andersen Perma-Shield Casements make easy living beautiful . . . and easier. For further details on how Andersen Windows can help your building design see your Andersen dealer or distributor. He's in the Yellow Pages under "Windows, Wood". Or see Sweet's File (Sections 8.16/An. and 8.6/An.) or write.

# Ceramic tile can make your homes look like they're worth more than your asking price.

As you can see from the living room pictured on the left, ceramic tile can make a big impact in a home.

When it's used creatively, it can make your homes look far more valuable than others in the same price range. That means quicker sales. And less quibbling over your asking price.

A prospective buyer can't help but be impressed with the distinctive appearance of a ceramic tile inlay in a foyer floor.

Or a dining room wall with sculptured tile.

And when it comes to the kitchen, nothing can be more impressive to a woman than ceramic tile walls, splash backs and countertops. Because ceramic tile is virtually cutproof, fireproof, waterproof and stainproof. And she knows it.

She also knows how practical and pretty it is in the bath.

In fact, the most beautiful bathrooms are still made with ceramic tile. Because the materials that try to look like ours end up looking like what they are: cheap imitations.

To help you visualize the stunning effects ceramic tile can create, we've put together a booklet that contains color pictures of applications that could turn a so-so house into a showplace.

Besides page after page of decorating ideas, our book also brings you up to date on the great new joint filler that can be color-blended: mastic grout, a pre-mixed formula that resists mildewing, staining and chipping.

Let us send you a copy of our booklet. It's yours for the asking. And it could be the most valuable thing you ever got for nothing.

#### **NEWS/DESIGN**

## These fourplexes look like expensive single-family homes

They were planned this way for a variety of reasons.

• The market was empty nesters who no longer wanted to maintain large homes, but did need space for their furnishings and a place for children and grandchildren to visit.

• The site of the project-2.1 acres in Brielle, N.J.-is surrounded by large single-family homes with similar Williamsburg-Colonial architecture.

• Zoning for this type of unit

had already been established for another project.

Each of the Berkeley Square units maintains the feeling of detached-home living-with basement, fireplace, attached garage, screened porch, for example.

Monthly rents for the 1,050sq.-ft. apartments range from \$440 to \$460.

The architect was Huntington Larson Inc. Owner/builder is Dr. Thomas V. Sollas.

Site plan (above right) and photo below indicate how project was planned to echo older, adjoining neighborhoods by including wide driveways, saving mature trees.

PHOTOS: SAMUEL T. MELILLO, JOSEPH TOMAINO

Fourplex floor plans emulate layout of single-family homes with laundry in basement, guest quarters on second floor. Screened porch (over garage in photo above), originally designed for four units where site dropped off, proved so popular it was added to four additional apartments.

## **The Full Proof Doors**

Warp proof Shrink proof Crack proof Sag proof Swell proof Sta-Tru<sup>®</sup> doors are so full proof, in fact, that you'll never go back to the gripes and headaches of conventional wood doors again. Or, any other metal-clad door, as far as that's concerned, if you compare it feature by feature, dollar for dollar, with our Sta-Tru door.

And, this is one beautiful door to live with. Not only in looks, but in installation, too. Check Sta-Tru's lower in-place costs. You'll enjoy every dollar-saving minute. Ask your Sta-Tru man about these full proof doors today. Let him show how Stanley helps you sell homes. Stanley Door Systems, Division of The Stanley Works, 2400 E. Lincoln Road, Birmingham, Michigan 48012.

## Any way you look at it, the Alcoa Alumiframe system is a big timesaver.

#### If you're looking for a way to cut down on the high cost of construction time, look into the Alumiframe® system from Alcoa.

With the Alumiframe system you use framing members similar to those used in conventional construction columns, beams, joists and studs. However, the system requires fewer pieces to complete floors, interior and exterior walls. And because aluminum is lighter, it is easier to handle. Look at the system: With fewer pieces, it goes together faster. Let's work from the foundation up.

It takes just two men to place a 40-ft Alumiframe main beam which weighs only 103 lb. The same-size beam in steel weighs over 680 lb.

The 28-ft Alumiframe joist weighs just 19 lb—a no-sweat job for one man to

#### **Photos:**

a. Five men lift an Alumiframe floor system into place.

**b.** Precut, precisely assembled Alumiframe components, true and square.

c. To build a floor fast, three-man crews lay down conventional plywood decking and secure it with adhesives and nails.

**d.** Screw shank nails are either hand or pneumatically driven.

e. "The Alumiframe system saved us time and money on every one of the 120 units at River Meadows," said Dan Castle, Congdon vice president and partner.

f. He added, "The system's light weight makes handling faster and easier."

g. A Congdon crew turns out floor frames at the rate of seven a day. place. The same-size joist in wood would weigh over 54 lb.

And for the 40 x 28-ft floor we're describing, only 75 pieces are needed. Complete. A comparable wood floor, including blocking and bridging, uses a possible 176 parts and pieces. **Check into builder's savings.** 

Developers, builders and carpentry contractors agree on savings. One of them, a leading framing contractor in California, Congdon & Castle Construction Co., saved nearly 50 percent in time over similar wood construction. Congdon did it in a 120-home community called River Meadows in Vallejo, California.

The Alumiframe system worked so well, that right from the start they saved money on every unit framed. Congdon is so satisfied with the system that this year they plan to use it in more than 500 units. Look at how aluminum framing saves time in floors and walls, too. Congdon bought vertical framing members cut-tolength, then pre-assembled walls and floors on site. With no special training. **The switch from wood to aluminum posed few problems.** 

The crew fastened the Alumiframe system together with conventional power-driven screw shank nails. Prepunched holes in the members helped speed erection even further.

Near Seattle, Wash., another contractor assembled Alumiframe exterior and interior wall panels in a factory, then transported them nearly 30 miles to the site. Savings over conventional wood framing proved to be over two minutes per man per lineal foot for exterior walls and from two to five minutes per man per lineal foot (depending upon construction method) for interior wall panels.

#### Look what the National Association of Home Builders Research Foundation, Inc., discovered.

In an independent time study on the use of the Alumiframe system in construction of one of the Congdon-built River Meadows homes, an NAHB research team reported, "It took about 48 percent less time using aluminum than would be expected for typical wood for framing in the Vallejo area. With seismic, termite and unstable soil problems, more labor and materials are required for floor construction in the San Francisco area." But even so, the NAHB study concludes that an Alumiframe floor anywhere else could probably be erected about 30 percent faster than one of wood.

#### Look into price. It is guaranteed.

Unlike lumber, aluminum prices usually do not fluctuate. Alcoa guarantees the price of Alumiframe members on a calendar-year basis. Look at who approved this system. The Alumiframe system has all the major code approvals: BOCA, ICBO and SBCC, and it meets FHA standards. See how the Alumiframe system can work for you.

Try this economical residential framing system that provides construction time savings on quality homes of any size, design or price range. Whether you're working in a plant or at the site, discover the advantages of building with fewer, lightweight members using conventional tools. For more information about the Alumiframe Building System, call Ken Lally, national sales manager, (412) 553-2853, or write: Aluminum Co. of America, 1092-B Alcoa Building, Pittsburgh, Pa. 15219.

A second-home community with something for everybody

The all-inclusive nature of Sequoia Woods is paying off in a waiting list for condominiums at the Arnold, Calif., project.

First, there's a wide choice of plans—from one bedroom units with 590 sq. ft. to three-bedroom, two-level layouts with 1,588 sq. ft.

Second, prices are moderate for the area—\$23,900 to \$43,900.

Third, there's a full range of recreational facilities—an 18hole golf course with pro shop, tennis courts, a ski run and a swimming pool.

The ten-unit, two-acre section of the project shown here opened in August and immediately sold out; 20 more of a planned 96 condominiums currently are under construction. The balance of the 3,000-lot project consists of single-family second homes.

Rossi DeMulse Co. is the developer; Donald Sandy Jr. and James A. Babcock, AIA were the architects. KHS Builders are the contractors.

Staggered placement of units provides maximum privacy for balconies of individual condominiums.

Clustered recreational facilities are indicated in two-acre section of project.

Cabin design of condominiums is enhanced by use of rustic exterior materials.

Pennsylvania: Bucks County. Zoned Hi-Rise commercial for apts., elderly, office and related commercial. 450 units, 9 acres, 1/2 mile from new racetrack. 1 block from major shopping center. Excellent major road accessibility. Utilities. Ideal for immediate development, inspeculation. vestment or "HOTTEST" area in Bucks County. Write Box 203 LAND MARKET House & Home, 1221 Avenue of the Americas, New York, York, N.Y. 10020.

## 70 Maytags average just 32¢ apiece for repairs at Hazelcrest Condominiums.

Reports Mr. Joseph C. Masterson, Manager: "We're all-Maytag here, and our 35 Maytag Dryers have proved every bit as dependable as our 35 Maytag Washers."

Opened in December of 1968, Hazelcrest Condominiums comprise 35 handsome buildings with a total of 285 units and 712 occupants in Hazelcrest, Missouri.

"We decided to go Maytag all the way, dryers as well as washers," writes Mr. Masterson. "It proved to be a good move. The residents couldn't be more pleased with these machines, and our whole laundry room operation is exceptionally smooth. Repair costs on our 70 Maytags have been practically negligible, averaging only  $32\phi$  a year per machine."

Of course, we don't say all Maytags will match the record at Hazelcrest Condominiums. But dependability is what we try to build into every Maytag Commercial Washer and Dryer.

Find out what Maytag dependability can do for you. We'll also

send details on exclusive Maytag DIAL-A-FABRIC Washers that let customers dial a programmed cycle for any washable fabric . . . *even wool*! One dial setting does it. *Mail the coupon*.

#### THE PLANNING SCENE

"You don't have to hire a psychiatrist when you switch from rentals to condominiums... But a little psychological understanding helps"

Every builder/developer who's switched from rentals to condominiums knows there's a host of differences in the two markets. But many builder/developers aren't aware that one of the prime differences is psychological—a feeling of possessiveness that comes with home ownership and the need for a buyer to identify his home as truly his own.

This need cannot be solely satisfied by furniture and wall hangings that are different fron his neighbors. What's needed is project planning that offers each buyer a sense of individuality.

Let's examine some site design factors that will foster this feeling.

First, the overall site should be one that the buyer can identify with. For example it might reflect his former residence and surroundings. Perhaps there's a similarity of neighborhood or natural terrain.

Even more important, the approach to the

ROBERT W. HAYES AIA, PLANNING CONSULTANT, SAN FRANCISCO, CALIF.

site must supply a strong initial impact. Thus the first impression should express the best environment of the site—mature trees, landscapes, etc., not a parking lot or asphalt area (Figure A).

Second, the relationship of automobile to dwelling is vital. Quite often disastrous design errors are made by placing parking facilities where they can't be readily seen or reached. Most people are extremely possessive about their cars; they must be located as close to the unit as practical. When individual garages are not furnished at each unit, the owner must feel his car is safe from vandalism. Equally important: The route from cars to doorsteps must be safe, pleasant and convenient (*Figure B*).

Third, a home—especially a home one purchases—must have a sense of singularity, a difference from that of one's neighbor. The most important site element to further this feeling is the front yard or front door of the dwelling. Individuality can be created here in a variety of ways (Figure C).

Fourth, make sure an owner has an outdoor area he can call his own. It's not enough to give him a deck overlooking a common area. He must not feel he's sharing this space with all his neighbors; the space must be private and he should be able to do pretty much what he wishes with it. Full-height fencing isn't always required, however, for this privacy (Figure D).

Despite this need for privacy an owner also can get very possessive about the land he owns in common with his neighbors. If he's paying for it, he usually wants to see at least a part of the common area and feel it's his. Thus each grouping of houses should relate directly to a common area (Figure E).

With ownership comes demands not found in rental housing. These demands for self expression will always be there. The success of a condominium development will depend upon how well it's designed for these needs.

## Antique Birch Contemporary. From the Cabinetmaker.

Quality doesn't cost as much as it used to. At least not when it comes to kitchen cabinets.

And we can prove it. With our Antique Birch Contemporary line.

It offers a fine Birch finish on all doors and drawers. Sturdy construction. And top of the line hardware. Plus generous storage space and a beautiful overall contemporary design that will work in any kitchen.

Antique Birch Contemporary cabinets are also supported by a full line of features and specialty cabinets. Including corner cabinets, lazy susan, and full sized broom closet. All made with the same care that has made Del-Mar one of the undisputed leaders of the industry.

With a strict quality control system. And a total service program that's designed to make sure you get the cabinets you want, when you want them, where you want them. With no excuses.

If you have any questions about Antique Birch Contemporary, or if we can help you in any other way, just call (404) 696-1469.

We sell service with every cabinet

## HANDBOOK FOR APARTMENT MONEYMAKERS

Managing Apartments for Profit recounts 21 chapters of practical experience largely from "The Apartment Scene," a House & Home series by H. Clarke Wells, vice-president of L. B. Nelson Corp., a growth company with an enviable record of profit in multi-family housing.

