Parched Dallas droughts. Hot, humid Houston summers. Punishing San Antonio storms. Tough weather requires tough windows. Only Weather Shield craftsmen could combine the graceful lines of 7/8 inch muntin bars, the historic beauty of individual lites and the energy efficiency of insulating glass. Other companies have boasted of divided lite windows, but for them, it's really a false front. Most merely adhere a wood grill to their glass and pass it off as TDL. The danger is the adhesive may cause stress fractures in the glass, or the grill may pop off. Weather Shield offers true divided lites along with truly superior craftsmanship. We carefully detail each and every TDL window and door to provide the same look and feel of early American architecture. We also offer TDL across our wide line of styles and shapes — as well as in our True Oak™ Cherrywood™ and pine options. Choose the TDL that shares a bond with architectural history, rather than a bond with adhesives.

*There's more to see in a Weather Shield window.*

"This traditional residence is just one of many speculative projects we have designed for Curt Welwood. With the larger window panes, wall dormers, and dormer windows provided by Weather Shield, we were able to stick with standard sizes and specifications while still achieving a traditional style."
— Lloyd Lumpkins, Principal Designer Fusch Serold & Partners, Inc., Dallas

"Since 1961, Curt Welwood Homes has been building luxury homes in the Dallas area. Quality, personal service, and integrity are the cornerstones of our reputation. Every detail, including Weather Shield windows and doors, is examined and measured against high standards to ensure the best results."
— Curt Welwood

A Critical Dialogue

This year, as ever, we're pleased to publish the Texas Society of Architects Design Awards. The jurors—Reed Kroloff, Marshall Meyers, and Francois de Menil—spent two very intense days winnowing out the seven winners from the 179 projects entered. The projects they chose are exceptional. They are diverse in scale, style, and budget, but in fundamental ways, they are alike. Each communicates clearly the architect's thinking and the building's purpose. Each is informed by a central idea. There are no wasted gestures, no false moves. Watching the judging, I often felt that nothing could be more difficult than designing a good building. Then one of these exceptional projects would be flashed on the screen and make it all look inevitable and occasionally simple.

But to appreciate how truly exceptional these projects are, stop and consider for a moment that the winnowing process began long ago when the submitting firms selected their very best to enter. Then think about how many buildings went up in Texas last year; according to the Real Estate Center at Texas A&M, almost 100,000 building permits were issued. The relationship between these seven projects and the thousands of tract houses, strip shopping centers, and prefab buildings constructed last year in Texas is probably a bit like classical music's relationship to Top Forty songs, jingles, and nursery rhymes. Classical music leads by example and sets a standard. But it also listens to popular music and occasionally draws on it for inspiration.

By publishing these projects, we also hope to lead by example, set standards, and in the most positive way encourage a critical dialogue. Unfortunately, the dialogue regarding architecture is rather limited in Texas. Only two newspapers—The Dallas Morning News and the San Antonio Express—have architecture critics on staff. Most well-read Americans can discuss a book or movie with intelligence because book and film reviews are a staple in the mainstream press and a common topic of conversation. Consequently, we can talk about plot, character development, pacing, and style. But when discussing a building, how many Americans have the critical vocabulary to talk about context, massing, scale, and proportion?

If the critical dialogue were more widespread, perhaps the meeting between the University of Texas Board of Regents and the representatives of Herzog & de Meuron ("Regents Resist Herzog," page 12) would have gone more smoothly. Perhaps more people would understand the relationship between patron and architect and what it takes to get truly great architecture.

In this issue, Lisa Germany reports on the Regents/Herzog exchange, and I'm happy to welcome her to Texas Architect as a new contributing editor. Lisa started writing about architecture for Texas Monthly in 1983 and has often contributed to Texas Architect. She published a prize-winning biography of Harwell Hamilton Harris at the University of Texas Press in 1991, won the Texas Society of Architects Flowers Award in 1994, and received a prestigious Loeb Fellowship at Harvard University Graduate School of Design in 1996. She recently reviewed the Rafael Moneo addition to the Houston Museum of Fine Arts for the New York Times.

John Davidson
NATIVE TEXAS PLANTS.

HOMEGROWN, NATURALLY.

Acme Brick, Texas-based and Texas-proud.

The ideal building material for your next project is made right here in the Lone Star State from native soil. With seven plants and fourteen sales offices across the state, Acme Brick spends $70 million in Texas each year. These dollars help bolster the local economy, which means more potential business for Texas architects. Insist on the same quality that architects have relied on since 1891.

Together, we keep Texans working and the Texas economy growing.

Check your phone directory to contact your local Acme Brick Company sales office.

A waterfront view deserves a crafted frame! Marvin wood windows have the clean lines and warm character that enhance and enliven the beauty outside. And when the outdoors turn stormy, Marvin performs as well as it looks, standing up to the elements year after year! Custom beauty and performance are standard with Marvin. At Marvin Windows & Doors, every window and door is “made to order” to ensure highest quality and design flexibility. Our extensive array of standard shapes and sizes offer easy control of your budget, too. Marvin’s beauty is through and though. Long-lasting, durable performance—that’s Marvin Windows! Beautifully made to order, one at a time.

“...When we designed a home for ourselves just two blocks from the coast, natural light was an obvious desire. Of course, this is a harsh environment, too—hot and humid, with driving rains at times. Marvin’s wood windows were our first choice. We knew we could count on Marvin Windows from previous project experiences. They are well-built windows, with low-E, insulated glass that has saved on our utility bills. Marvin worked with us to achieve our modular design in both fixed and double-hung windows.”

— Bibiana Dykema, AIA, Bright + Dykemas Architects, Inc., Corpus Christi

Letters

Ranting about Atlantis

The confused presentation of theming in the July/August issue is the subject of this letter. It was an issue which could have used a sharper critical focus, and more careful consideration of use of architectural terms.

What are we to learn from the disparate uses of the word “theme” and the various projects which supposedly use themes as design tools? The description of Moody Gardens never mentioned it. At Rough Creek, theming seems to refer to the use of regionalism. At Sunset Station, it means reference to the style of the existing building, and at Bayou Place it means weak contempo/regional motifs applied to commercial strip development. Only Frank Welch’s description of Atlantis II attempts to place the term as it is presently used in architectural theory.

But most disturbing was the decision to devote an entire page to the defense of theming by James Carry. As with Martha Seng’s choice of themed projects, Carry feels free to define the term as many things at once, without explanation. He seems to feel free to slander architectural monuments with the same sensibilities he uses to rewrite Plato. The specious description of the ancient Greeks as having themed their religious architecture should never have been allowed to go to press. These buildings were intended to be read like clever and sophisticated novels, literally, where carvings were tropes representing abstract concepts and where the Greek words for the images formed complex sentences describing the temple as an offering or trope for the carnage of battle. (George Hersey’s The Last Meaning of Classical Architecture. Not as whimsical fantasies involving natural forms.

Carry widens the meaning of the term to include cultural appropriation, metaphor, recurring concepts, and models or types, all in an effort to associate himself with Corbusier, Wright, Thomas Jefferson and Louis Kahn. To say that Kahn used the theme of ancient Rome as a design parti for the Kimbell is meaningless. Are the spaces shaped like vaults? Yes. Did he invent a mythical civilization of concrete to justify the use of a vault? Thank God, no. It’s convenient for imagineers to use the term “theme” in this duplicitious way because they can defend themselves with its traditional definitions: an idea in a work of art, or passage of music - the theme of repentance in Steinbeck. This way they are free to design as Mickey would; let’s make up a world where everything we do makes sense according to us!

In a bizarre twist, Carry seems to be defending the Atlantis II through its sense of place. While there is a definite, if uncomfortable, sense that one is in a specific manmade environment, could he be thinking that the environment he has made has anything to do with that island in that ocean, or equally important, this moment in time? Again, he’s simply reinventing the concept of place to justify his commercial goals.

Describing the Atlantis II as “rich in meaning” is puzzling as well. Where is the meaning in invented histories carved in styrofoam and gypsum? The only meaning I can see is “show me the money.”
Theme hotels, I am told, can be appropriate, but should not be passed off as, or associated with, the language of great architecture; as a critical perspective becomes uncritically relative, it rapidly becomes irrelevant. That is not to say that great architecture may not be created to house the entertainment industry, only that it can't go the other way. The entertainment industry cannot create great architecture.

Using the building as a sales tool will inevitably misdirect it away from other more important functional/psychological design concerns that all buildings should address.

True, conspicuous consumerism can create wildly wonderful environments of competing displays, attracting clients and dollars. The original Time Square, contemporary Tokyo. But here the sales pitch is not used as architectural criticism. There is no comparison to the Kimbell. And most importantly, these are public spaces available to all and affected by all. They are still localized solutions and so able to result in an authentic sense of place.

But the large building as event-advertising reshapes our experience into a real, placeless marketer's dream, a safe-adventure story board transformed into a physical object, cloaking the commercial reality. Here, the matador's cape leads the hapless bull market to an exclusive vacation get-away.

I feel less pity for the corporate concerns than for the architects who supply them with product. As I am sure Mr. Carry is aware, the purpose of advertising is to make people want something they don't otherwise crave. Who is to say one couldn't invent and promote any other sort of architectural experience equally well, given the advertising budgets of the interested parties. Commercial trends are directing designers to provide themes because building committees are more comfortable with the concept of advertising than they are with architecture. Advertising is easy to grasp; architecture is complex. The result is always a circular logic that creates something and advertises to make people want it, and when they want it, more are built because people want it.

Uncritical presentation of a theme hotel as an example of solid, publishable architecture should never have happened, and Texas Architect should understand that. Yes, architecture is complex, and one's experiences of it are not easily described in the format of publications. I would say that a magazine should either not try, or should try harder. It should either make the effort to get in the conversation, or not, but shouldn't try to dumb it down by avoiding a critical edge.

Phillip Reed
Cotera, Kolar & Negrete Architects
Austin

Correction
In “Gulf Resort” (July/August 1999, page 46), the project credits should have identified Design Trends, Inc. of Houston as the interior designer of the Moody Gardens Hotel and Hospitality Institute. References to the hotel's interior design in the story should be understood to be the work of Design Trends, Inc., not Morris Architects.

Sherwin-Williams
ProClassic® Waterborne
Acrylic Semi-Gloss
Enamel combines the buttery-smooth feel and durability of an alkyd with the fast drying and easy clean-up of a water-base. And that’s just where the benefits begin.

We’ve ended the water vs. oil debate by creating a paint that performs like both.

You’ll get the hardness, block resistance, adhesion and sandability you expect from an alkyd. Plus, you’ll get the low-odor, fast-drying and non-yellowing benefits of a water-base.

ProClassic requires a minimum of surface prep. It applies easily and has excellent wet and dry hide. It’s also an exceptional low-VOC alternative. Now, you don’t have to decide between oil- or water-base. Specify the paint that performs like both. Call 1-800-321-8194 for more information.

UT Regents Resist Herzog Plan 12
AUSTIN “UT regents balk at museum design,” read the July 9 front page headline of the Austin American-Statesman. The celebrated Swiss firm Herzog & de Meuron, chosen last fall to design the new Jack S. Blanton Museum, had presented its first preliminary rendering to the Board and, according to the Statesman, the regents said, “Try again.” The firm returned home to Basel to start over, leaving those of us who value good architecture and the architectural process gaping in wonder.

