Gladding McBean

Over A Century Of Craftsmanship In Clay

Gladding, McBean craftsmen have worked with architects from around the world, producing terra cotta facades that grace some of the most significant historical landmarks in the world. Our craftsmen draw from more than a century of experience to fashion unlimited custom designs using traditional methods and sophisticated computer-aided technology. They can create textures and glazes that duplicate the look of stone, while providing the durability of terra cotta. Gladding, McBean also produces a unique line of clay roof tile, clay floor tile, architectural garden pottery and vitrified clay sewer pipe.

TRADITIONAL BUILDING

EXHIBITION AND CONFERENCE

Incorporating The Restoration & Renovation Exhibition and Conference

CHICAGO 2006

APRIL 5-8, 2006 | NAVY PIER, FESTIVAL HALL A

Restoring the Past. Building the Future.

WHERE THE MARKETPLACE MEETS

Those who love traditional design, architecture, and old buildings will discover learning, buying, and networking opportunities at the Traditional Building Exhibition and Conference (formerly Restoration & Renovation Exhibition and Conference), April 5-8, 2006 at Chicago's Navy Pier.

Whether you're a veteran in the industry or just starting out your career, there is something for everyone, at every level of expertise.

THIS IS YOUR MARKET

The Traditional Building Exhibition and Conference brings you the entire market, your market, under one roof! The Traditional Building Show is the only national event dedicated to restoration, renovation and historically-inspired new construction market. Spend four days with us and we'll deliver what no one else can.

› LEARN AND EARN.

Choose from over 85 educational seminars, workshops, tours, and special events. Earn more than 20 learning units for AIA Continuing Education and others!

› FREE EXHIBITS!

Discover unique products and services you won't see anywhere else. Over 200 exhibitors will be on hand to address the specific needs of professionals and homeowners alike.

› NETWORKING.

Take advantage of unparalleled networking opportunities. Participate in AIA Historic Resources Committee's 2006 Annual Spring Meeting, the Traditional Building Gala Reception and a special benefit for the Preservation Resource Center of New Orleans.

CULTURE AND CONTEXT

Bilbao-based architects Javier Cenicacelaya and Iñigo Saloña have crafted buildings around the world that bring traditional character and craftsmanship to urban and rural environments.

By Kim A. O'Connell

In recent years, tourists in Bilbao, Spain, have often stopped to gaze, awestruck, at a striking building that commands attention from all sides. In this case, it is not Frank Gehry's gleaming titanium-clad Guggenheim Museum that draws their attention, but the Provincial Palace, an outstanding example of eclectic late-19th-century architecture. A national monument in Spain, the 1900 building has an elaborate façade of rusticated stonework, numerous arches and columns and fantastical figures and friezes. The equally magnificent interior features grand staircases, ornamental columns and statues and coffered ceilings.

For 23 years, Javier Cenicacelaya (right) and Iñigo Saloña have designed and advocated for traditional buildings that recognize history, local character and beauty, both in their native Spain and around the world.

In the late 1990s, an architectural competition was held to restore the building, which had deteriorated over the decades and undergone several additions. The building had once been fortified with iron bars, which had expanded and contracted, introducing fissures into the walls and weakening the structure. The project, which required a comprehensive and exacting restoration, was ultimately awarded to two Bilbao-based architects – Javier Cenicacelaya and Iñigo Saloña. For the past 23 years, these partners have stood in the vanguard of Neoclassical building in their native Spain, while also spreading their influence throughout Europe as well as the United States.

In contrast to the Postmodernist conceit that produces stunning but hubristic works like the Guggenheim, Cenicacelaya and Saloña are dedicated to designing and rehabilitating buildings that contribute to the urban context, provide visual continuity and acknowledge history and beauty. The two were at the forefront of the traditional neighborhood development movement and remain prominent supporters of New Urbanism. "We think it's important to talk about beauty," Cenicacelaya says. "We hate this culture of 'uglyism' that has spread in painting, music and architecture. We have to talk about beauty, about harmony, about pleasing the eye and about balance with the neighborhood. These things are part of the Classical tradition of Western society. We think it's a must to do that kind of work for coming generations."

The architects have garnered numerous awards, including the prestigious European Award for Reconstruction of the City in 1992, as well as many design competitions, producing such notable works as the Church of Saint John Neumann in Miami, FL. "Cenicacelaya and Saloña combine first-rate design with first-rate scholarship," says Andrés Duany, co-founder of Duany, Plater-Zyberk & Company (DPZ), which has collaborated with the firm. "The other thing about Javier and Iñigo is that they are terrific team players, and that is rare, and they are also very broad-minded about tradition. They can do traditional modern buildings."

The Value of Precedent

Cenicacelaya and Saloña earned their architecture degrees from the Universidad de Navarra in northern Spain, in 1975 and 1981 respectively, amid a fomenting backlash against Modernism and a growing movement to weave architecture back into the fabric of urban life. Cenicacelaya would

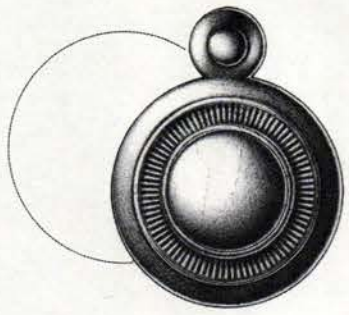

Cenicacelaya and Saloña designed this new office building and cultural center in Durango, Spain, which features a single, massive Doric column at the entrance – incorporating a traditional element in an unconventional way.

augment his education with a master's degree in urban design from Oxford University in England in 1978. Since then, both men were appointed visiting scholars by the John Paul Getty Foundation and have taught and lectured at institutions and symposia throughout Europe and America. Together, the architects launched a now-defunct publication on traditional building, *Composicion Arquitectonica: Art & Architecture*, which was well received.

In addition, Cenicacelaya has served as a professor of architecture at the Universidad del País Vasco (Basque Country) since 1983 and was also dean of the School of Architecture at the University of Miami in 1991 and 1992. He remains the more outspoken "public face" of the two partners, often posting messages on the TRAD-ARCH list-serv hosted by the University of Miami and publishing columns and letters in newspapers.

Architects such as Aldo Rossi, Colin Rowe, Robert Venturi and Léon Krier were and are important influences on both men. "When we were starting our practice, there was a strong criticism against the idea of an architectural object that was produced without regard for the physical context in which it was to be placed," says Cenicacelaya. "We always kept those ideas in mind, regarding the relevance of architecture to the creation of the city. Other issues were also critical for us when we were leaving school. One was continuity with history, which seemed to us to be extremely logical. We could not understand why [architectural theory sought] to cut off all connections with previous historical moments. Why deprive us, as architects, from the contributions of so many brilliant architects in the last centuries? So history became relevant, and with it obviously the value of precedent, the value of memory."

At the same time, Cenicacelaya views the work of many Modern architects to be important and informative, praising the "sophistication and simplicity" of Erich Mendelsohn as one example. "We do not deny the Modern style, as long as it is good," Cenicacelaya says. "When observing the work of these architects, one can see their effort in favor of simplification. In fact, architecture in general has evolved toward simplification and in favor of comfort. We do have to accept this fact. And indeed we have to accept many other facts of our present reality. We have to evolve when accepting all those constraints of our daily reality; there is an evolution in architecture, as in the past. But it is one thing to acknowledge an evolution that gradually adapts to the milieu, and an entirely different thing is [to create a] rupture, a breaking with the milieu."

While the column is a whimsical touch, the office building's height, divided-lite windows and materials complement Durango's historic downtown square.

Building in Basque Country

When the two architects first established their practice in the heart of Basque country in 1983, Bilbao was a moribund city suffering from a polluted river and declining industrial infrastructure. Determined to change this state of affairs, public and private leaders established an initiative to foster tourism, technology and culture in the city and bring Bilbao back from the brink of extinction. In the last 25 years, Bilbao has become a hothouse of architectural interventions, which have undeniably helped to bring attention to and revitalize the city. Among other recent projects, Cesar Pelli master planned a massive mixed-use center along the waterfront; Santiago Calatrava designed a glass-bottomed footbridge; Norman Foster crafted a sleek subway system; and of course, Gehry topped them all with the world-renowned Guggenheim.

Although one could say that Cenicacelaya and Saloña chose the right place and the right time to start an architecture practice, they have become increasingly concerned about the rate of development in Bilbao in particular and Spain in general. Cenicacelaya has worried publicly that Bilbao will become "an architectural zoo" if more is not done to build fully integrated, smaller-scale new works that complement the historic context of Bilbao. At the same time, the firm wanted to ensure that Bilbao's rebirth incorporated rehabilitation of its existing traditional architecture, such as the Provincial Palace.

For that project, the architects produced a map of all the façades and made hundreds of drawings of all the stonework. The iron bars were carefully removed, cornices were replaced and stonework was carefully cleaned and repaired. "It was an interesting and very delicate project," says Cenicacelaya. "When you restore a building like this, you should leave it as if nobody has ever passed by." The details were as critical to the restoration as the underlying structure. "It is of great importance, the architectural composition of a given building," he adds. "The beauty, the elegance of the building, the way in which the most minute details are solved."

In the countryside surrounding Bilbao, Cenicacelaya and Saloña have designed small-scale neighborhood projects as well. For the village of La Rigada, the architects designed a finely ordered rural center, which offers space for community events, meetings and even jai alai games. Its minimal decoration and tiled roof are nods to the rural Spanish countryside, with traditional colonnades in the Tuscan Order, the simplest of the Roman orders. A large portico protects viewers from the elements, while offering a pleasant space from which to witness events. A similar project, for a multipurpose

A national monument in Spain, the 1900 Provincial Palace required a comprehensive and exacting restoration. Structural work included removing deteriorating iron reinforcements and replacing stonework and cornices.

To guide the restoration, Cenicacelaya and Saloña produced a map of all the palace's façades and made hundreds of drawings of all the intricate stonework.

Red Cedar, Green Buildings

It's more than beauty that attracts architects to Real Cedar

No man-made material can duplicate the depth of Western Red Cedar's natural luster. Cedar brings an all-natural warmth and character to both outdoor and indoor spaces that will last for years to come.

Yet there are additional reasons beyond aesthetics that are attracting the attention of the architectural community. Here are a few of the many reasons to consider choosing Real Cedar building materials for your next project:

Revel in the Real.
While a number of substitute wood products have hit the market in recent years, all-natural Western Red Cedar remains a popular choice for commercial projects due to its exceptional appearance, versatility and durability. No imitation product has been able to capture the look and feel of genuine all-natural Western Red Cedar.

Natural Choice.
Western Red Cedar is grown from the earth, harvested, manufactured and used for decades or even centuries. Then, when its useful life span is ended, it returns to the earth. This natural life cycle explains why real cedar products are the environmentally sound choice when compared with alternative materials like concrete, plastic or metal - only wood comes from a renewable, biodegradable resource.

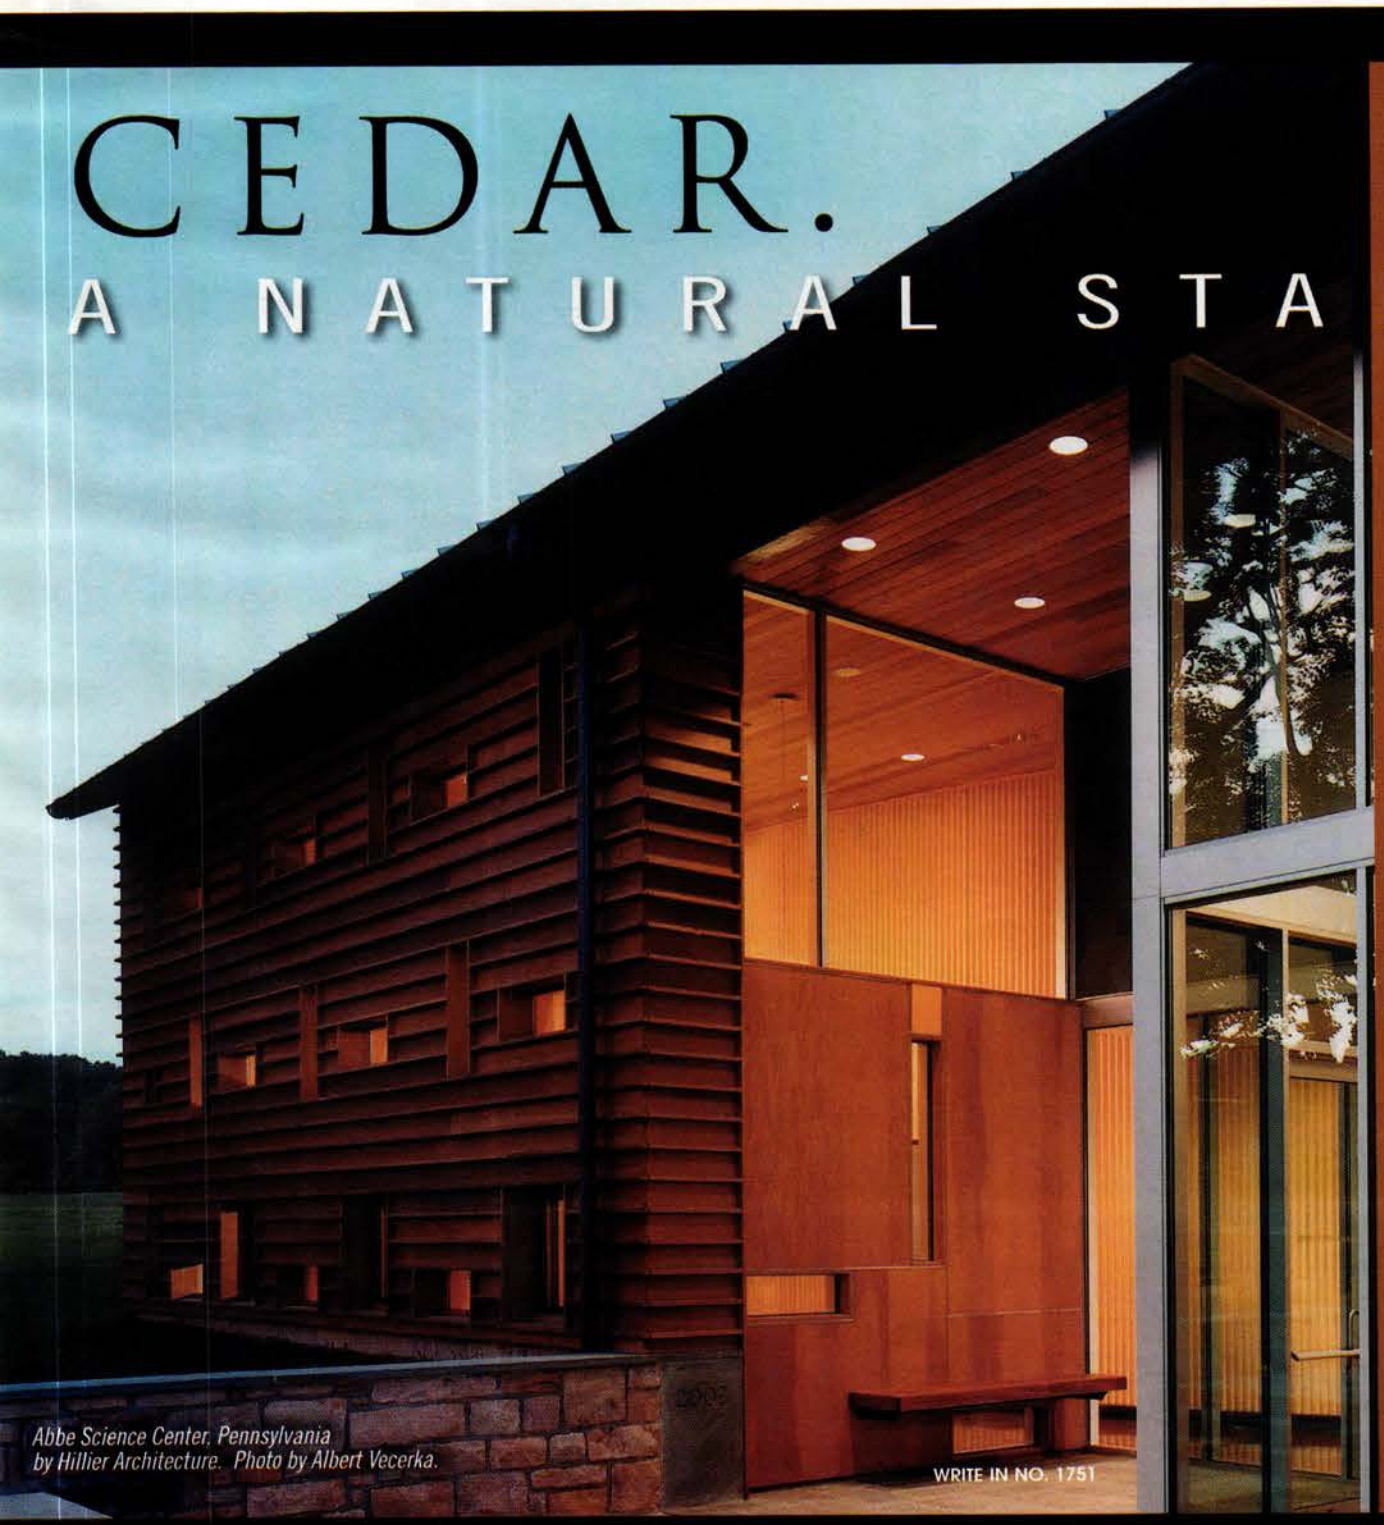

Today's sustainable forestry practices ensure a perpetual abundance of high-quality wood from North America's forests. Aluminum and concrete come from materials extracted from the earth. Once removed, they can never be replaced. Plastics are derived from dwindling petroleum reserves. Of each tree harvested, 95% goes into useful products. The remaining 5%, which consists of the branches, is left on the forest floor to biodegrade into rich compost for the next crop.

Beauty that Lasts.
Cedar is one of the best performing wood species for outdoor applications like siding and is commonly used in resort settings, among others. When properly finished, Western Red Cedar will last for decades, even in harsh environments.

Versatility All Around.
While Western Red Cedar continues to be a preferred material for outdoor applications, it also works beautifully for any number of interior applications. Accent details like exposed timbers, turrets or ornate tracery provide a classic, yet stylish look to interior spaces. Unlike man-made materials, Real Cedar is available in countless styles of standard and custom profiles, allowing architects to express their creativity more fully.

Invest Now for Big Payoffs Later.
Fads will come and go, yet when you closely examine the options, you'll discover the scales are tipped in favor of a classic such as Real Cedar, an all-natural building material with centuries of proven performance, elegance and beauty. For more information visit www.realcedar.org or call 1-866-778-9096.

Real Cedar lets you create buildings with genuine warmth and beauty, inside and out.

- *Environmentally responsible*
- *Readily stainable*
- *Naturally resistant to rot & insects*
- *Many grades and styles*
- *Lightweight*
- *Perfect for interior or exterior use*

Make your next project stand out with Western Red Cedar. Call or visit our web site for more details.

Above: A multipurpose hall, part of the Sagrada Familia School in the Basque community of Derio, is well ordered and modest, with simple coffered ceilings, divided-lite clerestory windows and a low-pitched roof and brick façade.

Right: The firm chose a variety of warm colors to enliven the interior of the hall, while the clerestory windows allow in abundant light.

hall at the Sagrada Familia School in the community of Derio, is functional in the best sense of the word. The large, rectangular hall is nonetheless highly articulated, featuring coffered ceilings, divided-light clerestory windows and a low pitched roof and brick façade.

In projects large and small, the architects display a distinctly urban sensibility, always balancing the notion of both public and private space. A combination office and residential building in Burgos, Spain, for example, is centered on an open interior courtyard, which is further defined by a circle of lighting and seating that creates a slightly more intimate area for conversation or reflection. Even the open plans of the Basque community centers contain balconies, porticoes and other more private spaces.

The firm has brought something of a Postmodernist sensibility to its work as well. A new office building and cultural center in Durango, Spain, fills a narrow plot on the city's historic Ezkurdi Square. The building's height, divided windows, regional stone and roof-level pediment all complement its traditional surroundings. Somewhat surprisingly, however, the entry gate is punctuated by a single, mammoth, green marble Doric column. "It's an important façade, and the column was symbolic of this," Cenicacelaya says. "It catches the eye of anyone passing by and fulfills the concept of decorum in a wide sense."

Renewed Urbanism

Increasingly, the firm has been engaged in significant projects outside Spain, including a Neoclassical residential-over-retail apartment building in Brussels and a proposal for a large university library complex in Amiens, France, distinguished by its double colonnade. Recently, the firm joined other international architects, including DPZ, in a large urban project in Berlin, known as Johannisviertel, that includes housing, offices, shops and a hotel. Located in the heart of the city, the five-acre block was heavily damaged during World War II and remained largely undeveloped during the Communist period, populated mostly by artists and squatters. Berlin city planners were concerned that the site be designed in a traditional manner that would restore the area's historic character and tie together the urban fabric.

After the developer rejected several design proposals, DPZ developed a master plan that treated the block as an open network of streets and walkways. Apartment buildings on one side of the site are built around traditional Berlin courtyards connected by archways, and a formal linear square runs along the site's east-west axis. DPZ chose seven architects or firms, including Cenicacelaya and Saloña, to contribute to the project and create a dynamism that is typical of urban areas.

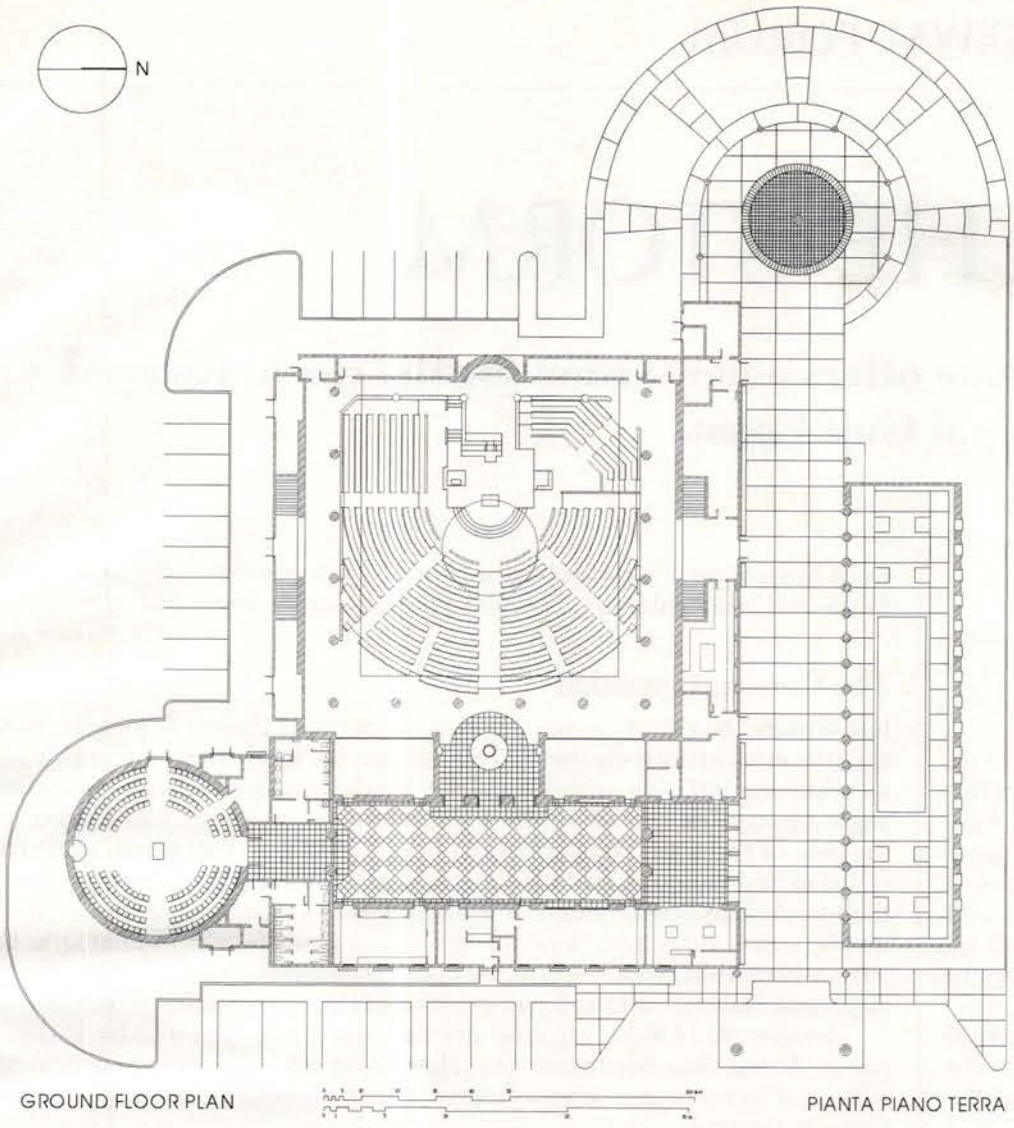

Cenicacelaya and Saloña, for their part, are charged with designing a long, narrow office building on an odd-shaped lot. Their solution proposes tying together the first two stories of the building with an unbroken façade of traditional ground-level storefronts topped with a bank of windows. Instead of shoehorning a monolithic office building onto the asymmetrical site, however, from the third floor up the architects have broken the façade

The renowned traditional firm Duany, Plater-Zyberk & Company of Miami, FL, chose Cenicacelaya and Saloña, among other firms, to participate in the redevelopment of an underused urban block in Berlin. Cenicacelaya and Saloña were charged with designing a long, narrow office building on an odd-shaped lot.

The firm's design for a rural center in the Basque village of La Rigada, which won the Bizkaia architecture award, is both Neoclassical and rural, with a large, tile-roofed portico punctuated by Tuscan order columns.

Cenicacelaya and Saloña brought both a modern and traditional sensibility to the design of the Catholic Church of Saint John Neumann in Miami. The firm eschewed the dark, vertically oriented plan typical of historic Catholic churches in favor of a modern open plan befitting the architectural character of South Florida.

The firm is an ardent supporter of the Congress for the New Urbanism, as well as its European counterpart, the Council for European Urbanism, founded in 2003. "New Urbanism is like fresh air," Cenicacelaya says. "I appreciate that America can be critical of its own problems and talk about its own problems, whether it's the physical milieu or the president. With New Urbanism, one believes in the Republic again, the America we all love, the America of Jefferson, the America of free thinking. There is an admiration here for the United States, and maybe some jealousy, so whatever is happening in the United States will come to Europe."

Although he acknowledges that critics have dismissed New Urbanism as "villages for millionaires," Cenicacelaya notes that traditionalists such as DPZ have been actively involved in discussions about rebuilding the Gulf Coast in the wake of Hurricane Katrina, an effort that he hopes will be a beacon for European revitalization. "Historic city centers throughout Europe have disappeared," he says. "The Mediterranean coast has been destroyed by tourism. This tourism is myopic, with buildings that are not sympathetic and widespread destruction of the landscape. Europe has lost more monuments and more heritage because of this attitude than the bombs of World War II."

Culture and context, craftsmanship and construction – all are equally important to Javier Cenicacelaya and Iñigo Saloña. "Buildings have to last," Cenicacelaya says. "Who would like to buy a house with a deadline date, like a can of tomatoes? It is silly the way consumerism is devastating all our resources. When the world is trying to go toward more sustainable development, good construction is even more relevant, because good construction is a great contributor to sustainability. One can just feel it when something is well built. One can feel it, and even more, one can enjoy it." ◆

into various structures and heights, implying an urban, layered skyline.

In the 1990s, the firm won an architectural competition to design the Church of Saint John Neumann in Miami, which combines streamlined Classical details with a distinct South Florida sensibility. For a Catholic church, the design is surprisingly catholic in its influences, including mosque-like shapes, balconies normally seen in Protestant churches, and a modern pendentive dome that is suspended from the ceiling. "We went into that competition convinced that we wouldn't win," Cenicacelaya recalls. "We were going on two ideas that the committee loved – we wanted the light of Florida to enter thorough the center of the sanctuary, and we wanted a vault that is floating from above like a tent, which is a biblical analogy."

"His buildings are very much in our regional style," Elizabeth Plater-Zyberk, cofounder of DPZ and current dean of the University of Miami School of Architecture, once said of Cenicacelaya. "There is a curious connection between Basque architecture and South Florida's Mediterranean architecture. He designs buildings that are sympathetic to the way we do it in this part of the country."

Above right: The Caribbean-color scheme and mosque-like shapes of the building combine with streamlined Classical details such as a well-ordered roofline and columns.

Right: A modern pendentive dome is suspended from the ceiling in the sanctuary, which allows South Florida light to bathe parishioners. The vault hovers overhead like a tent, an intentional biblical metaphor, according to Cenicacelaya.

AFTER THE STORM

A charrette of unprecedented magnitude offers a new vision for the storm-ravaged Mississippi Gulf Coast.

By Hadiya Strasberg

"Recover, rebuild, renew." These words, spoken by Mississippi Governor Haley Barbour in response to Hurricane Katrina in August 2005, spurred a week-long charrette that provided the state's citizens with plans and designs for a new Gulf Coast.

The Mississippi Renewal Forum was organized by the Commission on Recovery, Rebuilding and Renewal, under the direction of Chairman Jim Barksdale, in partnership with the Chicago, IL-based Congress for the New Urbanism (CNU). Andrés Duany, a co-founder of the CNU and principal at Duany Plater-Zyberk & Company in Miami, FL, and the CNU President and CEO John Norquist invited 110 architects, planners, engineers and other professionals from across the country and the U.K., along with an equal number of local professionals and government representatives to take part in the event.

Those involved included members of CNU and The Institute of Classical Architecture & Classical America (ICA&CA); PlaceMakers of Miami, FL; the Pasadena, CA-based architecture firm of Moule & Polyzoides; and the London-based Prince of Wales Foundation.

The forum, which took place October 11-17, 2005, was held in Biloxi, MS, one of the 11 municipalities along the coast that sustained heavy damage from Katrina. The location allowed participants to view the towns and their existing conditions and to meet with local officials and citizens.

The goal of the charrette was to offer Mississippians a vision for rebuilding their coast, not as it was, having already been ravaged by sprawl before Katrina, but better than it was. "We have a tremendous opportunity to improve communities while rebuilding them," said Duany at the event. "We want to give Mississippians the tools to create places that are more visually pleasing, more environmentally friendly, more diverse and more secure from hurricanes." He emphasized that "the tools that emerge from the forum will be valuable, but optional. Nothing will be imposed."

The Current Condition

Just outside the planning room at The Isle of Capri Casino Resort, the damage was evident. Carpets were water stained, the lobby was in disrepair and an adjoining building with blown-out windows was tilted at a precarious angle. Going west on U.S. Highway 90, a large casino barge was beached on the side of the road. Smaller ships were in residents' backyards, roofs had caved in and windows had blown out. In every town along the 120 miles of the Mississippi coast, homes and businesses were damaged by the fierce winds, storm surge and flooding. Structural damage was estimated at 80-90% in Waveland (which was at the eye of the storm), Pass Christian, Bay St. Louis and Gulfport, and at lower percentages in communities to the east.

Besides the obvious physical damage, the loss of community was palpable. At the time the forum convened, basic services remained unavailable, and even people whose homes were habitable had a difficult time living in the area.

Organization

The charrette was arranged into 16 teams, five focusing on general issues and one for each of the 11 municipalities or towns that make up the Mississippi coast. The regional planning, coding, architecture, transportation and environment teams took into account the general issues that were essential to the planning of each of these 11 municipalities.

"If a normal charrette might address one municipality and include a team of architects and planners with specialized consultants," said New

Left: Hurricane Katrina hit the Mississippi Gulf Coast on August 29, 2005, with record winds of 125 mph and wave surges that breached levee systems. Two-hundred-twenty-one people died in Mississippi and the 11 coastal municipalities in the state sustained heavy damage to their roads, parks, homes and other buildings.

Below: From October 11-17, 2005, local and out-of-state architects, planners and other professionals met at The Isle of Capri Casino Resort in Biloxi, MS, to partake in the Mississippi Renewal Forum. A week of intense touring, discussion and drawing produced architectural and town plans and strategies for restoring and rebuilding the 11 Mississippi municipalities.

York City-based designer Christine G.H. Franck, "this was the same model writ large for 11 municipalities instead of one. By having teams for each municipality, the specific needs of each place could be dealt with while general teams grappled with the shared issues."

On the last day of the charrette, Governor Barbour, mayors, community leaders, casino interests, business representatives, press and others gathered for an afternoon of presentations. Work from the previous six days was displayed on poster boards in the hallways and with PowerPoint.

Each municipality team toured the town it was assigned to view the land, assess the hurricane destruction first-hand and meet the locals. The Long Beach team viewed unbelievable damage to the municipality's roads, homes, offices and retail.

What, Where and How to Rebuild

The fundamental questions about the ins and outs of rebuilding the Gulf Coast were tackled by the regional planning team. The three team members – from Criterion Planners/Engineers Inc., Portland, OR; the U.S. Environmental Protection Agency; and Smart Growth America – discussed the focus of the charrette and outlined some of the general plans.

"The charrette is about choices," said Harriet Tregoning, the executive director of Smart Growth America. "Our role is to try to translate [Mississippians'] hopes and aspirations into a physical form that we hope will give them some ideas as to what options they might have as they consider how to rebuild their communities."

Rebuilding the economy, through the redevelopment of housing, retail centers and transportation, is one of the first steps. Tregoning pushed for people to be able to return to their houses and to get businesses restarted at the earliest viable opportunity. "People need to engage in commerce and the activities of daily life as soon as possible," she said.