The House & Home handbook includes the following topics for apartment moneymakers:

- -Tenant Turnover
- -Hiring Apartment Managers
- -Landlords in Court
- -Condo Mismanagement
- -Advertising Agencies
- -Bonus Handling
- -Marketing Formula
- -Project Merchandising
- -Resident Managers
- -Recreation Facilities
- -Community Relations
- -Computer Bugs
- -Screening Tenants
- -Security Tips
- -Tenant Union Hassles
- -Hybrid Apartment Homes
- -Family Market Problems
- -Project Size Leverage
- -Statistical Traps
- -Maintenance Jobbing
- -Key to Company Growth

Managing Apartments for Profit presents practical guidelines for profitable management in virtually every phase of apartment operation.

For \$3.95, it's a steal!

## This man just installed a good-looking, inexpensive, pre-painted metal bi-fold door in 15 minutes flat. No wonder he's smiling.

U.S. Plywood's metal bi-folds give you a lot to smile about. Cost, for one. They're more

economical than wood.

Ease of installation, for another. Our doors are precision engineered to fit right every time — without planing, shaving or fussing. And our hardware system permits accurate adjustment for horizontal and vertical variances in finished openings.

No painting's needed at time of installation. (Another time and money, saver.) Because all our metal bi-folds get enamel baked on right at the factory. For a finish that lasts much longer than any job-site painting, and won't crack, peel or chip.

Finally, our doors come in a variety of styles and colors, to cover anything from an 18" cubbyhole to a full room width.

If you'd like to learn more happy facts about our money-saying metal bi-folds, call your local U.S. Plywood Branch Office.

U.S. Plywood A Division of Champion International 777 Third Avenue, New York, N.Y. 10017

#### THE MARKETING SCENE

Condominium conversion: Part I "The difference between success and failure lies in understanding the concept, the problems and the market"

After 12 years condominiums are finally coming into their own, and it is not just in new construction. Resales in older condominiums are up and some companies are finding new opportunities in urban areas by successfully converting rentals to condominiums. But there will also be many who will fail because they lack understanding of the concept, the problems and the market. Let's look at some basics that should be considered by anyone contemplating a conversion.

Benefits to seller and buyer. The advantages are quite simple for an apartmenthouse owner or a builder/investor/dealer. Individual sales of the units will bring a greater return than the sale of the building as a single entity. In other words, a successful condominium conversion allows the sale of individual units for a higher price than rental units can demand based on income to an investor.

Profits ranging from 15%-20% of the sales price in a condominium conversion are not uncommon, whereas 10% profits are usually striven for in new construction. The fact that no construction is necessary in conversion is another very important incentive.

Benefits to the buyer are also obvious. To own the apartment as a condominium rather than to rent offers tax advantages; if the buyer is financed to maximum mortgage limits, almost his total monthly housing cost is a tax deductible item. Pride that comes from ownership is another—albeit intangible—advantage.

**Pricing compared to rents.** There are many ways to price the condominium conversion; however, they all relate to the market and availability of other forms of housing. One approach—the rental value of a unit versus the monthly cost of owning it—varies tremendously depending on the price range of the condominium conversion. The lower the price of the unit, the closer the monthly payment must be to what the monthly rental value of that apartment is. The reasons:

• A buyer who can afford a \$50,000 unit has fewer objections to paying \$75 a month more. If he can afford \$50,000, he probably is in the 40% tax bracket. His tax deductions more than compensate for this increase.

• On the other hand, families who can barely afford minimum housing and are purchasing \$10,-15,000 units (perhaps FHA financed) are not nearly so concerned about income tax. Instead they worry about whether they can stretch the paycheck until the next payday. So, if they can find a place to live for \$100 a month, they are not so likely to pay \$125 a month for tax advantages. To this market, a rental comparison is very important.

A word of caution: Many owners who purchase apartment buildings with surplus money are satisfied if they don't have vacancies for two years. But a professional would say "If you're 100% rented for two years, something's wrong. The rents are too low."

The upshot of this is that you can still find buildings today where rents are below true market value. You must recognize this and arrive at what probable rental value should be applied to the units. Then you can determine more accurately their fair market value as condominiums.

Pricing compared to nearby homes. You must always overcome a natural reluctance to living in a so-called single-family residence where the walls touch the residences of other families. One of the best incentives for overcoming this is price. As a rule of thumb, a condominium should be priced about 30% below single-family houses of equal square footage, amenities, etc. in the immediate area. There are exceptions: Some areas may require a greater price differential. In other areas-those that are very desirable and where the opportunity to purchase a house is limited-condominium prices could more closely approach single-family values.

**Physical improvements.** How far should one go in renovating or refurbishing or changing the character of the property? There are many factors to consider. Some 25-year-old properties that lack all the amenities of a modern structure do have the most important factor of all: prime location.

Now, do you sell such a building as is at really bargain price? Or do you go in and remodel kitchens, improve the architecture, change rooms and wind up spending a lot of money to meet that market? This is a problem that faced Equity Specialty Plan Inc. Apartments it was converting in the Los Angeles area were not too far away from homes priced at over \$60,000. This was definitely a prestigious location in name and in fact.

However, the company was not successful in selling the units at bargain prices of \$16,-500 to \$22,500 (six sales in three months). ESP changed the marketing program, expensively remodeled the units, raised prices about 50% higher than what the cost of the improvements were running (\$18,900 to \$26,500) and sold out the 53 units in two months.

**Project size.** What size apartment project is optimum for conversion? My advice is to stick to small projects in most cases. Mistakes are smaller. One is less susceptible to tenant protests. Small homeowners' associations are easier to handle and to set up.

There are tremendous problems with closings when you are involved with buildings that contain too many units, therefore making it impossible to subdivide into separate lots. By law 51% of the sales are required before a condominium becomes legal and sales can close. Most lenders require 75% to 80% sales before they can be closed (which is much too high a requirement and adds unneeded and unwarranted risks to the development). And the frequency of cancellations due to buyer remorse is directly proportional to the length of time they must wait before a sale is closed.

Joe Noble of ESP tells of a 795-unit FHA project in Venice, Calif., valued at some \$12 to \$13 million. FHA was very pleased with the prospect of conversion. Upgrading this area was a tremendous incentive. Unfortunately, word got out to tenants—retirees and people who had been living there for years on controlled rent. Then the political action started. HUD, on one hand, was encouraging the developer to move forward on the conversion. On the other hand HUD was funding the political action and neighborhood attorneys who represented tenants protesting HUD's approval and fighting ESP tooth and nail.

This is an extreme but classic example. Be careful if you get into some fairly good-sized projects of 50 or 100 units; tenants can get together, and politicians are very sensitive to the cries of ordinary citizens. They can stop you arbitrarily because you are still subject to what Planning wants to vote. Do your homework. If relocation is going to be a real tenant problem, set up a program to assist them.

In our next column we will explore more specific problems associated with condominium conversions—maintenance costs to the new condominium owner, fire walls and soundproofing, rehabilitation, current tenants, cash flow, homeowners' association and, of course, financing.

HERBERT L. AIST, PRESIDENT, HERBERT L. AIST AND ASSOCIATES, ENCINO, CALIF.

# a nice warm feeling

**Preway Custom Lo/Pro** (our lowprofile model) permits chimney offsets and returns-to-vertical *beneath an 8-foot ceiling*. Simplifies stacking for multi-family units. Trouble-free installation for single family, too.

**Old-fashioned** units take extra time, extra effort and are more expensive to install. Odd-shaped oval cutouts are often necessary.

Put the Preway Lo/Pro anywhere! On any floor, against any building material. Zero clearance eliminates installation limitations. The Lo/Pro is complete in one carton: refractory base and ceramic back . . . porcelainized walls . . . fine mesh firescreen and ash guard . . . Positive Seal damper. Left and right knockouts for gas log or log lighter. Three models — 28'', 36'' and 42'' — fit standard building modules. Preway speeds sales, increases return on investment. There's a full line of free-standing, built-in and wall-hung models (all with engineered-to-match chimney components). Call your Preway distributor. Or write to us.

# **1962 The Paslode Gun-Nailer**

Gun-Nailers drive 7 different nails ... 17/8" to 21/2" long

It's now 11 years better than the one that started the power nailing industry! We've made a couple of hundred improvements in the tool since 1962. In the meantime, Paslode Gun-Nailers have driven billions of Gun-Nails<sup>®</sup>. Get your hands on a Gun-Nailer. Compare the easy balance, the way it gets into corners, the speed, the dependability, and you'll know why it's still the best seller. Ask the Paslode man near you for a demonstration, or write for more information. Paslode Company (Division of Signode), 8080 McCormick Blvd., Dept. HH, Skokie, III. 60076. In Canada, Paslode Canada Reg'd.

# **1973** It's <u>still</u> the best seller

## It makes you look good, too.

We put beauty, elegance and reliable operation into the Delta faucet. We left the washer out. And all

the problems worn washers cause.

That's why when you specify Delta, you are specifying one of the most efficient, trouble-free faucets made.

One of the safest, too. Because of the Delta pressure balance bath valve.

When flushed toilets or clotheswashers suddenly decrease the pressure on water lines, the valve automatically compensates to maintain the same hot or cold water mix.

So the shower temperature stays constant. And no one gets scalded or hurt.

There are Delta washerless faucets for kitchens and bathrooms. For sinks and showers. Both single-handle and double-handle models. In beautiful new decorator designs.

They're styled to look good and to work better. And to make the specifier look as good as they do.

For illustrated literature, write Delta Faucet Company, A Division of Masco Corporation, Greensburg, Indiana 47240, and Rexdale, Ontario.

## Delta Faucets.

Washerless. To work as good as they look.

### THE MERCHANDISING SCENE

"Don't let today's casual life-style fool you...The living room still should be the focal point of your model unit"

Does anyone *live* in a living room? It almost seems obsolete for today's family. A better name might be the receiving room. With increasing emphasis on casual life-style, people are *living* in their dens.

But when it comes to marketing your model home or apartment, the living room still reigns for one important reason: It's the first room the buyer sees. And, trite as it may sound, first impressions are lasting. If your prospect's buying mood is dampened by the first exposure to your product he could remain psychologically chilled to your entire presentation. Conversely, inviting living rooms often whet the subliminal appetite for more.

More importantly, you must grab your prospect's attention immediately. You can't wait until he gets to the master bedroom to turn him on.

A properly merchandised living room sets the theme. It should silently offer at least one of these strong sales messages: comfort, elegance, entertainment, warmth, livability, conversation.

In previous columns we have not specified the exact furniture a room should contain. But the ground rules for decorating living rooms are unique. In model homes they should contain a sofa, two chairs (not necessarily matching), at least one end table (preferably two) and a coffee table. Why? Because practically all of your prospects would have each item in their own homes. They can identify with your room more easily.

A conversation grouping is a must. In a contemporary home, a sectional can be used in place of a single sofa. In a period design, a love-seat can fill the bill.

Interestingly enough, end tables need not always be at the end of the sofa. One can be placed adjacent to a chair.

Lighting itself is often a decorating challenge. No matter what basic design theme

 The modern living room in this high-rise condominium is both elegant and comfortable. Note furniture placement in conversational grouping.
Rust tones and antique groupings including clocks and period pictures warm up a living room corner in this ranch-style home. Warmth and comfort were the objectives.

3. This traditional living room is designed to dramatize the indoor-outdoor feeling and capture the mood of Hawaii. Light and bright colors are used to achieve house and garden ambiance.

4. This lively pink and orange traditional living room provides a chatty conversational area and is aimed principally at the ever important lady buyer. you work with, you are safe using the simple ginger jar or plain-based lamp in assorted colors to reinforce the look. The lamp's height is important. Never use a lamp over 35" high on an end table; anything taller distorts its proportion in relation to the rest of the room.

There are a host of other factors to consider. Walls, for example, can be warmed up with either a grasscloth paper or a soft patterned wallpaper. Bare walls can be brought to life with picture groupings and wooden clocks for traditional homes, chrome-framed paintings and chrome mirrors for contemporary homes.

Mirrors add depth and dimension, but be judicious in placement. Deception is easily spotted and too many mirrors will make the room occupants uncomfortable—even nervous—especially if they're hung opposite the conversation area.

Textures and fabrics are an excellent way to warm up a living room. Sleek, hard surfaces are cold, but heavier textures such as woven linens or suedes create a natural affinity with your prospect.

Wood and wood paneling, either deep stained or white-washed, are also appealing. Combining wood with wallpaper gives a definite dimensional look.

The living room is one place to experiment with unusual and intriguing furniture. Etageres, which look like tall, narrow bookcases, are at home in virtually every decorating style. They are available in chrome and glass for contemporary homes, wood finishes for traditional and cane finishes for country French or English.

Antique secretaries and armoires can also be considered. If the armoire has a closed front, use it as a bar with doors open. If it has a wire front use it with doors closed to showcase accessories and unusual objets d'art. It adds interest, warmth and, most important, that personal touch.

Once the basic furniture scheme is finalized and accessories selected, attention should be focused on such necessities as greenery, (live plants preferably and lots of them no matter what the interior theme) and books in floor-to-ceiling bookcases for a dramatic, literary touch.

Summing up, it is important that your decorator define the living room's role in your merchandising program. Should it charm and comfort, excite and invite or be formal and aloof? Establishing this early is crucial; only then can the interiors become part of a coordinated marketing plan.