As facts leaked out, the issue moved quickly from the merits of the Blanton conception to the lamentable behavior of the Board. To “balk” at an idea introduces antagonism into the client/architect relationship, denying the trust, the easy give and take, and the daring that yield the finest, most memorable buildings. It’s simply not the way to treat world-class architects.

Herzog & de Meuron’s proposed museum consisted of five low, connected, one-story pavilions slotted into the trees at the northern intersection of Martin Luther King Jr. and Speedway. With its planes of glass and masonry, its floating flat roof and long reflecting pool that leads the eye through the building to a view of the Capitol just beyond, the sketch revealed exactly the kind of building anyone might have expected from Herzog & de Meuron. Although the Blanton was still in the sketch stage, the firm’s love of immaterial form and attention to the ambient qualities of a site appeared perfectly consistent with the values the firm openly espouses. In the drawing one can feel echoes of Mies van der Rohe’s elegant Barcelona Pavilion and harbingers of a UT experience too long withheld from students — that of a truly naturalistic contact with landscape, not to be confused with the plant boxes and concrete sidewalks offered up now for that purpose.

UT President Larry Faulkner insists that board members were not shocked by what they saw. “They had some familiarity with the firm,” he says. And, referring to the presenter, Herzog & de Meuron partner Harry Gugger, Faulkner adds, “He did get all the way through before they interrupted.”

When the time came, however, two regents found their voices immediately. Rita Clements, whom the architects felt was fair in her comments, expressed her discomfort with flat roofs and her desire to have a building that deferred to the campus’ multi-level Mediterranean style buildings by Paul Cret and Cass Gilbert. A. R. Sanchez, a Laredo oilman, was more aggressive. Holding up a picture of one of those buildings, he said, “Why doesn’t the museum look like this?”

More of a rhetorical statement than a sincere inquiry, the question seemed to preclude the possibility of meeting the firm on common ground. Nevertheless, Gugger rose to the occasion and answered that it was not realistic to duplicate an existing building because of the type of facility required and because a new building should be expressive of its own age. He described the museum as a “non-building,” a bit of poetic rhetoric that was lost on the audience. (The Statesman made a great point of ridiculing the idea of a non-building.) Anyone vaguely familiar with the firm’s work could appreciate what Gugger...
meant. By consciously avoiding a multi-level silhouette at a site already weighed down with massive, blocky buildings, the firm sought to create a visual respite, a gateway into the campus that was inviting.

President Faulkner says, “Nobody is enthusiastic about a ‘non-building,’” but he was outspoken in his support of the design, calling it an “oasis,” and predicting that it would create a “lush corner of the campus.” Perhaps, no one is more aware than he of the immense time and effort and heart that went into the selection of the architects. The facts are well known. Aside from the $36 million raised for the museum (including $5 million from former regent Jack Blanton and his late wife Laura Lee and another $12 million given in his honor by the Houston Endowment), museum director Jessie Otto Hite conducted a selection process that was a model of intelligence and openness. Her invitation to the public to participate in the lectures given by seven finalists in the spring of 1998 energized the architectural community here and stood in marked contrast to the more elitist process of the Austin Museum of Art. The distinguished selection committee, made up of two UT architecture deans, former dean Hal Box, FAIA, and current dean Larry Speck, FAIA, along with architecture philanthropists, including Deedie Rose of Dallas, worked hard to shrink the list. This group held exhaustive interviews with the contenders, traveled to see buildings and returned home with an enthusiastic decision for Herzog & de Meuron. Interviews with Faulkner and UT Chancellor William Cunningham came next, followed by an excruciatingly long contract negotiation and even a period when the UT bureaucracy required the architects to participate in team-building games. It had taken a massive, concerted effort, marked by a real spirit of excitement, to bring Herzog & de Meuron before the Board of Regents.

Faulkner downplays the heated nature of the meeting and the apparent impasse between Sanchez and the firm. He says that the Board only “wants to feel that they’re part of the process.” The proposal wasn’t rejected, it seems, but rather sent back to be “fleshed out,” and presented again with other ideas in October. All that congeniality notwithstanding, Faulkner is flying to Switzerland to visit the firm. “The issues we have are high level,” he says, “regarding communication with the Board.”

Meanwhile, the office of Herzog & de Meuron is hard at work on several new ideas. “We really need to respond to their comments about a multi-story building with a pitched roof,” one architect told me.

Perhaps something like a true discussion between client and architect will evolve after this unfortunate beginning and the Blanton Museum will be the better for it. There is still reason to hope that Austin will become another stop for ardent Herzog & de Meuron pilgrims. But that will happen only if the Board of Regents doesn’t insist on bending the firm to its will. If “fleshing out” a sophisticated, original design means blowing it up into a disingenuous and soulless Battle Hall, then the Board will have moved us from the poetics of a non-building to the banality of non-architecture. And that’s a place the University has already been.

Kaboom Town: Frisco is growing at breakneck speed — but to what result?

FRISCO If football can be used as a yardstick to measure growth, the city of Frisco is going for a touchdown. Last year alone, Frisco Football League youth teams nearly doubled in size to 600 kids, reflecting a population explosion that has brought 20,000 people to the once sleepy community since 1990, an increase of 328 percent.

But sports teams aren’t the only groups noticing the phenomenon: A U.S. Census Bureau report released in June named Frisco the nation’s second-fastest-growing city among those with populations between 10,000 and 50,000. (Mesquite, Nevada, a town 60 miles outside of Las Vegas, snared top honors.) This record increase even surpassed Frisco’s own estimates, exceeding the high-population growth targets it set for 2020. Frisco’s population today is approximately 26,200; by 2009, the city expects to have swelled to 125,000.

Frisco’s boom began in 1991 when refugees from nearby Plano’s saturated housing market started moving farther north in search of cheaper property. Real estate developers followed, and the Frisco chamber of commerce started recruiting companies. The already vigorous growth was ignited by the completion of Dallas Parkway, a non-toll extension of the Dallas North Tollway. Although Frisco began the year without a hotel, by mid-March, both the Westin and Holiday Inn Express had broken ground, with no fewer than three more full-service hotels on the way. Similarly, Frisco will soon welcome Stonebriar Mall and myriad mixed-use developments including the 700-acre Frisco Bridges office park and retail center and a one million square-foot retail complex to be called the Centre at Preston Ridge. The local airport, too, has fallen under the expansionist spell. Although camps are divided as to whether the area should support a full-fledged airport or if it should scrap the airport and use the land for a major business center, all agree that development is imminent.

Just ten years ago, Frisco appeared much as it had since its turn-of-the-century beginnings as a farming community along the San Francisco rail line. But today the city’s quaint downtown is quiet. The future can be seen along the highways in gleaming new office buildings and in massive brick and granite entrances to real estate developments. Within these massive gates, in developments like Stone Manor and Hickory Springs, streets are lined with nearly-identical brick houses that have a patch of yard and a minivan in the garage. Nothing about Frisco sets it apart from neighboring Plano or any other new suburb. As might be expected, folks in Frisco are delighted about the growth (they’re making money) and no one is too concerned with the issues of urban sprawl, least of all transportation. As yet, Frisco isn’t even mentioned in any Dallas Area Rapid Transit (DART) plans, and Plano won’t get light rail service until 2003. But planning director John Lettelleir says the city’s master plan was designed to deal specifically with population-related issues. To formulate master plan strategies, he researched a broad variety of planning approaches to confront the transportation issue.

For those who must travel along major thoroughfares, the city has pledged more than $60 million over the next three to five years for improvements. This will contribute significantly to widening State Highway 111 and making US Highway 380 suitable as a major trucking route. It will also come in handy when Dallas Parkway becomes part of the Dallas North Tollway.

Existing roads are also undergoing an overhaul, including a name change for the infamous North County Road. Running north from downtown Frisco, North County meets the east-west Frisco Road. But only locals know that Frisco Road just runs westward; the eastern segment of the road continues as North County for a half mile. The clarification will likely please new residents and pizza delivery drivers alike.

City officials are orchestrating a comprehensive update of the master plan. Through town meetings and e-mail, Frisco is trying to make the process as egalitarian as possible, soliciting input from residents in addition to developers and builders. But so far, Frisco is urban sprawl as usual, another community completely dependent upon the automobile. When Frisco’s master plan is built out, 69 square miles of open farmland will be covered with houses.

Jenny Burg lives in Dallas and is an associate editor for Texas Lawyer.
McAllen’s Charette Takes on Urban Sprawl

McALLEN After the Sierra Club chose McAllen as one of the worst examples of urban sprawl in the nation, the City of McAllen decided to join in with the Lower Rio Grande Valley-AIA (LRGV-AIA) and sponsor an urban design charette focused on growth management and other current controversies facing the city. LRGV-AIA, at the urging of Tom Ashley, of Ashley Humphries Sanchez, has been instrumental in organizing a series of Regional/Urban Design Assistance Teams (R/UDATs) in the Valley focused on downtown revitalization and interregional growth management.

The first part of the charette featured Dan Burden of Walkable Communities, Inc., who spent two days driving and walking and interviewing citizens. Burden was looking at McAllen’s unrelenting traffic grid, seeking ways the city could become more supportive of pedestrians and less prone to increasing traffic volume. Dan Burden was the pedestrian and bicycle coordinator for several years for the Florida Department of Transportation, and has turned that experience into a lucrative consulting practice, advising cities on how to humanize their transportation planning. (Readers are referred to Burden’s excellent web-site, www.walkable.org. Perhaps most notable among many exchanges was Burden’s confrontation with the fire chief over subdivision roadway widths (previously 30 feet, now 37 feet; Burden recommended a retreat to 24 feet). Burden presented his findings on August 2. Part of his presentation was generic pedestrian planning (i.e., examples of what other cities have managed in terms of high quality pedestrian environments). The rest was specific to McAllen, and its tendency to ignore pedestrian needs and to focus on accommodating huge volumes of traffic on ever wider streets.

The latter portion of the workshop was led by Simon Atkinson and Robin Abrams of Urban Design Associates (UDA) in Austin. This workshop was part of a series UDA has facilitated in the Valley on downtown revitalization and growth management. The workshop began with a day-long tour of problem spots throughout the city, followed by two days of interviews focused on broader issues relating to growth management in McAllen. One of the city’s more urgent concerns is the unprecedented number of new low-income housing developments, built in McAllen because it has the smallest legal lot size in the Valley (4,500 square feet). Other issues that emerged included the lack of a community vision of how and where to grow, how to build neighborhoods out of rather-stamped subdivisions, preservation of open space in a region of rapid growth, location of a new civic center, introduction of historic preservation, ways to diversify downtown businesses, and the potential impact of a new planned community to be located just outside McAllen. This portion of the workshop concluded with a discussion of potential short and long-term responses to these issues, and a recommendation for a visioning process that will assist the city in both managing intense growth pressures and maintaining the high quality of life McAllen’s citizens cherish and fear losing.

TSA Announces 1999 Honor Recipients

STATEWIDE Outstanding contributions to architecture by individuals and organizations will be recognized at the Texas Society of Architects' (TSA) annual convention, October 21-23, at the Moody Gardens in Galveston. The TSA Honors Committee chose winners from a pool of nominees submitted by TSA Chapters. The society will also announce the winner of the Llewelyn W. Pitts lifetime achievement award, the highest honor TSA can award a member, at the convention.