It is not a question of whether state and federal incentives will be offered for redevelopment, but who gets them. "There are signs that the retail centers are moving north," said Tregoning, "something that was happening already, but now at a faster rate. These new developments are quite a bit different from the historic ones closer to the coast." Tregoning also warned that this shift north, if continued, will deplete the vitality of the town centers and result in more sprawl.

The regional planning team also emphasized the importance of increasing economic diversity, making the towns more attractive to retirees and tourists as well as local manufacturing. Another crucial point that was raised was development certainty. "A couple of years of not knowing where and how you'll be able to rebuild can be very devastating," warned Tregoning.

Form-Based Codes

The coding team, a group of eight architects, planners, a writer/photographer and others, focused on zoning, building and architectural codes that would maintain the integrity of the Mississippi communities.

In most of America today, the conventional existing zoning codes encourage sprawl by dividing industry, offices, retail and housing into separate districts making people dependent on their cars. "The current zoning ordinances exclude commercial stores from residential projects and mandate big parking lots and wide streets," Duany said in his presentation.

New Urbanist or form-based codes "do not ban sprawl, but enable the building of traditional towns," explained Duany. "They are about maintaining the character and value of towns," added coding team leader Sandy Sorlien, an urban photographer, lecturer at the University of Pennsylvania and editor of Duany Plater-Zyberk & Company's SmartCode. "They help to form community identity and cohesion" by promoting walkable neighborhoods laid out in a traditional grid pattern with buildings for a variety of uses and housing for people of all income levels. Within a quarter-mile radius there should be places to live, work, shop and go to school. The codes call for inviting public buildings and spaces, including plazas, parks, sidewalks and bike lanes.

All of the codes are evident in Pittsburgh, PA-based Urban Design Associates' (UDA) pattern book for the Mississippi coastal region, which was developed in large part by UDA principals Rob Robinson, AIA, and Raymond L. Gindroz, FAIA. The book, which describes and illustrates "the desired character of the community [...] based on precedents found in the region," as UDA's web site phrases it, was completed and made available to the public soon after the charrette.

Form-based codes translate to Mississippi's towns in much the same way they would in other established areas. They code for the form of development at the block and building scale; some, like the SmartCode, also address planning at the regional scale. Of course, other issues are at play,

This proposed plan for the Biloxi Back Bay Harbor returns the waterfront to the community with a promenade and a park. It also features a market hall and square just blocks from the harbor. *Rendering: Moule & Polyzoides Architects & Urbanists*

Gulfport's historic downtown has been located next to its deep-water port for years, something the team was excited about keeping. Team members proposed salvaging as many of the historic and traditionally styled structures in the downtown as possible and redeveloping the port as a place for multiple activities, including industry to the west and tourism, recreation, cultural and commercial activities to the east. *Rendering: Knight Martorell*

because of the widespread destruction and the influence of FEMA and other branches of the Federal government (see "Design Decisions").

"You don't want to see temporary housing become permanent," warned Sorlien, "but the good stuff doesn't happen by accident. Good codes aren't arbitrary; they're based on patterns that work.... Some of the plans [unveiled at this charrette] might actually be possible under existing zoning codes, because Mississippians are usually open, but that allows the sprawl development, too." The team, in consultation with Mississippi lawyers, wrote legislation outlining these principles, which can be adopted by state officials.

Design Decisions

One of the major concerns of the architecture team was designing buildings to meet FEMA guidelines, which require structures to be built above advisory flood elevations. In many regions within the 11 municipalities, these elevations were increased from 3 to 8 ft. above the existing flood elevations. Depending on the elevation at grade, the net effect in the lowest areas could mean that buildings would have to be elevated 15 ft. or more above grade.

"Working on this charrette was a little unusual," said team leader Susan Henderson, AIA, director of design management at the Albuquerque, NM, office of PlaceMakers, "because we had the challenge of the elevation issue. We would design a Lowcountry-style house with a wraparound porch, but then try to figure out what happens when it goes to 22 and 30 ft. How do you make that work in the real world? It's absurd.

"There are accessibility problems, liability issues," Henderson pointed out. "Retail dies when it's not connected to the street..." Not to mention the enormous costs that come with building off the ground. At least "raising neighborhoods off the ground is not a problem for many of the main streets," said Henderson, "which are at higher elevations."

As an alternative to elevating buildings, the architecture team recommended strengthening them. "Elevating houses would make them both ugly and more expensive," said Stefanos Polyzoides, of Moule & Polyzoides, Pasadena, CA, during his presentation of plans for Biloxi, for which he was team leader. He said Biloxi really has just two options in its low-lying areas: "You scrap the town and move to the hills or you make your buildings able to take a swim every 30 years." Using masonry in place of wood, for instance, would be a major improvement.

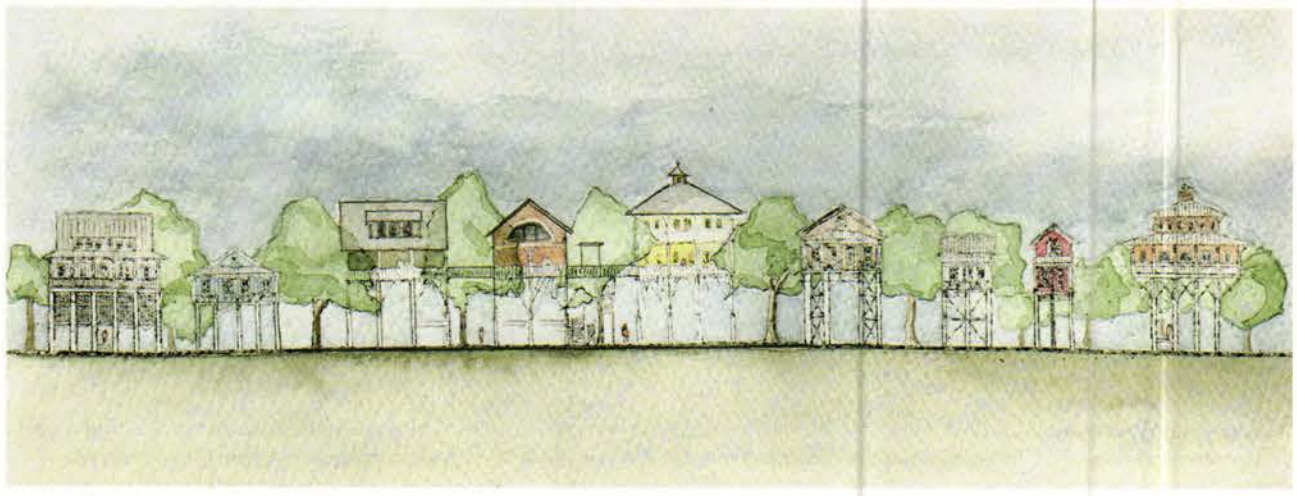

Polyzoides also emphasized the matter of preservation. "You have to save every single scrap even if it's one last column standing in order to make this town come back," he said. "Only then can we complement it with buildings of a type and flavor that are stylistically [appropriate]."

Other forms of private, public and civic buildings were also proposed by the 11 architecture team members, including manufactured, modular and kit homes; casinos; government buildings; and retail. The key issues this team dealt with in its building designs were speed of construction, affordability and durability. "We want to provide realistic, accessible and affordable designs," said Henderson.

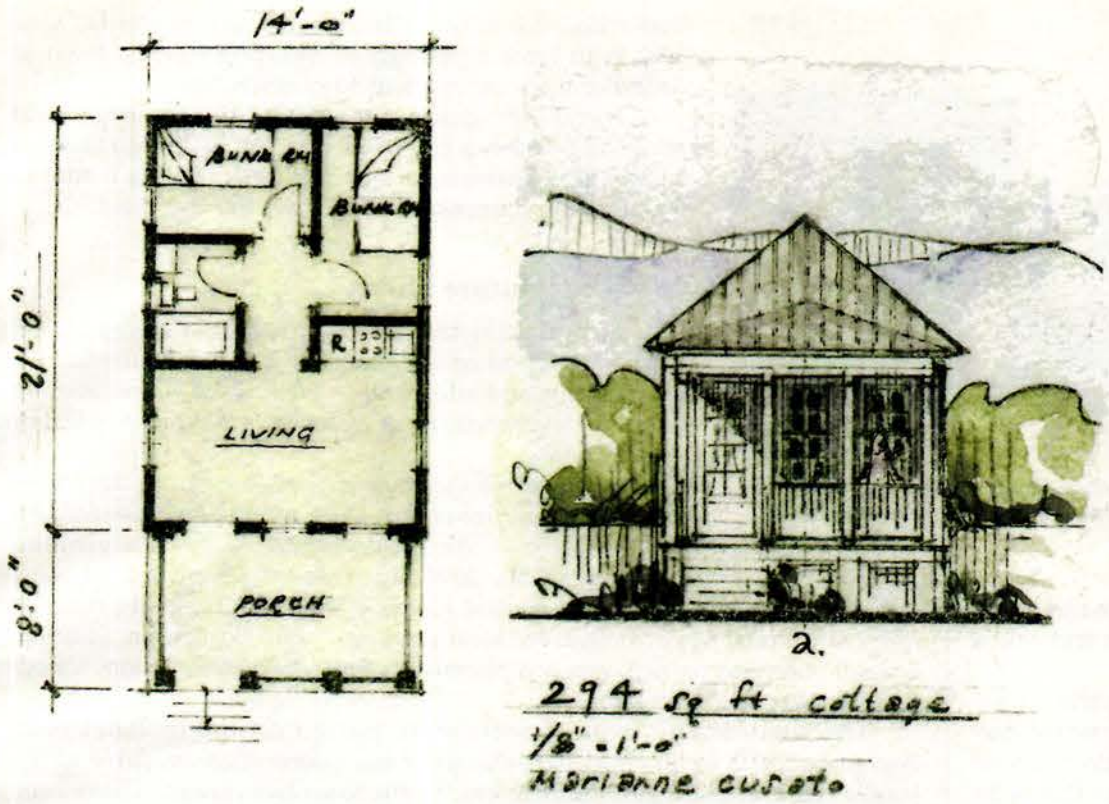

Before the charrette even began, in fact, Duany requested designs of many of these buildings, including shotgun manufactured homes. "Based on the aftermath of Hurricane Andrew [which struck Louisiana and Florida in August 1992]," said Henderson, "we know that the temporary housing provided by FEMA often becomes permanent." She also felt that since the

Above: U.S. 90, which runs east-west from Florida to Texas along the coast, was reconfigured in many of the charrette plans from a highway to a boulevard "to maximize both economic and social value." The transportation and Bay St. Louis team collaborated on its design in that town, creating various-shaped roundabouts and mixed-use buildings along the road. *Rendering: Bill Dennis, B. Dennis Town & Building Design*

Right: The architecture team designed housing for Waveland that was elevated as much as 22 ft. above grade level to meet what may be new FEMA flood elevation requirements in low-lying coastal areas. Three of the homes share an elevator. *Rendering: Robert Orr, Robert Orr & Associates*

One of three versions of emergency housing is this 294-sq.ft. cottage designed by the architecture team. Intended as immediate housing for workers and displaced residents, it is also a long-term solution as a manufactured home or modular or panelized construction. It can be manufactured and built on-site for about $25,000. *Rendering: Marianne Cusato*

government is supplying the structures, they should be designed by architects, addressing aesthetics and durability.

"Those that are in the pipeline will continue to come down," Duany declared to the attentive audience. "We can't stop them; we have no right to stop them. People need housing. But at some point we will intervene and say that only certified mobile homes will be acceptable."

Duany later added, "We realized that there was nothing whatsoever that prevented a manufactured home from being really good looking, well proportioned, really livable and something that you would be proud to have as your neighbor." The team presented prototypes of these homes, as well as modular homes, for a manufactured-housing summit, which was held in Mississippi a month after the forum.

The 1,000- to 1,600-sq.ft. modular home designs, which can be built in as little as three to six weeks, further fulfill the need for rapid and affordable housing. "Modular housing could grow over time from at least a basic structure built on-site as soon as possible," said Franck. "We have a favorable response from the manufacturers," added Henderson. "They say, 'we'll build whatever you give us.'"

One thought is that these certified manufactured and modular homes, as well as stock plans available to those who want and can afford to build traditional homes, could be pre-permitted to expedite the rebuilding process. "It would alleviate the permitting burden on the local building departments, though they would of course still be subject to inspections," Franck explained.

In addition, the team looked at apartment buildings and courtyard housing, "both as a means of considering more dense housing options and to address affordability issues," said Franck. A range of styles were rendered to show the numerous possibilities available; to give citizens a choice.

The municipality teams sometimes requested designs for site-specific buildings from the architecture team. Franck, for example, designed a number of civic buildings, including town halls and fire and police stations for Gulfport and Moss Point. Others designed Monaco-style casinos and a new Wal-Mart storefront to replace the big box in Pass Christian. "In the past," said Henderson, "retail and other buildings have been very low-end design. Our goal is to show businesses that they can appeal to a whole other market."

Better Connections

Though the transportation team's goal of improving the roads, bridges and waterways was straightforward, the team presented varied and wide ranging plans, including regional and local connectivity for both automobiles and public transit systems. The five-minute walkable neighborhood guided all planning efforts as a means of giving people the choice of not driving.

"We wanted to create streets that fit the urban context," said one team member, Norman W. Garrick, Ph.D., an engineer and associate professor at the University of Connecticut School of Engineering. This involves preserving the neighborhoods, reducing speeds and providing appropriate and attractive accommodations for bicyclists and pedestrians. In many municipalities, boulevards were designed in place of the coastal and elevated highways. "Think of the West Side Drive in Manhattan," Garrick said, "with safe lanes for cars, bikes and pedestrians and tree-lined medians."

The team was made up of four national engineers; a London-based architect; the president and CEO of Reconnecting America, the Center for Transit-Oriented America; and two local activists. In addition to developing a set of objectives, the team also provided alternatives to the plethora of roads in the form of public transportation, specifically buses, light rails, commuter rails, trolleys and water taxis. "Mississippi is one of the most auto-dependent states in the U.S.," said Garrick. "The use of public transportation is less than 1%, but residents do not have good alternatives. We want to provide it."

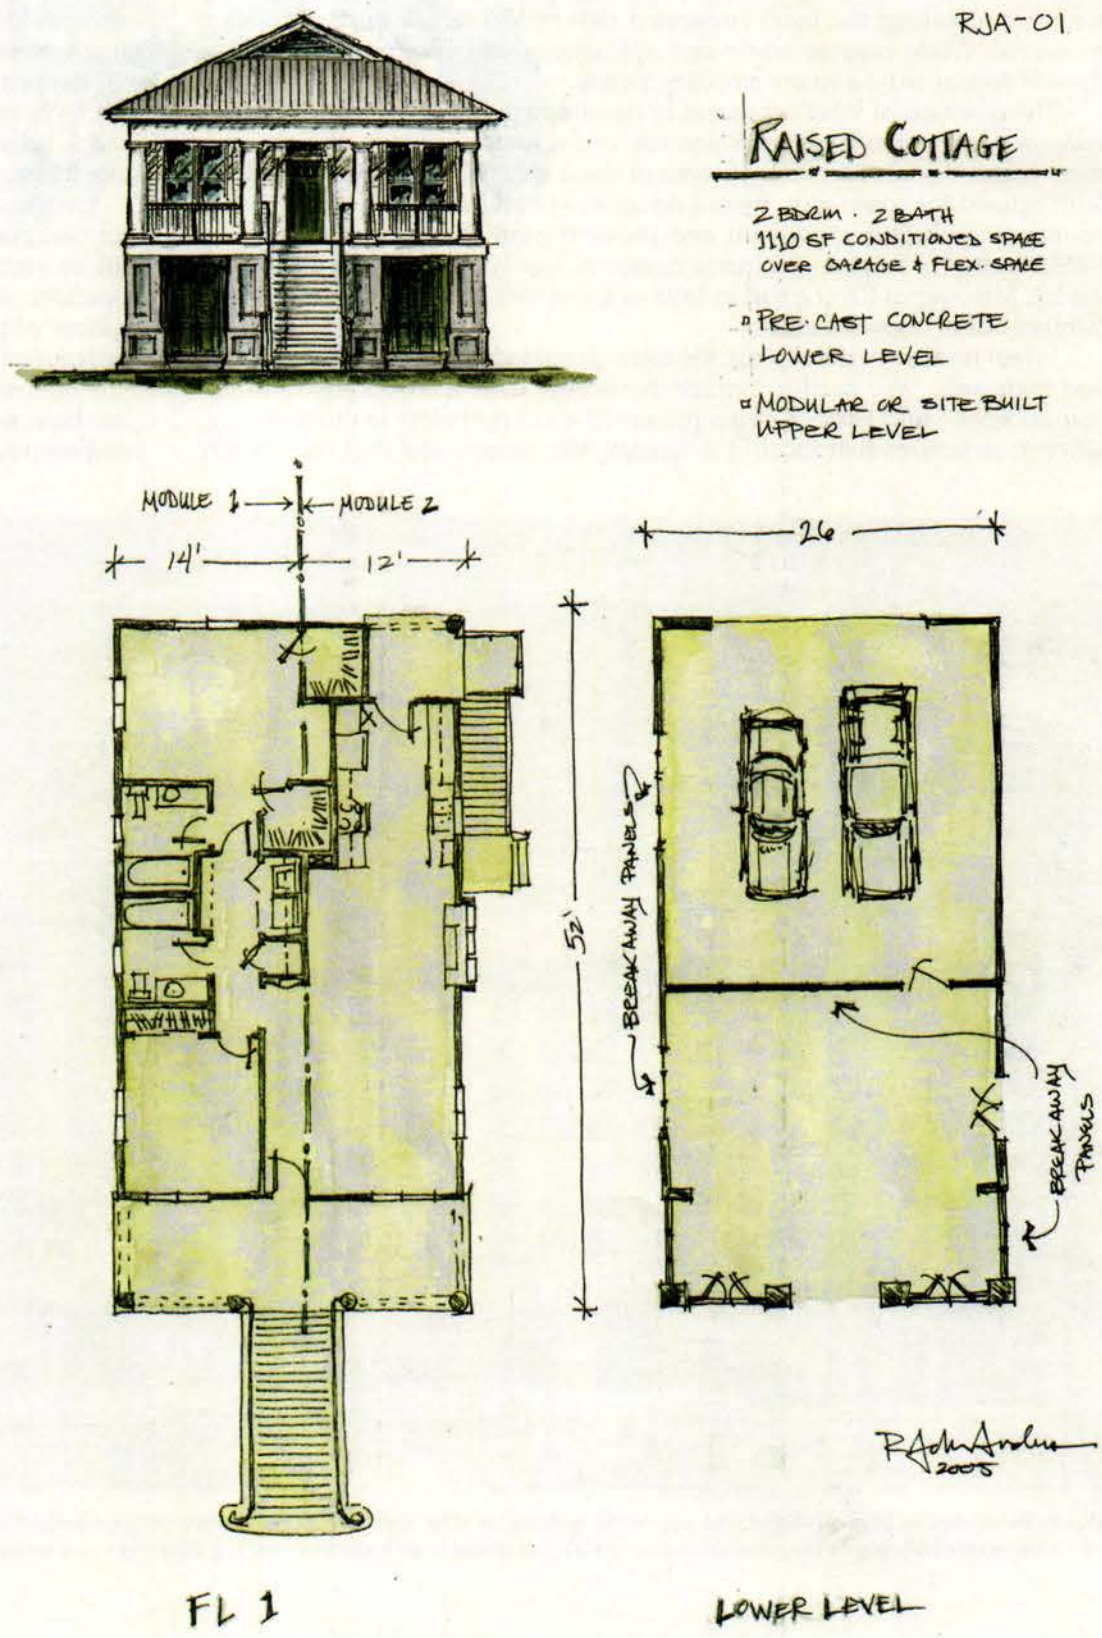

The public-transit plan was divided into three steps: one, to relocate the east-west CSX railroad corridor from the center of the towns to the northern reaches and to include fast passenger service on the new alignment; two, to create a public transit system that would tie the towns together; and three, to create local circulators within each town.

"We wanted to take advantage of the desire and money that existed pre-Hurricane Katrina to relocate the railroad corridor," explained Garrick. "The area needs a stronger regional train system – from Mobile, AL, to New Orleans – which would enhance inter-city connections. In place of the existing CSX tracks, we planned a boulevard and would like to see a light rail, bus or commuter rail developed.

"Local circulators, such as a trolley along the beach boulevard [U.S. 90], drew a lot of positive comments from locals," Garrick commented, "because Gulfport and Biloxi had had systems some decades ago." He said that the locals are very much on board with the team's proposals. "It will take some getting used to as it would be a huge culture change, but people are receptive to plans that support urban life."

Sustainable Solutions

The environment team included broad expertise in sustainable development: an attorney, a foundation representative and a green town planner. They met with local experts – including a head of the Mississippi Department of

To meet possible FEMA regulations (yet to be determined and put into effect) this modular or site-built cottage was raised a full story above grade level. The lower level is slated to be constructed of pre-cast concrete, which will withstand heavier winds than the traditional wood construction of the south. *Rendering: R. John Anderson*

Team members capitalized on the destruction of a Wal-Mart superstore in Pass Christian by designing a store that assimilates with a traditional downtown. The proposed mixed-use building is sited on a walkable block adjacent to smaller shops. Parking is provided in the rear.

Environmental Quality [DEQ], people from Habitat for Humanity and experts on water, sewage and energy – every day to ask questions and gain a targeted perspective.

The team discussed environmental problems that existed prior to the hurricane as well as those created by the storm. Previous to Katrina, the barrier islands were being eroded by dredging, and sewage overflows made their way into the Gulf of Mexico. "The Mississippi DEQ told us that sediments containing e-coli and other pathogens can eventually trigger beach closings," said architect Doug Farr, president of Farr Associates, Chicago, IL. "This is a huge environmental issue, and also threatens the tourist industry."

Hurricane Katrina obviously multiplied the area's problems, with flooding going miles inland and picking up debris and sewage, and the resulting mold and miles of detritus. "Our response was to think about waste in a different way," said Farr. "By relocating waste plants inland, some towns could set up eco-industrial parks for nurseries and other horticulture businesses that will turn the waste into industrial raw material."

It is very important that the clean-up effort include the salvaging and recycling of building materials. "There are 30-million cu.yds. of debris, which exceeds the capacity of the landfills in all three coastal counties," said Farr. One proposal was that the debris be used to reduce flooding and risk. "We calculated that 10% of the storm debris is suitable for structural infill," he said. "That volume of fill could raise the grade of about 400 acres 3 ft." In terms of recycling, the team suggested that FEMA needs to create strong measures. While organic waste and appliances are being separated, there doesn't appear to be a larger recycling policy.

The question of whether or not to rebuild in some of Mississippi's low-lying and below-sea-level areas was one of the issues raised by the environment team. "Locals told us that some of these areas should never have been built up and for some sites, there's no sense in building back," said Farr. Of course, it's a highly emotional and political issue, but Farr points to the FEMA policy of buying out many homes in low-lying neighborhoods after the big Mississippi River flood in 1993 as a tool that might be able to relocate families out of high-risk areas.

When it came to rebuilding, the team proposed green-building methods and materials. "We need to reduce the energy cost, provide good air and natural light," said Farr. "Katrina presented an opportunity to build energy-efficient structures that meet EPA Energy Star ratings and that use healthy materials, such as those that meet LEED standards." One idea is to have a pilot green building in each town in order for these innovations to gain traction.

Overall, the group was hopeful that Katrina could serve as a wakeup call to force a change in attitudes in Mississippi. Summing it up, Farr said, "This is a once in a generation chance to shift how we think and act."

What the Future Holds

All agreed that much work remains to be done. Implementation of the plans calls for citizen reviews, adjustments and adoption, as well as the cooperation of citizens, developers, businesses and government officials on all levels.

A number of the professionals present at the forum continue to be involved. Duany and the team leaders met in Biloxi with locals for three days beginning November 30, 2005, to present seminars on New Urbanism-101 in many of the coastal towns. "There are on-going training and educational opportunities for local planners," said Sorlien. In addition, several charrette participants are planning a SmartCode Workshop, scheduled for March 2006 in Biloxi.

The final design team reports were posted on the internet mid-November 2005 in an effort to make all of the information available to the public (www.mississippirenewal.com). Public town hall meetings have been held in numerous locations since October 19, 2005, throughout the 11 municipalities to gauge citizen reaction and to obtain feedback. "This is an important step in the process," said Henderson. "It's up to the individual municipalities to select the plans and architecture for their neighborhoods."

The Commission submitted its final report to Governor Barbour on December 9, 2005, and it was then distributed to each of the municipalities.

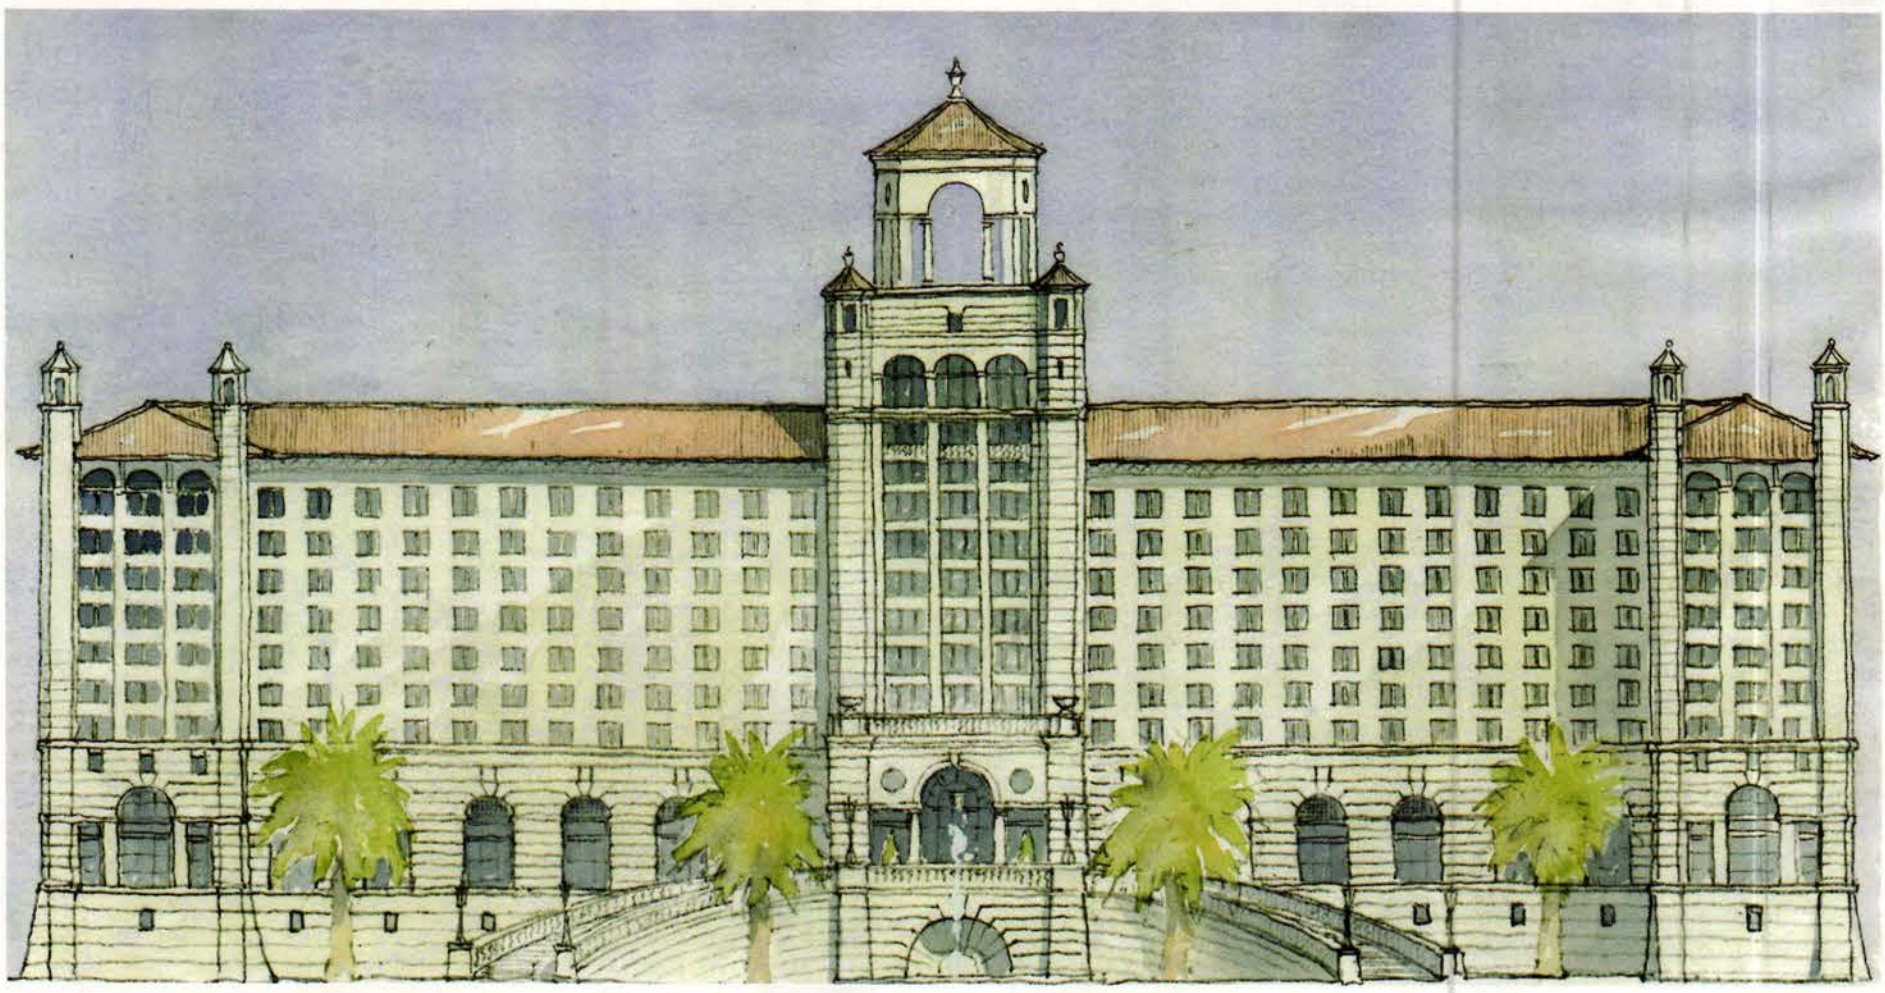

Opinions vary as to the likelihood these designs will be realized. Complex problems – such as coding, insurance and FEMA; private ownership; and expense – make it difficult to proceed.

To address the concerns of casino and private developers, the day after the forum, 2,000 contractors were invited to join the rebuilding discussion. A few weeks later, a meeting between local citizens and MDOT attempted to get the department on board with the new urbanist plans.

As for the goals of the transportation team, Garrick said that "we want to bring the Mississippi Department of Transportation's (MDOT) ideas in line with local desires, but I think we need someone with clout to be on the same wavelength with our vision. Otherwise, it seems very unlikely that it will happen. [MDOT] already has different plans." In terms of the architecture, "We expect a mix of traditional and modern design," said Henderson. Franck believes that "if the planning is adopted, the architecture will follow since Mississippians have such a strong tradition of good architecture."

On the issue of funding, Henderson is conservatively optimistic. "Biloxi and Gulfport may have some funding – mostly FEMA replacement; none will be state funded," she said. "Local civic funds may be available and hopefully we can count on patrons to contribute. I'm hopeful." In fact, a number of patrons have already come forward to supplement the Federal government's pledge of $51.8 billion.

"The real redeeming consequence of this charrette," said Tregoning, "has been to bring back the Gulf Coast better, stronger, more resilient, more competitive, more beautiful. All of us came here in an act of faith." ◆

Beach Boulevard in Biloxi is lined with one hotel and casino after another. The architecture team looked for design solutions to create traditional site-appropriate complexes, one of which is this building in the adjacent municipality of Gulfport with grand sweeping stairways and arched openings. *Rendering: Michael Imber*

PERMAWrap™ Columns

Save **time** and **lower cost** in 3 easy steps...

Are you ***still*** building square columns on the ***job site***? **WHY?**

It COSTS less? **Not any more.** It saves TIME? **Not any more.** More design OPTIONS? **Not any more.**

For ages, builders and remodelers have been building square columns on the job site. They have used pine, cedar, or redwood, and have hoped that the columns would outlast their 1 year home warranty. Some were lucky, and others were not. Imagine the amount of TIME that goes into building a square column on the job site.

What does it really COST you? Over time, what will it COST you? Take a look at HB&G's new PermaWrap™ column. It comes with a 5 year WARRANTY and installs around any load-bearing post. You can LOWER your cost and save time by installing HB&G's PermaWrap™ columns. For more information, call us today at 1-800-264-4HBG.