CAROLE EICHEN, CAROLE EICHEN INTERIORS, FULLERTON, CALIF.

## This simple system

A new and much greater selection of luminaires is now available for use with Weyerhaeuser Lighting Standards.

Gardco, General Electric, Holophane, McGraw Edison and mcPhilben—all have combined their exciting selection of fixtures with Weyerhaeuser Laminated Standards.

New advantage. You can now choose from more than a thou-

sand design possibilities.

Old advantage. This is an environmental lighting system. It blends with the environment as naturally as a tree.

The wood part of the system consists of laminated wood standards in three shapes: straight, single or double curved. Plus one- and two-way crossarms.

Weyerhaeuser Lighting Stand-

## has expanded.

ards are treated for long life with penta in light solvent. You can stain the standards or leave them natural. And local inventories are available in many markets.

For the full story on Weyerhaeuser Lighting Standards for residential areas, commercial areas, parks, urban renewal projects—write Weyerhaeuser, Box B-9522, Tacoma, WA 98401.

## This house is not a home...

## it's a sewage disposal plant.

And its operation is so neighborly that it can be located immediately adjacent to a real home or even alongside a picnic and recreational site as in this Levitt and Sons installation.

Consider the camouflage possibilities for shopping centers. Schools. Hospitals. Institutions. Airports. Office Buildings. For combinations of all of those.

This complete physical-chemical system is capable of meeting present and future environmental requirements on less than 1/4 of the space of conventional plants—spelling more space to sell.

It keeps your money working where existing sewage capacity is short.

It saves the costs of easements, and of long sewage intercept lines.

This plant is a preferred neighbor. It's the cleanest, quietest one in the project.

A jointly owned subsidiary of Hercudes Incorporated and Procedyne Corporation 910 Market Street, Wilmington, Delaware 19899 Phone (302) 654-7588 Remember? Now it's reality.

## what makes Aggreboard Aggreboard?

## This.

Stones of uniform particle size and color. Sizes: 0 (silica sand), 125 ( $\frac{1}{8}$ "), 250 ( $\frac{1}{4}$ ") and 500 ( $\frac{1}{2}$ "). Colors: Garnet Red, Cocoa Brown, Desert Brown, Sun Tan, Northern Green, Hartford White, Jewel White, Roma Grey and Black. Most colors available in the sizes listed.

## This.

U/V stable thermo-setting polyester resin matrix, 25-60 mil thick formed on the substrate to bond the aggregate. The cured matrix is a non-yellowing, non-porous enamel-like white. It can be tinted (as shown) to alter, or enhance the aggregate color.

## And this.

Your choice of  $\frac{3}{2}$ " DF graded exterior, plywood;  $\frac{1}{2}$ " Structasote 460 thermal insulation board (R = 1.0), termite, rot and fungi protected;  $\frac{1}{4}$ " thick fireproof asbestos board, or insulated asbestos board panels in a variety of thicknesses and insulating cores.

AGGREBOARD. Prefinished, structural sheathing/siding, 4' X 8' and other sizes, or pre-cut to custom shapes.

#### EITERS

The following letter (with photo) was received as a possible entry in the 1973 Homes For Better Living Awards Program. We feel the insight it affords into the process of architectural creation makes it worthy of publication here—ED.

H&H: Attached herewith is a photo of one of my recent houses. The problem was to create a small home within an unlimited area without lousing up an extremely low budget.

The plan, as well as being functional, features mutative continuity, integrated cadence, space penetration and rooms. With regionalism a top consideration, primary wall openings as well as secondary fenestration were left unglazed. The house features split floors and knockdown walls. Some of the split

floors are level and some are not. We are not exactly sure how this happened, but we suspect that it somehow had something to do with the carpentry contractor's leveling off at the time. Sort of an inverse reaction, don't you know. For purpose of economy, all foundations were omitted.

Features of the project include floors, walls and roof, the latter of which admits moisture only under precipitation. Area is about 400 sq. ft. and costs ran slightly under 35eper cubic yard. Actual building covers .0002% of the land area, leaving ample room for a future swimming pool and cabana.

Note that in lieu of front stairs, there is a small loading platform. This idea was conceived by the client. "Sometimes I come home with a load on," he explained.

An interesting feature from a purely technical standpoint, and which will undoubtedly interest my colleagues in the profession, concerns the system I used for dimensioning. Being a progressive man, I had toyed with the idea of using the four-foot module, but I seemed unable to make this work out with my yardstick. I did notice, however, that this unit of measure came quite close to the metre (or meter if you wish) and, although things were just a bit too long or short for micrometric accuracy, I conceived the idea of dimensioning in the metric system.

I am sorry to say that no plans are available for this project, either plot or them other things.

> J. LLOYD CONRICH, AIA San Francisco, Calif.

#### Miami market memo

H&H: Regarding the November article by Stan Fisher, "The Miami Market," we certainly agree that Florida is the hottest building market in the country—but we think perhaps Mr. Fisher took too quick a look at building activity on his visit to Dade and Broward Counties.

Mr. Fisher identifies Broward's major builders as MGIC-Janis, FPA Corp., Development Corporation of America and Haft-Gaines Co. While all of these firms are active and Haft-Gaines and FPA certainly qualify as leaders, there are others who are highly significant: Among them: Oriole Homes Corp., Coral Ridge Properties-Westinghouse and our own firm, Leadership Housing.

Naturally, we were disappointed that Leadership was not mentioned in the report since we are the leading builder of single-family housing for adults in the county.

In the city of Tamarac, a suburb of Ft. Lauderdale, more than 8,500 single-family homes have been built by us. We have over 2,200 acres there still to be developed. And we're presently marketing condominiums and retirement homes.

As for sales, during the four months from July 1 through October 31, sales of Leadership homes in Tamarac totaled 790, or about 6.5 homes per day.

We presently have a backlog of over \$35 million in single-family homes in Tamarac. As an example of the sales pace in the community, 285 of the projected 600 homes in Leadership's new family community were sold in the first 75 days.

In addition we own approximately 2,400 acres just west of Boca Raton in Palm Beach County which was recently identified—through a survey done for Advance Mortgage Corp. (subsidiary of First National City Corp. of New York)—as the fastest growing area in the U.S.

Further, we are beginning development of a 2,318-acre property in Tarpon Springs outside Tampa, which will be a planned, diversified lakeshore community offering varied types of housing and commercial development.

#### **Residential construction**

varies widly-single family detached units, townhouses, quadplexes, low rise or high rise apartments-each Blue Book report shows you how many units-by type-up to 5 years history, plus a projection for next year! You can plan and target your sales or promotion effort.

#### **Big builders are changing**

their construction methods-they are using more pre-cut homes, more components, more modulars. Some are in the mobile home business. Each report tells you what degree of industralization (if any) is practiced by the firm.

#### Many builders build in

more than one metro area today. A builder report lists all of the metro areas where each firm is building housing. Now you can identify all of the major builders in any major metro market easily.

#### **Government programs**

especially "Sections 235" and "236" play a big role in some major builder's operation. You can now determine who and how much of the government program production is built by the largest firms.

#### The future for housing

looks great. You can tell what to expect during coming months from the planned outlook of the major builders. These are included in the comment section of each report.

# Put Ever-Strait oors on m $\mathbf{O}\mathbf{O}$ atsin

There's always one good reason to feature steelclad Ever-Strait doors on your models: they help you demonstrate the quality you build into your homes.

And right now, there's a second reason. We'll give you up to \$56 worth of high performance options FREE with every Ever-Strait front door you install in a model home.

Here's how it works. Order the Ever-Strait doors you need for your models

-choosing from any of our nine exclusive styles. You pay the regular price. We will include the following exclusive high performance features at no extra charge: our High Performance Hinges with selfclosing feature; our High

4 4 4 4 4

Performance Korad-wrapped Frame; and our High Per-

formance Finish (door is pre-finished for you with high performance polyurethane enamel in one of eight decorator colors).

As a bonus,we'll also sup-ply a special "construction door" to fill the opening while construction is being

1	
TANT	
K	
TEI	
-4572 5	
-	TE

completed. So when the Ever-Strait Door goes in, it's brand spanking new and strikingly beautiful.

Incidentally, you can also get Ever-Strait doors for the rest of the houserear, side, patio-on the same basis when you use our High Performance Model Home door on the front.

We're making this offer to introduce you to the Ever-Strait High Performance Door. And the

offer applies to all model homes or apartment orders received by April 15, 1973.

Start using beautiful, warp-free, weathertight, pre-hung and easy to install Ever-Strait Doors in everything you build this year. And let the sale begin at the front door.

Write John Harper, c/o Ever-Strait Door Division, Pease Co., 7100 Dixie Highway, Fairfield, Ohio 45014. He'll send you your High Performance model home coupon and our helpful brochure "Let the Sale Begin at the Front Door."

# The dollars and cents of recreation

There is a long-standing marketing axiom that what the successful developer must offer is not just new housing but a new and better way of life. Today it's fast becoming apparent that a broad spectrum of recreational facilities is increasingly in demand as part of that new and better life style. Developers who go the recreation route have found an eager market waiting—both for primary housing and for resort and/or second homes.

Providing good, marketable recreation packages is a complex process that starts with feasibility and ends with long-term management. In this issue of HOUSE & HOME we explore one part of the process: the cost element in creating recreation packages. We have selected four major types of recreation for this exploration:

Swimming and tennis, which might be called small ticket facilities; neither is overly costly in terms of either space or dollars. Swimming pools have long been the primary element of the recreation package, and tennis—the least expensive of all—is the fastest growing in popularity.

**Golf** is the big-ticket facility, in terms of both space and price. It's also the facility that offers the strongest benefits—to both residents and developer.

*Skiing* can be a medium- or big-ticket item. And while it is mainly a resort activity, new snow-making technology is also bringing it into more and more first-home communities.

What do these facilities cost to build? To run? Can they bring in money? That's the subject of the pages that follow.

Consider what a good golf course can do for a project:

It provides from 100 to 200 acres of permanently maintained, self-sustaining green belt, usually beautifully landscaped, and often with lakes and streams. Hence it is an environmental and community asset that might well be the deciding factor in getting approval for PUD zoning.

It offers a sport that is in great demand and short supply, brings it virtually to the resident's doorstep and adds much of the exclusiveness that would normally be available only from a private club.

It creates premium homesites; all over the country, buyers are eagerly paying an extra \$5,000 to \$15,000 or even more for units overlooking golf courses.

And it is a marketing and environmental feature that should eventually produce at least a modest profit for its owner.

On the other hand, a golf course poses many problems for a developer. Here are the most difficult ones:

A golf course is expensive. A regulation 18-hole course will cost anywhere from \$350,000 to well over \$1 million, exclusive of land and clubhouse. And since a course is both a key marketing feature and an integral part of the site, it has to be built early, and its cost represents pure front money.

A full-size course eats up a lot of land—from 100 to 200 acres. And most of this is prime building land.

A golf course is expensive to maintain. Even if it eventually becomes a money maker, the developer must count on losing from \$50,000 up annually for the first two or three years.

Obviously, then, a developer should undertake a golf course only after the most exhaustive market analysis. And even when studies show a course is feasible, there is the question of what kind of a course.

## There are four basic types of golf course

The par-3, or pitch-and-putt course, has 18 short holes and can be built on about 45 to 50 acres. Most golfers don't consider this real golf.

The nine-hole course, with full-length fairways, can be built on from 50 to 80 acres. It is real golf, but many golfers would consider its abbreviated size somewhat boring.

The executive course is the shortest course on which what is considered real 18-hole golf can be played. It is often used in retirement communities and takes up from 70 to 100 acres.

A regulation 18-hole golf course requires anywhere from 100 to 200 acres, depending on its length. If it plays more than 7,000 yards from its back tees, it can legitimately be termed a championship course.

Most developers put in regulation courses; executive courses rank second. The selection of the latter usually results either from a special market, as noted above, or from a land squeeze; there are no great cost savings because there are still 18 tees and greens, the most expensive parts of a course to build.

## Costs depend largely on how much grading is done

Generally speaking, if a golf course site can be used pretty much as is, its cost will be at the low end of the scale; if a lot of recontouring and earth moving is necessary, costs will rise. Other variables include the degree of automation of the irrigation system and the size of tees and greens.

Here is an approximation of typical costs for an 18-hole regulation course. It is offered by Harry Eckhoff, a facility development consultant for the National Golf Foundation:

• Course construction and irrigation: \$270,000 to \$540,000.

• Maintenance from seeding to opening: \$35,000 to \$60,000.

• Maintenance equipment: \$40,000 to \$60,000.

• Maintenance buildings: \$10,000 to \$30,000.

 Equipment—flags, cups, washers, etc.: \$6,000 to \$12,000.
Cart paths: \$7,000 to \$30,-000.

• Total: \$368,000 to \$732,-000.

Not included are the golfcourse architect's fees, usually 6% to 10%, and a clubhouse, which can cost anywhere from about \$150,000 (locker rooms, pro shop and a snack bar) to \$1 million or more (bars, dining rooms, sauna, gym, etc.).

#### Here's a cost analysis for an actual course

Desmond Muirhead Inc., planning and design firm of Newport Beach, Calif., and Muirhead himself, a noted golf course architect, prepared it for a 140-acre course in southern California.