Two architects will receive the Presidential Award for Architects in Community Service. Ralph C. Bender, FAIA, of San Antonio, and Walter R. Kilroy of Dallas will both be recognized for their community work. Bender helped establish 50 scholarships for the working poor in San Antonio. He also established a method to resolve transportation problems, which was first used in San Antonio and has now been adopted by the state. Kilroy is being honored for bringing together architects and businesses to restore the Woodlawn Hospital so it can be used by Parkland Memorial Hospital. He is currently chair of the 1999 Legacy Committee and has led the fundraising effort and public promotion for this project.

Ford Powell & Carson, Inc., has received the Architecture Firm Award, a honor given to the firm that regularly produces outstanding architecture. In practice for 60 years, this firm has completed more than 2,500 projects and has won 125 awards for outstanding architecture, interior design and landscape architecture in regional, state and national competitions.

Six organizations have been awarded citations of honor for their efforts to advance the cause of architecture. Monte Vista Historical Association (MVHA) helped save historic structures in the Monte Vista neighborhood of San Antonio, and the National Park Service designated the Monte Vista Residential Historic District for the National Register of Historic Places in 1998. The Cultural Arts Council of Houston/Harris County (CACHH) works to preserve civic areas by supporting Houston's artists and arts organizations. CACHH sponsors lectures and workshops, and awards grants.

Mayfest, Inc., will receive a citation for donating about $5 million dollars over the past twenty nine years to maintain and improve hike and bike trails and recreational areas along the Trinity River in Dallas. Preservation Dallas was chosen for its effective work preserving historical structures and revitalizing inner city neighborhoods. Through seminars, tours of work by prominent architects and by sponsoring research, Preservation Dallas helps the public become more aware of the advantages of historic preservation.

The final two citations will be presented to Herman Miller, Inc., and Green Building Program. Herman Miller Furniture Company, working with Goldsmith's, Inc., restored at their own expense the original office furniture in the Federal Hall of the Tower Building in Fair Park. The City of Austin Green Building Program works to promote environmentally sensitive designs by educating builders and architects regarding sustainable materials, designs and building. At the 1992 Earth Summit in Rio de Janeiro, the Austin Green Building Program was the only US recipient to be recognized for its environmental initiatives at the local level.

D. Andrew Verwooy has been awarded the Edward J. Romieniec, FAIA, Award for Outstanding Educational Contributions. Assistant Dean for Graduate Programs, Graduate Advisor, and an Associate Professor of Architecture at the School of Architecture at the University of Texas at Austin, Verwooy also served on AIA Austin and TSA committees and has developed a series of Continuing Education Courses at UT-Austin.

Three individual artists will receive citations of honor in the Artisan Category. George Cisneros has composed and performed music and created art since 1968. His

“TSA Honors,” continued on page 18
most recent public work "In The Light of Passing Measures" welcomes people to the San Antonio International Center. In addition to his art, Cisneros has served as the Coordinator of Information Services for the Texas Commission on the Arts and founded The Urban-15 Group, a non-profit music and performance group. Brad Goldberg has worked with architects to integrate art and architecture to form a total spatial environment. Goldberg and the American Terrazzo Company completed the Austin Bergstrom International Airport's Historic Austin Map. Both have received the Craftsmanship Award from the Dallas chapter of the AIA. Lars Stanley received recognition for his continuous production of art, especially metalwork. Stanley completed work for Austin-Bergstrom International Airport, Zilker Gardens and the University of Texas Main Building Tower Observation Deck.

Austin Mayor Kirk Watson and Sally Buchanan, director of the San Antonio River Authority, have been given honorary memberships to TSA for their long-term association with architects and architecture. Mayor Watson is the managing partner in the law firm Watson, Bishop, London and Galow, P.C. He was named the Outstanding Young Lawyer of Texas of 1994 by the Texas Young Lawyer Association. The Downtown Austin Alliance gave him their 1998 Impact Award for his role in revitalizing downtown Austin. Buchanan was Executive Director of AIA/San Antonio from 1989-1991 and is on the Advisory Council for UTSA College of Fine Arts & Humanities until the year 2000. She has given over 20 lectures focusing on the preservation of historic buildings.

Columnists Michael Barnes of the Austin-American Statesman and Mike Greenberg of the San Antonio Express-News have been awarded the John G. Flowers Award for Excellence in the Media. Barnes has a Ph.D. in theater history and criticism. He has written over 3,000 articles for various publications and helped create biweekly Statesman columns entitled "Dialogue with a Designer" and "Portrait of an Artisan." Greenberg is the author of Synthesis Architecture, Craftsmanship and Design, and The Poetics of Cities: Designing Neighborhoods That Work. He received a John S. Knight Fellowship in 1986-87 and studied at Stanford University. He is currently Senior Critic at the San Antonio-Express News.

For outstanding achievements in architecture, Jaqueline G. Dodson was awarded the William W. Caudill, FAIA, Award for Young Professional Achievement. Dodson graduated from the University of Kansas School of Architecture in 1997, and has worked for Stan Hernly Architects, and is currently an associate with Graber, Simmons & Cowan. She was Project Assistant for the Austin Museum of Art Downtown and was named the Young Architectural Professional of the Year in 1997 by the Austin chapter of the AIA.

Introducing M/BED Concrete Masonry Units

One more challenge in institutional and commercial design and construction is solved. No longer will fixtures in prison cells, locker and shower areas in schools and gyms, or handrails be difficult to install in concrete block. M/BED Concrete Masonry Units make it quick and easy to make firm, permanent connections. M/BED embeds steel plates, finished primer red, into one or more block faces during manufacturing, creating simple but strong surfaces for attachment. M/BED units install quickly and easily along with ordinary block. Specify M/BED and count on smooth construction and lasting performance.

- Flush Embedding Plates
- Construction Time Savings
- Cleaner, Neater Finished Walls
- One-Step Installation
- Eliminates Elaborate Tiebacks
- Double-Sided Units Increase Mason's Productivity

Call today for our informative M/BED brochure:

Architects' Plan Disinterred at State Cemetery

AUSTIN For some, the Texas State Cemetery in Austin is a gateway to eternal peace, but not so for architects. Just two years after Lake/Plato Architects of San Antonio completed their award-winning cemetery restoration (see T.A., September/October '97), the state is making radical changes to their Plaza de los Requeredos (Plaza of Memories).

Perched atop a knoll at the south end of the 18-acre cemetery, the plaza is a rustic monument of 31 large rough-cut, irregularly-shaped Buttechino marble stones that stand upright in a circle and are joined by a low wall of dry-stacked hard flint rocks. Large, low-lying stones inscribed with quotes from famous Texans act as benches within the circle, and at the very center, there is a symbolic stone fountain. Landscaped with native plants and grasses, the plaza is a rugged slice of Texas Hill Country that overlooks Confederate Hill that is marked with 1,000 small white headstones.

The plaza was just one part of the $4.7 million master restoration plan, which called for the cemetery to be transformed into a more visitor-friendly and educational site. Lake/Plato’s plan included a reorganization of the grounds as well as a new visitors center. In addition to the new plaza, a new gate flanked by a columbarium wall was installed on the north side of the cemetery to serve as a ceremonial entrance.

Almost from the moment the gate was opened to the public, the Plaza de los Requeredos became controversial. According to Harry Bradley, the cemetery’s superintendent, visitors just didn’t like the tone and appearance of the stone circle. “People were very turned off by it,” he said. “It just didn’t look good. It was too hard and stark. About 99 percent of the people who commented on it, commented negatively.” So the State Cemetery Committee, a three-member, governor-appointed group charged with the responsibility of overseeing cemetery operations, ordered an overhaul of the plaza after they considered destroying it altogether.

John Grable of Lake/Plato and project architect for the plaza maintains that it wasn’t properly maintained and therefore its appearance never matched the original design. He received complaints that the plaza’s fountain was never operating and that the native landscaping was altered and not cared for. As for the original design, Grable points out that seven state agencies were involved in the restoration project and considerable care was taken to make sure everyone was on board. “When we did the final design presentation, everyone was in agreement. There was such great excitement and enthusiasm about the design,” said Grable. It’s hardly surprising that such a major makeover leaves Grable frustrated and disappointed. “We viewed this project as an opportunity of a lifetime,” he said. “It was to be a flagship for the next millennium.”

The reconstructed plaza has been designed by Jim Susman of Susman Tisdale Gale Architects of Austin and should be completed sometime this fall. A few of the plaza’s standing stones will be removed; others will be laid on their side. The centerpiece fountain will be leveled, though the quote-inscribed benches will remain. And some of the landscaping changes call for replacing existing plant material such as eastern red cedar trees with crepe myrtle, and Buffalo grass with Bermuda grass. “We try to use native plants here when we can, but we’re more concerned about appearance,” said Bradley. “The plaza just looked like it didn’t belong here. We want to soften it up a bit and add some color.”

Jeanne Claire van Ryzin

Jeanne Claire van Ryzin writes about the arts for the Austin American-Statesman. She reported on the Texas legislature in July/August T.A.
**Of Note**

**AUSTIN** The University of Texas at Austin School of Architecture honored patrons for their dedication to promoting interiors at the second annual Interior Design Gala on April 29, 1999, in Austin. Joci Strauss and Charline McCombs were honored for their roles in the restoration of the Empire Theatre in San Antonio, and Nancy Marcus was recognized for her residence in Dallas. Proceeds raised by the gala benefitted a lecture series that will bring experts in interior design to UT-Austin beginning in the spring semester. The Wilsonart Endowed Lecture Series in Interior Design will give students, faculty, and interior designers the opportunity to hear first-hand experiences and gain knowledge from leaders in the field of interior design.

UT-Austin moved the undergraduate Interior Design Program to the School of Architecture from the College of Natural Sciences two years ago. The School of Architecture plans to develop a graduate program in Interior Design within the next two years.

**AIA Austin Homes Tour**

**AUSTIN** To once again recognize some of the best architecture in Austin, Austin Chapter of the American Institute of Architects (AIA) is sponsoring The 1999 Austin Annual Homes Tour. All homes are designed by AIA Austin members and each house exhibits unique features, demonstrating the wide variety of architectural talent in Austin.

After thirteen years, this self-guided tour is the most successful of its kind. It continues to showcase the exemplary results of working relationships between AIA Austin architects and clients. Homes on the tour feature special qualities that illustrate the value and range of architectural services. The diversity of homes express the ability of architects to interpret their client's desires and carefully create a home that comfortably fits the life of the homeowner.

Tour hours are from noon to 6:00 p.m. October 2-3. Tickets are $15 and include a guide with maps and descriptions of the houses. For more information or to purchase tickets call 512/452-4332.

Gensler Architecture, Design & Planning Worldwide

As the largest international architecture firm with 16 offices and over 1,800 employees, Fast Company calls us “one of America’s most influential design firms.” In 1998, we were awarded the coveted Arthur Best Practices Award for our success as a learning company. If you’d like to advance your career with a growing company, consider this opportunity.

Retail Designer

You will be responsible for collaborating on a variety of projects including specialty stores, shopping centers, environmental graphics, branding, identity, signage and entertainment. To qualify, you must have a degree in Graphics, Interior Design or Architecture with 5-8 years of experience developing retail environments. Must be able to demonstrate aptitude in all areas of retail design from conceptualization through execution. Strong visual, verbal communication and presentation skills are required along with the ability to work in a fast-paced team environment. 3D software skills are preferred, and CAD proficiency is a must.