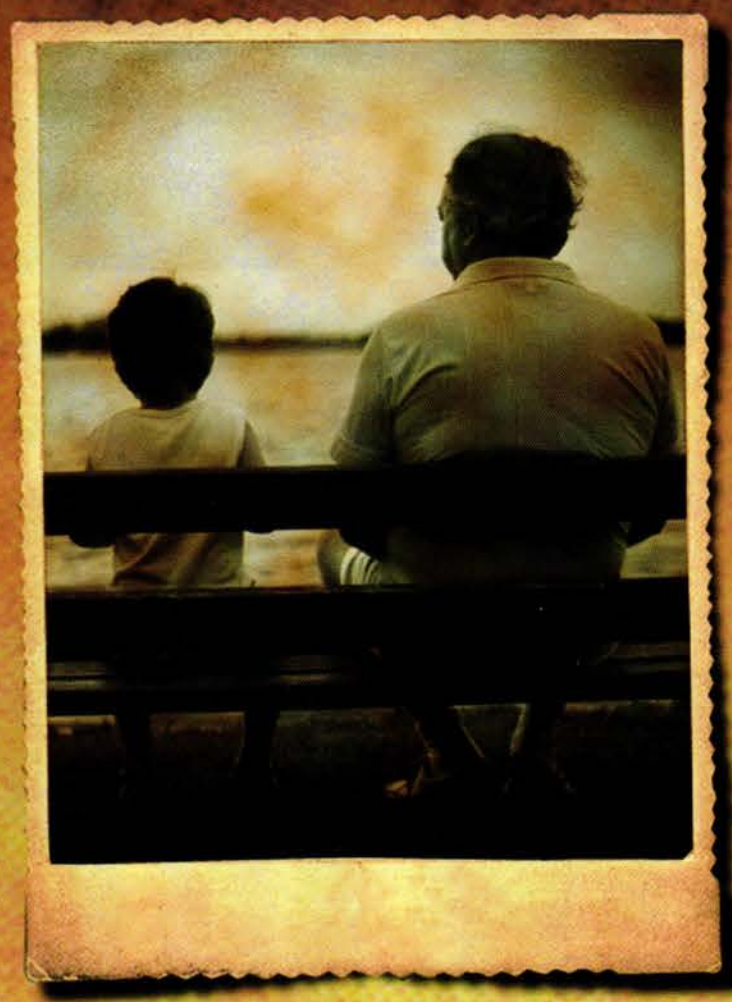

HB&G is GIVING AWAY a brand new fully loaded **Kawasaki® MULE™***, customized for a builder's way of life. Look inside PermaCast Column packaging for details.

No purchase necessary. Visit us at www.hbggiveaway.com.
*Kawasaki® MULE™ is a tradmark of Kawasaki Motors Corp., U.S.A.
*Kawasaki® is a registered tradmark of Kawasaki Motors Corp., U.S.A.

AS A CHILD, YOU WERE TAUGHT THE DIFFERENCE

BETWEEN RIGHT AND WRONG.

DON'T YOU THINK IT'S TIME WE APPLY THIS CONCEPT TO

THE MILLWORK INDUSTRY?

The Right Stuff.™ It's everything we are. Everything we make. And how we go about making it. It's our commitment to you to be the best that we can possibly be. It's more than a phrase. More than a standard. It's our vision. A vision to lead the decorative synthetic millwork industry into places others can only dream about. And a vision that ensures no matter what challenges you face on a project, one simple phone call will produce a solution. If you want to know more, read on. And if you don't, then you're probably a Fypon® customer already.

FYPON®

The Right Stuff.™

www.fypon.com 1.800.446.3040

FYTB0206RW / FY266

THE RIGHT SERVICE.

Our goal is to provide the industry's absolute best service and support. This goal is achieved through our Customer Service Quad.™ Four layers of customer support, including a dedicated external sales force, a proactive inside sales team, an intensive customer service group and a responsive technical support team all work together to ensure our service and support are unparalleled. And because we know that every customer is unique, and that every order is different, our commitment to you is based on your specific needs.

THE RIGHT PEOPLE.

At Fypon, we've established a culture where integrity and experience are rewarded. Our low turnover helps ensure that every member of our team is among the industry's most knowledgeable, skilled and experienced. From our visionary leaders who have virtually reinvented the industry by recognizing the needs of our customers to our sales and support staff who succeed only by building long relationships. After all, it's the right people who make Fypon the right choice.

THE RIGHT TOOLS.

When we set out to reinvent the millwork industry, we had to rethink how everything is done. Starting with our state-of-the-art, streamlined manufacturing process that enables us to provide the highest levels of quality control while keeping costs competitive. And because we aren't successful unless you are, Fypon provides you with expertly developed, tried-and-true marketing tools, proven lead generation tools and our exclusive online design configurator. Fypon also offers specialized, custom tools for architects, builders and contractors.

THE RIGHT PRODUCTS.

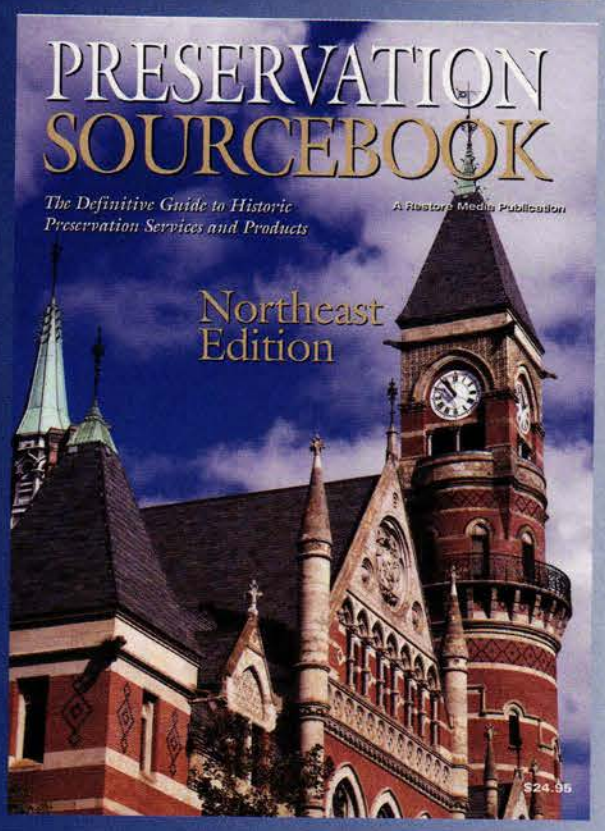

The right stuff, indeed. Our goal is to have the right product for every possible application. That's why we offer an astounding 6,000 products. Our exquisite urethane millwork and trim products lead the industry in delivery and quality from piece to piece. Our PVC foam board provides the workability and strength of wood, with increased weatherability and versatility. For columns that are decorative and load-bearing, in a variety of styles, Fypon has you covered. And for sheer speed, our FastRail™ quick-install porch rail systems are without equal.

THE RIGHT TIME.

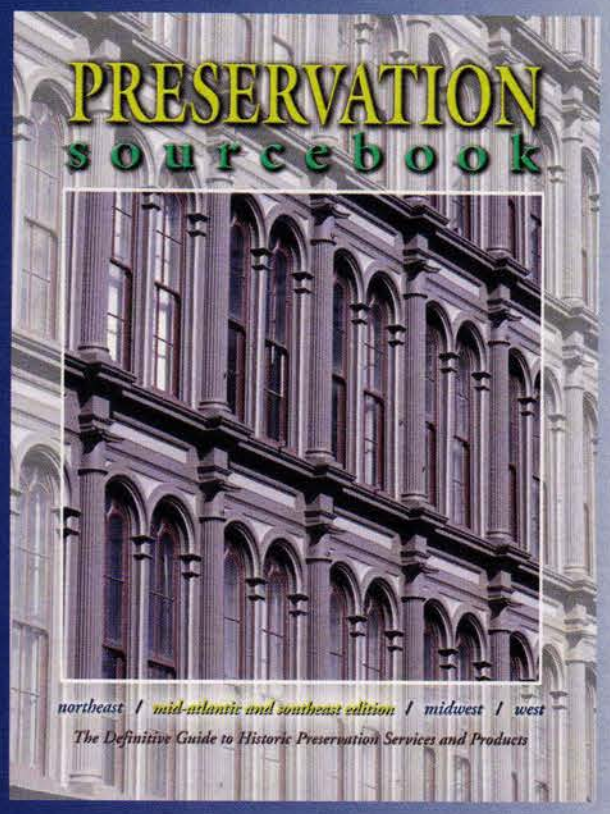

The stage is set. Fypon has taken the definitive lead in the millwork industry. By listening and responding to the needs of our customers, we now offer the industry's most comprehensive millwork product line, backed by previously unheard of lead-times and an intensive support network. All brought together to make Fypon the right company. And, no matter what your project, to provide you with the right stuff.

NORTHEAST

MID-ATLANTIC & SOUTHEAST

MIDWEST & WEST

If you own, manage, or restore historic buildings, you need

PRESERVATION sourcebook

The most difficult job in restoring an historic home or building is finding qualified people to do the work. Historic buildings, interiors, and landscapes require sensitive treatment by experienced hands. ***Preservation Sourcebook*** puts you in touch with your regional network of service providers, and helps you locate hard-to-find products and materials through local and national suppliers.

Regional Editions

The Northeast Edition covers New England and New York. The Mid-Atlantic & Southeast Edition covers the East Coast from New Jersey to Florida, and across to Louisiana. The Midwest & West Edition covers all states west of the Mississippi River.

Sourcebook Features

Preservation Portfolio

- Preservation Portfolio: This colorful showcase of regional historic preservation projects is the centerpiece of each Edition. Projects range from rural farmhouses to Art Deco skyscrapers. Each Profile is presented by a member of the project's restoration team. Photos and description highlight the firm's contribution, plus intriguing information about the building's history, the challenges of the project, etc.
- Preservation Directory: Over 250 categories are divided among 13 chapters. Within each section are company listings, featuring phone and fax numbers, Website and Email addresses, and descriptions. Some listings also include photographs.

Directory Listings

- Directory Chapters: Research & Planning; Design & Project Management; Sitework; Concrete; Masonry; Metal; Wood; Roofing, Siding, & Waterproofing; Doors, Windows & Hardware; Interior Finishes; Furnishings; Specialty Tools/Products/Services; Plumbing; Electrical & Lighting
- Preservation Organizations: Find Listings for preservation organizations and programs at the national, state, and local levels.
- Confirmed Sources: Companies who document three or more recent historic restoration projects are designated as Confirmed Sources.

Call 1-800-234-3797 to order the Northeast Preservation Sourcebook.

THE RENEWAL OF ARCHITECTURAL EDUCATION

Each year *Traditional Building* holds a roundtable discussion on a topic of current and enduring interest to its audience of design professionals. For 2006, the topic is the state and future of architectural education. In May, 2004, the Council for European Urbanism organized a conference on "Teaching Architecture and Urbanism in the Age of Globalization." The conference, held in Viseu, Portugal, brought together architects, urbanists and educators from around the world and produced the "Viseu Declaration." One of the primary tasks of architecture, according to the signatories of the declaration, is "Facilitating civic engagement, social diversity and economic vitality while protecting local identity and ecosystems," and one of the great obstacles to this is "the fragmentation of specialized education in architecture and urbanism." The declaration states that architectural education should:

> Recognize the unique role of urbanists and architects as form-givers, not as individual artists acting in isolation, but as professionals engaged with citizens in creating forms that satisfy human aspirations and needs.

We brought together a panel of eminent educators to discuss these themes, and many others. The panelists were: Victor Deupi, Paul Goldberger, Michael Lykoudis and Elizabeth Plater-Zyberk. The format for the roundtable was a moderated panel discussion, followed by a period of general discussion with an invited audience. We are indebted to The Institute of Classical Architecture & Classical America, particularly Paul Gunther and Henrika Taylor, for providing the venue and invaluable support for the event.

Michael Carey
Editor in Chief

Panelists

Victor Deupi

Victor Deupi is The Arthur Ross Director of Education of The Institute of Classical Architecture & Classical America and an assistant professor of architecture at the University of Notre Dame School of Architecture.

He received a Bachelor of Science degree in architecture from the University of Virginia in 1986, a Master of Architecture degree from Yale University in 1989, and a Ph.D. in architecture from the University of Pennsylvania Graduate School of Fine Arts in 1999. Prior to his 1998 arrival at Notre Dame, he taught at the Prince of Wales's Institute of Architecture in London and at the University of Miami. In his doctoral dissertation he explored the origins of architectural education in 18th-century Spain, with emphasis on the Ibero-Italian cultural relations that propelled it.

In addition to his academic career, Deupi is an active practitioner and design consultant most recently in partnership with Pier Carlo Bontempi of Parma, Italy. He has worked previously in the offices of distinguished practitioners Allan Greenberg and Demetri Porphyrios and has published widely on a variety of design topics including the New Urbanism and the humanities underpinning the Classical tradition.

Paul Goldberger

Paul Goldberger became dean of Parsons The New School for Design in July, 2004. One of the nation's most eminent critics and writers on architecture and design, he has helped shape public understanding of the social and political implications of design for nearly three decades. Goldberger is also the architecture critic for *The New Yorker*. He joined its staff in 1997, following a 25-year career at *The New York Times*, where he won a Pulitzer Prize in 1984 for his architecture criticism.

He is the author of several books, most recently *Up From Zero: Architecture, Politics and the Rebuilding of New York*, published by Random House in 2004. He also wrote *The City Observed: New York; The Skyscraper; On the Rise: Architecture and Design in a Post-Modern Age; Above New York*; and *The World Trade Center Remembered*. His writing has received numerous awards in addition to the Pulitzer, including the President's Medal of the Municipal Art Society of New York, the medal of the American Institute of Architects and the Medal of Honor of the New York Landmarks Preservation Foundation. He has also received the Roger Starr Journalism Award from the Citizens Housing and Planning Council; the Award of Merit of the Lotos Club, presented to writers of distinction; and in 1993 was named a Literary Lion, the New York Public Library tribute to distinguished writers. In 1996, New York City Mayor Rudolph Giuliani presented him with the New York City Landmarks Preservation Commission's Preservation Achievement Award in recognition of the impact of his writing on historic preservation in New York.

Goldberger has been awarded honorary doctoral degrees by Pratt Institute, the Center for Creative Studies, the New York School of Interior Design and Kenyon College. He is a graduate of Yale University.

Michael Lykoudis

Appointed dean in July, 2002, Michael Lykoudis has served as professor of architecture at the University of Notre Dame since 1991. A national and international leader in linking architectural tradition and Classicism to urbanism and environmental issues, he has devoted his career to the building, study and promotion of traditional architecture and urbanism. His scholarly activities have included the organization of several major conferences in collaboration with such organizations as the Classical Architecture League and The Institute of Classical Architecture & Classical America. The first, titled "The Work of Emerging Classical Architects," was held in 1992 in Alexandria, VA, and brought together a large number of practitioners of Classicism from Europe and the Americas. A second conference, "The Art of Building Cities," took place in 1995 in Chicago and was the first event in this country to specifically link the practice of contemporary Classicism with the new traditional urbanism. An exhibition and conference titled "The Other Modern," took place in Bologna, Italy, in 2000, and a conference titled "Three Generations of Classical Architects: The Renewal of Modern Architecture" was held in October, 2005, at Notre Dame.

Lykoudis was the co-editor of two publications, *Building Cities*, published in 1999 by Artmedia Press, and *The Other Modern* exhibition catalogue published in 2000 by Dogma Press. A third book, *Modernity, Modernism and the Other Modern*, is forthcoming from W.W. Norton & Co. A graduate of Cornell University, Lykoudis earned his master's degree from the University of Illinois' joint business administration and architecture program. Prior to joining the Notre Dame faculty, he worked as a project designer and architect for firms in Florida, Greece, Connecticut and New York. He also has conducted his own practice in South Bend, Athens and Stamford, CT.

The panelists for the 2006 Roundtable were, from left to right, Michael Lykoudis, dean of the School of Architecture at the University of Notre Dame, Michael Carey, moderator and Traditional Building *editor in chief, Paul Goldberger, dean of Parsons The New School for Design, and Victor Deupi, director of education of The Institute of Classical Architecture & Classical America. Not pictured is Elizabeth Plater-Zyberk, dean of the University of Miami School of Architecture, who participated by conference call.*

Elizabeth Plater-Zyberk

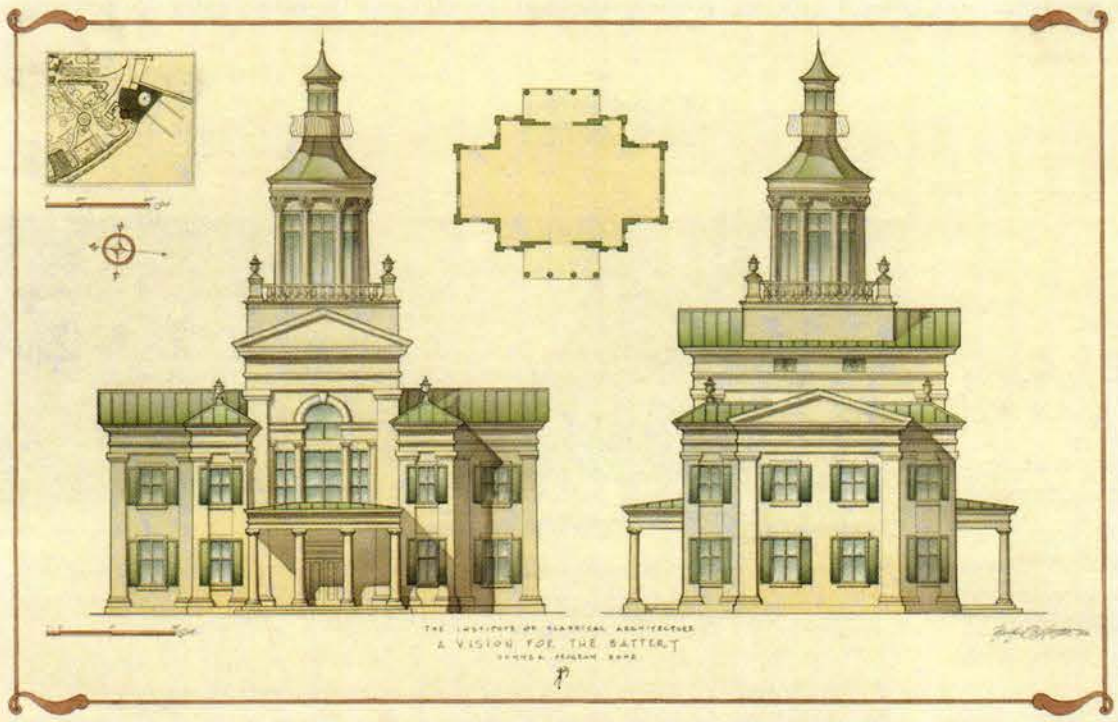

Elizabeth Plater-Zyberk is a founding principal of Duany Plater-Zyberk & Company. She is dean of the University of Miami School of Architecture, where she has taught since 1979. Having initiated the graduate program in suburb and town design in 1988, Plater-Zyberk continues to explore current issues in city growth and reconstruction with students and faculty. She has served as director of the Center for Urban Community and Design, organizing numerous design exercises for communities throughout South Florida.

Plater-Zyberk is a founder and emerita board member of the Congress for the New Urbanism, established in 1993. She has co-authored two books: *Suburban Nation: The Rise of Sprawl and the Decline of the American Dream* and *The New Civic Art*.

Plater-Zyberk received her undergraduate degree in architecture and urban planning from Princeton University and her master's degree in architecture from the Yale School of Architecture. She has received several honorary doctorates, the Brandeis Award for Architecture, the Thomas Jefferson Memorial Medal of Architecture from the University of Virginia, the Vincent J. Scully Prize for exemplary practice and scholarship in architecture and urban design from the National Building Museum and the Seaside Prize for contributions to community planning and design from The Seaside Institute. She lectures frequently and has been a visiting professor at a number of schools of architecture in North America. She has been a resident at the American Academy in Rome and for 14 years served as a member of the Board of Trustees of Princeton University.

Michael Carey: To begin, I have a two part question: Every pedagogical program implicitly or explicitly intends to generate a certain kind of model student. What are the characteristics of the model student your program generates? And assuming that one cannot learn everything there is to know about architecture in school, what critical faculties do you think it is important that students develop in order to continue learning after graduation?

Victor Deupi: The Institute of Classical Architecture & Classical America, in its 14 years, has engaged in a wide variety of teaching, from continuing education, which is the core curriculum of what it does now, to summer programs, travel programs and public lectures. The institute has been geared toward professional education, so in many ways the model student is the practitioner, is the one dedicated to the business of building and the activities associated with the practice of architecture – with the focus obviously being on Classicism and the relevance of Classicism today. Given the diversity of people in the program, the model student is one who can not only engage in the business of building, but can also draw, can draw beautifully, who should engage in urban design so they can think in the larger context. I suppose I'm also talking about critical faculties.

Brad Houston drew "A Vision for the Battery" during the 2002 Summer Professional Program at the ICA&CA.

As we look to the future, and as we contemplate the possibility of having some sort of accredited graduate program, I would think that the model student might take on even a more generalist character, so far as covering areas of applied arts – engaging in a whole range of allied arts would be something that could very well emerge.

Paul Goldberger: We are not, I should say at the outset, a Classical program. I'm not even sure that we are a traditional program at Parsons – and by that I would mean a modern program, in that today one can use the word "traditional" to mean "modern." What characterizes our program most of all, and therefore I would hope characterizes our students, is a belief in architecture as social engagement – architecture not as a disconnected exercise in style, but as a proactive effort at social engagement. The aspect of our curriculum that I think most characterizes our program is something we call the "design workshop," where each summer, students in the architecture program design and then physically construct some facility for a non-profit social service organization in New York. This makes a couple of critical points. One is that architecture is, for them, intimately connected to the tectonics of real building, and not theory. Secondly, that architecture is connected to the realities of a real client, and again, not a theoretical or imaginary one. Overriding both of those is the sense that architecture is an act of social engagement, given that these projects are always done, as a matter of policy, for non-profit social service agencies. So the notion of architecture as an act of social responsibility is very important to us.

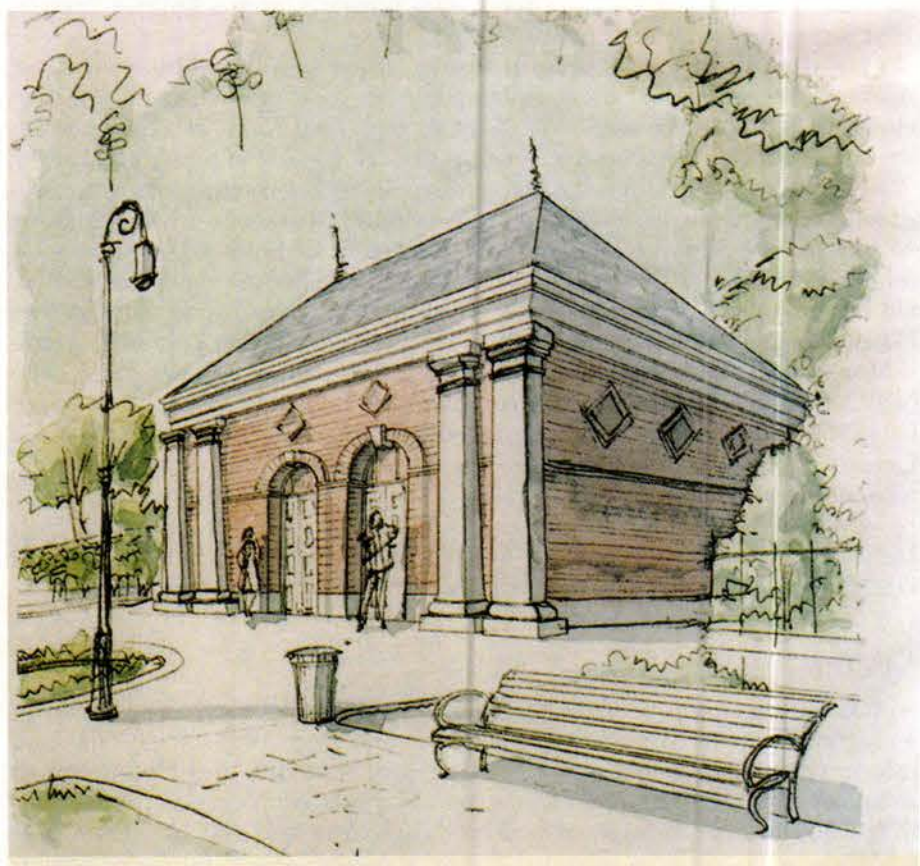

I would hope that our students are also characterized by a deep interest in, and sympathy for, all of the allied arts. For the last several years our architecture program has been operated under the same departmental umbrella as interior design, because we feel that those two disciplines have a great deal to say to each other, and that they too rarely do. In some ways, our attempt to close the wide breach between architecture and interior design is, in fact, although we don't think of it as an overt step toward Classicism, something that is much more compatible with the way architecture was taught, traditionally, before the Modern period. The entire architecture and interior design "combine" is itself within the context of a broader design school, with painting and sculpture studios right above, graphic designers half a block away, fashion designers and illustrators and photographers – so if we're doing anything right, we are encouraging architects to have as much sympathy for, and connection with, all of the other arts. I would say that the student we want at Parsons is a student with sympathy for, and interest in, a far wider range of arts, and architecture itself.

Elizabeth Plater-Zyberk: I understood your questions to be: "What is the character of the model student?" and "What critical faculties are the most important to develop?" The context for these at the University of Miami are both undergraduate and graduate, professional and post-professional degrees, to which students come of all ages, especially in the graduate program. We have students who come from many different walks of life, perhaps having succeeded already in business or medicine or in another area before undertaking the study of architecture. One of the reasons they come to study with us is our professed belief that architecture is a civic art. Within this context, the characteristic of the model student that's most important is a passion for some aspect of architecture, whether it be its aesthetic development, or the social needs that can be served by the built environment or some idea about a better way to exhibit environmental responsibility in building. Arriving with some innate drive to engage the built environment helps the student be successful.

In terms of the critical faculties that we hope to help the student develop, one is a love for lifelong learning – the idea that we are a stopping point, or a weigh station, in a lifelong process, and hopefully some tools for continued learning can be picked up with our faculty. We try to instill an understanding of what it is to reach for excellence, and a renewed commitment, or perhaps a first time commitment to never being satisfied with the work just completed, but to think of that work as part of the lifelong learning process. And finally, we hope students understand that their roles as change-agents, whether it's at the scale of one building at a time or in one's involvement with a regional plan.

Michael Lykoudis: At Notre Dame, we have a very strong undergraduate program and an emerging and growing graduate program, which have very distinct missions. The undergraduates come to Notre Dame for Notre Dame. Very few of them are equipped to understand the difference between a Classical program and a Deconstructivist program. I certainly had no idea at their age. We have a responsibility to those students to make sure that we appeal to their intellect – that they come to their own conclusions of their own free will. And when you're presenting a language of architecture to them, you're not just – as Paul mentioned earlier – presenting them with a style, but a way of viewing the world. It can't help but be ideological. But in the process, our model students, at the undergraduate level, embrace and perhaps even reject what we offer, maybe not at the same time. Some of our model students have become wonderful practitioners in the Classical arts, and many of you have seen them here in New York City. Many of them have also engaged firms that are Deconstructivist or Avant-Garde or Modernist, and have excelled, and have also been better precisely because of their Classical background.

So, at the undergraduate level, our model students are those who can critically take what we offer them and make it their own, and by making it their own, they transform it. I've never felt, even in the 15 years I've been teaching at Notre Dame, that our purpose, at the undergraduate level, is to produce Classical architects, plain and simple; it's to produce great citizens – people who see the social imperatives of the world and the architect's role, and will have transformed it, but come to those conclusions of their own free will.

An ICA&CA student drew this vision of a hip-roofed traditional building during the 2001 Summer Professional Program.

This hotel project was designed by Parsons The New School for Design student Santiago Rivera Robles-Martinez in his Design Studio VI in the spring of 2005. It is sited in the Lower East Side neighborhood of New York City.

At the graduate level, students are coming to us – knowing our expertise, knowing our interests – so that they can deepen their own understanding of the Classical language, of traditional Urbanism and of vernacular architecture. There are two different types of graduates students that come to us. The first I would call the "social activist," who has read James Howard Kunstler and is terrified of the future – that person is primarily interested in seeing Classicism as the highest expression of sustainable architecture. The other kind of student we get is the craftsperson, the one that is interested in engaging with a tactile familiarity the moldings, the fluting, and gets a tremendous amount of joy from the esoteric experience of the language. Those two kinds of people – and of course I'm generalizing – wonderfully complement each other, because invariably the altruistic tendencies of one influence the other and the perfectionist tendencies of the other also engage. It's actually a very porous, connective wall between the two types of people that we get.

It's interesting to have heard Paul speak about his program, because I could almost used those same words to describe Notre Dame.

Goldberger: It's fascinating, given that the curricula of our programs are very different, and yet the civic intent, in certain ways, is quite similar – and Lizz said not dissimilar things about her program as well.

Carey: Given what you've all said about social engagement, about architecture as civic art, where are all the architects coming from who view architectural design as a personal expression, to the exclusion of what you've been talking about?

Goldberger: One's temptation is to say they're coming from schools other than ours, but the truth is far more complex, because one must also ask where the client is coming from. I suspect that many of our students, when confronted with clients pushing them toward personal expression, are not going to say, "No, take this money that you were going to put toward this house in the Hamptons and put it toward some civic statement instead." It is partly social pressure from a broader society, partly other schools and partly the fact that while all of us, I think it's clear, believe profoundly in civic engagement as critical to the architect's education and ongoing identity, the reality is that's not all we do. We also teach other things, and once students are out in the world, they carry those other things in other directions.

Deupi: I think a great problem emerges before they get to school. Think about how many young high school kids are being raised in environments of suburban sprawl, where architecture is not presented to them as something that improves the quality of life – that architecture is, for the most part, absent. They don't see the profession of architecture as being civic activism, in the Albertian sense. They're raised to think that it is a kind of profession in the same way that everything that they see around them is a way of just moving forward or making money – architecture as not associated with any kind of deep social engagement. So I think the big problem emerges long before they get to architecture school, and in architecture school, even though we can engage them and try to provide a context within which they can think about these things, we need to begin much earlier.

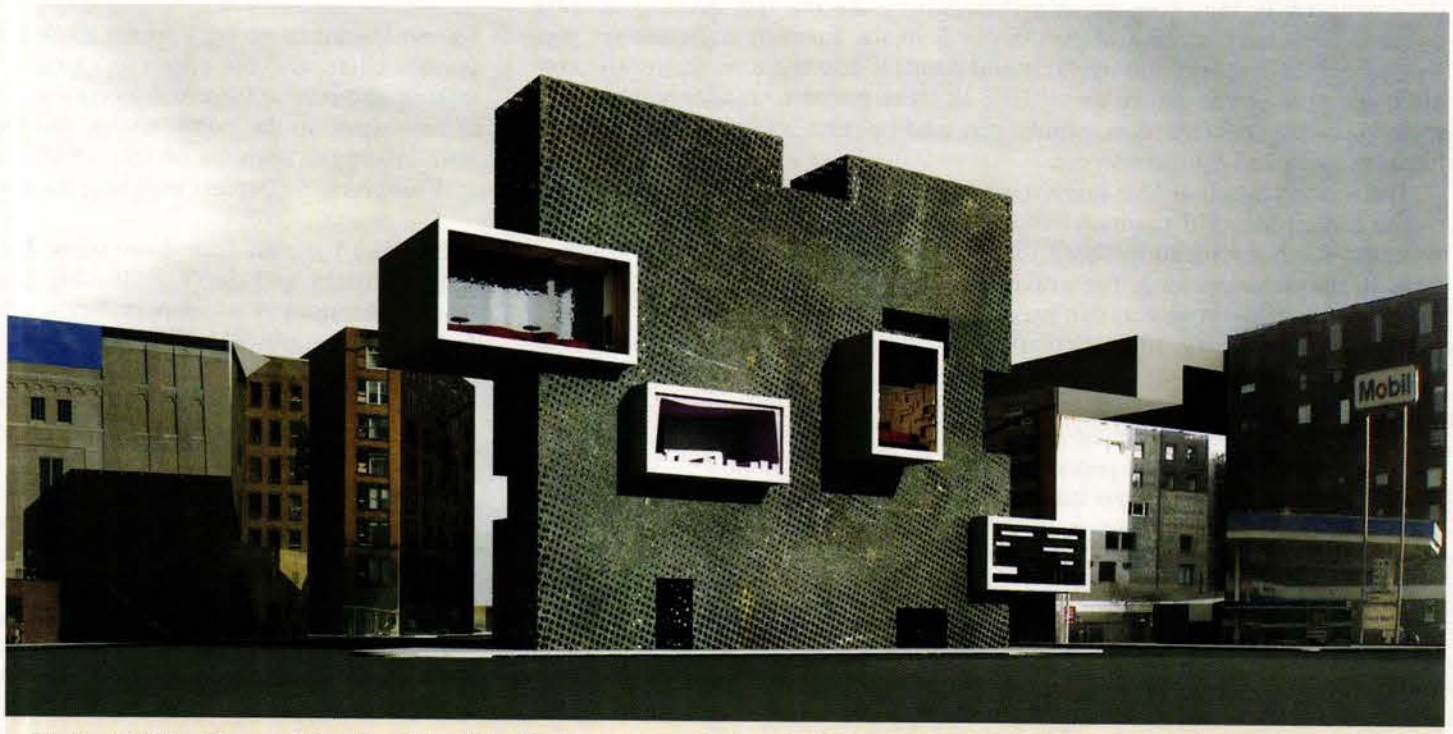

Goldberger: I would absolutely underscore that. There is a general societal disinclination toward architecture as social engagement and toward the values of urbanism. These issues transcend all issues of style, and take us even farther away from that. Indeed, the return to traditional building that all of us embrace, on the one hand, has brought us, at least, small halting steps toward a greater urbanist sensibility, but it's also brought us McMansions and all sorts of things like that, that none of us admire, and that represent, or can represent, as fully realized a culture of selfishness and privacy as any Modernist extravaganza might. The issue is really why the culture is not able to focus more on communal and societal and civic aims in its architecture.

