BEYOND THE GLASS is a world some of us seldom explore. Luck places a few people where they may look out on a lake or mountains but most of us have to develop our own view. The talented designer uses architecture to direct and reward the eye. The stone wall shearing through this glass wall points the way to a quiet wooded setting. On our cover the bonus view is an enclosed terrace corner. On pages six and seven you'll discover more vistas planned to please your eye.
Dr. William Menninger, President of the Menninger Foundation, Topeka, Kansas, a world-famed psychiatric center, is a psychoanalyst as well as an organizer and administrator. Dr. Menninger, his brother, Dr. Karl, and his father were pioneers in mental health in an age when the mentally ill desperately needed relief from the almost barbaric treatment in so-called "insane asylums." This doctor administered the Army's vast psychiatric program during World War II. This was also a pioneer venture in many respects.

We strive to establish the principles of the home we knew

I believe the home is truly the maker and breaker of mental health in most instances. There, all of us learn the initial lessons in life that make us what we are. We are honest, not because we decide to be honest — but because we grew up in a family where honesty and many other important personality traits were absorbed in our early years.

A home is where we learn how to give and take, to recoup after losses, to readjust when we get frustrated. It is in the home that we build up an emotional reserve — that is if we are fortunate enough to have a family that permits this — that enables us to withstand many of the buzz saws of life.

My brothers, Karl and Edwin, and I grew up in a home where there were many stimulating, wholesome interests. Our home at times was almost like a community center. In 1913 a troop of Boy Scouts held its meetings in our 13-room house on Topeka Avenue, as did other boys' clubs. Here there were musical evenings and Bible studies. My mother, Flo, was an avid student of the Bible who daily sought to know God's will for her life. She taught 400 women a year — the women studied four years to get a diploma from her Bible classes. She had students all over the country.

Our father, Dr. Charles, was a general physician and a lover of flowers, classical music and literature. He also had a dream — to build a medical center comparable in service to that of the Mayo brothers whom he had visited in 1908. We boys saw our parents working on their own separate projects with harmony, yet dependent on each other as any good married couple of necessity are. They were very close together sharing a deep devotion to their children.

It was our father who inspired the team work to build the Menninger Foundation that has served people from all over the world; we worked as a team until father's death at the age of 91.

The influence of our home has permeated the Menninger Clinic today . . . where we strive to establish the basic principles of the home we knew . . . some of which is an interest in the arts, in worthy hobbies, education, religion and healthful physical well being.
When PRIVACY has priority

If strangers' eyes and neighbors' windows share your life this home has advantages you'll want to study. The plan can satisfy your love of privacy, in a most friendly way. Where privacy won't be endangered walls are open, completely open. But where enjoyment might be diminished by public view, walls are unbroken.

To compensate for its controlled outlook on three sides, this home reserves its heart for the family. A walled pool and its surrounding patio provide airy space for lounging and dining. The kitchen and master bedroom are the only rooms not opening directly into this secluded area.

The two bedrooms and two baths are located at opposite ends of the "L" plan. This zoning permits the smaller room, which adjoins the pool, to do double duty as a guest room or as a compact isolated study.
Neat rectangle of plan encloses 1,800 square feet of house, garage and pool.

Bedroom-den facing pool is furnished with convertible sofa for guests.
VISTAS planned to please the eye

By RUTH CORELL

Most of us are deeply interested in vistas . . . vistas from indoors out . . . vistas from room to room . . . vistas from home to horizon.

Seldom though do we concern ourselves nearly as deeply with what the eye may expect to find as a reward at the end of those vistas. Often a view completely lacking in appeal may be made a treat by shifting furniture just a few feet one way or the other, by adding a plant, flowers or a single unique accessory.

Any one of these wall openings might have been just a door, but tasteful planning has transformed each into a frame for an eye-delighting vignette beyond.

A lamp and vertical pictures are the prime elements inviting you to wander on into this brick-floored study.

The stone kwanyin is placed for maximum enjoyment from indoors or from outside translucent sliding shoji doors.
The carving above the door and pictures on the wall do not divert the eye from interesting chair beyond.

Two sets of tall doors open simultaneously to display an antique wood carving on the entrance hall wall.

Shelves frame the door and the door frames a view of a giant bowl of white daisies on the patio table.

The round table up two steps continues Early American theme with a fringed cloth and hanging lamp.
Where do you put your check
rators are endorsing them for
the house. Patterns range fro
and colors from pale to pungen
favorites are still the familiar b
ingham checks which pay of
in these two rooms.

Cash in on checks
Black and white checks add to the drama of this informal dining-game center. White is an effective lining for cupboard shelves. The non-competitive black and white background makes possible a wide range of reds and pinks.

Wing chairs in the country-French dining room are upholstered in black and white checks. Walls are charcoal, draperies black and white pin-stripes. Bright cranberry, the accent, is borrowed from the glowing red of the glassware. Chairs would be equally at home in the living room.
You Can't Beat a BREEZEWAY
ADD THE BREEZEWAY to your list of outdoor living blessings. If you haven't one or have allowed your own breezeway to become little more than a go-between linking house and garage, you may be overlooking what may be your pleasantest outdoor living space.