Gensler has a competitive base salary, benefits and incentives package. With 26% growth in the last 3 years, we offer excellent prospects for advancement.

To apply, forward your resume in confidence to: Human Resources, Gensler, 700 Milam, Suite 400, Houston, TX 77002.

We are an equal opportunity, affirmative action employer.

CALENDAR

CyberSpaces

The Rice Design Alliance fall lecture series explores the future of architecture as both a remembrance of things past and an extension of our modern, high-tech culture. Christian Thomasen, author of Visionary Architecture: From Babylon to Virtual Reality; Daniel Libeskind of Studio Libeskind; Jean-Louis Cohen, chair of Town Planning History at the University of Paris; and Christine Boyer, professor of architecture at Princeton University and author of CyberCities are the speakers this year. 1999 TSA Design Awards

This year's jury for the TSA Design Awards selected seven projects to be honored from the 179 entries submitted. We were extremely fortunate to have jurors of national stature, great discernment, and deep experience who also happen to have significant ties to Texas and Texas architecture. Our thanks go to this year's Design Awards Committee chaired by San Antonio architect Dan Wigodsky.

François de Menil
François de Menil won the American Institute of Architects National Honor Award in 1999 for the Byzantine Fresco Chapel Museum in Houston. He was raised in Houston and New York and studied at the Cooper Union Irwin Chanin School of Architecture in New York City. He lives and practices in New York and is on the board of the Menil Collection in Houston.

Reed Kroloff
Reed Kroloff is editor-in-chief of Architecture. He was Assistant Professor of Architecture and Humanities at Arizona State University where he also served as assistant dean of the College of Architecture and Environmental Design. He holds degrees from the University of Texas and Yale University and has written for regional and national publications.

Marshall D. Meyers, FAIA
Marshall Meyers won the National Honor Award of the American Institute of Architects in 1978 for the completion of the Yale Center for British Art. He was the project architect for the Kimbell Museum and worked with Louis Kahn on the Salk Institute, as well as other projects. He now practices architecture in Pasadena, California.
1 The Williams House
Menil: The way the roof structure integrated air conditioning, the lights—it was thought out, and it's straightforward.

2 Hill Country Jacal
Kroloff: It does what many good building do in terms of how it moves from the ground plane to the sky. It's heaviest at the base and lightens up as it goes. The roof ends up razor thin, like a handkerchief or a kite that could sail away at any minute.

3 Rough Creek
Menil: The roofs are quite successful and elegant. The site organization and the material palette are successful. Simple. Not really simple, but not ornate.

4 Washington State History Museum
Kroloff: They stayed with the brick, and on the inside, there's a concrete shell that looks quite solid and steady and has the grandeur and scale that those old train stations had.

5 Ranch Shelter
Meyers: It looks like something that could just happen and fall off the back of a truck. And yet, there's no equivocation. It's absolutely clear and strong and inevitable.

6 Islamic Mosque
Meyers: It has the eternal look of something that represents a fundamental religion, but it also looks like it's of our time.

7 Laredo State Center
Kroloff: It marshals traditional form to try and make a place more comfortable through familiarity. But it also very nicely asks the landscape to help it be successful.
Sliding Doors
by Lawrence Connolly

Rilotenberry Wellen in Midland extended the range of Texas regionalism by looking to surrounding oil fields for inspiration when they designed this simple one-and-one-half-story gabled ranch shelter. The new, primarily metal structure replaces a dilapidated ranch house and completes the collection of existing structures. Conceived as an overnight refuge from the city, the shelter serves the primarily absentee owners as a gathering place for their ranch operations. Their intermittent stays and minimal support needs eliminate the form-cluttering comfort and storage demands characteristic of a full- or even a part-time occupied house. This refreshing absence allows for an exclusive focus on the fundamental requirements of providing shelter from inclement weather.

As such, the entire structure is uninsulated against the extremes of heat and cold in West Texas and bravely goes without central heating or air conditioning. Instead, heating is provided passively by opening the rolling doors to allow the sun to warm the concrete floor, and radiant warmth is provided by the two yin-yang positioned fireplaces. Conversely, the shelter relies on the shade from the adjoining eighty-year-old pecan trees to cool breezes from the west which are enhanced by ceiling fans. The house looks deceptively simple, but it unfolds in a different way each time the corner doors slide open.

To economize, the architects utilized off-the-shelf metal components that included a pre-engineered structural frame and corrugated galvanized steel siding along with stone and wood siding materials that were salvaged from nearby abandoned ranch structures. Over half of the 1,900-square-foot shelter of five equal bays is dedicated to a carport and porch. At the

1 The shelter's main room opens onto front porch and pecan mott.
2 Two of the shelter's five bays are enclosed for living space.
3 The fireplace made of salvaged stones contrasts the industrial aesthetic.
4 Rolling doors open to pecan trees and a view of the western horizon.
seasonally inhospitable north end is an open two-bay wide carport and at the south end, a single open bay is used as a porch all year round. The middle two bays contain a sleeping loft located above the kitchen and bathroom and the main room which is adjacent to the porch. A high window in the narrow loft provides natural light and ventilation and can be secured with a metal awning shutter. All of these components provide the flexibility needed by the owners.

Lawrence Connolly is an architect in Midland.
A THOUSAND-YEAR-OLD TRADITION is joined harmoniously to modern forms in the Islamic Mosque in Irving by Oglesby-Greene of Dallas. A Muslim congregation of the Dawoodi Bohra sect had a tight budget and a pressing need for space to worship, conduct classes, and hold community events. Most of the members of the congregation, which traces its origins back to the Fatimid Caliphate in Egypt in the 10th century (by Western reckoning), are recent immigrants from around Bombay in India, where the spiritual leader of the sect lives.

Oglesby-Greene responded with a suite of four buildings framing a circular courtyard: the mosque's prayer hall, a classroom building, a dining hall, and a residence. At the center of the site is a fountain, symbolic of ablution, which plays an important role in preparation for worship. Wide steps lead from the fountain to the mosque's entry hall. It is faced in alternate courses of red and gray concrete masonry units. An axis facing Mecca links fountain and entry through the prayer hall to the mihrab, the decorated apsidal niche where the priest leads congregants in prayer.

The prayer hall is built simply of stucco over load-bearing masonry walls, with glued-laminated beams and exposed wood decking over the column-free, carpeted worship space. The dimensions for the hall, 32-by-52 feet, were based on a traditional form. Tradition also dictated the mosque's decorative elements, which were patterned on those of a famous Fatimid-era mosque in Cairo. The minaret and the inverted-pyramid crests atop the walls were built up from metal studs, plywood, and stucco. As required by tradition, an upstairs gallery set in the two outside bays and separated from the prayer hall by an etched glass screen is reserved for women in the congregation.

(load-bearing curving exterior walls & exposed interior):
Featherlite

1. Alternating courses of concrete masonry units
form a curving entry wall for the mosque.

2. The prayer hall is a simple two-level space with
male worshipers on the ground floor and female
congregants in the upper galleries.

3. Ceiling lights in the dining hall center on lighter
colored carpet circles, which mark places for
special meals.

4. A shaded walkway links the prayer hall to the
classroom and dining hall wings.
To the west of the prayer hall, a glass-fronted, single-height classroom wing faces the courtyard through a small garden grove. The interior walls, tracing rays from the central fountain, create irregular classroom spaces. West of the classrooms is the dining hall building. Here, responding to a different set of traditions, the architects used the same structural materials as in the prayer hall, but on a wider, nine-foot module. Traditional meals in this community are served on 30-inch-diameter pewter platters; family groups sit in circles to share their food. The architects arranged lighting fixtures on three-foot centers in the ceiling and set lighter-colored three-foot carpeting circles in the floor to mark the space for these special meals. On the eastern wall of the dining hall, multiple hand-washing basins and special shoe storage racks again recall the importance of ablution in this tradition.

A small residential unit used by the priest establishes the southwest corner of the compound, its curving front wall creating complex interior spaces while responding to the lobby-front of the prayer hall. In Oglesby-Greene’s hands, the requirements of what might have seemed an exotic program produce spaces and forms of calm, order, and lyricism, matching traditional forms seamlessly with a modernist sensibility in construction materials and landscape.

Joel W. Barna was editor of TA from 1985 to 1995.
Sophisticated Shade

by Susan Williamson

With its enclosing stone wall and low swooping roof, this Hill Country retreat designed by Lake/Flato Architects of San Antonio, looks as if it is embracing the rocky creekside bluff on which it stands. The small building—1,500 square feet in one room—was designed to serve as a weekend getaway for a San Antonio family of four. Located about 40 miles west of San Antonio, the project accomplishes the owners’ goal of building something that sits lightly on the land, offering protection from the elements, but not acting as a barrier to an experience of the natural world. What they wanted, the owners told the architects, was a building that, if left unattended, would disappear into the landscape in 100 years.

A long, curving limestone wall anchors and shelters the screened structure to the north and serves as the organizing device for the interior as well. Above the solidity of the wall, the metal roof floats like a wing, cocked down and pulled low on the south side to protect the interior and an exterior patio from the heat of the sun. The steep slope of the roof echoes the slope of the land down to the creek below. The interior space is enclosed only with screen, but is still habitable in mild Texas winters. Panels above

RESOURCES
Limestone: Charlie Cade; roof and deck insulation: S.A. Foam Fabricators; metal roofing: MBCI San Antonio; wood windows: Marvin Windows Planning Center; wood ceilings: Hevenor Lumber; wood flooring: Braundera Yard & Hardware; concrete kitchen counter: Billy Johnson; self-composting toilet: The Home Place; tankless water heater (propane fueled): Tank Town; refrigerator and gas range (propane powered): Temptrol Corporation

1 The owners, who told the architects they wanted as much roof as their budget would allow, call the building Jacial, a Mexican term for a lean-to structure.
2 The building is enclosed only with screen; wide roof overhangs protect the interior from the elements.
3 One end of the stone wall encloses space for a shower and toilet.
the stone wall can be opened to direct breezes through the screen windows and closed to block cold north winds in the fall and winter.

In order to minimize the building's impact on the surrounding landscape, the clients decided not to bring in electricity or to install a septic system. Instead, all heating and cooling is passive. A shallow Rumford-style fireplace provides radiant heating. Rainwater is harvested from the tin roof and stored in a 5,000-gallon tank, the toilet is self-composting, the stove and refrigerator propane-powered, and the lighting is photovoltaic-powered.

From a distance, the incomplete curve of the stone wall looks as if it might be the remains of some earlier, larger structure. At the same time, the lightness of the screened room and roof give the impression of something impermanent, something newly constructed around and against the remnants of an older ruin.

Susan Williamson was editor of Texas Architect from 1997 to 1999.
Arch Revival

by Lisa Germany

In 1911 when Tacoma Washington’s Union Station was completed by Reed and Stem, the architectural firm that shaped New York’s Grand Central Station, its colossal, arched entrance and its crowning, copper dome announced that reaching the terminus of the Northern Pacific railway was a celebratory event. By 1991 when Austin-based Moore/Andersson Architects won the competition for the Washington State History Museum, no one could fail to see that Tacoma was the end of the line, in the gloomiest, most modern sense of the phrase. The area, one architect remembers, was like Skid Row, and Union Station, with a lackluster addition that had transformed it into a federal courthouse, was isolated, occupying a landscape that seemed to have no boundaries.