Carey: I find it interesting that you use an example of a house in the Hamptons – a private client pushing the architect toward personal expression. In that case, the client is often hyper-educated, in a certain sense, but in the public realm, this is not necessarily the case.

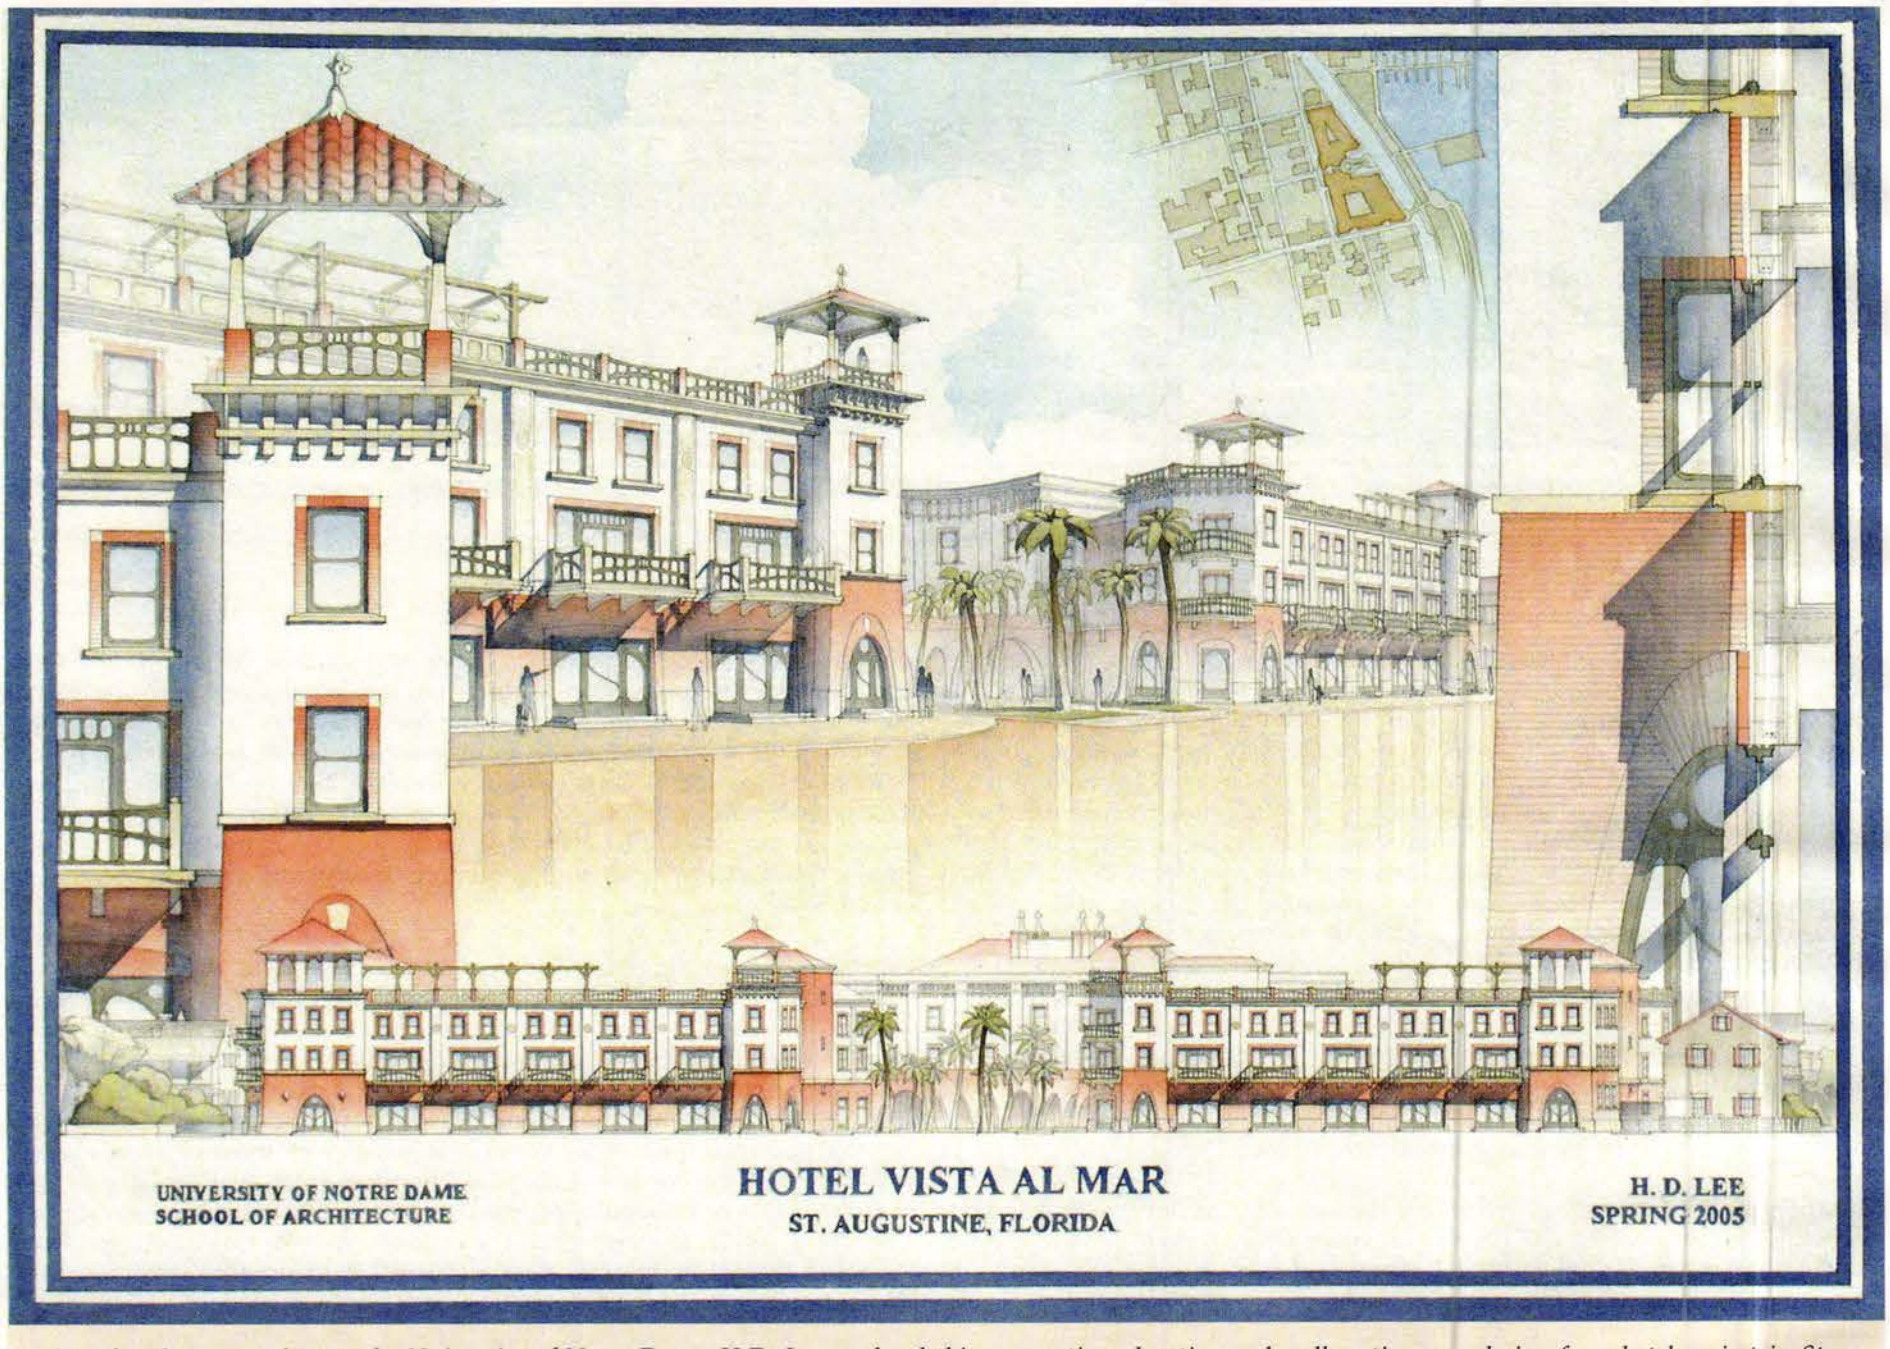

Plater-Zyberk: This is getting complicated. I have to think back to the question that spawned the last two comments, which was about personal expression. I think it was Michael Lykoudis who was saying that we have to look to the students or the young people themselves, and what they are seeking when they arrive at architectural education. We ask this question of our freshmen. On the first day of class they're all in one room together and we ask each one to tell their classmates why they want to study architecture. The answers range from the students who understand that there is an important social component or environmental component to the students who say things like, "Well, I was good at art and math, and this seems like a good combination" – those who are seeking some way to make good use of their talents and are still finding their way.

One has to recognize that there is in one part of architecture – because there are many kinds of architecture, many kinds of study, many kinds of practice – in one aspect of it, the drive of the artist, of an inner urge to create, which can be a very strong part of the choice made by the young person. With that drive you might not choose medicine or law; you might have to choose between painting and architecture; but I think it's clear how that choice is being made.

It gets more complex when you start talking about the expectations for creativity and innovation. The expectations of the client world – which, as Michael Carey points out, can be a very educated world – are often much influenced by academia, the ultimate taste-setter. Academia has its own expectations of the faculty, in terms of original work, innovative work as the requirements for tenure. These are often difficult to separate from standards applied to other disciplines, scientists and mathematicians engaged in pure

Stelina Tsifti, a Parsons The New School for Design student, designed this restaurant project for a site in New York City during her Design Studio VI course in the spring of 2005.

As a fourth-year student at the University of Notre Dame, H.D. Lee rendered this perspective, elevation and wall section as a design for a hotel project in St. Augustine, FL. (Professors Sallie Hood and Ron Sakal)

research where the goal of originality or innovation can be quite abstract, and very often, separated from all of those other good goals that we spoke of. The role of the academic institution – writ large, academia as a whole – makes an interesting contribution to the first tentative step of the creative young person saying "I have this urge to be creative."

Lykoudis: The issue of separation of the artist from his or her world is central to this discussion. It's a cultural paradigm that we've been following for a very long time. The young architects come to colleges and schools of architecture with very poor information about what it is that architects do at any level. They think, "I'm good at math, I'm good at art, this is what I do." It's partly the guidance counselors that give them this, it's the high schools that feed them this, it's also the general media that feeds them this. But ultimately, it's also an easy packaging for the professional. It's harder to explain all the connectivity that goes on in architecture – it's the last great generalist degree. You study math and you apply it in the form of engineering; you study engineering and you apply it and connect it to the artistic and the creative endeavors; you study the artistic skills required to render your drawings; you study construction, philosophy and politics, and all of these things become part of a larger construct.

Most students that I've known are completely flabbergasted and awed, in the most profound manner, when they discover these connections. This actually is what education should be – it should be about making connections. Generally speaking, the universities have been about breaking down the connections so that you can't make them; it becomes factual stockpiling and you get a binary, digital relationship with whatever it is that you're learning. Whereas the Classical, in the best meaning of the Classical – and I mean this in the broadest, cross-cultural sense – is about understanding the amazing web of philosophy, of art, of all the highest levels of humanity coming together in the creative process. When our students, who also come from suburban backgrounds, step into our classroom, and we show them these funny columns and these crazy moldings, they're not quite sure where it's all going. But it becomes alive for them when they go to Rome – Rome just makes that paradigm come alive. To me, that's the exciting part of this whole thing. If you can influence a few people to make those kinds of connections in an age where the private reigns supreme, where the ideals of early- and mid-20th-century civility have been smashed, and where deception is actually an ideal at some level – to see this resurgence of people that come together is really the best meaning of the word "citizenship."

Goldberger: I'm fascinated by the fact that we – despite going from question to question and moving around a certain amount – keep coming back to the idea of the architect as citizen, and the connections between architecture and civitas, which is really not so different from what you're saying about the ICA&CA. You're not just teaching craft, but teaching about the relationships between architecture and a civilized life. I'm delighted that we keep drifting back to that, because it shows that at the end of the day, that's what means the most to all of us and is what we most want to communicate to students. Whether we succeed at doing so or not is a whole other question for another discussion, but it is certainly what we most aspire to communicate – the connection between architecture and citizenship, so intimate that you can't really break the two apart. That's what you've been saying about Notre Dame certainly, and it's what I would like to be the case at Parsons as well.

Plater-Zyberk: Ditto for Miami.

Carey: I want to go back to the distinction between the education level of a private client and the education level of the public client. What we've been talking about is architecture as civic art, social engagement, etc., which exists at some level in the public realm. But the fact is – and I don't know whether you'll disagree with me on this – that the majority of the students from your institutions have careers building houses.

Lykoudis: I would take issue with that. I think that many of our students look for firms that don't do the big houses, and will take a 90-degree turn from that trajectory as soon as they're able to, because they associate a certain level of philosophical futility with that.

Plater-Zyberk: All they have to do is work with a few of those big-house clients, and they'll decide to do something else.

Lykoudis: They'll look for the firm that's doing Hope VI, they'll look for a firm that's taking military bases and converting them into affordable housing. Which actually brings me to another point, which is that the issues that we're talking about in terms of tradition today have expanded far beyond the parameters of discussion 15-20 years ago, when *Architectural Digest* had as one of its titles, "Reconstruction/Deconstruction: My Ideology is Better than Your Ideology" – that stuff is kind of passé now. The success of these firms that have engaged the public realm speaks for itself. There's a long way to go – I'm not suggesting that the world has changed and is a wonderful place and everyone loves each other – but the momentum has clearly shifted, and the students who have taken this and made it their own are doing very well with it, and they're pushing that agenda.

Plater-Zyberk: Now, if you're going to make some kind of bifurcation in the clientele to understand the different directions that students might take, I would make distinction in a different way. There are client-patrons, on the one hand: these might be of the private sector, or they might be public sector or not-for-profits, with current-day projects like a museum, for example, or a university building. On the other hand, you have the client-consumer who accounts for probably 95% of the built world, or 95% of the construction that takes place. There used to be an enormous gap, which has been somewhat bridged in recent years, between those two client types. You came out of school and had to decide whether you were going to starve and work with an architect who worked with patrons, or whether you would immediately start feeding a family and join the Sports Authority to be their commercial development architect. I think there are a lot more choices now, with a new middle ground working without patronage, in which budgets are critical and the users are consumers you never meet. In housing, for instance, there is a more educated clientele, or perhaps a more sophisticated regulatory framework, asking for intelligence and character to drive the market instead of being driven by the market. It's the arena of practice in which 95% of the building that occurs presents the greatest challenge for academia. The university's education must give the students the ability to set their standards high enough to invite patronage, while inviting them to take on the challenge of the budget and of the banality of the market as well.

Deupi: I don't think anyone ever criticized [Antonio da] Sangallo for engaging in high-end residential when he designed the Palazzo Farnese in Rome. I think Alberti's treatise says that there is nothing more virtuous that one can do than build a noble home for one's family. The problem is not so much addressing high-end residential, but making high-end residential a noble part of city building. Maybe that's been lost in the same way that the New Urbanists don't shy away from building greenfield developments, insofar as to say there's a problem with greenfield developments and it has to be improved, and there have to be new ways of building new towns.

Lykoudis: I think it's an important point. The high-end residential for our culture is the arena in which the Classical was allowed to excel. Without the clients and the patrons who supported the new Classical architects, much of the institutional work, much of the vernacular work and the New Urbanist work wouldn't have been as good. So there's this connectivity between all of the different realms that we engage in. I remember one of my colleagues once deriding New Urbanism, saying it set the standard very low for architecture, and I said, "Look, that's your job. If you don't think the standards are good, make them higher. Their job is to make the standards for urbanism very high, and you're not really addressing that in your work." The point is that there is a balance, that we are all a part of this large city, or whatever it is, this city of humanity, and we bring to it the gravitational pull of our expertise and our ideas, and we're all needed. So we need the people doing the high-end residences, we need the people doing the Hope VI and we need the people doing institutional work and other things.

Goldberger: I agree very much. I would also say that although the phrase "placemaking" has now become rather trite in the language, the very fact that it has become a cliché indicates the extent to which the values underlying that phrase have, in fact, been internalized within our culture today – whereas they would not have been understood at all a generation or more ago. Today, "placemaking" is something of meaning, hopefully at a more sophisticated level than the phrase itself suggests.

Carey: I'd like now to take some questions from the floor.

Clem Labine: I would like to go from the macro, *civitas* end of architectural education to the micro end. I've heard many principals of architectural firms complain bitterly that the graduates of "brand-x" programs don't know beans about how a building is put together, how it's detailed – in other words, have very little practical knowledge. Is that a valid criticism of architectural education? If so, how do your programs address that issue as compared to "brand-x" programs?

Lykoudis: I teach building technology, when I can, at Notre Dame. One of the big problems with the building technology curricula has been its disconnection from the design process. You have the design studio and then you have building technology. Building technology gives you the run of the graphic standards books, which are all so disemboweled, and virtually no connection is ever really made in how you would approach design processes. One of the biggest issues is how you inculcate the process of assembly into the design process. One of the great things about Classicism is that it's sort of a natural fit, because the language itself is a representation of construction. The students, even if they don't fully appreciate all the proper detailing, still depart with a sense of the principles – that certain things fit on top of other things and in between others. Just knowing that has made our graduates quite appealing to a variety of different firms.

Goldberger: It's unquestionably true that the emphasis on theory, particularly in the last generation, has pulled many schools, and therefore their students, away from tectonics and away from the realities of building and technology – not in the sense of new technology, but in the sense of structure, that it's essential to know. That's one of the motivations behind our design workshop, where students physically build something over the course of the summer. All that being said, however, I think it's also true that there are certain things that you only learn and only truly understand when you are doing them within the context of what, for lack of a better term, I'll call "real life."

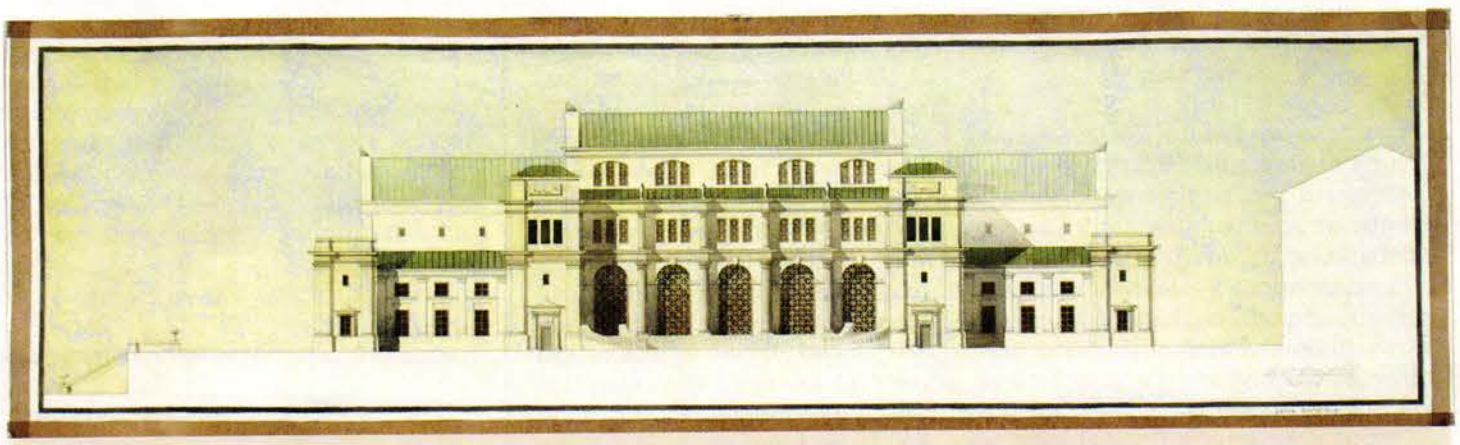

I've had a career in journalism as well as one in education and architecture, and I certainly know that for all I studied about writing and newspapers and journalism, I learned more after I walked into the door of *The New York Times* and started having to produce things then I could have ever learned in any educational environment. While the complaints that students are not coming to firms as fully cognizant of these issues have some merit, I think it also behooves us to remember that some of these people complaining have forgotten how much they themselves learned after their careers began, rather than in school, no matter what kind of program they were in.

Plater-Zyberk: Several years ago, the school selected two focus groups, groups of professionals, to tell us what they thought we should be doing as educators. For some reason, in the morning we had the older architects and in the afternoon we had the younger architects. The young people said more or less what the drift of this conversation has been. What they really needed, to have made the transition from school to practice more comfortably, was more technical information and experience – essentially the nuts and bolts of architecture, which they hadn't gotten quite enough of in school. The older folks said that the most important thing to do was help students develop good judgment and good communication skills – writing and speech. I was struck by how evidently different the needs are at different times during one's professional life.

In a sense, I think you are addressing both of those if the education encourages students to reach out, as I said earlier, for lifelong learning – not just waiting for the next course to come along to teach them the working drawing details, but to start looking at the built details around them and incorporating them into their own drawings simultaneously while focusing on faculty driven studio learning. In every group of young people, you'll find those who are waiting to be told what to do next, and those who reach out and say, "I'm so excited about what I'm learning that I just want to learn everything about it." These will own their own copies of *Graphic Standards*, as well as take Vincent Scully's history course. If you can help people develop that kind of confident enthusiasm about their own learning, then I think you've done more than half the job.

Lykoudis: At a lot of programs, I think, the faculty does not value that kind of integrity that goes into the making of a building. So often, architectural education is being taught as a disconnected series of elements – therefore Deconstruction, right? But you have to also convey to the students that you value the integrative and connective process of lifelong learning. Then those students, as graduates, are well on their way to doing it.

Deupi: I'd like to add a twist to this thesis of lifelong learning – that there are things that you learn in school and there are things that you learn in the profession – by suggesting that there are things that you don't learn in the profession that require you to continue your own self-fulfillment. We find that we have very successful architects who come and engage with our courses because they've reached the point in their careers where they want to ask some of the more profound questions. Ironically, people who have achieved a level of professional success and stability still feel the need to engage with lifelong learning, so it happens both at the university level and also at the professional level – this kind of self criticism that is essential.

A University of Notre Dame fifth-year student, Erin Dwyer, created this design for a ferry terminal in Rochester, NY, in the spring of 2005. (Professor Thomas Gordon Smith)

Christine Franck: I'd like to go back to the discussion about architect as citizen. It was interesting because in the discussion, it seemed that if one was engaging specifically in public, or institutional, projects, that was okay, and that by default, then engaging in private work, such as the big house, was not okay, but somehow a selfish or non-citizen act. If we consider that most schools of architecture today have abdicated house design, particularly single-family house design, to the homebuilding industry – in other

Traditional Building

Exhibition and Conference

2006 Chicago Product Showcase

1. Abatron

Abatron, Inc., founded in 1959, manufacturers and distributes a wide range of products for the restoration and repair of wood, metal concrete and stone. Additional products cover mold making, casting, adhesives and coatings in epoxy, polyurethane and acrylics. www.abatron.com. Booth #601.

2. Allied Window

Custom invisible storm windows for historic properties and renovation projects. Offer custom colors/special shapes – Interior & exterior applications. Low profile – 3/8" deep - sits close to the window allowing for natural shadow lines. See the benefits, not the storm windows! Visit www.alliedwindow.com. Booth #310.

3. American Colonial Crown Moulding

The Craftsmanship of the past returns and restores a touch of early heritage through our own custom designed Aluminum and Copper Colonial Crown Mouldings. They Grace the soffit, rake & frieze board, windows and doors on all types of structures including, Historic Sites, Church Renovations, Educational Facilities, Banks, New Housing Developments and Private Homes. Booth #16.

4. Bell Bird Control

Bell Bird Control manufactures and installs custom systems for bird deterrence. Using our patented solar powered BellStrip™ electrical deterrent system in conjunction with exclusionary measures, Bell has mastered the art of bird control while conforming to a building's aesthetics. Custom colors. Perfect for landmark or traditional buildings. Results GUARANTEED. Specifications online at: www.bellbirdcontrol.com. Booth #407.

5. Big Wally's Adhesives, Inc.

Big Wally's Plaster Magic—the Ultimate Repair Adhesive™ is a water-based, environmentally friendly, all-purpose adhesive. It repairs everything from cracked plaster walls, loose and missing ceramic or floor tiles, to wobbly chair legs. www.bigwallys.us. Come meet Big Wally and Handy Jane at Booth #24.

6. Boston Valley Terra Cotta

Boston Valley Terra Cotta is among the nation's most specialized architectural terra cotta manufacturers providing on-site surveys by experienced engineers and associates consisting of photo and field documentation, detailed cataloguing of all units to be replaced, CAD drawings, and extensive color match development. Boston Valley Terra Cotta offers Classic Clay Roof Tile and is the only U.S. manufacturer of Terraclad (Rainscreen system). Booth #515.

7. Botti Studio of Architectural Arts, Inc.

Established 1864. Restoration/conservation, new design, fabrication, installation, stained/faceted glass, murals, mosaic, statuary, gilding, painting, decorating. Image: Art Institute of Chicago, Conservation of 30' diameter Tiffany Stained Glass Dome. Additional images/information – www.bottistudio.com. Booth #511.

8. Chicago Brass

Distributor of high-end door & cabinet hardware and luxury plumbing fixtures, delivering premier brands on time, and providing knowledgeable, responsive service to builders, architects, designers, developers and home owners. Chicago Brass / Chicago Bath. 847-926-0001; fax 847-432-1178; www.chicagobrass.com. Booth #914.

9. Chris Industries, Inc.

Chris is a fabricator and distributor of architectural sheet metal which primarily serves the Roofing and Sheet Metal industry. We specialize in custom and historical reproductions on copper. www.chrisind.com info@chrisind.com. 800-356-7922. Booth #315.

10. The Christman Company

The Christman Company is a 111-year-old, full-service construction company with specialization in monumental building preservation, restoration, and renovation. Christman provides project management; construction management; design-build; and consulting services that include estimating, scheduling, and phasing. Visit us on-line at www.ChristmanCo.com. or at the Traditional Building Show Booth #518.

11. Coast 2 Coast

Coast 2 Coast is a national firm specializing in production of AutoCAD as-built documentation and condition assessments. Serving architects, building owners, retailers, designers and sign companies. Integrated digital survey packages include photographs, site observations, diagrams, and measurements. www.c2csurveys.com. Booth #314

12. Concealite Life Safety Systems

Emergency Lights and Fire Alarm Fixtures Make those necessary evils, disappear! ARCHITECTURE ON THE

INNOVATION ENGAGEMENT

REGISTER ONLINE AT *WWW.AIA.ORG*

The AIA 2006 Convention provides you with the knowledge, tools, and networking opportunities that can improve your projects and help you better serve your clients.

Fulfill your annual continuing education commitment in three days. Attend theme presentations on innovation, engagement, and inspiration featuring Frank Gehry, FAIA; Kim Day, AIA; Marilyn Jordan Taylor, FAIA; and José Raphael Moneo, Hon. FAIA.

Discover the leading-edge products, services, and technologies of the more than 800 companies exhibiting at AIA Expo2006.

Meet with industry leaders and your peers, at the many interactive workshops, seminars, tours, and receptions.

Register before May 3, 2006, and save!

The Guidebook

How to use the Guidebook

The Guidebook consists of three parts:

Product & Service Index	**44**
SourceList	**62**
Portfolios	**72**

To find a comprehensive list of product or service providers in a particular area, consult the Index. Here you will find more than 700 categories in 20 main sections. If you are searching for exterior polymer balustrades, for example, the appropriate section would be Section 6, "Exterior Elements, Ornament & Finishes." Locate "Balustrades, Polymer" in this category and you will find a list of manufacturers and suppliers. You can then find complete contact information, including web site addresses and a brief description of the companies, in the alphabetical SourceList. To browse through photographs of the work done by companies in the Guidebook, turn to the appropriate Portfolios, which are arranged according to the 20 sections. To locate any company's ad, consult the Advertiser Index below.

72

88

172

158

Advertiser Index

This index lists the page number for the company's ad (right) as well as the reader service number (left). With the latter number you can order product literature from the company by filling out the postcard opposite this page or by going online to www.traditional-building.com and clicking on "Free Product Literature." You may order product literature for an entire SourceList by using the reader service number at its heading.

This mariner detail is part of a frieze depicting symbols of industry painted by THOMAS MOORE STUDIOS for the Bank of America Building in Baltimore, MD. *Write in No. 1703*

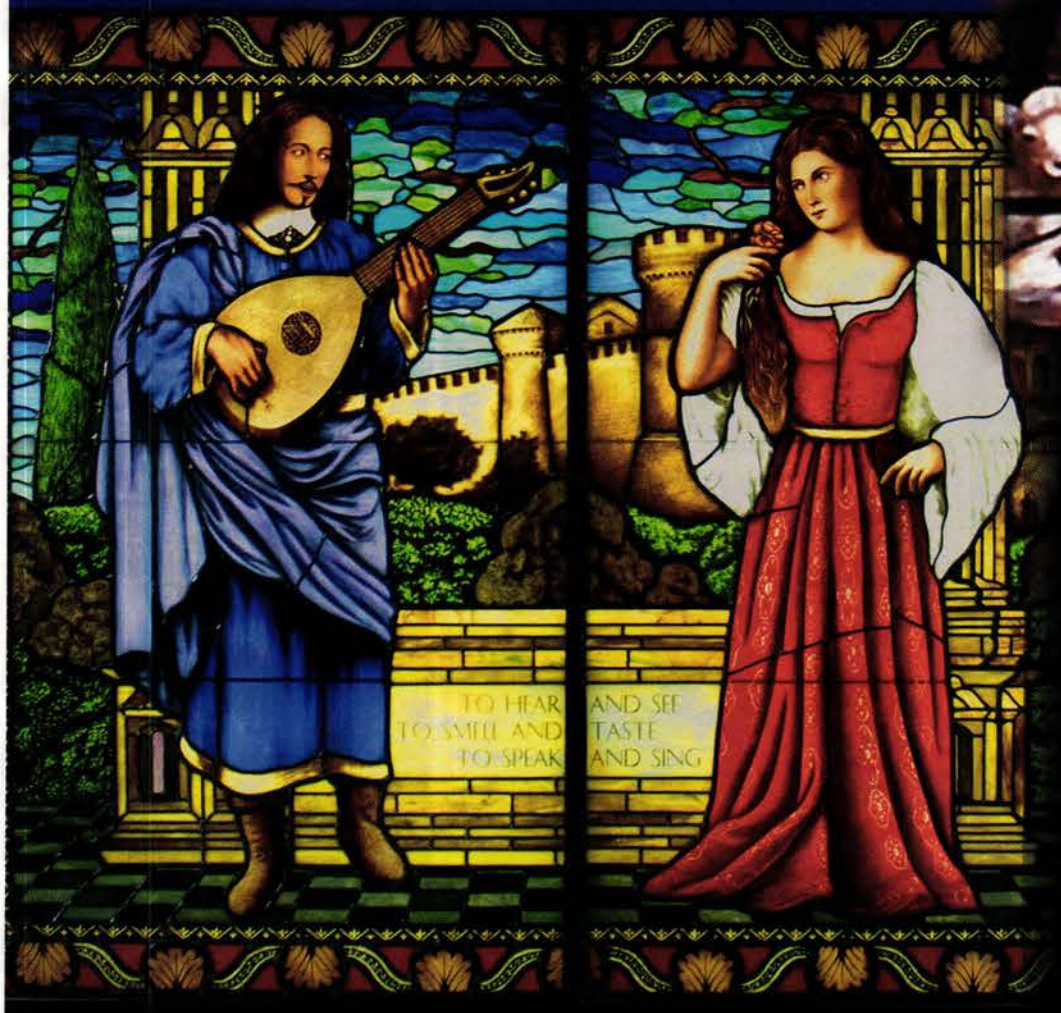

BOVARD STUDIO INC.

Stained Glass Restoration, Protective Covering Systems, New Stained Glass Windows, New Frames, Laminated Stained Glass for Earthquake and Hurricane Codes

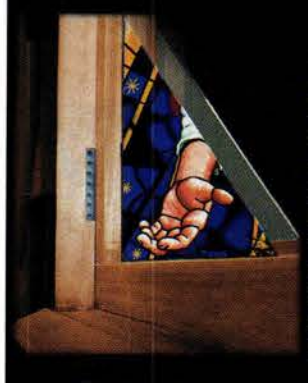

Rose window, First Presbyterian Church, Fort Smith, Arkansas. Our woodshop replicates damaged and destroyed window frames using plantation grown Honduras mahogany and old growth white pine.