The ten feet separating the kitchen and garage of this home span versatile space which can serve as a dining-living room, an adult game area, a summer bedroom or as a playroom for the children.

A modest-size house which must apportion its footage into four bedrooms, two baths, a living room and kitchen probably adds up to a busy plan. A breezeway may, as it did here, offer bonus space approximately equal to the living room in size — space which is convertible from one use to another by shifting furniture — space which can be developed for year 'round use.

The architect placed a pierced concrete grille across one end. Air flows freely through this wall but harsh winds are effectively blocked. Light is softly diffused but the too-bright sun is screened out. The opposite end is open for full enjoyment of the adjoining terrace and landscaped lawn.

The approach is given distinction by the recessed front entry and by the simple pierced masonry grille which screens the breezeway.

The redwood walls of the outdoor living room give the effect of an interior room. Furniture is completely safe from the weather under the wide roof overhang at either end. For even further protection, open end could be screened.

The reverse "L" of the breezeway permits access from the living room through sliding glass doors at the same time preserving the one long, unbroken wall of the living room which simplifies arrangement.
1 Wood rounds, treated for a long life, are set flush with the concrete. Deep concrete wells encircling the trees also form low seats.

2 Low-growing evergreens in hollow concrete block planters are surrounded by pebbles and concrete disks which serve as step stones.

3 Bright red flowers blanket this parking, leaving only a path of textured concrete rounds and gravel from curbing to front walkway.

By ARTHUR BURNS
A PARKING IS A parcel of land no one wants and few know exactly what to do to make it either useful or attractive. City codes often restrict what you can grow in the way of shrubs or trees, and feet and fumes handicap the grass you plant there. Yet because it is usually the first thing you see when you approach your home, you want to keep it trim and good looking.

The three parking treatments shown here were designed first for looks, second for easy maintenance and third for durability. There isn’t a blade of grass to be found, but there is color, there is pattern and there is individuality. And care is reduced to a minimum.
Cater to convenience with UNDER

THE CUPBOARD

How much unemployed space do you have just under your kitchen cupboards? Take a look. Most cupboards are fourteen to eighteen inches above the counter surface, and with the exception of a few appliances, your kitchen equipment probably never reaches into this area.

Wouldn't one or more of these storage ideas make your kitchen more convenient and neater? Your own builder can tailor them to your needs.

SWINGING SPICE CABINETS . . . In a space little larger than a shoe box you can hang a spice cabinet holding 18 apothecary jars. The single row of jars on the back shelf is revealed when the two-faced front swings out on sturdy piano hinges. Sled braces on the bottom of the stationary back section support the weight of the two filled front compartments.

COVER CACHE . . . Pan lids and covers slide into slots formed by inverted "T's". Similar under-the-shelf storage can also be planned for the inside of your cupboard to hold trays, cookie sheets and flanged items such as your pie pans or muffin tins.

HANDY MEASURING CUPS . . . Simplify your food preparation routine by having a set of mixing cups anchored just above the cannisters holding your dry staples. Choose metal cups which can be held by a magnet. Have alnico magnets glued to the underside of the cabinets with epoxy glue. Turn the measures bottom-side-up against these small magnets.

DRAWERS FOR GADGETS . . . If you can clear even a few pieces of kitchen equipment out of your overworked drawer you can find the right tool much more readily. Only two inches deep, these drawers will hold 75 per cent of all the items you use regularly and each is immediately visible with drawer open because shallowness prevents stacking.
SLIDES FOR GLASSWARE . . . If your cupboard shelves are getting exasperatingly crowded you can store some of your possessions under them. Tapered glassware or china can be suspended if you have keystone-shaped strips of wood fastened under the shelves. End them a few inches short of the front of the shelf for best appearance and have the dimensions tailored to cradle tops of your glassware.

COOKBOOK HOLDER . . . Angled to give the best visibility, the drop-down board holds your cookbook at just the right angle. A rubber band flattens pages.

RECIPE ROOST . . . Get your recipe files (or clock, or radio) off the counter. Free this precious space for more urgent business with an under-cupboard shelf. If you plan to use your shelf for radio or clock, leave the back open for ventilation.

Ease-down shelves

That one foot of cupboard space directly under the ceiling line probably comes in for as much criticism as any storage area in the house. No one likes to climb, strain or stretch to reach top shelves. These new pull-down cabinets permit you to raise or lower even the very highest shelves with finger-touch ease.

Ten or forty pounds, whatever the load, you'll hardly notice the difference so easily do high-torsion springs lower and replace the shelves.
PERFECT HOME is being sent to you through the cooperation of these outstanding organizations whose materials — skills or services make every Schenandoah Home a superior quality product which you may own through the years with pride.

I think we should not hesitate to spend what money we can on our homes — not pretentiously, but to make them right for us, and a place to which our friends will like to come. — SUSAN GLASPELL