Nevertheless, the station exerted a strong influence on the architects. Says Moore/Andersson’s Chris Wise, “The idea of the brick and the proportions of the arch were embedded in this powerful, existing building.” The task was to lift out the brick and arches, rethink them in the terms of the new museum, and by so doing, provide the station with the context it so sorely lacked. Thus, the firm called for four 65-foot, concrete groin vaults that echo the precise dimensions of the vault at Union Station and answer the older building’s call for monumentality. Although there is a separation of 85 feet of landscape between the buildings, the museum also picks up and continues the color and rhythm of the Station’s red brick.

The client, the Washington State Historical Society, articulated its needs clearly: 100,000 square feet of exhibit, storage, administration, and public spaces. Of this, 20,000 square feet required high ceilings with clear spans for exhibition purposes. The client wanted the new building to be a landmark that fit the station next door and hoped it would revitalize the area. Since its completion, the University of Washington, working with the firm Moore, Ruble and Yudell, has created a branch campus with the adaptive re-use of warehouses; Antoine Predock has designed a new art museum, and Arthur Erickson has been given the commission for the International Museum of Modern Glass. Moore/Andersson and artist Dale Chihuly have been commissioned to design a bridge of glass that will connect the history museum to the glass museum.

Perhaps most significantly, the museum set its budget at $21 million, which was 25 percent less than the figure museum officials initially gave the architects. In fact, Redmond Barnett, now head of exhibitions, likes to recall the late Charles Moore’s response. “Nothing,” Moore replied, “improves a project so much as a good budget cut.”

The budget cut reinforced the architects’ desire to design a vast shell of a building, partaking of the sturdy rigor of warehouses in the vicinity. Concrete walls and floors, heavy stair railings, cornices of lead-coated copper sheet, and aluminum panels with custom-made fasteners on the undersides of the arches give the museum an of-the-moment, industrial quality. “It’s a very gutsy, honest, individual building,” says Barnett. “It challenges the museum staff to come up to its level. Everything has to be good because the building is so good.”
Open arch connects a view of the city with the Bay. Sconces were designed by Moore/Andersson.

The massive steel bracket of the entrance arch meets its counterpart from the perpendicular open-air arch. Custom-designed fasteners line the underside of the right arch.

The full impact of the arches is expressed by the curving concrete ceilings.

Two prominent arches cradle an amphitheater below that inverts the dome of the nearby Union Station.

Lots of Light

by Gerald Moorhead, FAIA

The common response to Houston's climate is to exclude it, to build air conditioned shade. While the design of the Williams house takes the appropriate precautions with southern and western exposures, it avoids the stereotypical response by letting in light, and lots of it. "The light quality is singular," says the owner, a visual artist.

Situated on a standard 50-by-100 square-foot lot on the fringe of Houston's River Oaks, the house's industrial imagery of metallic saw-tooth sheds contrasts with a neighborhood of steroid stucco townhouses. As in the Bruner/Camp area just to the north where tin houses have proliferated, the metal siding and simple forms denote the economical construction of an artist's residence/studio.

The house is arranged on the site for privacy from the street. The "L" shaped plan faces living areas into an interior courtyard. The blank facade of zig-zag geometry fronts the street with studio clerestories above the carport. A tall living room links the two-story front section with the two-story rear bedroom section.

The client requested as much daylight as possible. The design thus brings in light from both the north and south windows for balanced, even light throughout the day. South-facing courtyard windows of the living room are shaded by a long porch, which also serves as the entry to the house. It's the north-facing windows, however, that give the house its industrial references, with repeated steep shed roofs with large clerestories. The studio, living area, and master bedroom suite all receive this special illumination. An added perk is that even on a dark day, light is reflected off the adjacent roof surfaces back into the clerestories.

Aside from the contrast of the shiny metal in a beige-and-pastel neighborhood, the house is unpretentious. Materials and construction are economical and pragmatic. The interiors are neutral, apart from the subtle drama of the light, and create a suitable background for the creation and display of art. TA

Much of the rhetoric about contemporary health-care focuses on the idea of creating patient-friendly environments, on designs that are as much about hospitality as hospital. But bright colors and well-furnished lobbies and clever wayfinding systems often fail to disguise the institutional and monolithic qualities of the buildings they decorate.

The Laredo State Center, designed by Lake/Flato Architects of San Antonio, reflects a conscious move away from design as usual for the Texas Department of Mental Health and Mental Retardation (MHMR). “We wrote our request for qualifications with good design in mind, not construction, administration, or experience with health-care design,” says MHMR project manager and architect Don Hurst. The success of the project began with the comprehensive program, developed by the late architect Killian Fehr.

The center provides walk-in services to a patient population that is 95 percent Hispanic, mostly lower-income, from rural backgrounds, and often undereducated. The facility and its staff, previously housed in an adjacent World War II-era Air Force hospital (since demolished), had long grappled with their patients’ lack of trust. The architects attempted to address that problem by creating a facility that was comforting and familiar.

The 55,000-square-foot project is organized as a cluster of one-story buildings fanning out from a central reception room known as the sala (living room). Between the buildings are courtyards cooled by fountains and landscaped with plants, including some used by the native healers and relied upon by many of the facility’s patients. A long corridor connects the three main wings (a fourth wing, housing a 15-bed crisis stabilization unit,
is separate). The scale is intimate and all spaces open to the outdoors; the basic concept was the healing power of nature. Beyond the central corridor, circulation is outdoors, under covered walkways and porches.

At $5.5 million, the budget was tight. The aesthetic success of the project comes from the way durable, inexpensive materials are used: stucco in a range of vivid colors, soft Mexican brick and pavers, metal roofs in varied shapes, stained concrete floors, and exposed structural elements in many of the interior spaces. Where the budget would allow, local art adorns the walls, and furniture hand-crafted from local mesquite graces the public spaces.

The number of patients served since the new MHMR center opened has increased by at least 100 percent and is continuing to grow.

The Laredo State Center is organized as a cluster of pavilions around lushly landscaped courtyards.

Circulation is mostly through exterior covered arcades and walkways.

Various buildings can be identified by form and color, allowing patients who may be disoriented or illiterate to find their way around the complex.
Inside/Outside

by Susan Williamson

The Rough Creek Lodge and Conference Center is another modernist take on the Central Texas vernacular by Austin architect Lawrence W. Speck, FAIA. This 39-room lodge, which is primarily used for corporate meetings and hunting retreats, is located about an hour and a half south of Dallas. The multi-building complex curves along a low ridge, weaving through a stand of large live oaks.

"This place is all about going indoors and going outdoors, about climbing and perching and moving through the landscape," explained Speck, dean of the University of Texas School of Architecture and design architect for Page Southerland Page of Austin. The lodge opens on the lake side, with outdoor rooms as important as the indoor ones. Two large porches, a firepit, swimming pool and spa span the lake side of the complex on various levels. The guest rooms all extend into the landscape as well, opening onto balconies that look out over the lake and the surrounding countryside.

The bowed standing-seam metal roof of the central building swoops low on the lake side like a pulled-down hat brim to shade the porches and public rooms. To enhance the connection between indoors and outdoors and to leave views toward the lake undisturbed, circulation is on the inside of the curve. On the opposite side of one building, a 650-foot-long wall creates one edge of a series of patios that are dug into the hill. Crisscrossing these outdoor spaces are covered walkways that connect the main building with the various outbuildings that house guest rooms and other facilities.

The main building includes a central public space of baronial dimensions centered on a double-height fireplace, enormous and yet minimally detailed with simple bands of contrasting stone. The lake side of this room opens to a vast expanse of glass, shielded from the sun by the continuation of the sweep of the curving wood-paneled ceiling. The roof joists are exposed, as is the carefully detailed system of steel cables and other connectors.

PyroTherm.
Built for Speed.

It's no coincidence wall systems specifying new certified 100% PyroTherm High Performance Concrete Masonry Units (HPCMUs) are being completed at record speeds. After all, a 100% PyroTherm HPCMU isn't your average gray block. It's more like a formula racer.

Re-engineered to be the best CMU ever made, the new PyroTherm HPCMU is manufactured according to strict purity, weight, strength and other performance requirements using only carefully graded, low-density PyroTherm aggregate.

When you specify PyroTherm HPCMUs, you'll get a strong, durable masonry block at about half the weight of heavier CMUs. HPCMUs are energy efficient, saving up to 50% on energy costs versus tilt-wall systems.

For the high performance, go with 100% PyroTherm HPCMUs.

Industry News: Roofing Products

Firestone Building Products Company has published an informational brochure of roofing materials. The 1999 Sweet's Brochure is a compilation of single-ply and asphalt-based roofing systems, polyisocyanurate insulation, and accessories for commercial roofing. It contains details of roofing system diagrams, physical property charts, and specification tables, to help select the roofing system best suited for your project. Circle 174 on the reader inquiry card.

Building Components System, Inc., now distributes SimTile® Metal Roofing Tiles. Available for both commercial and residential applications, SimTile® comes in steel (coated with PVF2-Kynar 500) and aluminum panels (coated in Polyester). Only a drill and snips are required for installation.

Metal roofs can prevent snow build-up, act as a heat-reflecting surface and do not burn. Tests performed by the Department of Fire Technology of Southwest Research Institute in San Antonio qualified SimTile® Rapide as a class B roof covering system and a class A roof covering, if installed with a standard fire barrier in accepted industry practices. Circle 175 on the reader inquiry card.

Spanish Red Tile is a new color addition to Met-Tile, Inc., manufacturer of tile roofing materials. There are now ten different colors which feature benefits such as light-weight yet all-weather resistance, wind resistance in excess of 230 miles per hour, and user-friendly installation. These tiles are designed to be low-maintenance and are available in three-foot-wide panels. www.met-tile.com

Revere Copper Products, Inc. has developed a series of seminars focusing on the unique advantages of designing, specifying and building with copper. The seminars are offered to architects, contractors, and others in the industry. Topics covered include copper roof systems, an examination of standing seams, horizontal, Bermuda seams, flat seams, and solid copper shingles; how and why to specify copper with a discussion of weights, thicknesses, temps, and ASTM specification. Other topics include copper’s durability, its use with other materials, color, finish, and weathering considerations. A look at new copper products is also included.

AIA members who participate in a seminar will earn a minimum of two CES Learning Units. This program meets AIA/CES criteria for Quality Level II and qualifies for one hour of Health, Safety and Welfare (HSW) credits. The seminars are conducted at architect’s offices. To schedule a seminar, call 800.448.1776.

Petersen Aluminum Corporation's SNAP-CLAD Panels top the new $4.75 million press box and stadium club, completing an eight year long renovation of the 48-yr-old Rosenblatt Stadium in Omaha, Nebraska. The stadium plays host to the NCAA College World Series and serves as home field for the Omaha Royals. The new press box features a peaked metal roof, which dramatically altered the exterior appearance of the stadium. Boone Brothers Roofing Inc. in coordination with the general contractor, Weitz Company, Inc. installed over 11,000 square feet of SNAP-CLAD Panels manufactured by Petersen Aluminum Corporation. The panels are a custom blue PAC-CLAD finish and were corrective leveled to provide superior panel flatness. Color and panel appearance was critical considering the prominence of the roofing panels in the stadium design.