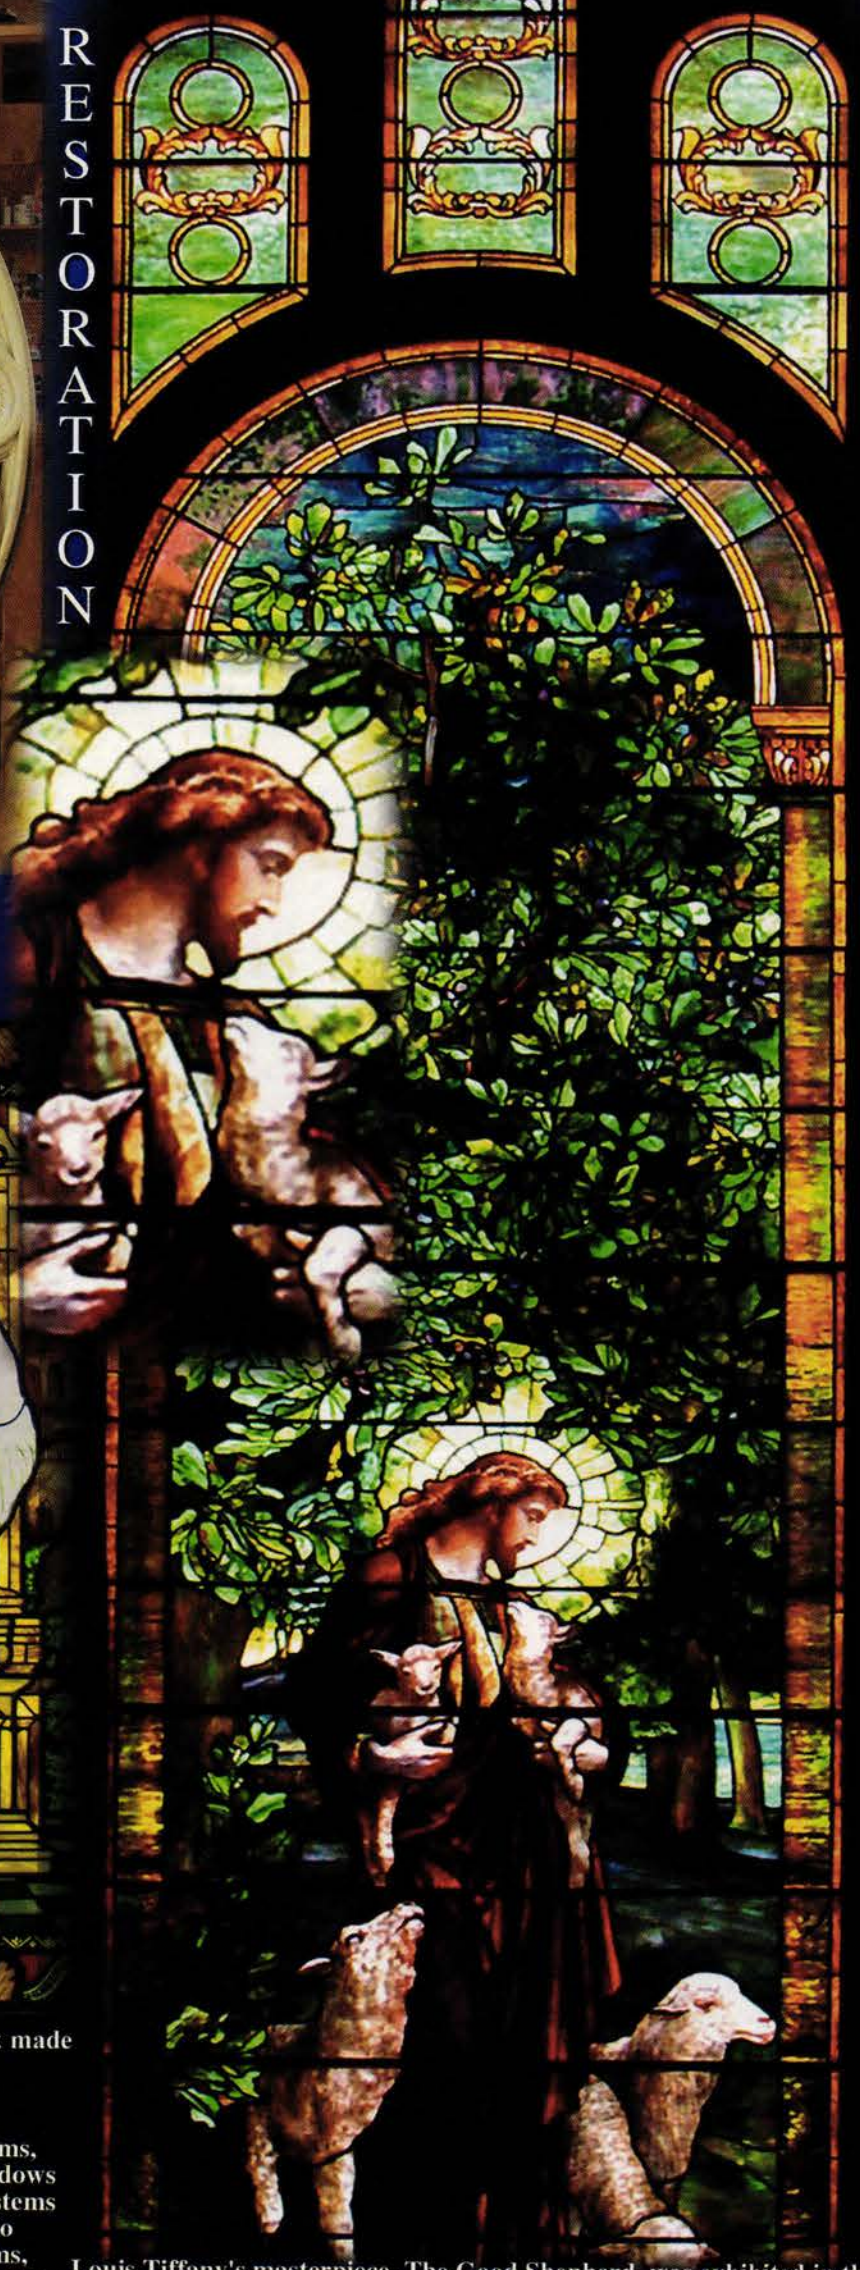

RESTORATION

A new 72" wide x 54" high traditional style figurative window with a new light box made for a doctor's office in Wilmington, Delaware.

According to an extensive study on protective glazing systems, more damage has been done to American stained glass windows by improperly designed and installed protective glazing systems than from fires, storm damage and vandalism combined. To conserve stained glass windows with exterior glazing systems, Bovard Studio's engineering team has developed our Precision Flow® (Patent Pending) venting systems for use in the framework of exterior glazing systems used with stained glass windows. The formulas used in our framing systems for stained glass windows are based on extensive research and engineering studies on the effects of exterior glazing systems on stained glass windows.

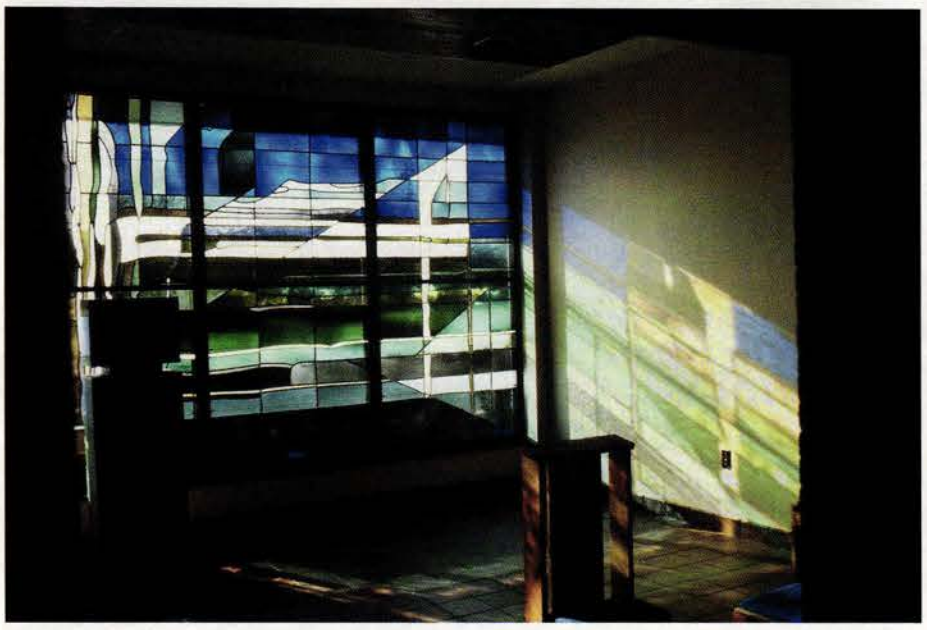

Louis Tiffany's masterpiece, The Good Shepherd, was exhibited in the 1893 World Columbian Exhibition representing his finest production in glass. This Good Shepherd window was purchased by Judge D. N. Cooley's family as the memorial for him and his wife Clara for St. Luke's United Methodist Church, Dubuque, Iowa, where it was installed in 1896. Bovard Studio was selected to restore this historic Tiffany masterpiece in 2002.

Call Bovard Studio Inc. at 1-800-452-7796 for all of your stained glass needs. Our staff of 70 stained glass professionals provide reliable service for an outstanding product.

THE 2007 PALLADIO AWARDS

FOR EXCELLENCE IN TRADITIONAL COMMERCIAL & CIVIC DESIGN

CO-PRODUCED BY
TRADITIONAL BUILDING AND
PERIOD HOMES
AND THE TRADITIONAL BUILDING EXHIBITION AND CONFERENCE

CALL FOR ENTRIES

The Palladio Awards are named in honor of Andrea Palladio, the Renaissance architect who created modern architecture for his time, while using models from the past for inspiration and guidance.

PALLADIO AWARDS FOR COMMERCIAL & CIVIC ARCHITECTURE WILL BE AWARDED IN FIVE CATEGORIES:

- RESTORATION & RENOVATION
- ADAPTIVE REUSE &/OR SYMPATHETIC ADDITIONS
- NEW DESIGN & CONSTRUCTION – LESS THAN 30,000 SQ.FT.
- NEW DESIGN & CONSTRUCTION – MORE THAN 30,000 SQ.FT.
- PUBLIC SPACES: PARKS, PLAZAS, GARDENS & STREETSCAPES

Corresponding awards will also be made for residential projects.

JUDGING WILL BE BY A PANEL OF DISTINGUISHED DESIGN PROFESSIONALS SELECTED BY THE EDITORS OF **TRADITIONAL BUILDING** AND **PERIOD HOMES**.

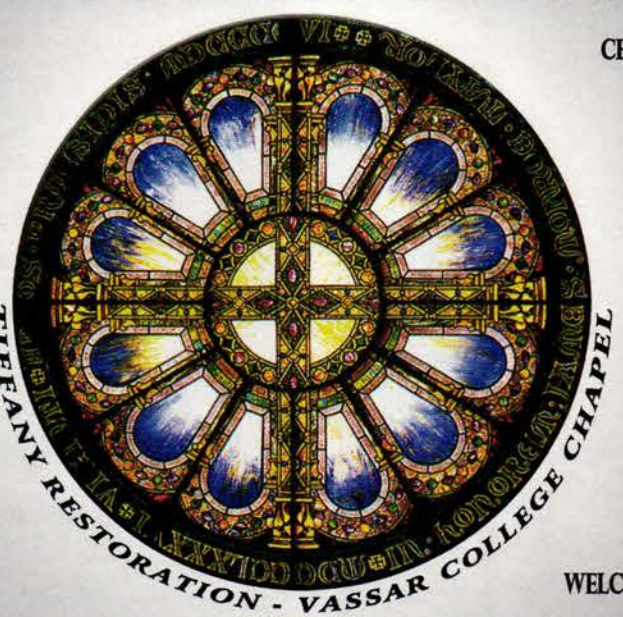

For details on the awards program, judging criteria and submission requirements, download an entry form from www. traditional-building.com.

The deadline for entries is November 15, 2006.

DEDICATED TO STAINED GLASS EXCELLENCE

The Wintergarden is a collection of unique Orangeries, Conservatories, and living areas that offer the beauty of summer all yearlong. These one-of-a-kind structures merge centuries of European wood conservatory tradition with the technology of today. By replacing the wood elements with a powder-coated aluminum construction, Private Garden presents a traditional structure that is safe, code compliant, and maintenance free. Our structures are designed and manufactured in Luxemburg to meet any applicable building codes and the strictest expectations of our customers.

THE 2007 PALLADIO AWARDS

FOR EXCELLENCE IN TRADITIONAL COMMERCIAL & CIVIC DESIGN

CO-PRODUCED BY
TRADITIONAL BUILDING AND
PERIOD HOMES
AND THE TRADITIONAL BUILDING EXHIBITION AND CONFERENCE

CALL FOR ENTRIES

The Palladio Awards are named in honor of Andrea Palladio, the Renaissance architect who created modern architecture for his time, while using models from the past for inspiration and guidance.

PALLADIO AWARDS FOR COMMERCIAL & CIVIC ARCHITECTURE WILL BE AWARDED IN FIVE CATEGORIES:

- RESTORATION & RENOVATION
- ADAPTIVE REUSE &/OR SYMPATHETIC ADDITIONS
- NEW DESIGN & CONSTRUCTION – LESS THAN 30,000 SQ.FT.
- NEW DESIGN & CONSTRUCTION – MORE THAN 30,000 SQ.FT.
- PUBLIC SPACES: PARKS, PLAZAS, GARDENS & STREETSCAPES

Corresponding awards will also be made for residential projects.

JUDGING WILL BE BY A PANEL OF DISTINGUISHED DESIGN PROFESSIONALS SELECTED BY THE EDITORS OF **TRADITIONAL BUILDING** AND **PERIOD HOMES**.

For details on the awards program, judging criteria and submission requirements, download an entry form from www. traditional-building.com.

The deadline for entries is November 15, 2006.

Architectural Windows & Entries

...custom designed and made from solid timbers according to the highest quality standards for the most demanding new construction and historic restorations.

WOODSTONE®
Architectural Windows & Doors

High Performance Traditional, Contemporary & Historic Replicate Wooden Windows & Doors
Since 1978

- Our products are *designed to your specifications and Hand-Crafted in the United States* using the highest grade, traditional, pegged, coped, mortise & tenon wood joinery.
- Woodstone uses the *highest grade lumber* available. We do not use finger jointed lumber.
- Our coped, mortise & tenon joinery seals against the weather and *lasts* longer, therefore we do not use corrosive fasteners, dowels, mitered or half-lap joinery in our products.
- Woodstone fabricates its sash and doors with *True Divided Lites* (TDL), not Simulated Divided Lites (SDL).
- Our Insulating Glass (IG) is fabricated by hand with Edgetec's low condensation SuperSpacer® and all Woodstone IG can be certified with the *highest IGCC CBA rating with up to a 20 year limited warranty.*
- True Divided Lite fabrication allows the use of various glass types in all Woodstone *Insulating Glass, including restoration glass, stained, and bent glass.*
- We preservative dip and apply finish to all of the wooden elements in our windows and doors before final assembly to protect all surfaces.
- Woodstone windows and doors have proven performance, including *the best air infiltration specifications* for traditional weight & pulley double hung windows available. *Impact resistant* sash and doors are also available.

Warmth, Elegance & Beauty Tough Enough to Take It.

Earth and fire are wedded in old-fashioned kilns to create a product with natural subtleties of shade, shape and color; and grace and beauty of classic architectural character.

Their natural, kiln-fired charm can stand up to the most demanding commercial, institutional or residential traffic areas.

WRITE IN NO. 500

Make our wood's history yours

Bold. Elegant. Timeless. Not all hardwood floors are the same. Like this Antique Heart Pine. We hand-selected each board from century old homes, barns and gristmills. Today, we offer one of the most respected and diverse inventories of hardwood beams and flooring in America. Call us today and make your next project historic.

100% Biodegradable • Non-Caustic & Non-Hazardous
Virtually No Odor • Made With 100% American Grown Soybeans

SOY•Gel™

Professional Paint & Urethane Remover

Lead-based Paint, Varnishes & Urethanes

Trim • Molding • Brick • Furniture • Metal • Wood Floors

Soy•Gel is a consumer friendly paint, varnish, and urethane remover. The low evaporation rate of Soy•Gel and its gel formulation make it possible to **remove several layers of paint in one application**. During the removal of lead based paint, lead becomes encapsulated in the gel, preventing air born lead particles, allowing for safe and easy disposal. Soy•Gel **contains no methylene chloride, is not an alkaline based stripper and cleans up easily with water**. Unlike traditional paint strippers Soy•Gel lets you **work without the odor**. Indoors or outdoors, you can be guaranteed a safe restoration process with Soy•Gel.

Brick Fireplace and Mantel

Works on Horizontal and Vertical Surfaces

Made from 100% American Grown Soybeans • Five Stars!

THE 2007 PALLADIO AWARDS

FOR EXCELLENCE IN TRADITIONAL COMMERCIAL & CIVIC DESIGN

CO-PRODUCED BY
TRADITIONAL BUILDING AND
PERIOD HOMES
AND THE TRADITIONAL BUILDING
EXHIBITION AND CONFERENCE

CALL FOR ENTRIES

The Palladio Awards are named in honor of Andrea Palladio, the Renaissance architect who created modern architecture for his time, while using models from the past for inspiration and guidance.

PALLADIO AWARDS FOR COMMERCIAL & CIVIC ARCHITECTURE WILL BE AWARDED IN FIVE CATEGORIES:

- RESTORATION & RENOVATION
- ADAPTIVE REUSE &/OR SYMPATHETIC ADDITIONS
- NEW DESIGN & CONSTRUCTION – LESS THAN 30,000 SQ.FT.
- NEW DESIGN & CONSTRUCTION – MORE THAN 30,000 SQ.FT.
- PUBLIC SPACES: PARKS, PLAZAS, GARDENS & STREETSCAPES

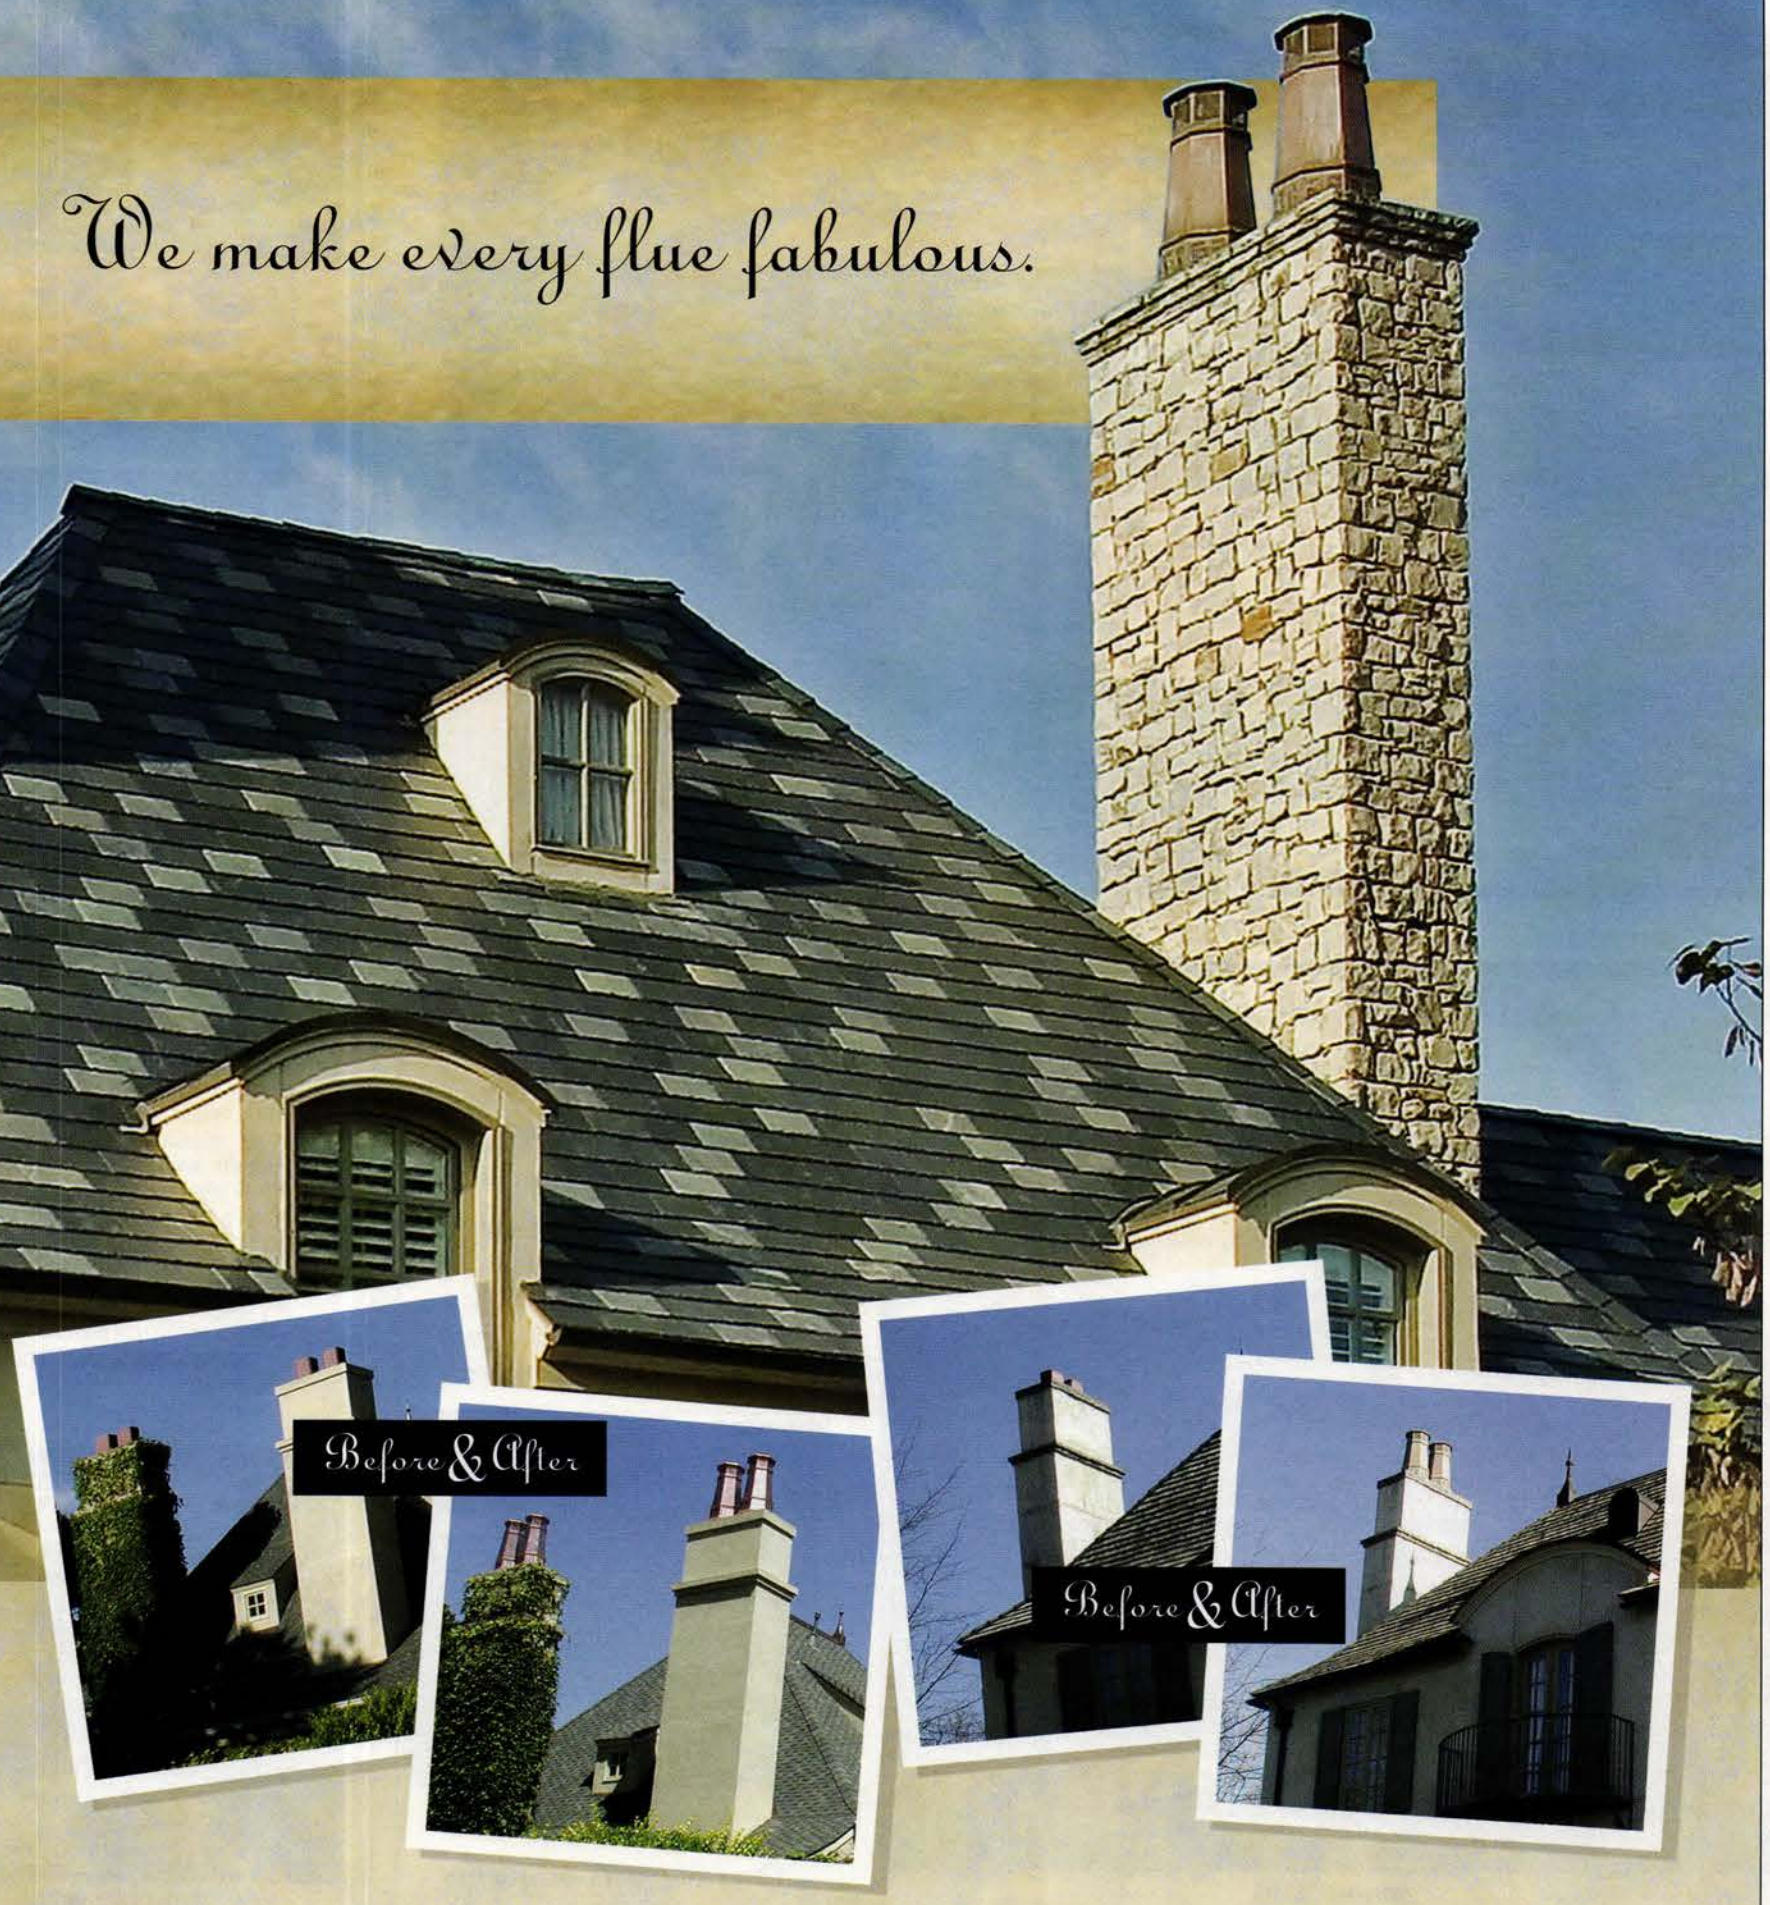

Corresponding awards will also be made for residential projects.

JUDGING WILL BE BY A PANEL OF DISTINGUISHED DESIGN PROFESSIONALS SELECTED BY THE EDITORS OF **TRADITIONAL BUILDING** AND **PERIOD HOMES**.

For details on the awards program, judging criteria and submission requirements, download an entry form from www. traditional-building.com.

The deadline for entries is November 15, 2006.

We make every flue fabulous.

Whether a home has one chimney or 100, each flue can have the same elegant appearance with a copper chimney pot by European Copper. Designed by Jack Arnold, AIA, our chimney pots are suitable for both masonry and pre-engineered fireplaces. Patented, UL Listed and tested to withstand high velocity winds, extreme heat and below-zero temperatures. A chimney pot by European Copper improves the draft, keeps out pests and water and is impervious to mold or mildew. Take the look of a chimney over the top and make every flue something fabulous.

PERFECT FOR **EXISTING** OR **NEW CONSTRUCTION** CHIMNEYS.

- ~ *Finest quality stainless steel and copper*
- ~ *Patented and UL Listed*
- ~ *Suitable for masonry or pre-engineered fireplaces*
- ~ *Withstands extreme winds, heat and cold*
- ~ *Keeps out pests and water*
- ~ *Improves draft*
- ~ *Lightweight, easy to install*
- ~ *Five unique styles available*

CALENDAR OF EVENTS

TRADITIONAL BUILDING EXHIBITION & CONFERENCE, April 5-8, 2006. This is the nation's largest event dedicated to the rehabilitation of building interiors, exteriors, landscapes, streetscapes and historically inspired traditional new construction. The conference, which will be held this spring at the Navy Pier in Chicago, IL, includes sessions with many professional learning units available through the AIA, ASLA, ASID, IIDA, AIC and the APA. For details on programs and exhibiting, go to www.traditionalbuildingshow.com.

CLASSICAL ARCHITECTURE COURSES, TOURS & PROGRAMS. The Institute of Classical Architecture & Classical America offers an extensive national and international program of lectures, study tours, courses, salons and programs. Continuing-education courses, eligible for AIA continuing-education credits, in many of the design areas of Classical architecture are offered year-round by The Institute. Tours this year include "John F. Staub's Houston," from March 23-26, "Ancient & Neoclassical Greece," from April 3-13, and "Architecture of Lutyens," from May 13-20. ICA&CA's Mid-Atlantic chapter offers "Elements II: The Ionic Order," held February 4, and "Proportion II," on March 11. For details on these or other events and programs, go to www.classicist.org or contact academic@ma-ica.org.

HISTORIC PRESERVATION & CULTURAL RESOURCE MANAGEMENT SEMINARS. A number of seminars are offered March – May 2006, throughout the U.S. by the National Preservation Institute. Subjects include Identification and Evaluation; Laws and Regulations; Property Management and Design Issues; and Curation, Conservation and Stewardship. For course details and more information, go to www.npi.org or call 703-765-0100.

THE PALLADIO AWARDS. The annual award competition for excellence in traditional design is co-produced by *Traditional Building* and *Period Homes* magazines; awards are given in Commercial/Civic/Institutional Architecture and Residential Architecture. The deadline for entries for the 2007 awards is November 15, 2006. For complete details about past winners and entering the next competition, go to www.palladioawards.com.

WOOD-CARVING WORKSHOPS. A Classically trained master wood carver conducts classes in wood carving for novices as well as professionals looking to take skills to the highest level. Classes are available both for groups and individual instruction. For more details, go to www.klitsas.com.

WORKSHOPS ON HISTORICAL LIME MORTARS. A comprehensive two-day course details the why and how of using lime putty mortars for re-pointing historic masonry. The workshop combines lectures and laboratory work with hands-on lime slaking and re-pointing on all different types of historic masonry walls. For course schedules and registration details, call 773-286-2100 or go to www.usheritage.com/events.htm.

PRESERVATION EDUCATION PROGRAMS. Throughout the year, the Preservation Education Institute – a program of Vermont-based Historic Windsor, Inc. – offers workshops on various preservation skills, technology and practice for building and design professionals, property owners and others. For a listing of current programs, go to www.preservationworks.org.

NATIONAL BUILDING MUSEUM PROGRAMS & EXHIBITS. The National Building Museum, Washington, DC, has a series of exhibits and programs throughout the year on topics dealing with architectural design and building. Many of the programs offer AIA continuing-education units – and the building itself is worth the visit if you've never been there. For details on current programs, go to www.nbm.org.

HISTORIC PRESERVATION SEMINARS. The National Preservation Institute has a schedule of seminars in Historic Preservation & Cultural Resource Management running from March through December in cities across the U.S. Seminars vary in length from one to three days and qualify for AIA continuing-education credits. For full schedule details, go to www.npi.org.

BAY WEATHERVANES fabricated this weathervane in the shape of an artist's palette.