Rough grading. A minimum of 100,000 cubic yards will be needed to elevate tees and greens. In addition, some cutting and filling is necessary to create fairways out of the heavily rolling site; the recommended amount is 150,000 yds. At 40¢ per yard, cost of moving 250,000 yards is \$100,000.

Finish grading. Topsoil must be removed and replaced in all graded areas to insure a good stand of turf. Shaping or fine grading of tees, mounds and fairways should be done by a qualified man on a small tractor with specialized attachments. Cost: \$54,000.

Irrigation. Labor costs for maintenance are rising, and the number of conscientious night watermen who are prepared to get wet changing hoses on a quick coupling (largely manual) irrigation system is diminishing. So a full-coverage, fully automatic sprinkler system should pay for itself in six to eight years and also provide better turf.

In southern California such a system will cost between \$1,000 and \$2,000 per acre, depending on the quality of pipe and equipment and the amount of business good sprinkler contractors have on their books at the time bids are taken. Using a mean figure of \$1,500 per acre, this system will cost \$210,000. Add \$18,000 for a pumping system and the total is \$228,000.

Lower cost alternate systems may also be used, though the labor cost is higher. Range for more manual systems: \$80,000 to \$120,000.

Greens. The size of greens can vary from 5,000 sq. ft. to 10,000 sq. ft. Large sizes are used on resort courses where there will be heavy play. On this type of course an average size-from 6,500 to 7,500 sq. ft.-will be used so that pin positions can be changed frequently. For a good quality green constructed according to U.S. Golf Assn. recommendations, a cost of 70¢ per sq. ft. is a reasonable figure. So the construction (pea gravel, peat or loamite, fertilizer, sterilizer, final grading and seeding, etc.) of 18 greens of 7,000 sq. ft. each will cost \$88,200; a 20,000 sq. ft. practice green will cost \$14,000. Total Cost: \$102,000.

*Tees.* Finishing off and seeding 18 tees will cost \$10,000.

Traps. There will be an average of four per hole at an average size of 50'x20'. A good grade of cream or white sand, 9" deep, will be used (good sand is very important, Muirhead says; the first impression of a golf course can be improved 500% by good sand), and it is an expensive item. Cost is about \$10 a ton, and an average trap needs 25 tons. Spreading and shaping the sand adds about \$40 per trap, so total cost per trap is \$290. If there are 72 traps, overall cost is \$20,800.

Fairways and rough. These two areas are treated in the same way. (Rough has doubtful value on a resort course, but it can be grown if desired.) Cleaning, floating, cultivating, rolling and fertilizing will cost \$170 per acre; seeding will cost another \$150 per acre. Total cost for 140 acres of rolling, open fairways: \$44,800.

Trees. Although trees are an asset, Muirhead believes one should not try to make an arboretum out of a golf course. Beauty should arise from the structural design of fairways, lakes and existing tree masses, not from something applied as an afterthought. Hence the suggested expenditure for trees is low: only \$30,000.

*Cart paths.* These should be 8' wide and, depending on material chosen, can cost up to \$2.20 per sq. yd. So roughly 4,500' of cart paths will cost \$8,800.

Lakes. Bulldozing them out is part of rough grading. If lining is necessary, Bentonite or caliche cost about \$600 per acre; 10 mm polyethylene with one foot of sandy backfill costs \$3,600 per acre. This course will have ten acres of polyethylene-lined lake. Cost: \$36,000.

*Miscellaneous.* Additional items necessary for operating the course include maintenance equipment, \$45,000; a maintenance shed, access drive and restrooms, \$45,000; and the cost of maintaining the course from completion to opening, \$22,000. However, the cost of a clubhouse with its accessories and landscaping is not included because it can range from a few hundred thousand dollars to \$1 million plus.

Architect's fees. \$75,000.

Total cost of constructing and equipping the 140-acre course: \$821,680.

## Maintenance costs: They're very hard to pin down

Annual operating costs can range from \$50,000 to \$200,000. The variables are numerous and include the number of rounds played per day, the number of playing days, the number of employees and their salaries (which depends in turn on whether they are union or non-union) and the type of irrigation system.

"The only way to find out maintenance costs for a particular area," says Max Genet, golf course consultant from Palm Springs, Calif., "is to talk to club managers and greens keepers from that area. National and regional figures put out by industry groups tend to be ridiculously low."

Genet says that to maintain a first class golf course in southern California costs from \$165,000 to \$250,000 a year. But to maintain a similar course in Florida would cost \$50,000 to \$60,000 less because California courses tend to use union labor and Florida courses do not.

Fast growing and very inexpensive

In fact, of the four major recreation facilities covered in this issue, tennis requires by far the lowest investment; it's possible to build a court for as little as \$5,000. And tennis offers these other advantages:

Very little land is used up by a tennis facility. An acre will comfortably accommodate eight courts and a clubhouse.

Maintenance costs are very low and in some cases virtually non-existent.

Tennis courts can be built very quickly. So the little amount of front money they require need be out only a few weeks before the courts are in play. Hence tennis is a likely candidate for the position of first-finished item in the recreation package. Furthermore, it's easy to expand tennis capacity, so courts can be built to stay just ahead of demand.

## One court will serve a lot of players

The reason is that turnover on the courts is very fast. Typically, a match will last an hour (and most clubs limit players to that time span); hence on a summer day, 40 or more doubles players can use just one court, and more if it is illuminated for night use.

So it's not surprising that many developers use a rule-ofthumb formula of only one court per 100 dwelling units. This is based on the assumption that from 15% to 25% of a project's residents will make at least some use of a court and on the U.S. Lawn Tennis Association's estimate that at least one court should be provided for twenty players.

However other developers caution against the temptation to underbuild courts and recommend that the formula be as much as one court per 50 dwelling units, particularly in communities that are heavily oriented towards sports.

"Nothing aggravates a tennis player like a long wait for a court," says one developer. "It pays to monitor peak demand very carefully, and if the wait is too long, build more courts. They aren't that expensive."

## There's a wide variety of playing surfaces

Just what kind a developer installs depends on how much money he wants to spend. The best playing surface, clay, is the

most expensive both to buildusually \$10,000 to \$12,000 per court-and to maintain. A few developers consider it worth the cost, especially if their tenants are especially keen on tennis playing. (One such developer also hopes to get occasional exhibitions by tournament pros on his project's courts.) But many other developers find that their residents are perfectly happy with asphalt courts which, at about \$5,000 each, are the cheapest to install and which require virtually no maintenance. They can be used as soon after a rain as the water is drained off, while clay requires at least some drying time. They require no rolling; clay requires frequent rolling. And they can be used year round, while clay can't be used after the first frost.

On the other hand, asphalt (and concrete) courts are hard on players' legs, and they have a faster bounce than most players care for. So, not surprisingly, compromises have been developed. They consist of various granular or composition surfaces which provide much of the feel of clay courts, yet are much easier to maintain. There is, for example, an asphaltic composition which can be poured over an asphalt base that gives a somewhat softer bounce than asphalt itself. However, there may be chipping problems when the hard edge of a racket strikes the surface.

Granular surfaces, which are sprinkled over clay bases, reduce the amount of rolling required to perhaps twice a day under heavy use, they dry quickly after rain and they permit easily laid tape lines instead of limed lines. Their main drawback, tennis pros say, lies in a slight slipperiness that causes a player to slide into the approach to a shot. It's not a serious fault, but it does take some getting used to. Installation costs of these compromise surfaces are generally about the same as for clay courts.

For many projects the answer is another compromise: some hard-surface courts for general play, and some better surfaced courts for more serious play.

#### Extras that can increase playing time

Lighting will add considerable playing time to a tennis facility, and of course add cost as well. A good rule of thumb is that onethird to one-half of outdoor courts should have illumination for night tennis. Of the two most common types of lighting, quartz and mercury vapor, the latter (at roughly \$2,000 per court) costs about twice as much to install, but it provides much better lighting and is cheaper to operate.

In most parts of the country indoor tennis is just beginning to catch on.

The U.S. Lawn Tennis Association says only about 15% of outdoor players continue the game when the weather gets cold-chiefly because a relatively higher fee has to be charged to recover the capital costs involved in building court enclosures. These costs range from about \$40,000 for an airinflated structure for one court to, for example, \$625,000 for a six-court enclosure like one being built at Bay Valley, a new recreation-oriented PUD in Saginaw, Mich. (However, the latter also includes a lot of extras: two handball-paddleball courts, proshop, lounge, day-care center and locker rooms.)

## Maintenance: a very broad range of costs

As previously noted, hard-surface courts need virtually no maintenance beyond an occasional sweeping to rid them of water, dirt and leaves. Most of the maintenance of granular courts consists of periodic rolling—twice a day or so under continuous use. And clay courts will need somewhat more rolling, plus an occasional reliming of lines.

Most of this maintenance is labor, and costs are hard to pin down because this labor is usually pro-rated as part of maintaining an entire recreational facility. Hence estimates from a number of builders ranged from \$600 to \$1,500 per court per year.

#### Income possibilities are usually limited

Since construction and operating costs of tennis courts are minimal compared with other facilities, most developers make no charge at all for the use of outdoor courts during the day. Opinion seems evenly split as to whether to levy a charge for night tennis. Many developers say it's worth it in good will to provide free lighting; others charge \$1.00 to \$2.00 an hour to pay for the
installation and operating costs.

(Of course, once a condominium project is built out, the courts will probably be turned over to a homeowners' association.)

Indoor courts are a different matter. Since they can cost up to ten times as much as outdoor courts, playing fees are essential. Typical charges are in the neighborhood of \$8.00 per hour during the day, and \$10.00 per hour during the more popular evening hours. The cost, while high, is usually split among four players.

There is a great deal of income potential from lessons and equipment sales, but in most instances the developer will be better off leaving this operation to a resident professional.

Baymeadows, in Jacksonville, Fla., finally went this route after trying unsuccessfully to run its 13-court racket club through the project's management. Nobody knew how to merchandise equipment and the inventory became clogged with equipment that simply did not sell.

The professional, whom the developers then hired, costs in effect nothing. He is guaranteed a minimum return—which he more than makes from lessons and equipment sales—and is given complete charge of the club's operation.

Whatever else goes into a project's recreational package, swimming is the sine qua non. In all but the lowest price ranges and smallest developments, its presence is taken for granted by potential buyers and renters. It is used by more residents—and more types of residents—than any other facility. And more times than not it is both the visual and social focus of the community.

While developers tend to think of swimming pools as relatively low-cost facilities, it is surprising how much money can be poured into them for such things as heating, lighting and enclosures to render them usable in winter months. So while it's easy to build a swimming pool, it's not so easy to build the right size pool in the right place with the right extras and not throw away a lot of money in the process.

## One big pool or several small ones?

This is the first decision most developers will have to make, and it will depend largely on the market the project is catering to. For example:

Older people generally prefer smaller pools that are not crowded or noisy and are relatively accessible to their own house or apartment. They want to socialize, but in small groups. And their swimming is usually leisurely, potential Mark Spitzes foaming by will make them nervous. So for this market, several smaller neighborhood pools make the most sense.

Younger adults generally prefer larger pools and a more active, sociable atmosphere. So for them a larger more centralized pool facility will be best.

Children from the teenage level down are the most active of all and require the greatest variety of facilities. In addition to social dipping some may want competitive swimming; diving will probably be popular; and for very young children, wading areas will be necessary. All of these activities are most easily provided in one large community facility, often connected with some sort of community building.

### How big a pool—or pools will be required?

A good starting point—although it's subject to a lot of variables—

is three square feet of surface area for every resident above the wading-pool age. This figure is based on information derived from an analysis of swimmingpool usage in New York State:

Of every 1,000 residents, 450 are likely to be in the pool area sometime during peak demand (i.e., during the hottest weekend of the year). Of these, onequarter, or 113 people, will be actually in the water at any given time. Since every recreational bather needs at least 27 sq. ft. of space, these 113 people will need just over 3,000 sq. ft. of surface area—or 3 sq. ft. per resident.

Although the basic rectangular shape is simplest and generally the least expensive, some variations are often necessary. For example, in the interests of safety it is desirable to have diving areas separated from swimming areas; an L-shaped pool, with the short legused as a diving tank, serves this purpose and more cheaply than a separate diving pool. Carrying this further, a Z-shape provides another short leg which can be used as a children's wading pool.

Free-form pools may be preferable to rectangular ones for esthetic reasons, especially if the pools are small. These used to be relatively expensive. But today, according to Milton Costello of Amityville, N.Y., a pool designer and consultant, free-form pools should cost at the most only 10% more than conventional pools of the same size.

### So how do you estimate the minimum cost?

One leading swimming pool manufacturer—an East Coast company that installed about 300 commercial pools last year (including 130 in housing projects)—offers this formula:

\$12 a sq. ft. for the basic pool (shell, tile, coping, filtration system, automatic chlorinator and flow meter).

Plus 15% of the basic cost for accessories (heater, vacuum cleaner, skimmers, etc.).

Plus one-third of the basic pool cost for a concrete deck, which should be twice the area of the pool.