For more information on SNAP-CLAD Panels, please contact Petersen Aluminum Corp., 1-800-441-8661 or visit our web site @ http://www.pac-clad.com

On the Margins  

EXHIBITIONS Traveling photo exhibition dramatizes low-income housing problems.

Gehry via Dallas  

ARCHITECTURE Dallas architect Frank Welch, FAIA, captures Frank Gehry, FAIA, in words and photos.

Taniguchi

The Architecture of Yoshio Taniguchi
Taniguchi, Yoshio
Essay by Fumihiko Maki
280pp, 226 b&w, 208 color illustrations
hardcover $125
Harry N. Abrams, 1999

BOOKS In his opening essay “Stillness and Plenitude,” the eminent Japanese architect Fumihiko Maki describes Yoshio Taniguchi’s enormous commitment to detail in such a way that one can’t help but think of traditional sword-making workshops in which the steel is so well tempered and the sword so finely wrought that the resulting quality is enough to identify the maker, obviating the need for a signature. Happily, Taniguchi’s quiet rigor and refinement is manifest in this survey of twenty projects ranging from museums, schools, and libraries to his competition-winning proposal for the Museum of Modern Art’s expansion in New York City.

The eleven-by-eleven-inch format provides a generous background for exquisite color photography, similar in many aspects to the Spanish journal El Croquis. Each project is represented in the same almost imperceptible format, proceeding from site photo with isometric drawing and brief text, to exterior photos, to interior photos and aligned drawings (elevations, sections, and plans) reproduced at the same scale. The book is designed to explain the work, not obfuscate or dissemble, and this in itself seems a welcome relief to the usual architectural monograph.

W. Mark Gunderson

W. Mark Gunderson is an architect practicing in Fort Worth.

On the Margins

EXHIBITION The Texas Low Income Housing Information Service (TxlHIS) has launched a traveling photo exhibition depicting the growing housing crisis in Texas. Despite a booming economy, TxlHIS reports that a million Texans are living in substandard housing, and that 350,000 live in “colonias”—physically isolated communities that lack adequate sewage, drainage, paved roads, and potable water. This is a side of Texas that most of us never see; unfortunately, as our cities are becoming increasingly prosperous and our downtown areas gentrified, poor people are being pushed out of the only homes they can afford.

The exhibition focuses not only on problems, but on creative grassroots solutions. In the Rio Grande Valley, farmworkers created a cooperative self-help housing program that gives families with incomes of as little as $6,000 a year the chance to build a three bedroom house with payments less than $100 a month. In Austin, a neighborhood association and church groups renovated houses for the homeless.

The exhibition, “Housing in Texas: a Living Crisis,” has appeared in Austin, San Antonio and El Paso, and is now on its way to Houston, Dallas, Fort Worth, and Laredo. In each city, in conjunction with the exhibition’s opening, TxlHIS holds a community meeting that involves elected leaders and academics. For the exhibition’s location and schedule, check the Texas Housing website (www.texashousing.org) or call 512-477-8910.

Freedmen’s Town against Houston skyline
Gehry via Dallas

by Frank D. Welch, FAIA

Young architects crowded around Frank Gehry, FAIA, some holding books for him to sign, others just staring at the rumpled, white-haired, 70-year-old celebrity perched on the edge of a stacking chair at the Dallas Convention Center. Gehry was preparing to speak at the Annual AIA Convention, and was methodically transferring hundreds of slides from plastic sleeves to carousels. Head down, swaying to and fro in sync with his arms moving rhythmically back and forth across his lap, he looked a bit like a tailor bent over his work.

He operates like an artist, guided by intuition, yet there is a palpable, objective quality to the infrastructure of his buildings—a non-artiness—reflecting perhaps his modernist beginnings.

I had met Gehry before, but after photographing the blindingly sculptural Guggenheim Museum in Bilbao, I was still surprised at how down-to-earth he is. Gehry is shortish and stocky, and has a modest, laid-back manner. Though he was wearing a coat and tie for his speech, he usually looks like a blue-collar artist, definitely a man of the people. When he finished transferring the slides, he looked up over his little eyeglasses, smiled, and said, "This is a bunch of stuff to look at."

And it turned out to be an impressive "bunch of stuff"—museums, theaters, college buildings, an astounding variety of projects. As he showed the slides, Gehry spoke softly, describing the projects in a detached, beamed way as if he were seeing them for the first time. He was generous, crediting his staff and a demanding client for the success of the Guggenheim. He was confessional: "It's scary when I start work on a building." And he was self-mocking: "These guys wanted to do something with the old Times building on Times Square in New York so I came up with a scheme to drape the building in a metal mesh that would move—up and down, in and out—sort of breathe in cycles. Well, they came in, said what I had done, called me a genius over and over, then left and I never heard from them again."

As if wanting to refute the impression that his abstracly florid, expressionistic structures sprang from his head in a burst of fevered inspiration, he stressed the lengthy process of searching for the right design solution, and documented that search with slides of sketches, models and computer drawings. "It goes on and on," he said. "It's like watching paint dry." Project by project, he carefully led the audience through his office's consuming method of analysis-search-discovery-rejection-revision-rediscvery and so on to the final design.

Long before Gehry became famous, he hung out with artists and musicians in California, and art is a primary source of his inspiration. He operates like an artist, guided by intuition, yet there is a palpable, objective quality to the infrastructure of his buildings—a non-artiness—reflecting perhaps his modernist beginnings. The "weird buildings" (Gehry's words) work with an inner logic. The best part of his speech came when a power failure shut down the slide projector. Gehry leaned forward in the gloom and for almost half an hour gracefully fielded questions from the darkened room of architects. He was open and down-to-earth, until one high-pitched question came out of the dark alluding to the willfulness of Gehry's designs. Then he bristled.

After the speech, I offered to take Gehry to his hotel. I had a photograph of Bilbao for him, and I had several questions about Philip Johnson for a book I was completing. Outside, we wandered around the angular, behemoth Convention Center looking for my car. As we plodded along in the sweltering heat, he put on some stylish sunglasses, and we paused when one of the lenses fell out. "Don't you know where you parked?" Gehry muttered as he tried to jam the lens back into the frame. After circling the gigantic building, I finally spied my Honda and drove Gehry to the Adam's Mark Hotel. Upstairs, in the small, windowless sitting room of his suite, Gehry loosened his tie, kicked off his shoes, and putting his Gold 'n' socked feet up, he opened a bottle of cold Evian and apologized about the cramped suite.

When I asked about Philip Johnson, Gehry replied, "I wanted to meet Philip in the 60s because he was the only architect around who was collecting art—the artists I liked—and I used to tell Jasper Johns, 'Say, you know Philip, introduce me.' And he'd say, 'No, no, when you're ready, it will happen.' So in the early 70s I did the Roa Davis house and Philip heard about it and came out and we struck up a dialogue and became friends. He's so smart and so quick and so willing to say what he thinks. He doesn't pull his punches. I found that refreshing."

The conversation ranged from topic to topic, and at the end of our visit, I gave him a photograph of the Guggenheim I had taken in Spain last year. He stared hard at the dark image without comment, then said, "Everyone wants to do the Bilbao thing now. We've gotten calls from every country, including China." As I was leaving, he said he was flying down to Biloxi early the next morning to talk about a small museum for a potter he admires.

Biloxi, Mississippi? Given the chance to practice his art, Gehry will go.

Frank Welch, FAIA, is an architect practicing in Dallas and a TA contributing editor. His photos of the Guggenheim appear on the following pages.
Expo Review

The companies listed below are exhibitors in the 60th Annual TSA Design Products & Ideas Exposition in Galveston, October 21-23.

4530 W. 14th, # J, Houston 77092
713.686.0501, fax 713.957.4699

Acme Brick Company, booths 225, 228
2811 W. 7th St., Fort Worth 76107
817.332.4101, fax 817.390.2404
For more than 100 years, Acme Brick Company has been meeting the needs of Texas architects with hard-fired clay brick in an exciting variety of colors, textures, and blends. Acme's newest plant is scheduled for completion in late 1999 and will produce Acme Handmade Bricks for Texas architects. Acme also offers the IBP Glass Block Grid System.

Aegis Coating Technologies Corp., booths 302, 304
11921 Windfern Road, Houston 77064-3200
281.894.9336, fax 281.894.4069

AHI Supply Inc., booth 110
P.O. Box 884, Friendswood 77546
800.873.5707, fax 409.823.1005
AHI Supply Inc. manufactures and sells materials involved in various areas of construction. For this exposition, we showcase our paint stone line of products and our colored masonry cements and mortar mixes. We have standard lines of products and custom applications in both areas.

All Seasons Commercial Division, Inc., booth 406
1800 Shihoh, Bryan 77803
409.823.6557, fax 409.823.1005

Allstate Rubber Corp., booth 315
19512 101 Ave., Ozone Park, NY, 11426
718.526.7890, fax 718.849.1662
Allstate offers 163 colors. Allstate vulcanized rubber cove is available in 39 colors, and in SHADOWBASE™ Allstate MVP2 is designed for heavy graving where easy maintenance and low cost are paramount. Allstate rubber tile lets you choose any color combination in reliefs, confetti, smooth, marble or gym tile.

Amerispan Fence Co., booth 326
1555 N. Mingo, Tulsa, OK, 74116
800.241.8724, fax 877.926.3747
The Texas architect's first choice in ornamental fencing. Amerispan's Aegis™ fencing is the most widely specified ornamental fencing in the commercial market today. We are unsurpassed in strength, coatings, and quality. Fax us toll free at 877.926.3747 for budgets, or call 800.241.8724 for a complete Architectural Binder.

Architectural Building Components, booth 318
11625 N. Houston Rosslyn Rd., Houston 77086
281.894.1696, fax 281.894.1989
Architectural Building Components manufactures standing seam metal roofing and operates primarily in the south central U.S. We make nine standing seam profiles including tapered and curved panels in 18 standard 24-gauge Kynar 500 colors. We also make the E-Z-Z, a pre-notched zee closure designed to limit field labor involved in installing the ridge headwall and hip flashing.

Armarco Industries, Inc., booth 311
1320 Spinks Rd., Flower Mound 75028
972.874.1388, fax 972.874.1391
Armarco Industries, Inc. is a roof system specialist firm that works with architects, engineers, and building owners. We provide our clients with proper evaluations of the existing conditions, make recommendations, provide budget estimates, write specifications, and do project management to ensure proper installation of the roof components.

Artcrete, Inc., booth 234
5812 Hwy. 494, Natchitoches, LA 71457
318.379.2000, fax 318.379.1000

Ash/Trash Distributors, Inc., booth 104
6103 N. Villa, Oklahoma City, OK, 73112
405.843.9085, fax 405.843.3962
Absolutely the greatest looking litter container on the market today! Our Ash/Trash containers are manufactured with a fire retardant glass reinforced composite construction. Can be used outdoors or indoors and color coordinated to match any building color.

ASI Sign Systems, booth 400
8601 Juneau, # 140, Houston 77040
713.461.7222, fax 713.865.7516
ASI Sign Systems is the leader in architectural graphics. Our services include planning, manufacturing, installation, and maintenance. Through our ASI custom products and Modulex Systems, we offer the most comprehensive line of signs available in the market.