CAMPBELLSVILLE INDUSTRIES reproduced the cupola on top of the Bell County Courthouse in Belton, TX. *Write in No. 2730*

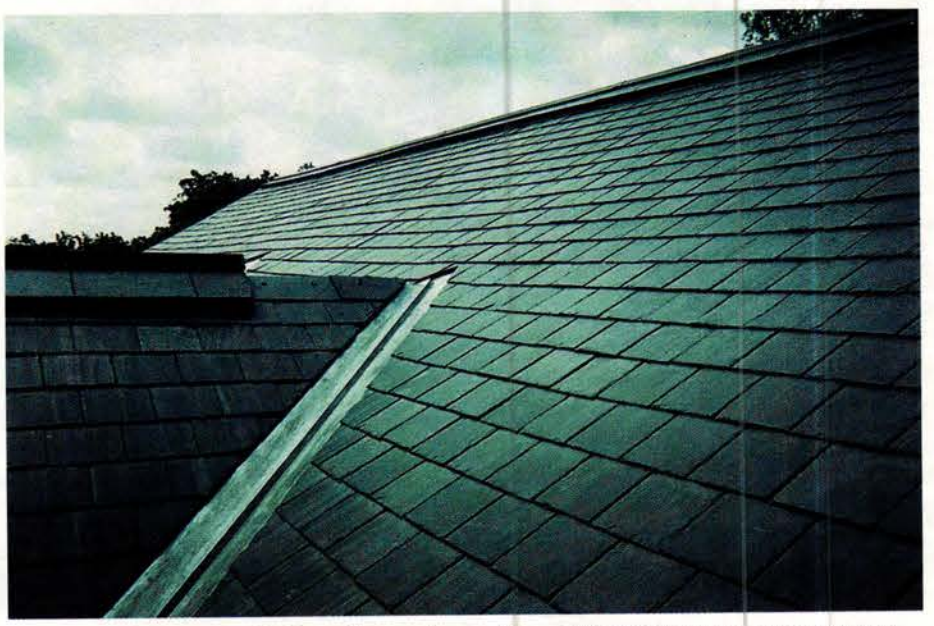

BOSTON VALLEY TERRA COTTA restored the roof tile for the Berea Temple in Baltimore, MD. *Write in No. 160*

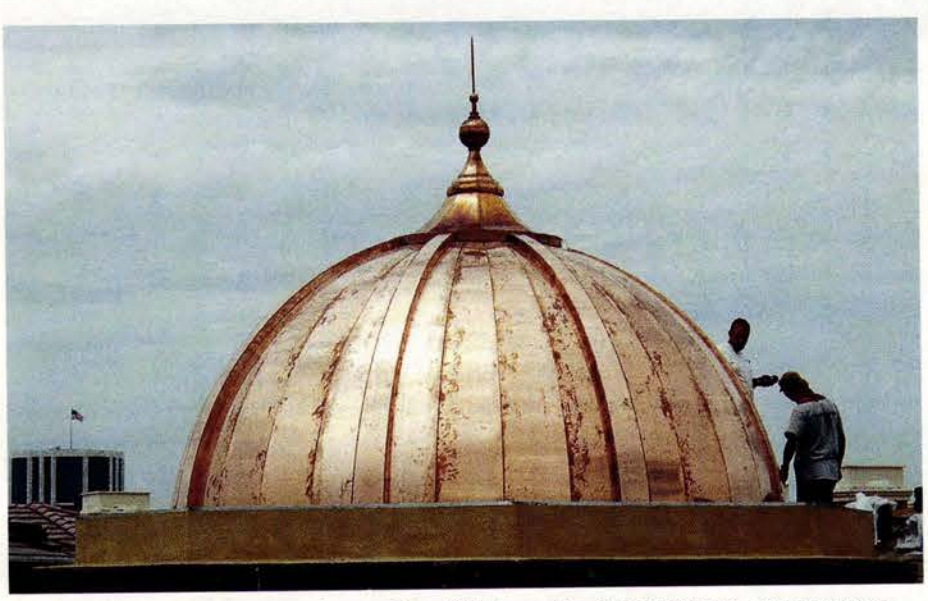

This copper cupola is one of many roofing products available from COPPER-INC.COM. *Write in No. 1615*

The model #225 snowguard from ALPINE SNOWGUARDS can be used on shingle roofs. *Write in No. 145*

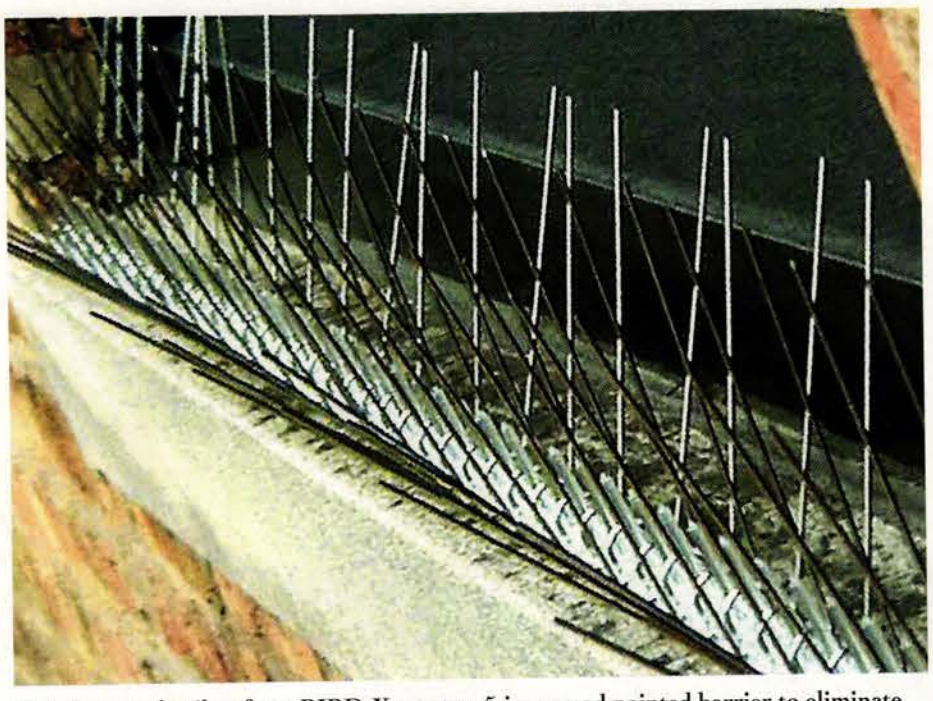

The Top Slate system of ridges, hips and vents from CASTLE METAL PRODUCTS is designed to strengthen the weakest areas of a slate roof. *Write in No. 2901*

This 16-ft. copper dome was designed and fabricated by C&J METAL PRODUCTS for a building in Newport Beach, CA. *Write in No. 596*

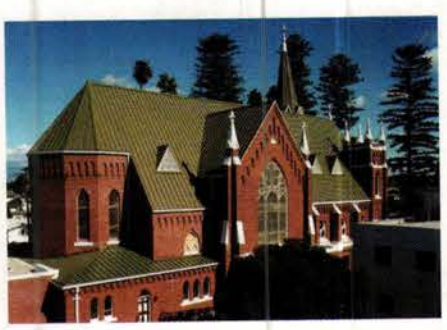

Fabricated by CLASSIC GUTTER SYSTEMS, this ornate gutter incorporates a hidden nut-and-bolt adjustable hanger system. *Write in No. 1280*

Stainless-steel spikes from BIRD-X create a 5-in. spread pointed barrier to eliminate roosting surfaces on buildings. *Write in No. 3230*

The Camelot premium designer shingles from GAF MATERIALS incorporate two thick layers and are warranted to withstand winds up to 110 mph. *Write in No. 1636*

CUSTOM-BILT METALS' model #CD-150 mechanical seam panels were used in the restoration of this 1904 church in Santa Clara, CA. *Write in No. 598*

The Originator of Plastic Snow Guards

SNOJAX™ INC

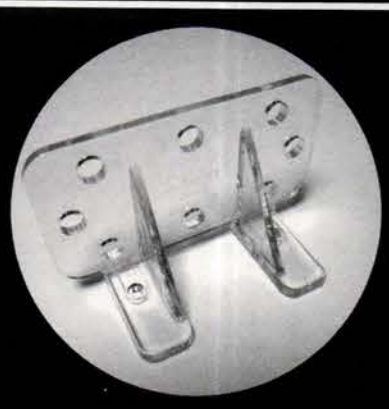

SNOBLOX™

Patent # US D453,678S

Decrease Liability ***Increase Profits*** ***Enhance Safety***

THE FIRST ... THE BEST ... AHEAD OF THE REST!

NO GIMMICKS ... JUST SNOW BLOCKS THAT WORK!

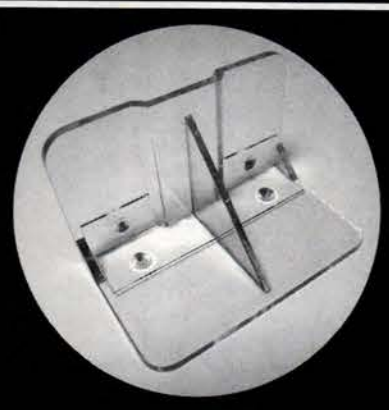

5.22" wide by 3.25" high

Snojax I

The Original

The FIRST patented polycarbonate snow guard introduced in 1978 for mechanically fastened applications.

5.22" wide by 3.25" high

Snojax II

Often Imitated, Never Duplicated

The FIRST polycarbonate adhesive mounted snow guard, invented in 1985. May also be mechanically fastened

Surebond SB-190

Time Proven Adhesive

Bonds Snojax II & SnoBlox to glossy coated Kynar™ painted metals with incredible strength.

Face: 5"wide by 3" high
Base: 3" wide by 5" long

SnoBlox Ace

Unique Patented Design

The waffled base increases bonding potential more than TWO times better than a smooth bottom. Adhesive mounted or mechanically fastened. Professionally tested up to **4849 lbs.**

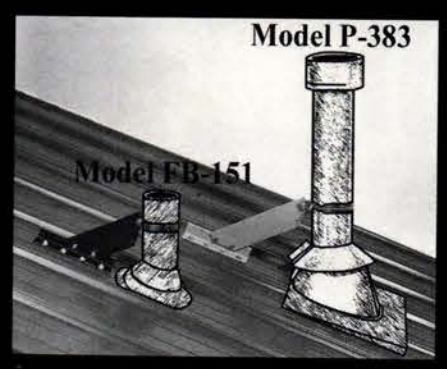

Face: 3"wide by 2.5" high
Base: 1.5" wide by 4" long

SnoBlox Deuce

NO "Minor Rib Straddling"

Smaller size fits 36" panels with 9" flats. Mechanically fastened or adhesive mounted in the ***center*** of the flat area ***between*** the minor ribs. Professionally tested up to **3456 lbs.**

VentSaver

Another FIRST

This ingenious product protects Vents, Chimneys and Masts from snow and ice avalanche!

The Cricket Eliminator!!

Strap Guard

New Product!

Strap Guard for slate, flat tile, synthetic slate and cedar roofing. Strap length can be cut to desired length. Used with the SnoBlox Deuce.

SnoBar

The first patented color-matched bar system attached year round with a seam clamping mechanism.

SnoBlox Ace on a Shopping Center Mansard

Snojax II on a Popular Restaurant

Snojax II on a Flower Shop

SnoBlox Deuce on a Beverage Distributor

The Space Age Solution for Weatherproofing Historic Roofs

Acrymax® Coatings and Systems help you restore, beautify, and protect a variety of historic roof types, as well as masonry and stucco walls. Especially useful for tin roofs, our high-performance systems provide superior protection in all weather conditions. And Acrymax systems won't peel or crack, like other coatings. It's a solution so effective, NASA selected it for the Space Shuttle.

Acrymax systems are safer for the applicator and the environment. Available in systems tailored to match various roof conditions, its rubber-like properties allow Acrymax to remain flexible down to 30 degrees below zero. The result: an aesthetically pleasing, weatherproof membrane that lasts.

Acrymax systems are easy to apply and come in a variety of standard and custom colors. Call today for a free brochure or visit us online at: www.preservationproducts.com.

The Acrymax Reinforced Restoration System, combines multiple layers of acrylic coatings with high-strength reinforcing fabric to lock out the elements.

The Slate Look

Your Best Traditional Choice!

Searching for the right look for your traditional building can be a frustrating experience. That's why GAF offers a wide selection of premium designer shingles that emulate the look of real slate. All of these premium shingles feature the performance and safety advantages of fiberglass asphalt construction, including a Class A fire rating, 110 mph wind warranty, and 10-year Smart Choice® Protection. For a price that other roofing materials — especially slate — can't begin to match. Surprised? What else would you expect from North America's largest roofing manufacturer!*

"No one protects more North American roofs than GAF... Why trust your property to anyone else?"

VANDE HEY RALEIGH

Masters in the Artistry of Roof Tile

Whether it's the harmonious palette of a summer seascape, or the textural beauty of a weathered tree trunk, **Vande Hey Raleigh** can turn your inspired color ideas into reality. Whatever your vision, we can interpret it in roof tile. *Beautifully*. Or if you'd prefer, simply choose from our extensive array of existing tones. Be it for historical restoration, stately homes, resort hotels, or commercial real estate, our high-performance roof systems rise above the rest for timeless beauty and protection. In this era of mass production, we take the time to lavish each one of our tiles with hand-crafted precision, which may explain why we've become master craftsmen in the art of roof making. Blending time-honored techniques with innovative new technology has resulted in our exquisite collection of architecturally styled roof tiles. Let your inspiration guide you. *And we'll do the rest.*

The elegance of Vermont slate. Guaranteed to last a hundred years.*

Unparalleled natural beauty and a 100 year warranty*. This winning combination is why Vermont slate makes so much sense. Our **58 quarries** produce exceptionally fine quality slate—worked only by Greenstone trained craftsmen, in production facilities that are constantly updated and expanded. This has lead Greenstone Slate to become a principal producer of colored slate roofing. Our consistently high quality product, excellence in service and installation support, and competitive, direct pricing—result in the highest value possible in a slate roof.

Santafé

Clay Roof Tiles and Pavers

Our Business

Santafé has been a leader in the clay products industry for the past half century and is currently the largest producer in the Americas. Located in the outskirts of Bogotá Colombia, Santafé operates from 8 manufacturing plants that produce a diverse product line, from Structural brick, façade brick and pavers to several profiles of roof tiles, from the traditional to the contemporary.

Through a system of company warehouses and Distribution networks, Santafé products reach customers throughout Central and South America, The Caribbean and most major markets in the United States.

Our Quality

Santafé insists that quality be the main priority throughout the entire production process. This begins with the high quality raw materials available from our mines in Colombia. From carefully selecting the clays in the mines, their grinding operations and careful monitoring of the kiln temperatures, our specially trained technicians control all phases of manufacture to ensure the same impeccable finishes time after time.

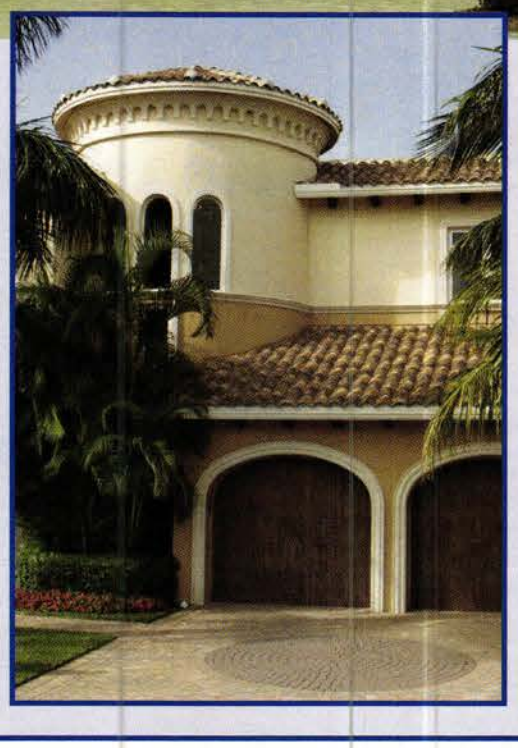

Clay products retain their vibrant color over time, unlike other building materials. Santafé clay products, because of their production process, have very low absorption and very high strength that provides higher resistance to mildew and staining caused by environmental factors. Santafé roof tiles are lighter in weight and a perfect replacement option for shingle or concrete roofs.

Our color palette is one of the largest in the tile industry, with over 50 different colors available in natural clay, matte, and glazed finishes. Santafé will also develop custom colors for our customers who wish to be unique or exclusive with their tile color needs.

Our Commitment

Santafé's creativity and experience, combined with the latest technology and strict quality control standards allows us to guarantee the best combination of price and quality in the industry today. We back up this commitment with a 50 year, normal wear and tear warranty on our products.

When you purchase a Santafé product, it is backed by a company committed 100% to its customers.

KEPCO+

Architectural Cladding Systems

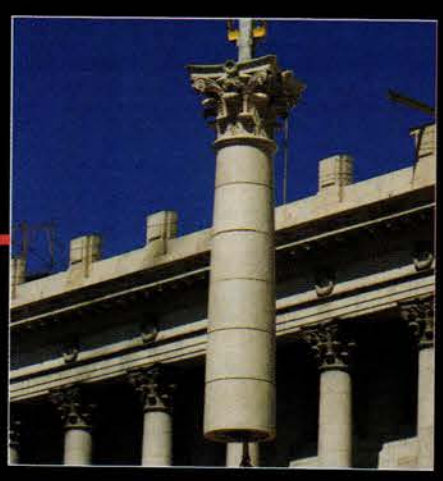

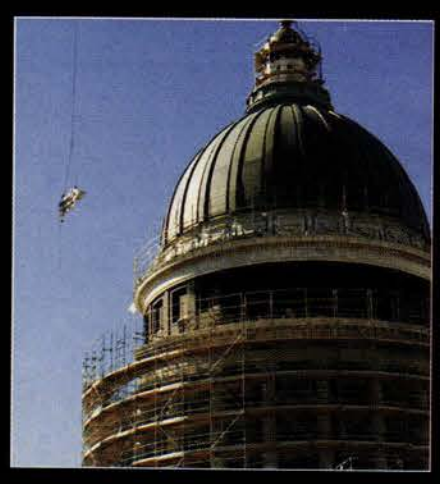

PRESERVING THE PAST

As a result of the September 11th attack on the World Trade Center, the granite facade of New York City's 90 West building suffered severe damage. Originally constructed in 1907, this historic Cass Gilbert masterpiece incorporates numerous detailed carvings reflective of the period's architectural style. Due to the project's congested "ground zero" location, the equipment and scaffolding required for construction needed to be minimized as did the duration of the renovation. Already familiar with KEPCO+'s expertise in prefabrication and panelization of a variety of architectural cladding materials, the design and construction team contacted KEPCO+ in an effort to find creative solutions. After an intensive design build collaboration, a unique panel system was engineered which allowed an integration of both the new and restored granite. Of the 42 panels fabricated for the project, 33 were unique designs. The arch panel shown at left was the most intricate of the panels and weighed 20,000 lbs. Through the use of modern methods, the intricate facade of this century-old building was restored to its original grandeur.

RESTORING THE FUTURE

As part of a total renovation and seismic upgrade, the original cladding on the rotunda of the classically designed Utah State Capitol was removed, restored, or replicated, and re-installed on the massive drum. Originally constructed in 1916, sixty five percent of the terra cotta, including that on the balustrade and entablature cornice ring, was prefabricated in KEPCO+'s facility on either stainless steel or hot-dipped galvanized steel trusses. Panelizing portions of the terra cotta allowed much of the material to be attached offsite while the superstructure was seismically upgraded and the substrate retrofitted. This improved the schedule, reduced scaffolding and crane time, and allowed for quality control registration of the terra cotta, piece to piece and panel to panel, before shipment to the jobsite. In total, 204 terra cotta panels, ranging in weight from 800 to 8,400 pounds, were fabricated. Installation of the terra cotta panels began in August of 2005 and is scheduled to be complete by spring of 2006.

NIAGARA

Mature Lime Putty

SLAKED • AGED • SCREENED

NIAGARA® Mature Lime Putty
is a high-purity dolomitic lime putty
fully slaked and screened for immediate use.
The Niagara putty is made from dolomitic limestone discovered in Genoa, Ohio in 1890 and is said to be the purest in the world.
Recommended for authentic restoration applications and is designed to duplicate an original ingredient of mortar, plaster, and stuccos used on many prestigious and historic buildings from the 18th and 19th centuries.

MASONRY RESTORATION WITHOUT SURFACE DAMAGE

Our two exterior cleaning formulas are the safest and easiest systems for cleaning masonry surfaces. Non-hazardous and environmentally safe, **KLENZTONE** penetrates the pores and releases dirt so it can be rinsed clean. Brushed, sprayed, or rolled on, **KLENZTONE** cleans, brightens, and preserves all weathered and grimy masonry surfaces. And no expensive equipment is required. Call us today for a free sample. One simple patch test will prove **KLENZTONE**'s superiority. (Also ask about our interior stone cleaning products, too!)

MID-ATLANTIC & SOUTHEAST

MIDWEST & WEST

If you own, manage, or restore historic buildings, you need

PRESERVATION sourcebook

The most difficult job in restoring an historic home or building is finding qualified people to do the work. Historic buildings, interiors, and landscapes require sensitive treatment by experienced hands. ***Preservation Sourcebook*** puts you in touch with your regional network of service providers, and helps you locate hard-to-find products and materials through local and national suppliers.

Regional Editions

The Northeast Edition covers New England and New York. The Mid-Atlantic & Southeast Edition covers the East Coast from New Jersey to Florida, and across to Louisiana. The Midwest & West Edition covers all states west of the Mississippi River.

Sourcebook Features

Preservation Portfolio

- Preservation Portfolio: This colorful showcase of regional historic preservation projects is the centerpiece of each Edition. Projects range from rural farmhouses to Art Deco skyscrapers. Each Profile is presented by a member of the project's restoration team. Photos and description highlight the firm's contribution, plus intriguing information about the building's history, the challenges of the project, etc.
- Preservation Directory: Over 250 categories are divided among 13 chapters. Within each section are company listings, featuring phone and fax numbers, Website and Email addresses, and descriptions. Some listings also include photographs.

Directory Listings

- Directory Chapters: Research & Planning; Design & Project Management; Sitework; Concrete; Masonry; Metal; Wood; Roofing, Siding, & Waterproofing; Doors, Windows & Hardware; Interior Finishes; Furnishings; Specialty Tools/Products/Services; Plumbing; Electrical & Lighting
- Preservation Organizations: Find Listings for preservation organizations and programs at the national, state, and local levels.
- Confirmed Sources: Companies who document three or more recent historic restoration projects are designated as Confirmed Sources.

Call 1-800-234-3797 to order the Northeast Preservation Sourcebook.

This timber-frame building was constructed by SOUTHERN TIMBERWRIGHTS. *Write in No. 1290*

VERMONT TIMBER WORKS erected this hammer-beam timber-frame building in Stowe, VT. *Write in No. 927*

For over 30 years
Hugh Lofting Timber Framing, Inc
has created beautiful,
energy efficient,
passive solar homes.

From one room cabins and lean-to's to grand estate rooms and hotels, our team works with clients and their architects to design, raise and enclose structures that are personal, functional and environmentally aware.

Each of our hand cut and shaped timbers are sourced from certified sustainably managed forests. We also use reclaimed and standing dead Douglas Fir, Larch and other species.

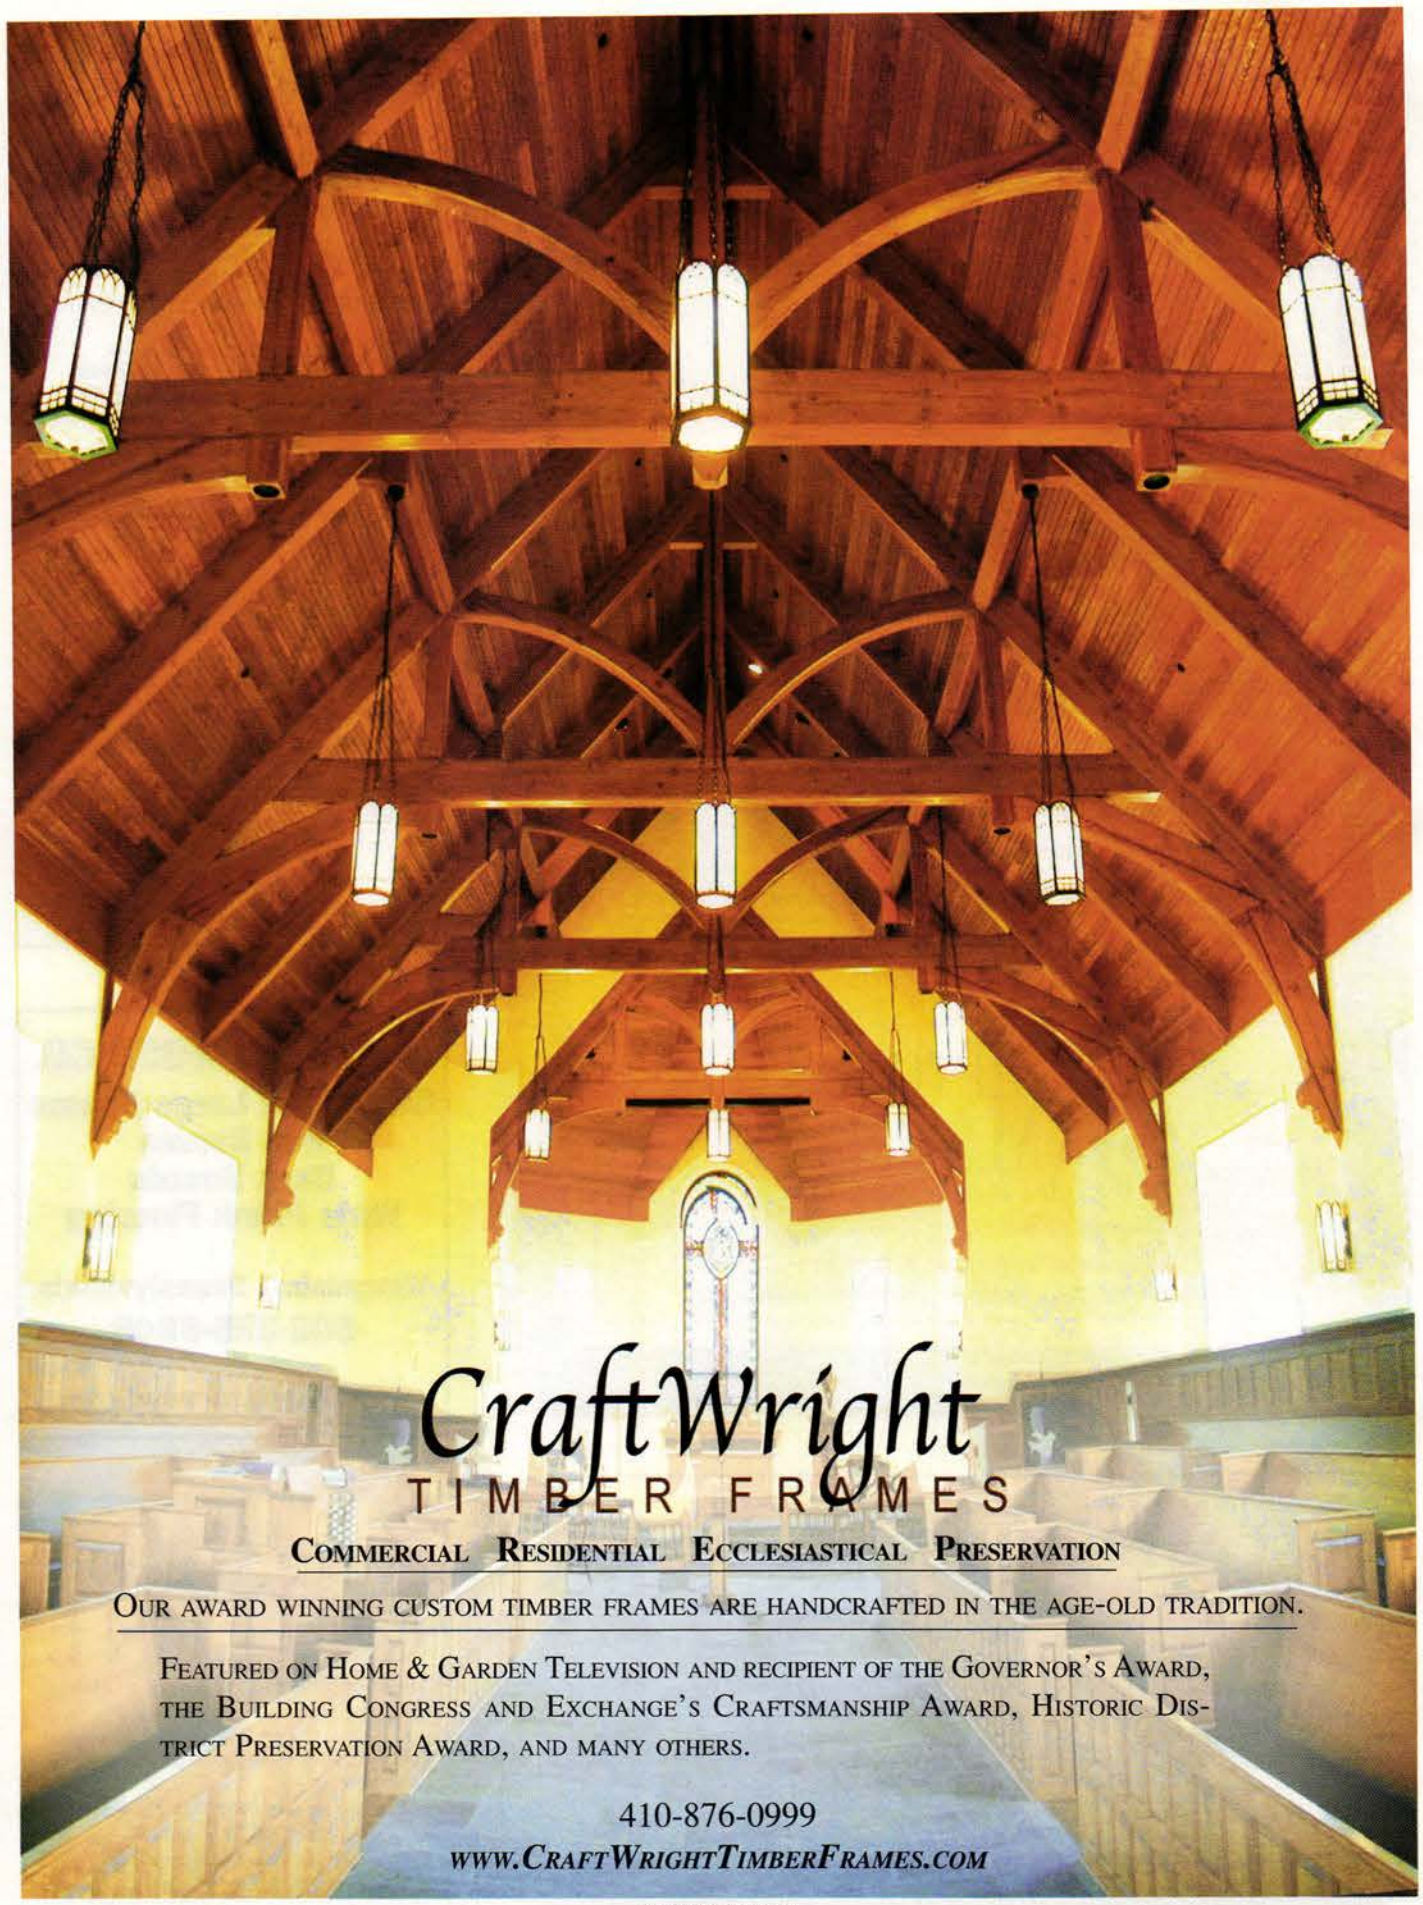

We apply a Structural Insulated Panel Enclosure System to the exterior of the frame to provide a high R-value and a weather tight seal, leaving the beauty and the warmth of the wood frame exposed.

TROW & HOLDEN MASONRY SET

CARBIDE MASONRY SET

Our new Carbide Masonry Set includes three of our most versatile stoneworking tools.

- The carbide-tipped **Stone Buster** gives you a splitting tool and a striking hammer in one tool. Comes with a 16" wood handle or substitute a fiberglass handle for an additional $12.
- The 2" carbide-tipped blade **Mason's Chipper** is perfect for trimming or squaring stone. The steeply angled blade and beveled carbide tip make it easier to see your work.
- The 1" stock carbide-tipped **Hand Point** will be the workhorse of your tool set. Use it to rough out and remove high spots, which will help extend the life of your wider-blade carbide tools.

A great value and includes a Trow & Holden t-shirt!

Restoration and Maintenance Products

Specified by the U.S. Government, Architects, Builders and other Professionals,

Abatron Restoration Systems meet and surpass the restoration and maintenance standards for wood, stone, concrete, metal, composites and other materials. Developed and manufactured by Abatron, they are based on **epoxies, urethanes, acrylics, vinyls, silicones, polyesters and other materials** in wide ranges of viscosity, hardness, flexibility, thermal, chemical and mechanical properties.

Examples of some of our popular products by category:

Wood Restoration

WoodEpox: structural adhesive paste and wood substitute, used in any thickness to fill, add or modify. It can be sawed, carved, machined, nailed, sanded, stained, painted.

LiquidWood: liquid, penetrating consolidant for restoring strength and function to rotted or spongy wood.

Both **LiquidWood** and **WoodEpox** permanently restore structures, windows, furniture, columns, frames, statuary, boats and most rigid surfaces, and impart water and insect resistance.

Stone, Concrete, Masonry Restoration

AboCrete: to permanently repair, resurface fill and bond driveways, floors, decks, swimming pools, most damaged rigid surfaces, concrete, wood, metal and other surfaces.