So minimum costs (fencing and landscaping not included) would be approximately \$17,800 for a 20'x50' (1,000 sq. ft.) pool, \$58,740 for a 44'x75' (3,300 sq. ft.) pool and \$200,250 for a 75'x150' (11,250 sq. ft.) pool.

## What materials and finishes are best?

Concrete is still the most-used material, but steel and aluminum pools are making some inroads. Construction and maintenance costs are about equal, in Costello's view, although metal pools may be more economical where the water table is high, since they eliminate the need for dewatering the site while the concrete cures.

Tile finishes are once again growing in popularity and are probably the cheapest in the long run since they require less maintenance than concrete finishes. Recently developed epoxy-glaze coatings, which can be sprayed or rolled on, give a tile effect and should last from three to five years before refinishing is necessary.

Putting a pool indoors will, of course, skyrocket its cost. And the value of an indoor pool must be questioned closely, since studies show that interest in swimming drops 80% to 90% in the colder months.

Nevertheless, if the project is large enough, an indoor pool may be justified. It shouldn't be an overly small one, since those who do swim during the winter are likely to spend most of their pool time in the water—very probably churning out laps as part of a fitness program.

One modest-priced way of enclosingpools is the air-supported plastic structure whose cost starts at about \$38,000. These enclosures are not particularly attractive, and they pose problems in heat loss and acoustics, but they do the job.

Permanent structures will cost at least \$20 per square foot, and it's not unusual for a luxury installation over a large pool to exceed \$250,000. Air conditioning is a major portion of the cost; it is necessary because of the extreme humidity.

## Here are some more options and extras

If an outdoor pool is to be illuminated, the power requirement is three to ten watts per square foot of area. Recently put on the market is a quartz-iodide lighting system that will adequately light a 20'x50' pool at an installed cost of \$8,000 to \$10,000.

A basic package of poolside equipment and furniture, including six reclining chairs, 12 lounging chairs and two umbrella tables with four chairs, costs about \$1,200.

Heated whirlpool baths are becoming increasingly popular extras, especially in adult communities. A 12-ft.-diameter bath with eight jets will cost about \$3,500, including heating equipment.

Two miscellaneous items are worthy of note, one for safety and one for esthetics:

For safety reasons the installation of a ground-fault detector, which continuously monitors the electrical system for current leakages, may be required. If a leakage occurs, the system cuts off all power before there's a chance of shock. The cost: about \$300 [H&H, Jan., page 96].

For esthetic reasons a diatomaceous-earth filter can be worth its extra cost of \$300 to \$400 over a conventional sand filter because it filters out much smaller particles—micron size and smaller—and gives the water a purer, more inviting blue color.

## Maintenance: The cost depends on the size

Apart from routine cleaning of the pool site, the major maintenance consists of regular pH and chlorine balancing and skimmingout leaves and other debris. Unless the pool complex is large enough to support a full-time maintenance engineer, the most economical way to handle this is to hire an outside maintenance contractor. Typical contracts specify thrice-weekly visits and cost from about \$60 per month for a 20'x50' pool to about \$120 for a 50 meter by 25 yard size.

If the pool needs attendants such as lifeguards, or if it is part of a large-scale recreational facility, the operating costs are much greater-but so are the opportunities for income. For example, Baymeadows, a 480-acre recreation-oriented PUD in Jacksonville, Fla. (H&H, Feb. '71), allots \$81,000 per year to run its 8,600-sq.-ft. pool and recreational complex. This covers a full-time director of recreation, full-time janitor and some seasonal and part-time employees, such as lifeguards and snack bar attendants. But the pool will have a probable income this year of \$70,000 from such sources as swimming lessons, food sales and day camp, run during the summer.

Expensive to build, but potentially a big profit producer There are two ways a ski facility can make money.

1) It can increase surrounding land values enormously. For example, an improved one-acre homesite with ski access to the slopes of Mittersill in New Hampshire sells for up to \$60,-000, while the same size lot 30 minutes driving time away costs \$2,000. At Haystack ski area in Vermont, townhouse lots sell from \$15,000-\$18,000 in a mountainside PUD accessible to the upper slopes.

2) A ski facility can turn an operating profit. A survey of more than 70 ski areas shows that the average return on investment in 1972 was 14.7%—a marked change from the glamorous but insolvent ski resorts of the 1950s and early 1960s which gave the sport a highly unprofitable image.

In fact, most ski-area professionals—admittedly biased believe that the greatest profit is to be made in operating ski facilities not in developing land and building shelter. Their view is that developing the surrounding real estate just provides additional capital to expand the ski area.

"Perhaps the most important function of the real estate operation is to provide the beds necessary to maximize the profitability of the ski facility," says James R. Branch, president of Sno-engineering Inc., a ski-area consulting firm located in Franconia, N.H.

But to a developer, skiing is primarily a means to help move real estate. His concern, then, is where can he build ski facilities, and what will they cost?

### The keys: topography and meteorology

Ski developments are not limited to the big mountains of New England and the West. In the Midwest, hills with a vertical drop from 100' to 300', challenging for beginners and adequate for intermediates, are being developed, and in some instances are made from fill, old car bodies or compacted garbage.

"In the mountainous areas of West Virginia, Tennessee, Georgia, Kentucky, Virginia, and North Carolina, we've seen a big growth in ski communities," notes J. Porter Gibson, a land planner and golf course architect from Charlotte, N.C. And hills in eastern New Jersey, western Pennsylvania, central New York State, Long Island and other basically flat areas have become ski slopes.

Nevertheless, the number of areas where ski-oriented projects can be built does have limits.

"Only about five percent of the terrain in the U.S. is developable into a good ski hill or mountain," says Branch, "and only a small percentage of that has land at its base which can be developed with homes and commercial buildings. And of course, this area must have the right climate."

Any locale where the temperature drops below 29°F for extended periods can have manmade snow if the real thing doesn't fall in sufficient quantities. The availability of reliable snow-making equipment during the past five years has been the primary impetus for the lowelevation ski developments of the south. The cost of this equipment usually ranges from \$50,000 to \$200,000 for small hills, and it costs \$6 to \$16 per acre-ft. of snow per hour to operate.

### How big an area? There are three categories

A small area, with a vertical drop of from 100' to 500', will require up to \$1.2 million (excluding land) to reach the point where skiers can begin going down the hill. One double chairlift and one small tow will suffice. Comfortable capacity (the number of people the area can absorb with a lift-line wait of no more than 15 minutes) is less than 1,000.

A medium-size area, with a vertical drop of from 500' to perhaps 1,000', will cost up to \$2.5 million. One or two double chairlifts and a few smaller tows will be needed. Comfortable capacity: 2,000-3,000.

A major-destination ski area (one to which people will travel great distances) will have a vertical drop of 1,500' to 2,000' and higher. It will usually cost from \$3 million up, much of which will go into double chairlifts and a large base lodge. The comfortable capacity will be in excess of 3,000.

These figures are, of course, very general, and great variations are possible. For one thing, there is a wide choice in the quantity and degree of luxury of ancillary facilities like lodges; for another, the actual costs of developing slopes depend on the conditions of topography, timber, rocks, ledges, etc. and on the size of the trails.

"The average width of a slope is 220'," says architect Harry Reid, a partner in Desmond Muirhead Inc., which has designed ski-oriented projects, "but the length in eastern areas averages about 6,000', and in the West, nearer 12,000'. And the cost of building the trails can range from \$1.50 to nearly \$10 per lineal ft., depending on how hard it is to clear and grade."

### Here's a typical cost breakdown

Sno-engineering's James Branch provides these ball park figures for Typical Mountain, an imaginary hill in Ski Country with a 300'-400' vertical drop and a comfortable capacity of 750 skiers.

*Base lodge* with facilities for 250 people—cafeteria, cocktail lounge, ski rental area, ski shop, lockers, offices and toilets: \$250,000.

Parking lot, grading and surfacing: \$25,000.

Double chairlift, 2,000' long: \$125,000.

T-bar lift: \$75,000.

*Slopes and trails,* clearing, blasting, fine grading and seeding 35 acres: \$80,000.

Snow-making equipment, installed, for 20 acres, including underground pipe, storage pond and compressor building: \$150,000.

*Lighting* on 20 acres for night skiing to encourage mid-week usage: \$60,000.

Snow grooming equipment tracked vehicle and devices to chop and smooth snow: \$30,000.

Ski shop inventory: \$50,000.

Maintenance building: \$25,-000.

*Planning and engineering:* \$60,000.

Environmental study (some states require it; some towns request it to help in zoning decisions): \$10,000.

Not included: land, access roads and utilities, which would be charged off largely to the real estate operation.

Total cost: just under \$1 million.

The cost of operating Typical Mountain will range from \$100,000 to \$300,000 a year. The lower figure assumes operation weekends and holidays only, the higher figure assumes a full-bore operation requiring full staff for ticket sales, cafeteria, lounge, nursery, ski school, ski repair, ski rental, ski shop, ski patrol, lifts, snow grooming, snow making, parking lot and security.

Branch says, "Though the first-year loss is likely to be about \$50,000 and the secondyear loss about \$30,000, Typical Mountain should be in the black by the third year. After that, if properly managed, it should net 10% to 15%.

### A growing trend: private ski clubs

Built into the developer's financial strategy for Typical Mountain is an increasingly popular plan to run the ski facility as a private profit-making club rather than a public facility. Charter memberships are sold at \$2,500 each, with preference given to property- or homeowners in the project; say 750 such memberships are sold for a total of \$1,875,000. Members also pay annual membership fees of about \$300, and additional income is derived from commercial space, lounges, concessions, etc. Finally, a limited number of day sale tickets can be sold to the general public if they can be accommodated on the slopes without inconveniencing members.

For the developer, the advantages of a club operation are obvious: He gets back the cost of creating his ski facilities, with very possibly a profit, in a relatively short time. And for club members, there are relatively uncrowded slopes, discounts on many of the facilities, plus a sense of exclusiveness.

So much for Typical Mountain. Here are the costs of two real ski facilities:

At Quechee Lakes, a 6,000acre, four-season community in Vermont, a good beginner/intermediate ski area cost under \$200,000. It has a 670' vertical drop, served by a single 2,700' double chairlift that cost \$170,-000 and a small tow that cost \$10,000. Capacity is 800 skiers per hour. Reasons for the exceptionally low cost: the hill had been cleared of many trees prior to becoming a ski area; a million-dollar clubhouse and a restaurant built to serve the entire 2,500-unit community are right next door; and since the area is

in a strong natural snow belt, snow-making equipment was not required.

In the 1971-72 season, it cost \$27,000, including taxes and depreciation, to operate the area on weekends and during two holiday weeks. There was virtually no income because a homeowners' association owns and operates the facility for its own members.

A large new ski operation is located on Chewelah Mountain, 50 miles north of Spokane, Washington. With a 1,850' vertical drop, three double chairs and an 18,000-sq.-ft. base lodge, the total cost was \$2 million.

Says developer/architect Norman Sylvester: "49° North (the name of the ski area) has a perfect slope configuration and gradient—it's right out of a textbook on ski area design." Sylvester also is excited about the adjacent 1,000 acres of leased and purchased land his firm will develop.

### What about the warm-weather months?

Built into a ski operation is the problem of what to do with the facilities during the off-season. If the developer has a year-round recreation package (and most ski-area developers do today), the lodge and restaurant facilities can sometimes be planned to serve swimming and tennis operations during warmweather months.

Another possibility: Crosscountry skiing (as opposed to alpine or downhill skiing) is currently experiencing a boom thanks to its lower equipment costs and to the fact that people of all ages can enjoy it with relatively little practice or training. The trails required for cross country skiing are also inexpensive, and during warm-weather months they make ideal horseback-riding trails.

## On the next 14 pages: 5 projects where recreation plays a key role

ATTIMUT

-

The sales record at Silverado Cottages-Unit D should dispel any doubts about the value of a golf-course location. Ninety of the 100 condominiums were sold within two months after the project opened in October, 1971, and the balance sold out quickly thereafter. The prices: \$39,400 to \$42,500 for 1,000-sq.-ft. twobedroom units and \$31,900 to \$32,900 for 700-sq.-ft. one-bedroom plans. And according to Carl Hieb, sales manager, in the year since the condominiums opened there have been from seven to ten resales at approximately \$10,000 appreciation.

Another sure sign of success: a demand for more luxurious condominiums on an adjacent golf-course location (Area 3, site plan) where the developers will start 38 \$70,000 to \$100,000 units ranging in size from 1,612 to 2,400 sq. ft.

· · · · @ . Ø. · · ·

Of course there were other factors going for Unit D—one section of a large-scale golforiented community in Napa, Calif. being developed by AMFAC, through its subsidiary Silverado Corp.:

• A site plan that gives each condominium a view of the golf courses. TO PAGE 86

Seven building clusters (lower site plan, opposite page and photos) make up Silverado Cottages-Unit D which overlooks the North Course of the golf-oriented community (upper site plan, opposite page). Because sewers had to drain to one end of the project, the Unit D site was filled 4' to 5' above natural grade, creating a hillside effect for the condominiums (bottom photo). Relationship of Unit D to overall community is indicated by color key in site plans. Architect for the project was Brandenburger Associates.

### FROM PAGE 84

• Room layouts that provide a spacious feeling (plans, overleaf).