Atlas Architectural Metals, Inc., booth 235
1301 Greengrass, Houston 77008
713.863.6275, fax 713.863.6272
Atlas Architectural Metals, Inc. is a Houston-Texas based manufacturer of commercial aluminum glazing systems with branch facilities in Caldwell and Dallas. We offer a complete line of curtain wall systems, storefront and interior framing systems, standard and heavy duty entrance doors, commercial windows, and interior metal sliding doors.

Avatech Solutions, booths 434, 436
4332 N. Beltline, # B-110, Irving 75063
972.570.0077, fax 972.570.7505
Avatech Solutions has provided CAD solutions to design professionals since 1983 with a complete set of products and services. Our exhibit features the new tools to automate 3D design and visualization with Architectural Desktop and 3D Studio VIZ. Easily create walls, doors and windows in 3D and 3D and then take these models to 3D Studio VIZ for an animated walkthrough of your design, complete with materials and textures. Get AIA/CES credit for previewing this new technology.

Best-Rite Manufacturing, booth 555
201 N. Crockett, Cameron 76520
254.697.4953, fax 254.697.6258
Best-Rite manufactures a full line of visual display boards and display cases. For over forty years, Best-Rite has established a reputation for excellence by offering personalized customer service, superior quality hand-crafted workmanship, fast shipping times, and the strongest product warranties.

Black Millwork Co., Inc. / Andersen Windows & Patio Doors, booth 504
901 Rehill St., Austin 78753
512.454.1293, fax 512.454.8447
Over the past 94 years, Andersen has become the leader in the wood window and patio door industry by offering quality products that incorporate state-of-the-art technologies and superior craftsmanship backed by superior warranties. Andersen offers features that address the hot climate, vinyl clad wood windows with high-performance insulating glass to reduce heating and cooling costs. Our hundreds of shapes and sizes are ready-made, saving you the extra cost of custom-made windows.

Bomanite Corp., booth 355
P.O. Box 519, Madera, CA, 93638-0559
559.673.2411, fax 559.673.8126

Bradley Corporation, booth 317
P.O. Box 369, Menonomee Falls, WI, 53051
414.251.6000, fax 414.251.5817
Bradley Corporation is the industry's exclusive source for plumbing fixtures, washer accessories, partitions, emergency fixtures, and solid plastic lockers, serving commercial, industrial, health care, recreation, educational, and corrections markets worldwide.

Cadeshack, booth 355
9006 Rocky Lane, Houston 77040-1538
713.866.1700, fax 713.866.3332
Built on the solid foundation of the unique Virtual Building™ concept, ArchiCAD covers every facet of the architectural process: design, documentation, communication and collaboration. ArchiCAD lets you create and modify buildings in 2D and 3D, derive sections, elevations, and details easily from an integrated 3D building model, communicate with colleagues and clients, automate door and window scheduling, interact with outside databases, and even write customized add-on functions.

Carlisle SynTec Inc., booth 257
2399 Midway Road, Carrollton 75006
972.248.3036, fax 972.248.0393

Celotex Corp., booth 156
13800 Montfort, Dallas 75240
800.523.4684
Celotex continues to be a leading building materials manufacturer. Celotex products are used in both commercial and residential applications providing solutions to a wide variety of design issues. In addi-
Environmental Soil Stabilization, L.C.C., booth 314
1125 Woodland Park Blvd., # 165 LB3 2, Arlington, 70013
817-274 1500, fax 817-861-0339
Ecos 3000 electrochemical injection is used to stabilize potentially expansive soils beneath new and existing building and pavement locations. Ecos 3000 is an iron exchange solution that is mixed with water and injected into the ground under pressure through injection rods. The Ecos 3000 solution reduces the amount of absorbed water attached to clay particles so that the shrink/swell potential of the soil is significantly reduced.

F.W. Dodge, booth 128
1341 W. Mockingbird Lane # 110-0, Dallas 75247
214-688-5061, fax 214-688-5021

Farmer's Copper & Industrial Supply Inc., booth 557
P.O. Box 2649, Galveston 77551
409-765-9053, fax 409-765-7115

Featherlite Building Corp., booths 301, 305
P.O. Box 1229, Austin 78727-1029
512-472-2474, fax 512-471-2886
Featherlite will display its new oversized ground face masonry units (Hill Country Stone) and new landscape products (interlocking concrete pavers and Mesa retaining wall products). Additionally, Texas Quaries will display the versatility and beauty of their quarried limestones - Leafer Gray, Lueders Buff, Cordova Cream and Cordova Shell.

Follett Veneers, Inc., booth 206
5713 Cottonwood, Pearland 77584
281-848-5492, fax 281-848-7185
We are meeting the needs of architects, architectural millworkers, and custom furniture manufacturers every day with a wide array of services, including a CD catalog containing color photos of over 150 veneer cuts and species. We offer custom cut panels and doors, and provide AW! Certified panel products.

Fry Regal/SCI, booth 407
P.O. Box 95403, Houston 77241-5033
713-957-0391, fax 713-957-3094

Gaco Western Inc., booth 334
P.O. Box 59971, Dallas 75229
214-921-8460, fax 214-921-8462
Gaco Western manufactures high performance elastomeric coatings and polyurethane foam for the construction industry. For over 44 years, Gaco has specialized in roofing, decking, and waterproofing.

Galvame, Inc., booth 437
205 Via Burton, Anaheim, CA, 92806
888-489-1367, fax 877-781-3185
GALVATIVE I roofing system is 75% lighter than traditional clay tile and weighs only about 175 pounds per square. The core of the system is a 24-gauge epoxy-coated steel panel available in the marketplace. It panels' larger sizes allow for faster installation on larger roof areas. Combine this with the efficiencies of a battensless system and you have the markings of one of the most cost efficient steel installations available.

Giles Engineering, booth 307
10721 N. Stemmons Freeway, Dallas 75220
214-358-5885, fax 214-358-5884
Giles is a national consulting firm specializing in Geotechnical, Construction Materials Testing, and Environmental services. We provide these services to Texas architects, owners, developers, financial institutions, and municipalities from our Dallas Regional Office.

Greenscape Pump Services Inc., booth 305
1425 Whitlock # 108, Carrollton 75006
972-446-0152, fax 972-446-0115

Guardian Industries, booth 316
3801 S. Hwy. 189, Corsicana 75110
903-871-4874, fax 903-874-8638

Hoover & Keith Inc., booth 309
11381 Meadowgreen, # 1, Houston 77082
281-496-0616, fax 281-496-0616

Houston Chapter Associated General Contractors, booth 205
3825 Daconia, Houston 77029
713-833-3700, fax 713-833-3700

Hull Historical Inc., booth 205
201 Lipscomb St., Fort Worth 76104
817-332-1495, fax 817-331-1490
Hull Historical is a full service historical millwork company. We specialize in historically accurate doors, windows, moldings, wainscoting, built-ins, cabinetry, casework, and stair parts for historic buildings and homes. We provide a turnkey service from fabrication to installation and finish.

Hurdl Millwork Company, Inc., booth 138
575 S. Whelen Ave., Medford, WI, 54451
715-248-2011, fax 715-248-6643
Hurd has been setting the standards for performance in windows and patio doors since 1919. Available in a wide variety of styles and sizes, Hurd offers wood, aluminum cladwood, and vinyl products. With the largest selection of glazing options available, Hurd windows are making homes more comfortable across the nation.

ICI Dulux Paint Centers, booth 205
1003 Antoine, Houston 77005
713-680-3377, fax 713-680-3486
ICI Dulux Paint Centers is a business unit of ICI Paint World Group, the largest producer of paints in the world. We provide architects, contractors and building owners with the single source solution for paint and coating needs to match their exacting requirements.
Innovative Concrete Construction, Inc., booth 531
1110 Osgood, San Antonio 78233
210.590.3727, fax 210.590.3456
Pink-form extra is an insulated concrete form (ICF) using two inches of foam to insulate concrete walls. ICFs provide an effective R-value of 50-plus and tremendous gains in security and safety over stick-built homes. While more expensive initially to construct, they provide significant savings in energy over the life of the structure.

Innovative Insulation, booth 224
6200 W. Pioneer Pkwy., Arlington 76013
800.826.0123, fax 817.466.6122
Innovative Insulation... Saving a World of Energy. We specialize in radiant barriers and reflective bubble insulations. Our products substantially reduce fuel usage as well as maintain comfort levels in structures of all designs and sizes. Our double-sided products provide 97% reflectivity and are made of 99% pure aluminum. A non-toxic, non-carcinogenic, and incredibly lightweight material, Innovative Insulation offers perhaps the most easily installed product in the industry.

International Code Council, booth 308
5203 Leesburg Pike, #708, Falls Church, VA, 22041
703.931.4532, fax 703.379.1546
The International Code Council is owned by BOCA, ICBO, and SBCCI. Representatives from each group will be available to discuss the current status of the development of the International Codes. Copies of the codes will be available for review. Support services, documents, and membership information will be available from each organization.

International Interior Design Association, booth 527
214.981.0344, fax 214.971.5307

ITEC Steel, Inc., booths 125, 127
1020 Shady Oaks Dr., Denton 76205
940.383.0593, fax 940.383.3784

J.E.H./Eagle Supply Inc., booths 417, 419
15200 Midway Rd., Addison 75001-4532
972.364.0545, fax 972.364.0545
J.E.H./Eagle Supply Company is a leader in the roofing supply industry. The Specialty Division is the exclusive representative for Ludowici Roof Tile, Hilltop Vermont Slate, and North Country Black Slate. Our Specialty Division prides itself in a knowledgeable sales force and the ability to deliver on time.

Jewell Concrete Products, Inc., booth 329
P.O. Box 7115, Waco 76714
800.792.3216, fax 254.772.6999

Kelly-Moore Paint Co., booth 106
1513 W. FM 1960 West, Houston 77005
917.864.0449, fax 281.864.0471
The development of innovative products continues to be an integral part of Kelly-Moore's success. As a company, we have committed a tremendous amount of resources to developing and manufacturing top-quality, environmentally-friendly products that meet the needs of painting professionals.

KSL, Inc., booth 132
8420 Katy Freeway, Houston 77024-1903
713.865.2500, fax 713.865.8824
King Safe & Lock Co., Inc. has been in operation in Houston since 1970 serving end users and the construction industry with locksmith services, access control, architectural door hardware, safes, vaults and specification services. KSL, Inc. has on staff two Architectural Hardware Consultants (AHC) available for consultation on door hardware specifications, Life Safety Codes, Accepted ADA applications, and specialty door hardware.

Lehigh Cement Co., booth 306
1512 Lake Air Dr., Waco 76710
254.772.9350, fax 254.776.1799
Lehigh Portland Cement specializes in the manufacture, promotion, and sales of white cements with a variety of products including types I, III, V, and masonry cement. A vast distribution network allows both bulk and package cements to reach any size project anywhere in the United States.

List Industries, Inc., booth 521
6430 FM 1660 West #214, Houston 77069
281.469.9522, fax 281.469.4514
See us for steel lockers for school corridors, athletic areas, hospitals, and all types of dressing areas; locker room benches; industrial steel shelving; and portable gates.

Lutron Electronics, booth 218
7200 Suter Road, Coopersburg, PA, 18036
610.282.3800, fax 610.282.6437
Lutron Electronics Co., Inc., is the world's leading designer and manufacturer of lighting controls and architectural lighting control systems for residential, commercial, industrial and institutional applications.