AboWeld 55-1: structural thixotropic paste to permanently repair or reshape stairs, statuary and vertical surfaces without forms.

AboWeld 8005-6: to bond new poured concrete to old concrete and other surfaces.

AboCoat and Abothane Series: protective coatings for floors, walls, tanks, tubs, boats. Water dispersions, solvent systems or 100% solids.

AboJet Series: for structural crack-injection, in a wide range of viscosities and other properties.

Mold Making and Casting Compounds

MasterMold 12-3: non-toxic polyurethane paste for flexible, large and small molds. Best for architectural components, columns, capitals, statuary, moldings, decorative and structural elements. Excellent elasticity, form retention and number of castings.

MasterMold 12-8: liquid 12-3 to pour flexible molds.

AboCast 4-4: pourable compound for rigid large and small molds and castings, from machinable tooling and patterns to castings of any size, meeting most chemical/thermal/mechanical specifications.

Structural Adhesives, Sealants and Caulks

meeting all kinds of specifications for composites, structural and decorative components, indoors and outdoors.

WoodCast: light-weight, impact resistant pourable compound for interior and exterior castings.

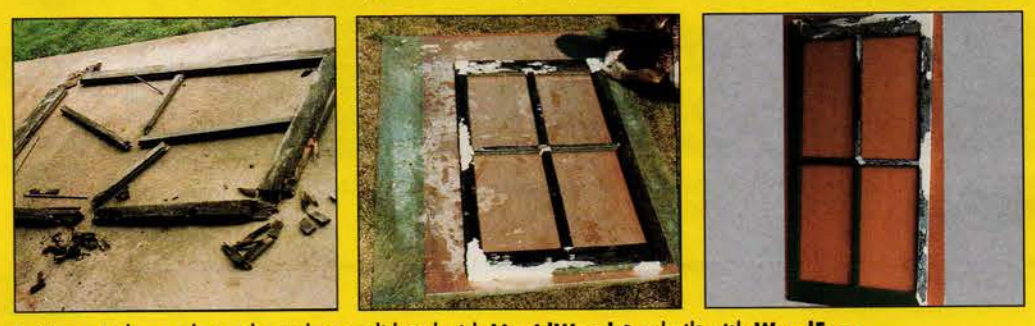

AboCast 8 Series: versatile, clear epoxy casting compounds in a wide range of viscosities, reactivities and other properties.

AboSeal Series: rigid or flexible sealants for most environments.

Many other products are also available. Their number increases continuously to meet any new requirement or preference.

Rotted & infested base of a loadbearing column is completely sawed off & replaced with **WoodEpox.**

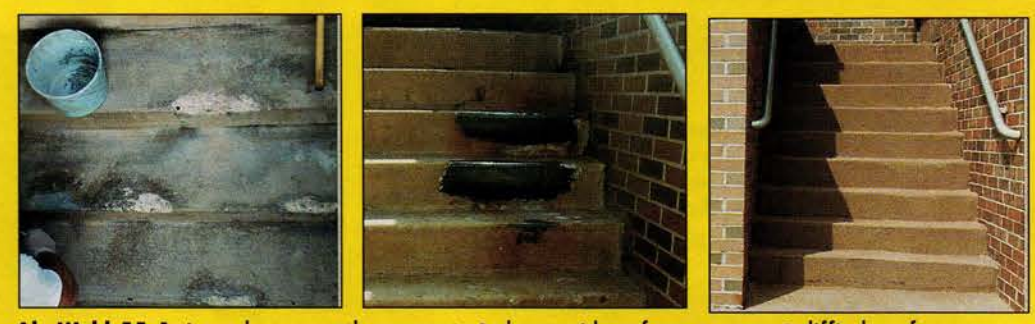

Antique window sash is salvaged, consolidated with **LiquidWood** & rebuilt with **WoodEpox.**

Consolidation & rebuilding of rotted windowsill with **LiquidWood** & **WoodEpox.**

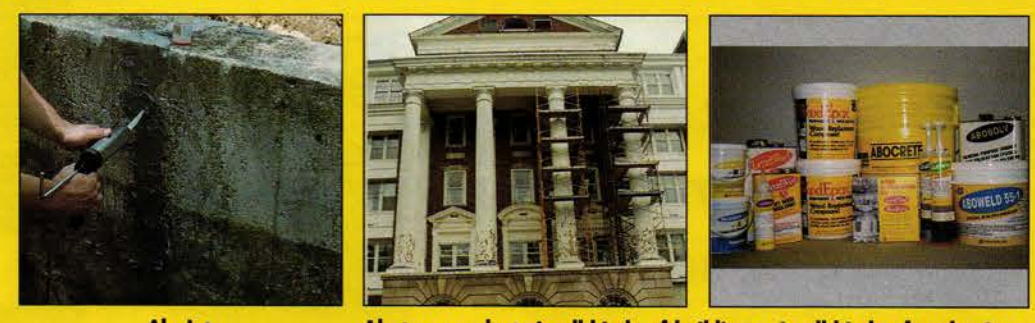

AboCrete, is much stronger than concrete, bonds permanently & does much more, quickly & for much less money.

AboWeld 55-1, is much stronger than concrete & shapes without forms on steps & difficult surfaces.

MasterMold can reproduce capitals, structural & decorative components, statuary & other patterns quickly & cost effectively.

AboJet series for structural crack-injection

Abatron products in all kinds of buildings...in all kinds of packaging.

Old·House JOURNAL

DRAWING FROM HISTORY

Michael Graves: Images of a Grand Tour
by Brian M. Ambroziak, with a foreword by Michael Graves
Princeton Architectural Press, New York, NY; 2005
272 pp.; hardcover; 210 b&w illustrations, 90 four-color plates; $29.95
ISBN 1-568-98529-0

Reviewed by David Mayernik

Graves' drawing confidently captures the sweep of the centrally planned interior of this Early Christian church, while the chiaroscuro of the ink wash evokes Piranesi's views.

The thread that connected the Classical architects of the early-20th century with those of the later-20th and early-21st centuries was thin, frayed and fragile. Not a single office in the United States (unlike Raymond Erith's in England) sustained and passed on the tradition from one half of the century to the other. The American architects who were interested in recovering the Classical tradition in the 1970s – like John Blatteau, Alvin Holm and Allan Greenberg – needed to be autodidacts in every sense, and between old books and old timers, who had a thing or two to convey, they cobbled together a remarkably credible beginning to a new renaissance.

For those of us of a slightly younger vintage, we had their example, but also we inevitably found our way though the intellectual fog of something called Postmodernism. The leaders of that movement were busy reconnecting Modernism with history, but in ways that were, given their own intellectual background, inevitably tentative and often ironic. Nevertheless, they found fairly fruitful ways of reconnecting that Classical thread, and sustained, however imperfectly, the possibility of a Classical comeback. Many among them are still ambivalent about those of us who "went all the way," but their engagement with history meant that the past could have life again in a world where Modernism threatened to eradicate it entirely. Sadly, we find ourselves in a similar state in most architecture schools today, and so it is welcome and timely that we now reassess the carriers of that thread. Of them, none perhaps had a greater impact than Michael Graves, and the collection of his drawings from his time in Rome as a fellow of the American Academy are valuable testimonies to both his sense for great buildings of the past and the role of that remarkable institution.

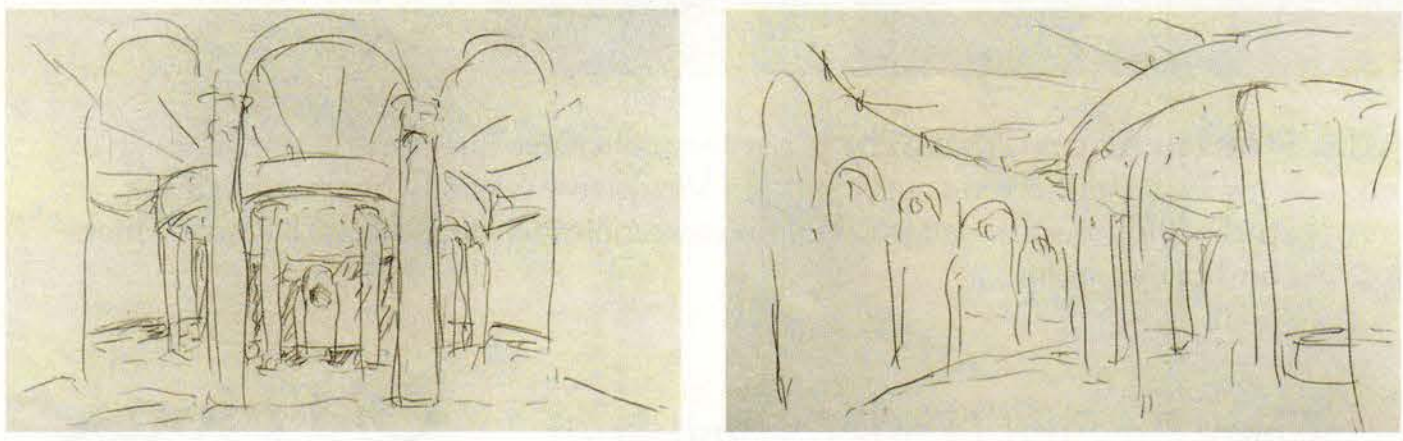

The American Academy in Rome was founded by a group of well-heeled Americans in 1894 with the inspiration and guidance of Charles Follen McKim. It was the only academy in that city not created under the auspices of a national government, but was instead sustained by private philanthropy; the Academy aspired to emulate the venerable French Academy, destination of Prix de Rome winners for centuries. Even though J.P. Morgan helped the Academy find a home on the Janiculum hill in part so that its higher prospect would allow the Americans to look down on the French in the Villa Medici across town, the French Academy furnished in a very real way the model for ours. For the first several decades of its existence, the American Academy's fellows documented the great buildings of Rome and Italy in accomplished wash renderings, just like their French counterparts. All this changed after World War II, as Modernism caught up with the Academy as it did elsewhere, and no longer did the painters, sculptors and architects study the past systematically in sympathy with the resident scholars. However, the allure of Rome even then (unlike now, sad to say) was so strong that Academy fellows felt compelled to draw what they saw, and some of these took the experience seriously enough to begin to question their commitments to the ruthless tenets of Modernism. Graves was one of them.

Graves' drawings and photographs from his time at the Academy have now been collected into a voluptuous volume by one of his former students at Princeton, Brian M. Ambroziak. While the temptation to make the connection with the Grand Tour as it was experienced in the 18th and 19th centuries couldn't be resisted by the author, Graves' work really can't be understood in that context. The culture of those earlier centuries was not intellectually hostile to what Rome represents in any way like the 1960s were, and the architects who traveled to Rome on the Grand Tour in the 18th and 19th centuries were steeped in the craft of drawing classically, while Graves frankly was not. What makes Graves' drawings notable was how they stand out in the light of their time: as passionately engaged with all manner of Roman architecture, as sympathetic to the material form of buildings as much as their intellectual import, and as capable of both representation and analysis.

The drawings can be divided into two categories: those that with a bold combination of pen and wash attempt to represent what he sees, and those purely in a quivering line, with occasional tone, that suggestively hover between being analytical diagrams and naïve views. The former type is mostly "new" to our understanding of Graves' work, because the technique effectively disappeared from his repertoire as his renown increased through the 1970s and '80s. The latter, however, portend much for the signature Gravesian drawing style that the architecture world now knows, and speak volumes about how he was able to reconcile the great buildings of the past with Modernism: at the level of archetype, or of the diagram, the historical buildings take on a raw power and a dream-like abstraction that begin to build a bridge to Graves' early Modernist architecture, which was informed by the example of Le Corbusier. As Graves says in the Foreword, "By their fragmentary nature, [drawings] are inherently speculative and therefore contribute to the very conception of architecture."

Le Corbusier, too, could only apprehend antiquity by reducing it to its totemic essence in notational drawings; ornament and color for him got in the way of whatever power he perceived in the past. It is worth recalling what Le Corbusier said about sending students to Rome in his manifesto *Towards a New Architecture*, since it is precisely his aversion to the city that recommends Rome as an antidote to a Modernist anti-historical program: "To send architecture students to Rome is to cripple them for life." In Graves' Roman experience, on the contrary, he says that there he "came to understand architecture as a continuum from antiquity to the present day, and thus as a language." In his drawings from those years, he was in fact liberated from the crippling effects of an anti-historical Modernism; and later, as a renowned teacher as well as practitioner he helped to do the same for others. His essay found near the end of the book, "The Necessity for Drawing: Tangible Speculation," is a cogent, suggestive argument about how drawings work in the design process; with the onslaught of digital drafting it is all the more relevant today than it was when first published in *Architectural Design* (June 1977).

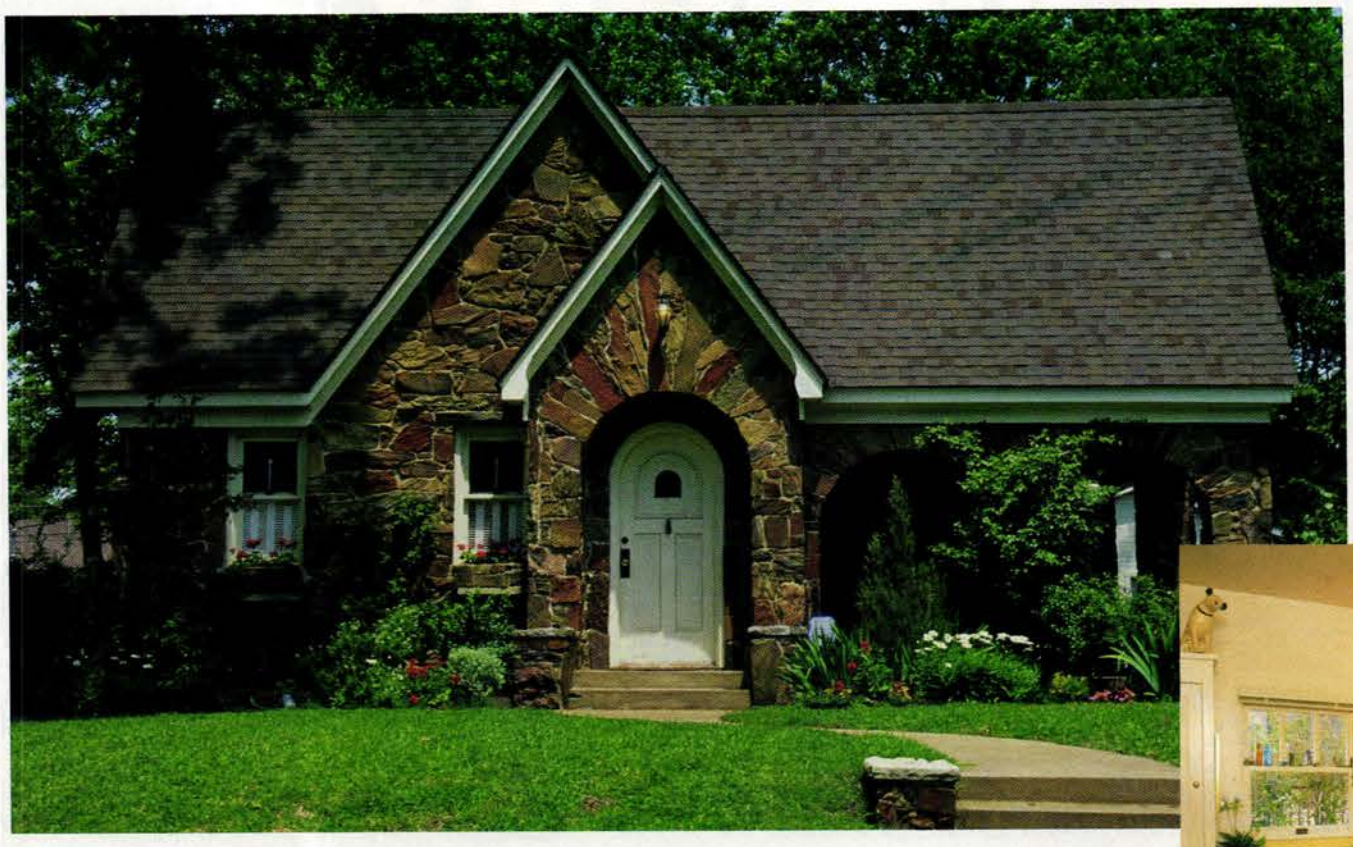

This book is a worthy documentation of the clear-headed courage of Graves' engagement with the past, and a subtle articulation of the value of drawing by hand for architects of any stripe – not to mention a defense of the value of studying in Rome, if one were needed. ◆

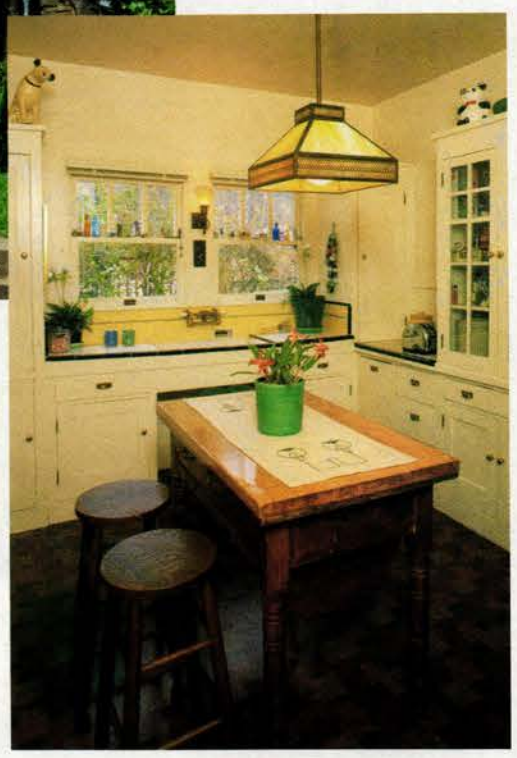

These two pencil sketches of another centrally-planned Early Christian church heralds Graves' future graphic technique and harkens back to Le Corbusier's travel sketches.

David Mayernik is an architect, urban designer, fresco painter and professor in the School of Architecture at the University of Notre Dame. A Fellow of the American Academy in Rome, he is the author of Timeless Cities: An Architect's Reflections on Renaissance Italy *(Westview Press, 2004).*

An Inviting Past, An Enduring Future.

When you subscribe to *Old-House Journal*, you'll discover how to blend the elegance of yesteryear with today's modern amenities. Step-by-step instructions, expert "how-to's," and unique insight will help you to discern the tools, funds, processes, and materials you'll need to recapture your home's personality and promise. An authority on homes of every style and every era, *Old-House Journal* provides cost-saving tips, beautiful interior schemes, and resources for authentic and reproduction architecture in every issue.

Best of all, *Old-House Journal* chronicles the real-life successes of fellow restorers. Their advice for living in an ever-changing renovation environment, and a subscription to *Old-House Journal* means you're never alone. Together, we'll work to give your older home a brand-new beginning.

Magazines, Conferences, Trade

RESTORE MEDIA, LLC

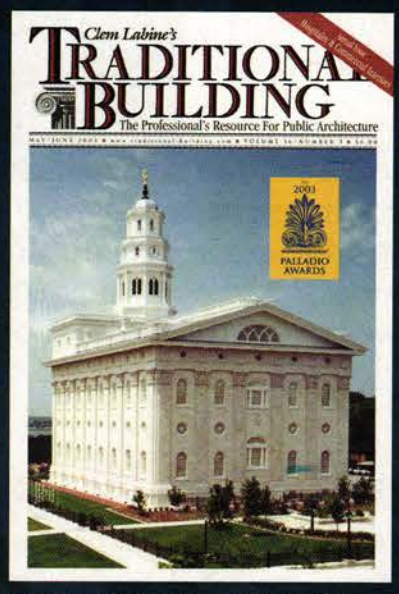

Restore Media LLC is the only publisher and conference producer dedicated to the traditional building market. The company's magazines, conferences, trade shows, websites and directories serve the information needs of architects, builders, developers, building owners, facilities managers, government agencies, interior designers, landscape architects, suppliers, preservationists, town planners, artisans, trades people and old house enthusiasts who work passionately to renovate and restore historic buildings or build new ones in a traditional style.

The traditional building market has emerged into a recognized and firmly established segment of the residential and commercial construction industry with more than $170 billion in construction volume. From grass roots movements in America's historic neighborhoods to a government mandated National Historic Preservation Act, Americans have a heightened appreciation for our architectural heritage and are spending money to preserve and improve it.

Americans continue their love affair with traditional style architecture and traditional towns. An increasing number of new residential and non-residential buildings are designed to look historic. Whether a new old house built to fit into an existing neighborhood, a sympathetic addition to a 19th century courthouse or a traditional neighborhood development, these are buildings that call upon our architectural heritage, create a sense of place and make people feel good.

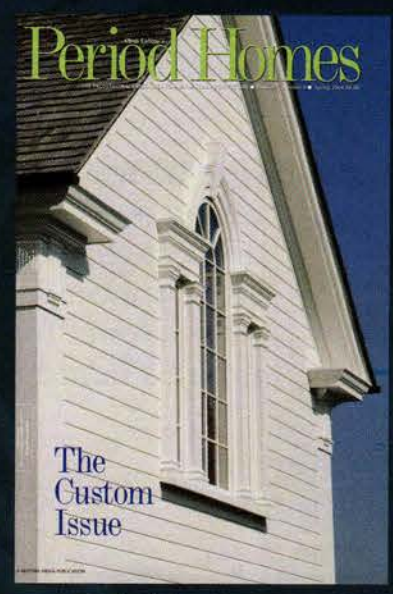

These buildings, the professionals and enthusiasts who design, build, renovate or restore them, and the products that go into them are the subject of Restore Media's magazine, conference, trade show, website and directory content.

Restoring the Past. Building the Future.

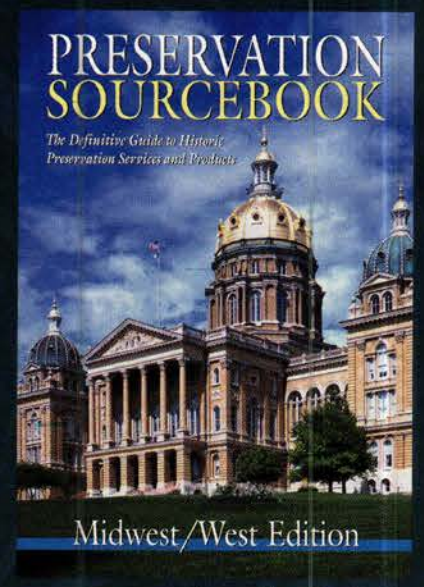

www.traditional-building.com

Traditional Building is a bi-monthly magazine edited for 55,000 professionals involved in restoring old buildings or designing and constructing new buildings in traditional styles. The audience includes architects, contractors, building owners, facilities managers, interior designers, developers, landscape architects, building managers, preservation planners, restoration consultants, and other professionals who need to know where to locate hard-to-find traditional-style products and services.

www.period-homes.com

Period Homes, published 6 times a year, is edited for 45,000 professionals involved in residential restoration and renovation or the design and construction of new homes built in period styles. The magazine's audience includes architects, interior designers, custom builders, restoration and renovation contractors, developers, landscape architects, and other professionals who are looking for difficult-to-find historical products and services for residential projects.

www.preservationweb.com

Preservation Sourcebook is the definitive source for services and products to restore historic buildings, landscapes, and interiors. Each regional edition provides property owners and managers, architects, contractors, public officials and preservationists with a comprehensive directory of local and national resources.

Shows, Websites, Directories

TRADITIONAL BUILDING
EXHIBITION AND CONFERENCE

www.traditionalbuildingshow.com

Where the Marketplace Meets

The Traditional Building Exhibition and Conference is the only national event for professionals who restore, renovate or preserve historic buildings or build new ones in a traditional style. Attendees include commercial, institutional and residential architects, contractors, planners, developers, building owners facilities managers, interior designers, landscape architects, renovators, trades people, artisians and enthusiasts. The Traditional Building Exhibition and Conference takes place twice a year, spring and fall. In spring, the show presents 85 seminars, workshops and special events as well as 300 exhibits to 6000 attendees from around the world. In the fall, a regional event, the trade show and education program attracts 3500.

Continuing Education Credits are offered from affiliated associations including AIA, ASID and APPA. Conference curriculum includes technical training, design, planning, installation, materials and management.

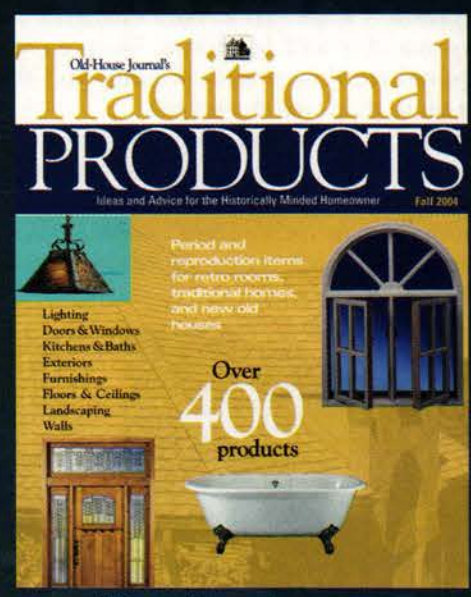

www.oldhousejournal.com

Old-House Journal is a bi-monthly special interest title for old-house owners and enthusiasts, as well as for professionals who restore and renovate older homes. OHJ, which has a total circulation of 110,000, is the only consumer magazine in the field that's strictly about owning, renovating, restoring, decorating, and maintaining homes built before 1960. OHJ was launched in 1973, which makes it the oldest publication in its category.

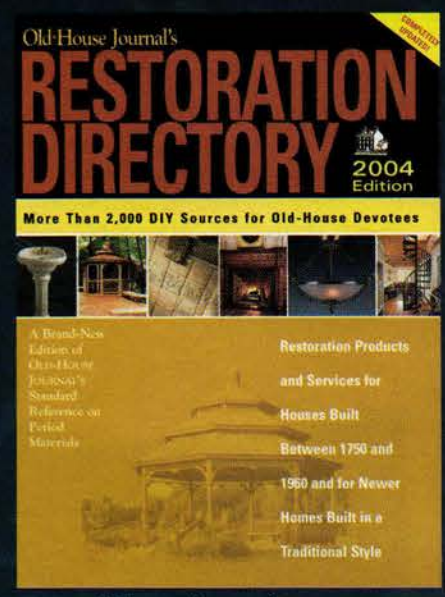

www.newoldhousemag.com

New Old House, the latest launch from Old-House Journal, covers the ever-widening world of new homes built to replicate the look and feel of classic American housing styles, including Arts & Crafts (bungalows), Foursquares, Shingle-style houses, and Victorians of all stripes. With newsstand distribution of 100,000, New Old House is loaded with eye-popping photography; it is a stunning addition to Restore Media's stable of publications.

www.oldhousejournal.com

Old-House Journal's Traditional Products is a comprehensive introduction to the subject, including everything from historically appropriate building materials to period pieces to modern substitutes. With newsstand distribution of 40,000, Traditional Products is loaded with inside tips and hundreds of product leads from the editors of Old-House Journal magazine. Traditional Products is a one-of-a-kind annual guide for restoration-minded consumers intent on remaking their old houses into living-like-new homes.

www.oldhousejournal.com

The annual Restoration Directory has a newsstand distribution of 40,000. It is the most authoritative and comprehensive guide to suppliers of products and services for old homes and old-house style. The Restoration Directory contains more than 500 categories of building products and over 2,000 companies that make everything from stained glass and antique bath fixtures to hardwood floors and heating systems.

BUILDING DIVERSITY

The Architecture of Duany Plater-Zyberk and Company
by Joanna Lombard
Rizzoli, New York, NY; 2005
175 pp.; hardcover; 200 color illustrations; $49.95
ISBN 0-8478-2600-7

Reviewed by Eve M. Kahn

DPZ created oolitic limestone colonnades for a 2002 visitor center at a botanic garden in Coral Gables, FL, designed with architect Joanna Lombard (who also authored this monograph).

No monograph has ever delved into the architecture of the Miami-based firm of Duany Plater-Zyberk & Company (DPZ). The office is best known for its town plans, most famously for the wildly successful Florida resort of Seaside, which set off the New Urbanist movement. (Not even DPZ's plans have been well documented yet. In fact, there's been no book on the subject since 1991.) DPZ designs don't make good monograph fodder. There are few potential money shots of mansions at dusk, and still fewer streetscapes where DPZ has kept itself in the limelight rather than collaborating open-mindedly with other firms.

Not that Andrés Duany and Elizabeth Plater-Zyberk themselves are low profile. While running their practice as well as the University of Miami's architecture school, the couple lecture tirelessly and organize advocacy drives and pro bono charrettes. (Andrés, the more charismatic member of the team, recently spearheaded the post-Katrina Mississippi Renewal Forum, see page 12.)

This mid-career study is fittingly modest in size (8x9 in.), with comparatively whopping 3-in. margins. The author, Joanna Lombard, an architect, landscape historian and University of Miami professor, has known and taught alongside Duany and Plater-Zyberk for 20 years. Lombard pithily describes three dozen projects dating back to 1977, almost all of them in Florida and in a quite narrow stylistic range. DPZ concentrates on Mediterranean Revival, "cracker" vernacular and Moderne. Deep eaves, porches and courtyards nod to regional traditions and climate, and the structures' masses almost never reach more than two stories tall.

That is, nothing screams "look at me." More so than most traditionalist firms now practicing, DPZ doesn't just give lip service to the idea that New Urbanism should be anti-heroic, context-friendly and inclusive. This monograph showcases affordable freestanding houses for migrant workers, state-subsidized rental apartments and churches and civic centers in working-class neighborhoods. Every DPZ project, Lombard writes, "is a demonstration of a responsibility to the community."

A few coastal palazzos and a Caribbean golf-centered subdivision have nonetheless crept into the mix, bearing the whiffs of elitism and developer-kowtowing that enrage so many critics of New Urbanism. Classicists, meanwhile, may be discomfited by the austerity of DPZ's buildings; even the relatively well-funded civic or institutional projects seem ornament-deprived – there's little sincere entasis and few cornices worth their salt. DPZ's little-known 1970s houses for family members, meanwhile, are downright glum in their trim-less, muntin-free state, abstracted practically to Hugh Newell Jacobsen levels. (Remember that Duany and Plater-Zyberk are veterans of Robert Venturi's and Arquitectonica's offices, and more comfortable being called pluralists rather than Classicists.) Lombard delicately refers to DPZ's early phases as examples of "extreme formal translations of vernacular."

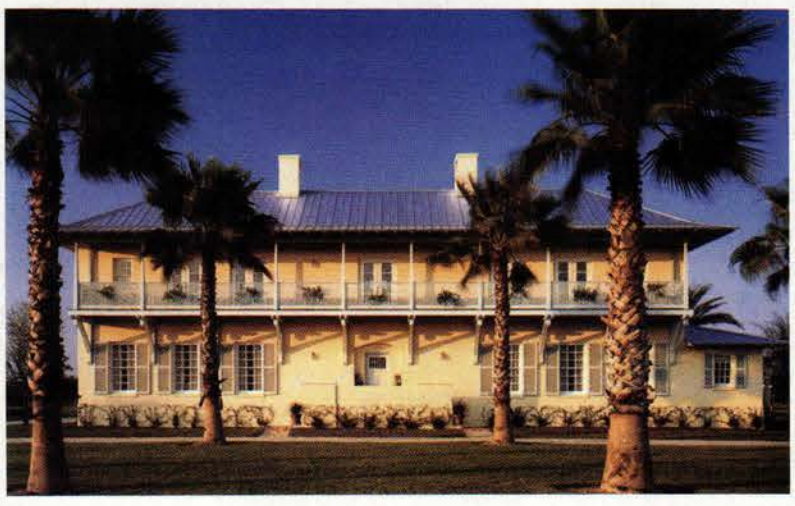

The author has munificently provided elevations and floor and site plans, but her text seems stingy. Client biographies and materials specs are largely absent, as is data on how the buildings have evolved and whether DPZ's dreams of affordability or mass-transit access have come true. There's no timeline, no project or address list, not even an index, and hardly any people appear in the photographs.

Another frustration is that there is a good deal of passive-voiced near-jargon: "The ground for the architectural practice was formed by an analysis of vernacular culture and building tectonics in all its problematic quality, both mitigated principally by the community."

DPZ has built some structures and places that sing intelligibly to inhabitants and tourists alike, and that help reknit unraveled urban fabric. Their output doesn't perhaps warrant hagiography – too many monographs fall into that trap, in the style of Vincent Scully claiming Louis Kahn's work "thrums with power." But more storytelling, more reportage about sites in development or in action, more quotes or even essays from users, clients, friends or critics, would have suited DPZ's ideals of diversity. As Lombard sums up the firm's core belief, "Authentic urbanism requires many hands." ◆

Left: In planning a 1989 golf resort in St. Croix, DPZ offered homebuyers four styles of villas, with or without towers, verandas, galleries or courtyards.

Far left: This St. Augustine-inspired 1996 house at Windsor, in Vero Beach, FL, is a rare example of DPZ designing a building in a development it planned.

Left: A 1995 Catholic church in a Miami, FL, suburb typifies DPZ's wielding of Moderne precedents.

TRADITIONAL BUILDING

EXHIBITION AND CONFERENCE

CHICAGO 2006

APRIL 5–8, 2006 | NAVY PIER, FESTIVAL HALL A

WHERE THE MARKETPLACE MEETS

Those who love traditional design, architecture, and old buildings will discover learning, buying, and networking opportunities at the Traditional Building Exhibition and Conference (formerly Restoration & Renovation Exhibition and Conference), April 5-8, 2006 at Chicago's Navy Pier.