• Architecturally designed covered parking facilities immediately adjacent to each unit not the case with nearby competing projects.

• An adjacent recreation area with clubhouse, swimming pool and tennis courts.

Who are the buyers? Some 60% to 65% of them come from the Bay area—not surprising since the project is easily accessible from that location. But because of a nearby private airport, the balance come from as far away as Japan and East Coast states including New York, Connecticut and Florida. Owners range from the mid 20s to the 80s—most having professional backgrounds.

Only six or seven of the condominiums are used as permanent homes; the rest are occupied as weekend or holiday retreats, and some 70% to 75% of the owners take advantage of a relatively informal leasing program handled by the management of the main clubhouse. Units can be rented on a hotellike basis, with owners receiving 50% net of gross income.

Two condominium plans include 4'-wide doors between living rooms and owners' bedrooms to provide unobstructed views through the glass walls that lead to patios and balconies. Selling prices included draperies, wall-to-wall carpeting and logburning fireplaces.

### Project no. 2: Condominiums with many facilities —and more to come

How do you speed the sell-out of a project by a year's time? At San Carlos Hills, just south of San Francisco, Loews/Snyder is betting that an augmented recreation package will do just that.

The 30-acre condominium project already boasts a clubhouse—with lounge, billiard and card rooms, saunas, fireplace nook and kitchen facilities—as well as a large swimming pool and three satellite pools and tot lots scattered throughout.

Now, subject to local zoning approval, two sunken tennis courts will be added for an estimated \$40,000 which includes costs for grading and lighting. A full-time social director also will be hired to oversee all recreation including increased clubhouse activities such as bridge parties, weaving and painting classes, etc. Salary for the director will be paid by the developer until more units have been sold.

Not that the developer is complaining about sales so far. Since December, 1971 145 of 172 completed condominiums have been sold and construction has just started on 168 more. In all, 434 one- to three-bedroom units are planned. Prices range from about \$32,000 to \$44,000 and sizes from 784 sq. ft. to 1,318 sq. ft.

Buyers so far are mainly singles and childless couples principally relatively affluent apartment tenants who are being eaten by taxes and see condominium ownership as a financial advantage as well as a way to express their individuality.

But the developers hope to attract more of the family market with the increased emphasis on recreation.

"Tennis," says Regional Vice President Hank Richmond, "is growing in popularity. Golf courses are so crowded these days, you can't get on one. Tennis is a good substitute for the exercise and conviviality found on the golf course."

**Recreation building** and corner of largest pool in project are shown in the photo at top left. This recreation area is located at the junction of Phases 1 and 2 *(site plan. left)* which, with Phase 3, consist of the 172 completed units. The project site lies along the ridge of hills that forms the spine of the San Francisco peninsula. Each of the one- to three-bedroom plans *(right)* contains a laundry and separate dining area.

AMERICAN PLYWOOD ASSOCIATION

Three-story buildings (*above*) are entered via bridges located at mid-level, so access to each unit is only one-level, up or down. Use of single-wall system with Texture 1-11 plywood kept prices of units below those in surrounding area. The project was jointly designed by architects Fisher-Friedman & Associates and Natkin & Weber.

### Project no. 3: Condominiums for the family that skis

If you're going to appeal to the family market in a ski project, what do you provide besides a lot of room?

One answer is shown at Sugarloaf Mountain, near Kingsfield, Maine, where condominium owners are able to ski right from their doors to the chairlift, base trails and the lodge—eliminating long, cold walks which are a problem in many ski-oriented projects.

The developer, Mountainside Corporation, believes this accounts for the preponderance of family-owners—almost 100%.

"Anyone who has had to shepherd children with their mittens, boots, etc., finds the proximity of units to ski trails a tremendous selling point," they point out.

The project opened in 1970 and presently there are 94 oneto four-bedroom units which sold for about \$30,000 to \$42,000. These are in a variety of building types—most supplied in panelized form by Acorn Structures of Concord, Mass.

There's also a group of stickbuilt condominiums which sit above two levels of commercial space in a building adjoining the base lodge *(lower photo, opposite)*. These are one-bedroom, two-level units with an extra sleeping loft. Selling price: about \$26,000.

Another 44 units are planned for this year—about the maximum that can be constructed in one limited building season (generally from the end of May until Thanksgiving). Because of this, there's a waiting list for units each year.

Most buyers are professional people—doctors, lawyers, etc. and the majority come from Maine. There's another large group from Massachusetts, and a scattering from other northeastern states, Washington, D. C., North Carolina and Canada.

0

**Overall site plan** *(top)* indicates how condominiums have been placed on the 1,-700-acre mountain so that owners can ski directly from units. Lower plan is hub of main ski area. Its relationship to overall plan is demarcated by dark blue areas. Floor plans show one of many varieties of layouts available in panelized buildings located throughout the project. A larger version of this 1,470-sq.-ft., four-bedroom-plus-bunkroom condominium will be offered this year.

Panelized building (above), one of several styles supplied by Acorn Structures, contains layouts shown on opposite page. Main ski area (left/includes the base lodge and multi-level units over two floors of commercial space—a restaurant, ski shop, laundry, photo shop and country store. Architect for this stick-built structure was Ecodesign.

Two-story buildings (photo, above) are sided with plywood, applied horizontally to produce the same look and feeling of more expensive units in nearby lakefront projects. Wall-to-wall carpeting, draperies, free-standing fireplaces, dishwashers, ice-making refrigerators and garbage disposals were included in the purchase price. Project's pool and beach are shown in photo at right. Architect was Birger Lundberg.

### Project no. 4: Condominiums that use neighboring rec facilities

A wide range of recreational facilities for a small project doesn't make financial sense. An alternate approach-and one used at Tahoe Marina Condominiums—is to tie in with a nearby club or recreation center.

The Lake Tahoe, Calif., project is wedged into a mere 1.3 acres-200 ft. of which fronts on the lake. The first ten condominiums, originally slated for occupancy last January, were destroyed by fire, and it wasn't until March that 20 units were ready for delivery. Yet the entire project was sold out near the end of June.

One reason: in addition to beachfront docking facilities and nearby skiing at Heavenly Valley (a major ski area), owners have full use of recreational facilities at the adjoining Tahoe Marina Inn (site plan) for a small monthly fee.

Another reason: moderate prices for the area. One-bedroom units with 616 sq. ft. and twobedroom units with 700 sq. ft. sold for \$29,000 to \$36,000.

Says Scot Bergren, president of Cal Rus Development: "Condominiums on the lake had been selling above \$60,000 and developers were having a tough time unloading them. We couldn't afford to be stuck with empty units for a year, so we built smaller units. It wasn't necessary to pay commissions or advertise extensively because word got around. About half of the complex was sold before we broke ground."

Purchasers range the gamut from schoolteachers to millionaires. Most are married couples with one child, and all are sailing and ski enthusiasts.

The adjoining inn provides owners with another service. Under a yearly contract, full professional management services, including general maintenance and snow removal, are furnished on a round-the-clock basis. In addition, the inn provides information to visitors interested in renting condominiums - a service used by most of the owners.

Site plan shows proximity of adjoining inn-a short walk from the units. Four plans were included (Type 1 is for end units). Upper condominium lofts are reached by ladders.

### Project no. 5: Rental units that revolve around a recreation center

Recreation at Riverbend is the project's raison d'être and the reason for its success. In fact, the 60-acre community was one of the first in the Atlanta area to borrow the full-recreationalpackage concept from the West Coast. So when work began about five years ago, a huge clubhouse was built first.

Says Lee Matthews of developer Crow, Pope & Land, "Riverbend isn't thought of so much as an apartment complex as it is an entertainment center."

A glance at the site plan legend tells why. First, there's the aforementioned clubhouse, with its saunas, two dance floors and pit-type fireplace, among other amenities. Then there's a host of swimming pools, tennis courts, a golf green, picnic area and dock. All of which accounts for Riverbend's tremendous appeal to the market it was aimed at—young adults, both singles and childless married couples.

The first units were rentals about 618 units—of which roughly 10% are townhouses. First units opened early in '69 and final units at the end of '71. The project is maintaining about a 96% occupancy rate—excellent for an area with a high vacancy rate [H&H, Jan. page 70]. Male tenants are mainly junior executives; females are employed in a wide range of careers. Their median income is in the area of \$15,000 to \$16,000.

Riverbend's newest phase consists of condominiums. Of the 130 units planned, 52 have already been sold-26 are occupied, 26 are currently under construction. The decision to go condominium, according to Matthews, was made in 1971 when the company discovered a market existed for sales to singles who are attracted by recreational facilities and whose tax bracket made ownership financially inviting. These are young adults (average age of 29 to 31) to whom ownership of a traditional single-family home offered no enticement. Most buyers are executives with incomes of \$25,000 to \$35,000.

Hub of activities at Riverbend is the huge clubhouse (photo, above left) and its surrounding recreational facilities swimming pools, tennis courts and golf green (Numbers 9, 5, 12 on site plan). Rental units (photos, these pages and overleaf) rent for \$185 to \$350 per month. New condominium phase of project (not shown) is being built on choice piece of riverfront land (no. 6 on site plan) which had been held in reserve. Location of formal lake and fountain area (left) is no. 7 on site plan. Small footbridges, like the one in the above photo, span natural creeks that run through the project.

Formal lake /photos, above, bottom right and bottom, previous overleaf/ provides a secluded community get-together area away from the main clubhouse—plus an attractive view from balconies of surrounding units. The 60-acre site abounds in mature trees, many of which form landscaping around rental units (photo, above, opposite page).

UPPER LEVELS

GARAGE LEVEL

Typical plans in two- and three-story rental buildings include efficiency and one-to three-bedroom units *(the latter not shown)* ranging from 650 to 1,300 sq. ft. Of the 618 units, half are two-bedroom layouts. Architect for the rental section of the project was Cooper Carry & Associates.

# PROJECT PORTFOLIO

JULLIUS SHULMAN

PROJECT: Sunrise Alejo LOCATION: Palm Springs, Calif. DEVELOPER: Sunrise Corp. LANDSCAPE ARCHITECT: Frank Rademacher SITE AREA: 20 acres NUMBER OF UNITS: 106 one-story condominium townhouses PRICE: \$29,995 to \$38,995

The most unusual feature of Sunrise Alejo is its simplicity: Only two models are offered, and they are built into identical four-unit combinations. This has obvious economic advantages. Design and merchandising costs are kept low, important where there are relatively few units to share these costs. And construction is simpler, hence more efficient. As the pictures here and on the next four pages show, when the overall plan is sound, a simple model mix can help rather than detract from a project's environment. Sunrise Alejo's sales record proves this. The project opened last August, and by the first of this year, with the Palm Springs selling season just getting under way, 70% of all units were sold.

PHOTOS: JULIUS SHULMAN

The site plan (above) of Sunrise Alejo is basically a repetitive series of culs-de-sac and four-unit buildings. In the center of the 20-unit tract are three more or less separate neighborhood areas, each revolving around a small swimming-pool and whirlpool-bath complex. Some buildings are not oriented to these neighborhood centers; in such cases, walls shield the outdoor living areas from the street. And walkways provide access from all units to the pools.

There are two tennis courts in the

project, shown at right on the site plan and at right in the photo on the facing page. The ratio of one court to just over 50 units represents an upgrading over the developer's previous and similar project; there, a ratio of one court to 80 units proved to be inadequate. Tennis is rapidly increasing in popularity in the area, and roughly one half of the buyers in Sunrise Alejo play to at least some extent. One reason: Golf courses in the area are crowded, and tennis takes less time to play.

Sunrise Alejo's prime market is buyers in their fifties who are purchasing second homes and whose first homes are within 200 miles of Palm Springs. Most have incomes of \$50,000 and up and tend to be business and professional people; many of the former use their unit at least part of the time as a business asset, lending it to out-of-town dignitaries. Most buyers plan to lease out their unit for four to six months when they themselves aren't using it. But based on the record of buyers in a similar

adjacent project by the same developer, few will rent it this often in the first year. In subsequent years, however, as the novelty wears off, they will use it less themselves and rent it out more.

The two plans offered at Sunrise Alejo are shown at right. The threebedroom unit has been more in demand, both for its size and because it is always an end unit. The two-car garage is shared by two units—a not overly popular situation with buyers who would prefer their own garage.

Photos at left and on the facing page show the living room and bedroom of a two-bedroom unit; the photo below is the kitchen and dining area of a three-bedroom model. Furnishings, right down to kitchen utensils and linen, are offered as a complete package for about \$8,500 and up. Carole Eichen Interiors did the decorating and supplies the package, and about one out of five buyers has taken one.

### Symmons' new lav and sink trim: they're the best way to sell houses next to our shower.

When we invented the Temptrol single-handle, pressure-balanced shower, we gave you a system that could really help you sell houses. Because you could tell your customers that pressure-balancing would keep them comfortable in the shower, and prevent scalds and chills, as no other system could. The good-looking contemporary design didn't hurt, either. Now we've come out with new lav and sink trim that will help you do the same kind of selling job. It's just as low on maintenance, and just as pretty as anything we've ever made. Instead of washers, which wear out, it's got ceramic,

which is ageless. We've already tested it through more than a million cycles, and it's just as good as new. Tell that to your customers. Tell the husband he won't have to worry about high repair costs. Show the wife how the finger-tip action of the handle prevents spotting and staining. The whole family will appreciate the smooth movement of the lever handle for positive, accurate selection of temperature and flow. Temptrol shower system. And now, Temptrol lav and sink trim. Together, they're a package that will help you sell houses as no other systems can.