Marvin Windows and Doors, booth 300
P.O. Box 100, Hwy. 11, Warroad, MN, 56763
888.487.8666

800.725.6188, fax 972.484.8948, fax 972.484.1615
Whether it's renovation or commercial projects, single-family homes, multi-family housing, or self-leveling applications, you can count on Maxxon products for performance and value: Gyp-Crete, Gyp-Crete 2000, Thermalo-Floor, Dura-Cap Floor Underlayments, Level-Right Self-Leveling Floor Underlayments, and Acousti-Mat II, the ultimate sound deadening system.

MCT Sheet Metal Inc., booth 321
29210 Quail, Katy 77493
281.391.0284, fax 281.391.4787
For more than 20 years a major provider of quality architectural sheet metal products to schools, churches, commercial, industrial, and residential customers in central and east Texas and elsewhere. MCT specializes in durable, attractive retrofit metal roof systems.

Monarch Paint Company, booth 525
4202 Lockefield, Houston 77052
713.682.4799, fax 713.681.1020
Monarch Paint Company invites you to view their new high performance architectural and commercial paints. These were developed using new resins and polymers for use in high traffic areas with superior sealing qualities or properties.

Mundo U.S.A., Inc., booth 236
1705 W. Northwest Hwy., #155, Grapevine 76051
888.966.6369, fax 817.421.8886
Many know Mundo based upon our wide variety of athletic flooring which ranges from weight rooms to outdoor tennis courts. Yet, we owe much of the competitive edge we enjoy in the rubber flooring industry worldwide to our roots as producers of durable and high performance commercial surfaces.

Monoglass-Halligan & Associates, booth 130
P. O. Box 6673, Baton Rouge, LA, 70896
225.924.5648, fax 225.924.0409
Monoglass spray-applied fiberglass insulation offers greater flexibility in design because of its versatility and ease of installation. Monoglass solves insulation requirements of the new energy codes. A few of the key advantages of Monoglass are: an R-factor of 4 per inch of thickness; totally incombustible; dust free; and can be left exposed.

Monolithic Dome Institute, booth 139
P. O. Box 479, Italy 76651
972.491.7423, fax 972.493.6662
The Monolithic Dome is made of steel-reinforced concrete and polyurethane foam. This makes the dome almost indestructible and passive solar. The Monolithic Dome withstands tornados, hurricanes, earthquakes, fire, and other natural or unnatural disasters. It is used for homes, schools, gymnasiums, churches, storages and more. Tomorrow's building available today.

Osmose, Inc., booth 402
P.O. Box O, Griffin, GA, 30224
770.224.8344, fax 770.224.5225
Osmose, Inc. is one of the world's leading manufacturers of preservatives for wood products industries. Advance Guar® Burate Pressure Treated Wood is intended for use in structural framing for...
residential and light commercial construction to protect those structures from Formosan termites, all other wood-eating insects, and fungal decay.

Parsec Inc. Radiant Barrier System, booth 511
1045 Brockwood Rd., Dallas 75255-1477 800-527-3454, fax 214-553-0993
The Parsec ThermO-Brite System is a collection of products which correct construction problems involving air infiltration, radiant heat gain, and moisture control. By applying data from psychrometric tables and climatological data, the right combination, placement and application of our product is determined to allow the use of passive solar design techniques in conventional construction.

Pavestone Company, booth 540
P.O. Box 1868, Grapevine 76099 817-245-2788, fax 817-370-4126
Pavestone Company, with 12 regional facilities distributing to over 35 states, has been manufacturing concrete products since 1980. We’re dedicated to the production and sales of modular concrete pavers, retaining walls, and erosion control systems.

Pionite Laminates/Rugby Building Products, booth 217
530 Garden Oaks Blvd., Houston 77018 713-692-3388, fax 713-692-5767

972-272-8084, fax 972-276-4736
An association of terrazzo contractors and suppliers who specialize in poured-in-place terrazzo floors, base, and stairs.

Specialty Concrete, booth 505
P.O. Box 14373, San Antonio 78265-4373 210-645-4114, fax 210-645-2456

Sto Corporation, booth 204
3812 Marrietta Dr., Frisco 75035
972-335-7177, fax 972-335-6127

Structural Glass, booth 316
1020 West Loop North, Houston 77055
713-861-0271, fax 713-861-7371
Structural Glass—your source for heavy glass doors, hand rails, clad aluminum doors, formed doors, and ornamental metal. Structural Glass—your manufacturer of standard glass entry ways. Structural Glass—our skilled craftsmen satisfy your every requirement from shop drawings to the finished product in our innovative production facilities.

Sundek of Texas, booth 405
1215 Triplet, San Antonio 78236
210-491-0280, fax 210-491-0379
The exciting way to combine color, texture, and character with the economy, durability and strength of concrete. A highly flexible and creative design tool will transform the monotony of plain gray concrete into a multi-dimensional, colorful, textured surface. Designed to cover old or new concrete, SUNDEK combines an impressive array of colors and textures with structural integrity far exceeding that of standard concrete finishes.

Sunset Settings, Inc., booth 428
1714 Sunser Blvd., Houston 77005-1714
713-522-7661, fax 713-529-6660

Systematics Internet Solutions, booth 134
4711 Lake Park Dr., Arlington 76011
817-481-0786, fax 817-361-4714
Archamage by Systematics is an on-line project management and collaboration tool for architects and their design teams. With Archamage, project teams have the ability to distribute documents and drawings rapidly over the Internet. Archamage allows complete control in management of the project, keeping all project members up to date, and bringing positive and timely results.

Tejas Textured Stone, booth 52
6000 Split Trail Rd., Plano 75074
972-578-5616, fax 972-423-6524
Tejas Textured Stone is a man made replica of natural stone, highly versatile with numerous advantages over natural stone. It requires no structural ledge, is 75% lighter than its natural counterpart, and can be installed over brick, block, concrete, or wood. It is
also more cost effective and installs faster than natural stone. Tejas Textured Stone supplies products nationwide for residential, commercial, and multi-family projects. Stacks include Austin Stone, River Rock, Castle Stone, Field Stone, Ledge Stone, Weather Edge, and thin brick, in popular colors.

**Tex-Lam Manufacturing, Inc., booth 315**
7217 Stuebner Airline, Houston 77091
713.695.3975, fax 713.695.3346
Tex-Lam Mfg., Inc. is a Houston, Texas based firm serving the industry since 1977. We manufacture plastic laminate and solid phenolic toilet partitions and distribute washroom accessories. We have distributors in over thirty states.

**Texas EIFS/TEIFS Wall Systems, booth 324**
220 Burleson, San Antonio 78202
800.348.6475, fax 210.472.2464

Ludowici Clay Tiles
For over 400 years Ludowici’s craftsmanship have produced legendary clay roof tiles for the finest commercial, institutional, and residential projects. See Ludowici tiles at UT Austin; TCU, Fort Worth; Texas Tech; Lubbock; Randolph Air Force Base, San Antonio; and Moody Mansions, Galveston.

Hilltop Slate
The “natural slate company” quotes Vermont’s finest. The discerning architect may choose grassy green, mottled purple, or economical sea green. The tradition of slate starts at Hilltop. See our slate at First Methodist Church, Fort Worth, and Exxon World Headquarters, Irving.

North Country Black Slate
This smooth, rich black slate with a slight lustre is a favorite of architects, contractors, and building owners throughout the world. This is a black slate that stays black! See North Country Black Slate at the Elsby County and Lockhart Courthouses.

Galveston Gem

The 1861 U.S. Custom House at 20th and Postoffice is one of the crown jewels of Galveston and arguably one of the most significant buildings in Texas. The Custom House was constructed in four and one-half months. The plans called for extensive use of cast and wrought iron, which was then an innovation in construction. The two-story building, modified from the original 1850s design of Ammi B. Young, first supervising architect of the U.S. Treasury, features piazzas and dramatic columns and capitals. Generally classified as a Renaissance Revival building, the Custom House deserves notoriety as one of the state’s most gracious and stately public buildings.

Referred to as the “lucky landmark” in a 1960s publication funded by the General Services Administration, the Custom House is indeed fortunate to have survived hurricanes, fires, and numerous attempts at alteration or demolition. Preservationists took an interest in the Custom House because it was the oldest federal building in Texas used for civic purposes, or because of its role in the Battle of Galveston in 1863 and the following years of Confederate occupancy. In June of 1999, the 1861 Custom House became lucky again; it is now the home of the second largest non-profit preservation organization in the country, the Galveston Historical Foundation. The Foundation entered into a 60-year lease with the General Services Administration, agreeing to rehabilitate and maintain the building. This is the first such agreement with a non-profit preservation organization.

The 1861 U.S. Custom House ranks among the finest of civic buildings in Texas and is a proud statement of the vision and design accomplishments of countless architects and preservationists.

W. Dwayne Jones

W. Dwayne Jones is Director of Preservation and Conservation Services at the Galveston Historical Foundation.
Tyvek® CommercialWrap™—Making the Grade in Commercial Construction
Put Us to the Test on Your Next Building!

"We recommended Tyvek® CommercialWrap™ for this hospital, because we wanted to use this as a test case for specifying breathable membranes instead of ordinary building felt in commercial construction. It has been a very successful test! In fact, Tyvek® CommercialWrap™ has done so well that it has fostered a good cooperative spirit among all the trades, especially with our drywall contractor! We wanted to create a watertight envelope during construction. Tyvek® CommercialWrap™ was the answer!"
— Gary Baker, AIA, Vice President, HKS Inc.

One building wrap has the strength, performance, and ease of handling for commercial construction. Tyvek® CommercialWrap™ is the premier wrap in the DuPont Tyvek® Weatherization System. Its spunbonded polyolefin resists air and water penetration with its non-perforated continuous microfiber web, which has microscopic pores large enough for moisture vapor to pass through, but small enough to resist air and liquid water. Tyvek® CommercialWrap™ is heavier and more durable than other Tyvek® wraps, with higher air and water resistance to provide extra protection and installation ease in commercial construction. Specify Tyvek® CommercialWrap™ when you can’t afford not to have the job done right. For more information, or to speak with a DuPont Tyvek® Specialist, call 1-800-28-TYVEK® (1-800-288-9835).

DuPont Tyvek® CommercialWrap™ Performance Counts:
- Protects installed R-value
- Superior moisture vapor transmission
- Double or better water holdout
- 50%-plus increase in wind load resistance

© 1989 DuPont. Tyvek® is a DuPont registered trademark for its brand of spunbonded olefin. CommercialWrap™ is a DuPont trademark for its brand of weatherization system. Circle 8 on the reader service card or visit booth 318 and 221 in Convention Center.
When you were young, you weren’t satisfied building indiscernible objects with your Legos; you had an unquenchable urge to build a replica of the Taj Mahal, and you did.

While a scout, pitching a pup tent wasn’t challenge enough, so you constructed a three room lodge out of pine cones and tule reeds. You made sure the roof line was pitched accordingly in case of sudden thunderstorms. You earned a well deserved badge that weekend.

At the beach, most swam or sunbathed, but you designed and built sand castles…life sized sand castles, large enough to house an operational catapult, which you built from driftwood and seaweed.

When you grew up, you became an ARCHITECT.

And only one Web site can satisfy your sense of creativity, your yearning for information, and your passion for your profession:

It is www.texasarchitect.org