# recreational products

Recreational facilities are cropping up in more and more housing developments across the country. Everything from playgrounds, game rooms and swimming pools to golf courses, gymnasiums and bowling alleys is being offered in today's new projects. To help developers who plan to provide these facilities, H&H is initiating regular coverage of recreational products and kicking it off this month with the following four-page sampling of what's available in the field.

Trees are for climbing and "Tree Form" (1), a contemporary playground sculpture, is no different. The open cylinder, standing 5'8" high installed, has four connecting branch-like members that provide foot and hand holds. "Castles" (2), a modular climbing system of cylindrical forms, serves as an enchanted house or a fortress, depending on imagination. Two basic units, a single and a double cylinder, can create a variety of play pieces. Structures of cement combined with crushed granite stone and sand aggregate are available in natural or a selection of colors. Form, South Lyon, Mich. CIRCLE 260 ON READER SERVICE CARD

> Designed for safety as well as fun, the "Trailblazer Slide" (3) has a wide, railed, parallel stairway instead of the conventional ladder. Steps and pre-slide platform are covered with non-skid galvanized steel. A fiber glass tunnel atop the slide seems like sheer fancy but actually serves to eliminate stand-up sliding. Miracle Equipment, Grinnell, Iowa. CIRCLE 261 ON READER SERVICE CARD

Space-age multi-play unit, "Apollo Slide" (4), can amuse more than 15 youngsters at once. A central platform is reached by climbing specially designed secure-grip grilles or a circular center ladder that is considered fall-proof. Descent can be made down a 14' slide or two fireman poles. Playground Corporation of America, Long Island, N.Y. CIRCLE 262 ON READER SERVICE CARD

# recreational products

Game table and chairs (1) are available in two- or four-seat models. The pedestal-type table with integrally molded base has a 31"-square table top with an inlaid chess board of black and white epoxy squares. Chairs and tables are separate units. Form, South Lyon, Mich.

CIRCLE 263 ON READER SERVICE CARD

Physical fitness and weight watching are practically effortless using a gym package designed for apartments and condominiums (2). The nucleus of the package, the "Master Gym", is a compact exerciser that combines an automatic barbell, a quad pulley, dipping and chinning bar and a four-position abdominal board. Other equipment available includes bicycles, treadmills, vibrators, pony rollers and twist aways. Marcy, Glendale, Calif.

CIRCLE 264 ON READER SERVICE CARD

Daily exercise is easy with a gymnasium facility such as this one installed at a Newport Beach, Calif., apartment complex (3). Included are an automatic stand-in-place jogger, sit-up boards and racks, a multiple press, a squat rack, a belt vibrator and an exercise bike. Paramount Health Equipment, Los Angeles. CIRCLE 265 ON READER SERVICE CARD

**Pushbutton exercise** is provided by the Astrobar (4). This gym has an electric switch to dial the desired pounds of resistance on a horizontal bar. Requiring only 25' of floor space, the unit incorporates 15 separate pieces of equipment. Astrobar, Pacific Palisades, Calif. CIRCLE 266 ON READER SERVICE CARD

4

Playing the game is easy on a floor carpeted with "Games People Play" (5). The new Zimmer-printed floorcovering of 100% Antron nylon combines nine vibrant colors to produce a giant playing board for chess, checkers, dominoes, parcheesi, backgammon, tic-tac-toe, Chinese checkers and hopscotch. Carpet comes with a specially prepared oversized game component kit. Jorges, Rossville, Ga. CIRCLE 267 ON READER SERVICE CARD

Relaxation for individual or group use, the Jumbo Sauna Mark 810(6) accommodates up to 15 at one time. The unit, designed specifically for rental buildings and condominiums, has an exterior control panel with an automatic timing device. Interior is constructed of kiln-dried redwood; exterior is laminated fir plywood. A polyurethane shell between the two is used for insulation. Am-Finn Sauna, Camden, N.J.

CIRCLE 268 ON READER SERVICE CARD

Increasingly popular equipment for single and multifamily projects, saunas (7) come in 17 standard sizes ranging from 3'x4' to 10'x12'. Included in each kit are room, heater, remote control panel, timer and thermostat. All models are pre-wired for electrical hookup and lights. Helo, Thornwood, N.Y. CIRCLE 269 ON READER SERVICE CARD

Prebuilt saunas (8), ranging in size from 3'x3' for one person to 6'x12' for large facilities, feature built-in heaters and controls. Delivered knocked-down, the units are easily assembled with a special wrench included with each package. Interiors are kiln-dried redwood; exteriors, unfinished Philippine mahogany. Viking Sauna, San Jose, Calif.

CIRCLE 270 ON READER SERVICE CARD

Make a splash on the white-stripped 12" bedway of the streamlined Miracle Pool Slide (9). Designed for safety, the enclosed stairway has galvanized steel hand rails and floor plate treads for sure footing. Slide is equipped with two water jets and threaded coupling for water connection. Miracle Equipment, Grinnell, Iowa. CIRCLE 271 ON READER SERVICE CARD

A perfect game for a multifamily recreation center is a mini-bowling alley (10). This Astroline center includes a "Gemini" twin seating unit, an Astroline linear ball return with a pin finder mounted in the hood and a bowler identification panel on the automatic scorer. The latter is placed at end of ball return. Brunswick, Skokie, Ill. CIRCLE 272 ON READER SERVICE CARD

# recreational products

No cuts or bruises for youngsters who play on this area covered with "Lawnscape" (1), a synthetic turf that provides the feeling of grass but eliminates the maintenance problems. Made of Chevron "Polyloom", it can be used for putting greens, pool areas and shuffle board or croquet courts. "Lawnscape" is guaranteed against fading and fiber deterioration. Ozite, Libertyville, Ill.

CIRCLE 273 ON READER SERVICE CARD

## **Practice putting** on a green designed for optimum accuracy.

"Astro-Turf" golf putting surface (2) is a long-wearing ribbon nylon material that resists weathering and wear. Installed directly on concrete or asphalt, the surface provides a green with the quality of natural turf with minimum maintenance. Other Astro-Turf products include a landscape and an action surface. Monsanto, St. Louis, Mo. CIRCLE 274 ON READER SERVICE CARD

**Colorful patios and poolsides** are easy to create and easy to maintain with flagstone of durable plastic (3). Each tile measures 14" square and ¾" thick. Four 6" stakes and four built-in pegs for insertion in the ground provide firmness and stability. Available in slate, white, red, blue, orange and two shades of green. Dapol, Worcester, Mass. CIRCLE 275 ON READER SERVICE CARD

Wherever grass won't grow, "Oasis" (4) will. The easy-to-install roll-good, made to simulate grass, is constructed of Chevron "Polyloom" and a waffled rubber backing. Available in 6' and 12' widths in Kentucky bluegrass color, the turf can be installed on sundecks, playgrounds or outdoor recreation areas. General Felt Industries, Saddle Brook, N.J. CIRCLE 276 ON READER SERVICE CARD

#### Instant tennis anyone?

Indoor-outdoor, roll-up or permanent court of "Sportsface" (5) are engineered to provide a predictable ball bounce. Made of 100% acrylic, the carpet-type covering is available in three grades: no-cushion-back or two different cushion-back thicknesses. J.P. Stevens, New York City. CIRCLE 277 ON READER SERVICE CARD

### With Formica brand laminated plastic, you get more when you buy, give more when you sell.

Make your sales job easier. Insist on countertops, cabinets, furniture, vanitories and walls surfaced with FORMICA® brand laminated plastic. That's the name your home buying and tenant prospects know and prefer. Overwhelmingly.

And watch that preference grow even stronger with the Formica '73 collection. We're introducing 14 contemporary new colors, patterns and woodgrains that are consumer tested and keyed to the widely promoted HOUSE & GARDEN color trend guide. Your fabricator can also supply you with a variety of innovative textures, dimensionals, metallics and our exclusive Quatramatic reproductions.

We'll even help you locate fabricator-sources who will coordinate colors and designs, meet the delivery schedules you set and give you as competitive prices as you'll find anywhere for comparable quality.

These are just some of the ways you get more when you buy, give more when you sell. See your fabricator, or write direct, Dept. HH-2.

# "Let the General Electric put his total builder program

Your key man in the GE program for builders is the Contract Sales Representative. He is the man who can coordinate the GE resources and services to meet your needs.

Most of the Contract Sales Representatives have had years of experience working with builders and know where to find answers to help solve your problems.

Philip J. Drieci If it's Kitchen and Laundry Design problems, he can consult our Certified Kitchen Designers and their staff.

If it's heating, cooling, or lighting design, your representative can call on one of five regional managers of GE's Corporate Market Development Operation (CMDO) who'll have Paul O'Neill and his Electrical Systems Application Group analyze your preliminary plans.

If it's advertising and merchandising, he'll have a merchandising specialist, like Paul Miller, give you a recommendation based on CMDO's years of experience in real estate marketing.
# Contract Sales Representative to work for you."

General Electric Contract Sales Operation.

He also has a computer system which we call the Contract Register to record data on quantity, models, door swing, color, voltage, etc. together with date and place of delivery. From time to time, he'll review your schedule with you and update your delivery requirements.

GE gives women the product innovations and the quality they want. In fact a national survey has shown that more than three times as many American women think GE makes the best major appliances of any other manfacturer.

Furthermore, every GE appliance is backed by GE service, "Customer Care...Service Everywhere." This is our pledge to you that wherever you install General Electric appliances, there'll be an authorized GE serviceman nearby, should he ever be needed.

And, remember, when you order GE products, you also get the know-how, service and professionalism your project requires...all from a single source.

You can reach our Contract Sales Representative through your local GE Major Appliance Distributor.

Seascape I, Solana Beach, California. Roofs: Certigrade shingles No. 1 Grade, 24" Royals. Walls: Certigrade shingles No. 1 Grade, 16" Fivex. Architects: Oxley & Landau. Builder: Westward Construction Corp.

# A California condominium measures its success in many forms.

Circular, angular and rectilinear forms create a highly appealing sculptured look for Seascape I near San Diego. The fifty-unit condominium quickly sold out, prompting construction of Seascape II.

Red cedar shingles had a lot to do with it. They establish a single and inviting identity for the community of diverse structures

and shapes. Their rich texture blends naturally with the environment. Their look of quality proves a welcome sight to residents and local planners as well.

Equally important, red cedar shingles are durable. They weather beautifully, even in harsh marine air. They'll retain their natural elegance

for decades with little or no maintenance. And they'll withstand hurricane winds. For details and application tips on Certigrade shingles and Certi-Split handsplit CROWNING TOUCH OF DURING shakes, write us at 5510 White Bldg., Seattle, WA 98101. In Canada, write 1055 W. Hastings Street, Vancouver 1, B.C.

CIRCLE 245 ON READER SERVICE CARD

Hardwood flooring in a double herringbone pattern is available in Thai-teak, kerriwood and karpawood. The medieval-inspired pattern comes in unit strips of  $12^{\circ}x1.714^{\circ}$  in thicknesses of  $3^{\circ}$ ,  $5^{\circ}$  or  $^{25}/_{32}$ . Units are laid in a series of double strips that meet at angles. Bangkok, Philadelphia. CIRCLE 248 ON READER SERVICE CARD

# General Electric puts things into its builder models that no one else puts into their builder models.

The idea of a builder model central cooling unit is to build a quality unit for an economical price. The difference between our condensing units and others is the quality features that only General Electric puts into a builder model.

To start with, there's the General Electric Climatuff<sup>™</sup> compressor. What's special about the Climatuff

compressor is the special things we put into it. Things like super-strong motor

insulation that resists refrigerant contamination and helps to withstand unusual voltage surges.

The Climatuff compressor also has Swedish steel valves, and a centrifugal oil pump for complete lubrication of all moving parts.

In addition each 230-volt compressor is tested at the

factory to start with a power input of only 170 volts—about 75% of rated voltage. The Climatuff compressor is so good,

more than 750,000 of them have been installed with a remarkable record of reliability.

Top air discharge in cooling unit design is an idea that was pioneered by General Electric. And we still are unique because we bring air in from four sides at a low velocity which helps to prevent clogging of condenser surface with leaves and grass clippings.

Only GE models have Spine Fin<sup>®</sup> condenser coils. The big advantage here is that this eliminates all but a few of the brazed joints, where leaks can occur and cause failures.

And then there's our National Service

Contract. This plan offers customers an established cost for service from the second through the fifth year of ownership including both parts and labor required as a result of normal usage. (See contract for normal maintenance requirements and exclusions.)

The contract, obtained at the time of installation, is between the purchaser and General Electric. For a 36,000 BTU/H unit the cost is only \$109, plus state and local taxes. The work is done

by the General Electric franchised dealer or authorized servicer. For the full story on

quality and dependability, phone your GE central air conditioning dealer. He's

listed in the Yellow Pages under "Air Conditioning Equipment and Systems."

# **PRODUCTS/COATINGS, ADHESIVES**

**Epoxy wall coating**, made from a two-part polyamide base, offers long life and wear resistance. "Surface-Mate" provides a semigloss finish that resists chemicals, solvents, abrasion and impact. Available in clear, white and 14 colors, material can be applied by brush, roller or spray. Baker, Doylestown, Pa. CIRCLE 235 ON READER SERVICE CARD

Interior latex house paint is stain-resistant and quick drying. Marks, smudges, grease and dirt film can be easily washed away. Repeated cleaning with soap or detergent will not damage the surface. The one-coat covering will not fade or change colors and comes in 16 basic shades. Evans Products, Portland, Ore.

CIRCLE 236 ON READER SERVICE CARD

Slip-proof floor finish for all resilient and hard-surface flooring resists detergent wear. "Amerloc", a tough metal interlock finish, is highly resistant to water, salt and scuffing. Developed for heavy traffic areas, it can be maintained by machine scrubbing or damp mopping. American-Lincoln, Bowling Green, Ohio. CIRCLE 239 ON READER SERVICE CARD

High strength construction glue, suitable for plywood and gypsum board, can be used on floors and walls. "Bondmaster W1352" minimizes nail pops, squeaky floors and loose wall areas. The material is a synthetic-rubber/resin-solvent-type mastic adhesive. National Starch & Chemical, New York City.

CIRCLE 240 ON READER SERVICE CARD

Ready-to-use cement block adhesive does not require the addition of water or other catalyst, eliminating mixing. The material is applied directly from the container with a caulking gun or trowel. "Beadline" is nontoxic and harmless to skin. Coatings & Adhesives, Glenview, Ill.

CIRCLE 237 ON READER SERVICE CARD

Thin-ply concrete for restoring worn or broken surfaces is weather- and water-resistant. "Compat" consists of a dry powder and a gauging liquid. The material, which dries to a color that blends with cement, can provide a rough or smooth surface and be troweled to a feather edge. Hartline Products, Cleveland, Ohio.

CIRCLE 238 ON READER SERVICE CARD

138 H&H FEBRUARY 1973

# PRODUCTS/STRUCTURAL

**Fiber glass molds** for poured concrete provide flexibility for creative architecture. Using "Textur-Form" molds a variety of shades, complex textured surfaces and three-dimensional shapes can be economically achieved. Molded structural columns at El Camino College (1) and two examples of textured surfaces (2,3) are shown. Textur-Form, Freight Container, Temple City, Calif. CIRCLE 200 ON READER SERVICE CARD

Structural wood beams are reinforced with full length longitudinal 1/s"-thick steel bands (5). A punch press is used to form teeth (nails) along each side of the bands which are then pressed between two planks of cedar, fir or other wood. The final product is a beam laminated in a sandwich configuration without the use of glue or bolts. "Steelam" is pre-stressed and pre-cambered. Designed for both interior (6) and exterior (4) use, beams can be constructed of high quality woods for exposed applications or of lower cost construction grades. Also available with the integral nailing band is "Steelam Decking", consisting of 2"x8" planks edge-laminated to form large panels. Increased strength of panels, due to the steel bands and prestressing, permits the use of decorative woods. Beams and decking can be combined for a complete roof system. Lindal Cedar Homes, Seattle, Wash.

# PRODUCTS/STRUCTURAL

Glass-fiber bonding material eliminates the need for mortar in concrete-block construction. "Bloc-bond", in 80 lb. bags, is a mixture of Portland Cement, hydrated lime, a water-resistant agent and alkali-resistant glass fibers. The easy four-step application process is shown above. Owens/Corning, Toledo, Ohio. CIRCLE 208 ON READER SERVICE CARD

Specialty plywood, available in decking and structural strength, can be used for exposed ceiling/floor and exposed roof/ceiling combinations. "Ruff Cut 44", with the appearance of rough sawn T&G 4" lumber, comes in 5%" or 3/4" thickness with face of fir or western red cedar. Pope & Talbot, Portland, Ore. CIRCLE 211 ON READER SERVICE CARD

Anchor clips that secure wood to masonry can be used for anchoring sills, joist ends or for trusses and rafters. The device is suitable for concrete block or brick installation. Shipped flat, the clips can be shaped to job application. Arms bend out to permit panels to be slipped onto walls. Panel Clip, Farmington, Mich. CIRCLE 209 ON READER SERVICE CARD

Underpinning anchor fastens wood studs to sloping foundation sill. The 16-gauge galvanized steel anchors are hinged and adjust from level to 45° sloping grade, eliminating the need for stepping the top of a concrete wall as the sill parallels grade. Unit is available for 2"x4" or 2"x6". Howell, Burlingame, Calif.

CIRCLE 210 ON READER SERVICE CARD

Blind-hole anchor provides solid fastening for any type of wall or floor capable of supporting more than 100 lbs. The "Sleev-lok" anchor consists of a steel screw, a nylon sleeve and a polycarbonate threaded cone. Available in 1/4 "x1/4" and 1/4 "x21/2", the unit requires no special tools. Precision Plastics, Largo, Fla.

CIRCLE 212 ON READER SERVICE CARD

Single framing anchor can be formed into any of six different configurations. The anchor is designed for use in secondary structural connections where 2" nominal members join. Manufactured of 18-gauge galvanized steel, the anchors formed in right angle sections come with six nails. Teco, Washington, D.C. CIRCLE 213 ON READER SERVICE CARD

# "To my customers, KitchenAid is more than just a dishwasher. It's something special that makes my houses something special."

When people buy custom-built homes, they expect the best of everything.

And that's what Bob Webb, a top-quality builder in Columbus, Ohio, gives them.

He has a full-time architect on his staff. Uses Amish carpenters and cabinetmakers for superb interior finishing. And insists on providing dishwashers with the reputation of being the very best - KitchenAid.

As Bob Webb puts it, "KitchenAid dish- KitchenAid washers reflect the quality of all products used Dishwashers • Trash Compactors Disposers • Hot-water Dispensers

throughout the house. They have a special appeal to buyers. And after installing 170 of them in the past five years, I've never heard of any of my customers having a bad experience with KitchenAid."

KitchenAid can give the homes you build a special quality, too. Check our catalog in Sweet's Light Construction File or call your KitchenAid distributor about his Builder Plan. KitchenAid

Division, Dept. 3DS-2, The Hobart Manufacturing Company, Troy, Ohio 45373.

# PRODUCTS/STRUCTURAL

**Gypsum wall system**, for on-site and manufactured housing, consists of specially designed gypsum board with edge joint-profiles, open glass-fiber reinforcing tape, a joint compound and a self-priming, spray-on vinyl-acrylic coating. "Rigidwall" cuts installation and finishing time. Celotex, Jim Walter, Tampa, Fla. CIRCLE 203 ON READER SERVICE CARD

Gang nail connector plate has a hinge feature that eliminates roof height problems in over-the-road transportation of modulars. "Roof Hinge 20" allows the top chord of mono-pitch and gable trusses to be folded down for shipping. Factory completion of the roof ends on-site assembly. Automated Building, Miami, Fla. CIRCLE 206 ON READER SERVICE CARD

Dennis Anderson was doing well after 10 years as an independent insurance and securities broker.

In fact, he was shopping for a vacation house to build on his private lakefront property when he first came into contact with Lindal Cedar Homes.

He found more than he bargained for: 1) A broad selection of unusually ap-

pealing, remarkably solid leisure homes.
2) Plus a better way to insure his own future—as a Lindal distributor

own future—as a Lindal distributor in Minneapolis.

He now reports, "I'm making more money than I've ever made, and I'm having a lot more fun."

Dennis is no exception. Total Lindal sales jumped another 50% in 1972, once again boosting our share of the thriving leisure-homes market—a market predicted to generate \$5 billion a year by 1975.

That's a lot of security.

If it's the kind that makes sense to you, you should consider a Lindal distributorship. You'll find you don't have to know a lot about construction to build a mighty handsome future.

Just write our president, or complete and mail the coupon at right.

☐ I'd like to know more about a Lindal distribu-

torship. I'd like to know more about your houses; enclosed is \$1 for your 44-page Planbook.

Exterior wall system E 2x4 studs and plates F 5/8" Fireston® type X

F %" Firestop® type X gypsumboard G Batt insulation (not required for the rating) H G-P ½" Firestop® gypsum sheathing I G-P %" plywood siding

\*Insulation not required to meet fire rating

# They meet HUD specs!

Georgia-Pacific has put together two wall systems that meet your required HUD specs. The interior wall system has an STC of 50 (BW-35st) and a one-hour fire rating (UL-U312). The exterior wall system has a one-hour fire rating

(based on T99 and BMS 191-192).

# The price is right!

You need to meet specs as economically as possible. And Georgia-Pacific's interior and exterior wall systems are inexpensive. In fact, there aren't any less expensive similar wall systems on the market.

B

# They're easy to install!

To get a one-hour fire rated interior wall with an STC of 50, just apply a single layer of G-P's ¼ " Gypsum Sound Deadening Board vertically to both sides of wood studs, with insulation in cavity, and secure with nails. Then, strip laminate a single 5⁄8" layer of Firestop® Gypsumboard vertically to both sides of the sound deadening board. It's that easy. For a one-hour fire rated exterior wall, apply 5⁄8" Firestop® gypsumboard over wood studs and insulation.\* Then attach ½" Firestop® sheathing to the outside wall and cover with 3⁄8" or 5⁄8" G-P plywood siding.

Laminated glass data in file folder form includes information on a variety of bullet-resistant, burglarresistant, sound control and heat and light controlling safety glass. Each product data sheet includes description, performance, application and specifications. Folder is binder-hole punched, index-tabbed. Laminated Glass, Haverford, Pa. CIRCLE 315 ON READER SERVICE CARD

**Casual furniture** for indoor and outdoor use is featured in a full-color catalog. Includes a complete section on available colors, finishes and patterns. Medallion, Miami, Fla. CIRCLE 316 ON READER SERVICE CARD Patents issued during 1971 for swimming pools and equipment inventions are described in illustrations and text. The typewritten booklet can be obtained by sending \$4 in check or money order to Stanley Garil, Research Specialist, Dept. H, 2514 K St. NW, Washington, D.C., 20037. Copies of the 1969 and 1970 booklets are also available at \$4 each. Please specify which booklet is being ordered.

Cedar shakes and shingles are featured in full color. The binder-holepunched booklet features photographs of actual applications, a selection chart of panel texture descriptions, uses, sizes and available colors. A chart of solid colors and semi-transparent tones is included. Shakertown, Cleveland, Ohio.

CIRCLE 309 ON READER SERVICE CARD

Metal building systems and their use in solving construction problems is the subject of "A Special Report to Building Planners". This basic howto book discusses planning a new structure in three chapters: 1) Better Planning: The Key To A Better Building; 2) Preengineered Construction: Can It Do The Job? 3) The Professional Builder: First Choice Of The Building Planner. A fourth section—designed as a pull-out—lists 150 questions to be answered before building begins. Star Manufacturing, Oklahoma City, Okla.

CIRCLE 310 ON READER SERVICE CARD

**Contract kitchens** are the subject of this color folder. Five styles of kitchens are pictured and described to help the volume builder in selection. Product advantages are discussed briefly. Boise Cascade, Raygold Div., Winchester, Va.

CIRCLE 311 ON READER SERVICE CARD

Tile—glazed, quarry and ceramic mosaic—is featured in a 1973 catalog. The booklet describes color coordination and a mural and swimming pool design service. Also gives specifications, distribution centers, sales representatives and installation instructions. Pictures of suggested and actual applications are included in color. American Olean, Lansdale, Pa.

CIRCLE 312 ON READER SERVICE CARD

Faucets and accessories for kitchens, bathrooms and lavatories are shown in a full-color, binder-hole-punched, catalog. Moen, Elyria, Ohio.

CIRCLE 313 ON READER SERVICE CARD

Glued, laminated wood, used specifically in recreational facilities, is shown in full-color photographs of actual applications. Two of these applications are discussed in some detail. A table of span ranges is included. American Institute of Timber Construction, Englewood, Colo.

# Consider Sears. Because your coin-op equipment only earns when it's working.

Coin-op laundry equipment can be a lucrative venture. But only if your original investment pays out in machines that can stay in service. And let's face it, apartment dwellers just don't treat your machines the way they would their own.

"You get more with Kenmore." Because Kenmore coin-op washers and dryers are built to stand up to this kind of punishment. And if and when there are problems, we've made these machines as easy as possible to service. With vital parts accessible.

And if you're *really* in trouble, it's comforting to know there are 12,000 Sears service trucks around the country: your chances of getting fast service when you need it look pretty good.

It makes good sense to consider Sears and get top-quality equipment to begin with.

Note: Sears also offers a full contract line of conventional Kenmore laundry equipment for builders who plan to provide their tenants with individual laundry installations. Here are 10 good reasons to consider Sears.
1. Product quality. 2. Dependable service.
3. Product leadership. 4. Value/Price. 5. Strong brand recognition. 6. Delivery to your schedule.
7. Single source. 8. Contract Sales Specialists.
9. Design assistance available. 10. Over 85 years of customer satisfaction.