Whether you're a veteran in the industry or just starting out your career, there is something for everyone, at every level of expertise.

THIS IS YOUR MARKET

The Traditional Building Exhibition and Conference brings you the entire market, your market, under one roof! The Traditional Building Show *is the only national event dedicated* to restoration, renovation and historically-inspired new construction market. Spend four days with us and we'll deliver what no one else can.

LEARN AND EARN.

Choose from over 75 educational seminars, workshops, tours, and special events. Earn learning units for AIA, AIBD, ASID Continuing Education and others!

FREE EXHIBITS!

Discover unique products and services you won't see anywhere else. Over 200 exhibitors who will be on hand to address the specific needs of professionals and homeowners alike.

THREE MEETINGS IN ONE!

For even greater learning and networking opportunities, the AIA Historic Resources Committee's 2006 Spring Meeting and the Association for Preservation Technology Building Codes and Historic Rehabilitation Conference will co-locate with the Traditional Building Exhibition and Conference.

Restoring the Past. Building the Future.

THE FUTURE OF THE FUTURE

The Iconic Building
by Charles Jencks
Rizzoli International Publications, Inc., New York, NY; 2005
224 pp.; hardcover; 200 color and b&w photos and illustrations; $35
ISBN 0-8478-2756-9

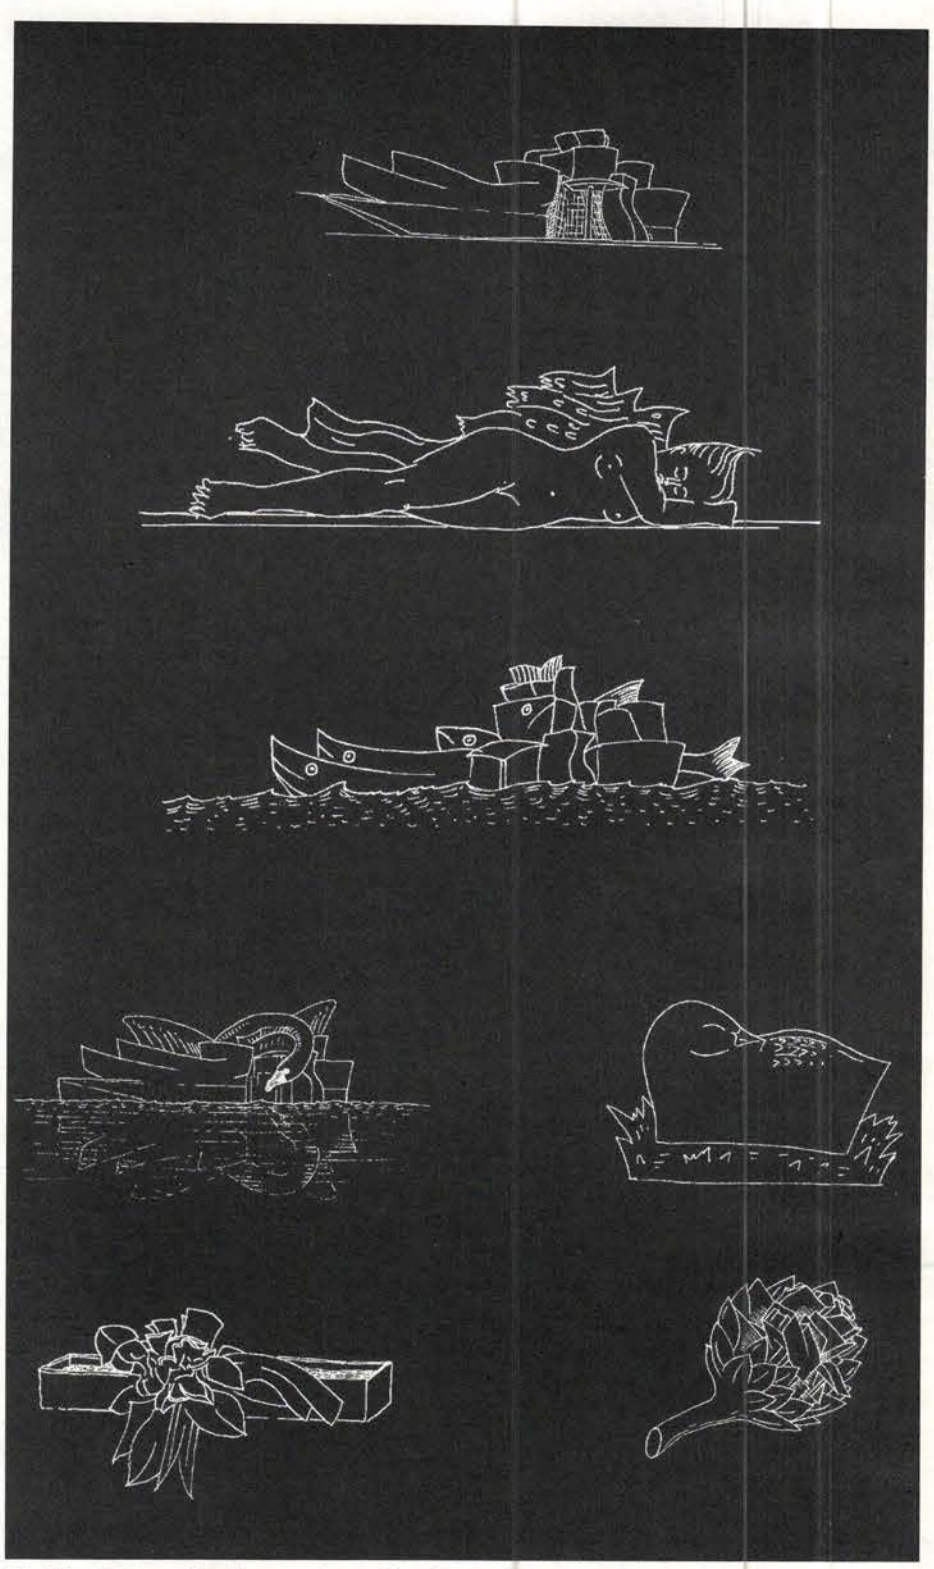

Reviewed by Douglas Klostermann

An alluring image of the fluid, colliding metal forms of Frank Gehry's Guggenheim Museum in Bilbao would have predictably adorned the cover of Charles Jencks' *The Iconic Building*. Instead, Norman Foster's Swiss Re tower rises from a launching pad, with rockets firing and smoke billowing. The fabricated image effectively reflects Jencks' smart, accessible writing as he explores the rise and current developments of the iconic building, as well as the architects behind the trend.

The well-known success of Gehry's Guggenheim in revitalizing a region and attracting millions of tourists has created what is called the "Bilbao Effect." Other cities desire an icon of their own, to put them on the map and bring in tourist dollars, and corporations wish to create and occupy an instant, world-famous landmark. Since the completion of Bilbao in 1997, numerous attempts at landmark buildings have followed, designed by architects including Foster, Daniel Libeskind, Rem Koolhaas, Santiago Calatrava and Peter Eisenman. Some have been successful, even superlative, in the critics' and public's eyes, while many have been considered failures or mere one-liners. Jencks explores not only what sets them apart, but also why it is worthwhile to look beyond the initial splash and media hype to develop standards for judging and designing this potentially enduring building type.

The author lays the path to today's iconic buildings by summarizing the recent history of modern icons: Frank Lloyd Wright's Guggenheim, Eero Saarinen's TWA Terminal and Jorn Utzon's Sydney Opera House. He affectionately pauses at Le Corbusier's pilgrimage church at Ronchamp, which Jencks considers "a standard against which to measure the iconic buildings of our time, and a hard one to equal." Those buildings succeed, he contends, because they are "enigmatic signifiers," a concept that runs as a cohesive thread throughout the book. The enigmatic signifier suggests but it does not name, it allows the viewer to map onto it their own symbols or interpretations, and it stands up to repeated study as one attempts to decode and fathom its multiple meanings. As Jencks writes, "We map the unknown on to the already said and a successful iconic building will always elicit a flurry of bizarre comparisons, a veritable blizzard of idiotic similes..." Several of these comparative expressions from critics and the public have been illustrated throughout the book in white on black line drawings, or "metaphorical analyses," by Madelon Vriesendorp: the Guggenheim in Bilbao as an artichoke, the Swiss Re headquarters as a pinecone, Renzo Piano's concert hall in Rome as an armadillo.

The focus of the book then shifts to Ground Zero: the competition for the new World Trade Center, the selection of Libeskind as the architect and the subsequent struggles and events surrounding the site. Jencks provides an informative and engaging history of this drama, which continues to unfold as multiple players clash over the future of the site. He presents the events as "The Battle of the Icons," a drama in five acts, beginning with the initial studies and the ideas that emerged for the building, the site and the memorial; the involvement of the media; the competition between the seven teams and the final selection – all played out in the public eye; the compromises and changing roles; and the beginning of the current stage. Unfortunately, in this section, Jencks illustrates the media's framing of September 11th and the following series of events with several simplistic, page-filling collages of his own design that are not at all in keeping with the quality of the text they accompany.

Madelon Vriesendorp's metaphorical analysis of the critical reactions to Frank Gehry's Guggenheim in Bilbao include a fish, a sequined mermaid, a swan, a duck, a window box and a Constructivist artichoke. *Photo: © Charles Jencks* The Iconic Building, *Rizzoli International Publications, Inc., 2005*

The site plan for the "non-landmark landmark," Enric Miralles' Scottish Parliament Building in Edinburgh, shows the relationships of the different elements. *Photo: © RMJM Architects*

Although this may be the best-developed section of the book, it stands apart and nearly independent from the other chapters. Jencks claims the battles over Ground Zero show how the "iconic building has moved center stage and taken on a life of its own." He ties this into his thesis by invoking the enigmatic signifier; Jencks credits Libeskind's win – with the judges as well as the public – to both his rhetoric and design skillfully evoking "mixed signs and symbols that could be understood as both precise denotations and open-ended connotations." While the other architects and teams were caught up in the language of design and shied away from emotion, patriotism and symbolism, Libeskind's "Freedom Tower denoted the Statue of Liberty, 1776, the culmination of an open spiral of crystal skyscrapers embracing the memorial site." The author joins the media and the public in calling the Freedom Tower an iconic building, though it is questionable if it actually is architecturally. He admits that the final building will probably not garner the level of praise Bilbao has, and, taken outside of its loaded context, the structure – like the numerous recent skyscrapers in Asia and the Middle East – would probably not enter into the scope of this book.

Gehry's Walt Disney Concert Hall in Los Angeles, CA, opened in October, 2003, after 15 years in the design process. Jencks explains that "The exterior is an icon of [the] acoustic interior." *Photo: © Charles Jencks* The Iconic Building, *Rizzoli International Publications, Inc., 2005*

Another project born out of a competition, which may not be as familiar as the Freedom Tower, is Enric Miralles' Scottish Parliament. Designed in 1998 and completed in 2004, the building has emerged from a drama that saw the cost rise to more 10 times its original estimate (and the resulting government investigation), and has survived the death of both the architect and the project's strongest supporter. Jencks recounts the details of this process and uses the building to demonstrate both the potential and the perils of an iconic building. It is also presented as an example of the trend of the "non-landmark landmark," or "anti-icon icon," a category in which he also places Eisenman's work. Unlike the majority of iconic buildings, this type grows organically out of its site or landscape, rather than being imposed upon it.

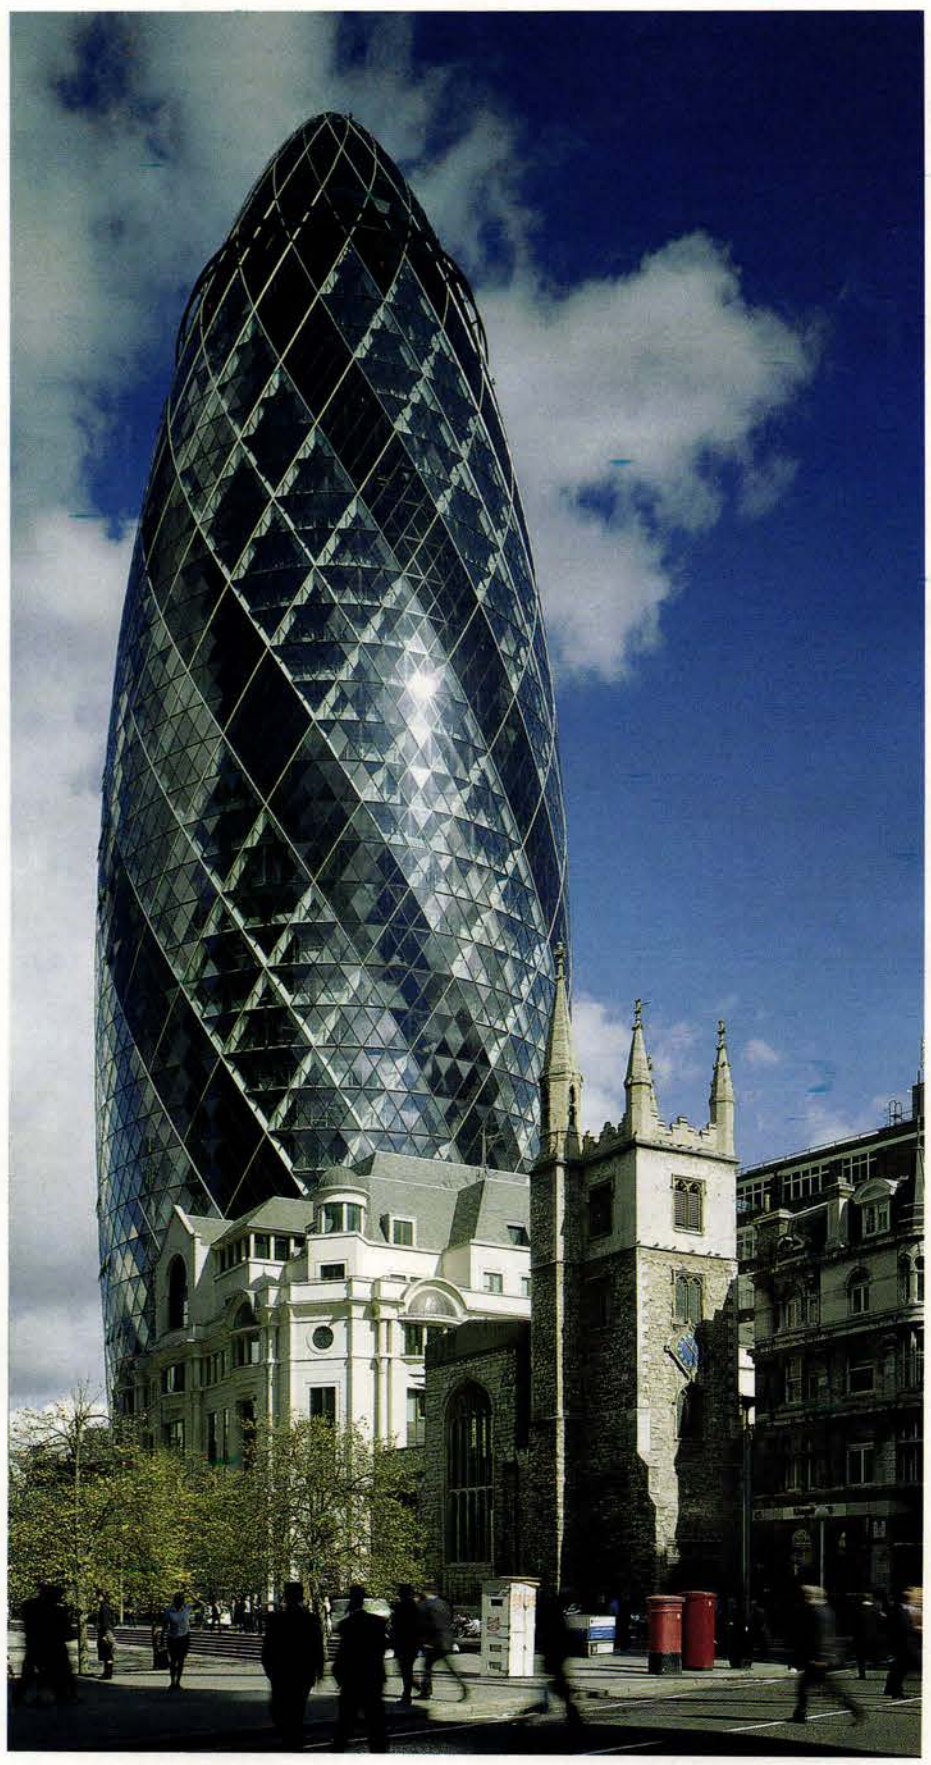

The book continues with a survey of buildings and architects who Jencks considers "The Challengers" and the "Two Winners." He explores the successes and shortfalls of projects by Santiago Calatrava, Will Alsop, Zaha Hadid and Peter Eisenman. Here, and in other sections, the author includes brief excerpts from interviews and conversations with some of the architects. These snippets, however, rarely offer insightful or elucidating thoughts from the creators of the iconic buildings. Rather, Jencks as interviewer seems to attempt to steer the subject into saying what he wishes them to, and when they fail to, he resorts to saying it himself.

The winners, in his opinion, are Frank Gehry with both the Guggenheim in Bilbao and his Disney Hall in Los Angeles, CA, and Norman Foster with his Swiss Re headquarters in London. According to the author, the Disney Hall succeeds in part because the flowing curves of the exterior are derived from the acoustically dictated design of the interior. The numerous and varied metaphors it inspired – from "rain-soaked cardboard" to "Marilyn's skirt" – support his claim that the enigmatic signifier is at work with this building. Similarly, Foster's building, in addition to inspiring the metaphor on the book's cover, is also referred to as "a baguette loaf" and more colorfully, an "erotic gherkin." Its success, however, is credited to the natural metaphors its form suggests or by which it was inspired. With the exception of these two buildings and the Scottish Parliament, Jencks focuses primarily on the exterior, and less often on the interior, forms of iconic buildings. He fails to explore the functional success or failure of the buildings.

Koolhaas' Seattle Public Library, pictured in the book but not written about, offered the perfect opportunity for a discussion of an iconic building's functionality. Koolhaas re-imagined the role, program and organization of a library for the 21st century, and then wrapped a diamond-patterned skin around it to create its striking, iconic form. One can judge its exterior, and even its interior spaces, using Jencks' standards, yet the building ultimately succeeds or fails on a functional level, which after a year and a half of continuous use, could already begin to be measured and evaluated.

In his conclusion, Jencks returns to his explanation of the icon as enigmatic signifier, and its origins in King Louis-Philippe's obelisk in the Place de la Concorde, the Eiffel Tower and Giorgio de Chirico's paintings. He states that the iconic building trend has every indication of continuing, if not increasing, due to the decline of the monument and religion, and the rise of capital culture. He concludes that the iconic building can succeed, even in this time of no collective iconography, by evoking natural and cosmic themes, just as Le Corbusier did at Ronchamp and, he contends, Gehry did at Bilbao. As he has with previous books, perhaps Jencks will revisit, amend and expand this treatise as the iconic building trend continues to develop and unfold, and as a broader historical perspective is gained. ◆

Douglas Klostermann is a 1993 graduate of the University of Notre Dame School of Architecture. He currently works as a project manager in the Planning and Design Department of the Brookyn Public Library and is a self-proclaimed expert on the library's historic Carnegie branches.

THE CITY WITH NO LID

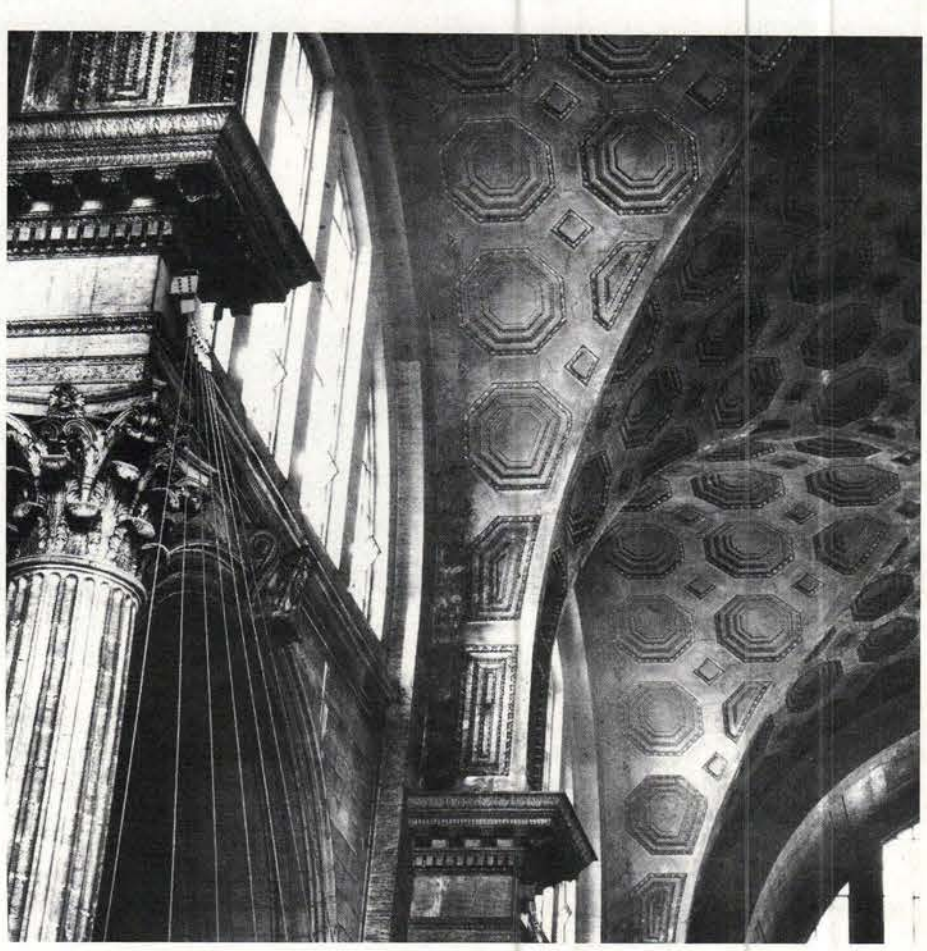

Building New York:
The Rise and Rise of the Greatest City on Earth
by Bruce Marshall
Universe Publishing, a div. of Rizzoli International Publications,
New York, NY; 2005
304 pp.; hardcover; 300 illustrations; $49.95
ISBN 0-7893-1362-6

Reviewed by Nicole V. Gagné

In 1934, after having lived in France for more than 30 years, the great American writer Gertrude Stein visited the United States for a lecture tour, which she described in her 1937 book *Everybody's Autobiography*. Struck by the architecture of New York City, she noted, "European buildings sit on the ground but American ones come out of the ground. And then of course there is the air. And that air is everywhere, everywhere in America, there is no sky, there is air and [...] because there is no sky, there is no lid on top of them."

Observing the once lofty Flatiron Building dwarfed by newer and taller skyscrapers, she concluded, "you look up and you see the cornice way on top in the clear air, but now in the new ones there is no cornice up there and that is right because why end anything." With her usual acumen, she grasped an unspoken principle of American urban architecture in general and New York City buildings in particular. The building that sits on the ground stays there; the building that comes out of the ground keeps going. It may go all together and be razed and replaced, or it may just keep going up and up. The sky's the limit – but when there's no sky and only air, there is no limit, and so nothing ends.

Bruce Marshall's new book, *Building New York*, is almost an illustrated history of Stein's thesis – even down to its clever Stein-like subtitle, "The Rise and Rise of the Greatest City on Earth." The author and his researchers have pored through literally millions of archival photographs to compile a dazzling collection of hundreds of stills, which documents the history and personality of architecture during New York City's unstoppable growth during the 19th and 20th centuries. This handsome tome overflows with unforgettable images, especially of the erection of buildings, from St. Patrick's Cathedral and the Flatiron Building (seen before the addition of its cornice!) to the late and lamented World Trade Center. Especially memorable is one amazing shot of the Empire State Building as a work in progress – photographed from the vantage point of one of the triangular windows in the spire of the then newly completed Chrysler Building.

Drawing inspiration from the Baths of Caracalla in Rome, the architects McKim, Mead & White designed Pennsylvania Station (1911) to contain two enormous central spaces. This detail shot of the main waiting room affords a rare look at its elaborate coffered ceiling and majestic Corinthian columns. Some 50 years after its completion, the building was razed.

Dewey Arch was planned for Fifth Avenue and 23rd Street as a celebration of Admiral Dewey's 1898 defeat of the Spanish in Manila Bay. To stimulate funding for its erection, a temporary arch, shown here, was built of wood and plaster. But when Dewey's presidential aspirations collapsed, so too did his monument, and in 1900 this glorious placeholder was demolished.

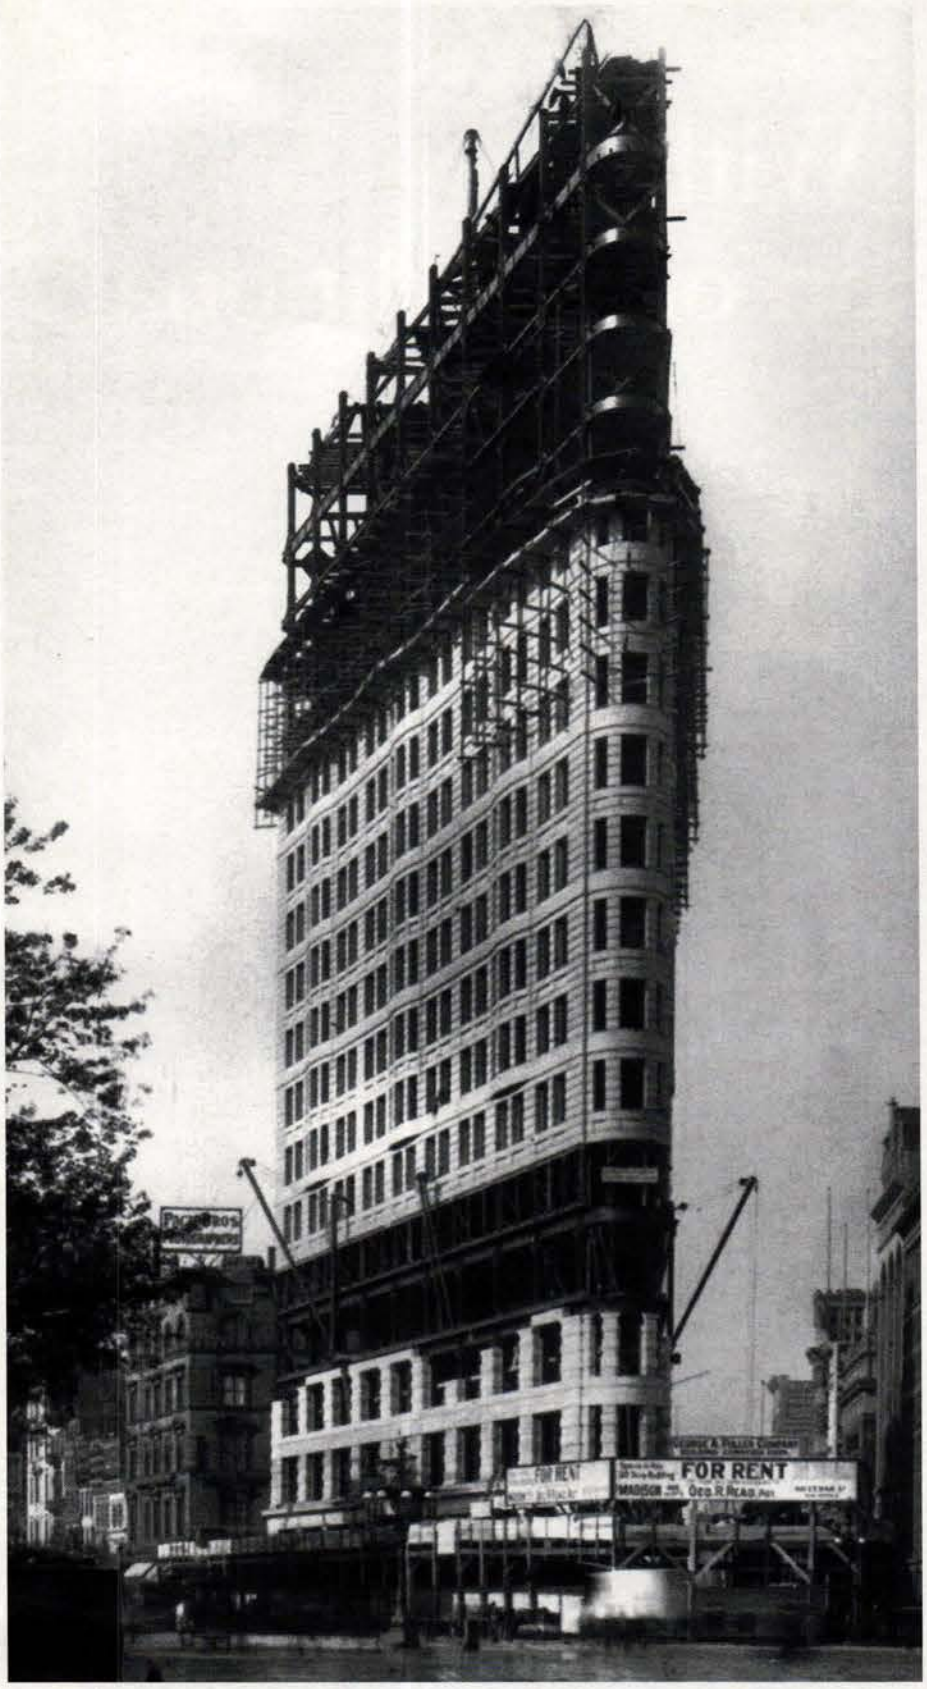

To his credit, Marshall fully appreciates that building a city means more than just making buildings, and his book provides ample coverage of the creation of New York's parks, playgrounds, monuments and cemeteries. He also wisely depicts the expansion of the city's infrastructure, with majestic photos of bridges, tunnels, subways, airports, expressways and that cherished New York innovation, the parkway: The author delights in describing how a 15-mile highway, completed in 1923, provided "a gently curving, tree-lined, landscaped route into the city for the affluent commuters of Scarsdale and White Plains. It was a 'parkway,' the Bronx River Parkway. Both the word and the idea are particular to New York. No other American metropolis has so carefully fitted so many miles of access and exit so homogeneously into the landscape."

Marshall's depiction of New York's infrastructure also becomes a survey of how a city grows. The Queensboro Bridge, for example, was completed in 1909, and "by 1930 the population of Queens had quadrupled, [and] the assessed value of its properties had increased sixfold." By the same token, the decision to extend the subway lines into what were then "vacant, rural tracts" in the outer boroughs wound up "sparking the development of Astoria, Flushing, Flatbush."

Although Marshall's book is fabulously rich in historical imagery, it often lacks informational detail in its captions; most of the archival photographs are undated, and readers are often left to scrutinize car models and clothing styles to get a better sense of what period they are seeing. This parsimoniousness extends to the text itself – *Building New York* is rather light on words – and so the redundancies that crop up become all the more glaring.

However, there is some justice in Marshall's pointing out twice the racism that underscored Robert Moses' sweeping alterations to New York City, as typified by his having built "more than 250 children's playgrounds in the city (but only two of them in black neighborhoods)." More tiresome are the repetitions of such data as "New York's reason for being was the pursuit of wealth," or how, in the construction of the Seagram Building, architects Mies van der Rohe and Philip Johnson "spent more money per square foot than had ever been spent before."

That last reiteration points out a further weakness in the text, namely the author's addiction to superlatives. Granted, it's hard to avoid them when discussing New York City's famed construction projects. One can feel a certain glory in the fact that the caissons for the Brooklyn Bridge were "the two most massive manmade structures on the continent," or that the bridge's central walkway was "the highest manmade promenade in the world." Civic pride can also be excited by appreciating that the Verrazano Narrows Bridge was "the longest suspension span of its day," or that the first Grand Central Depot train shed, completed in 1871, was "the largest covered space on the continent," or even that the American Airlines Building in JFK Airport has "the world's largest stained-glass window, a 317-ft. curve, 22 ft. high."

The Flatiron Building, designed by the Chicago skyscraper architect Daniel H. Burnham, is nearing completion in this ca. 1902 photograph. Marshall notes that the 300-ft.-tall building was "one of the first tall structures not needing to be walled from the bottom up; the frame took the strain." Limestone blocks were used to face the steel girders of New York's beloved triangular building.

The catalog of extremes can make readers flinch, however, when they are asked to gasp in awe at the news that Radio City Music Hall has "the world's largest theater," "the world's biggest Christmas Tree" and "the world's largest cinema screen, the heaviest proscenium arch, the largest orchestra pit." Drearier still is the news that the Museum of Modern Art received "the most expensive makeover in museum history" in 2001, and its "admission charge is now $20, thought to be the highest museum entrance fee in the world."

Marshall also recognizes the dark side of the city's increase, and in his prologue he acknowledges, "Opportunism and exploitation, wealth and misery overlaid [New York City's] progress right from its founding." That undercurrent informs some of the book's catalog of extremes; far from evoking wonder, the statistics often remind readers of the self-congratulatory extravagance, wastefulness and rapacity that define many of the city's structures.

The saddest superlative in the book, however, must be the fact that New York "holds the record for the highest building ever to suffer a wrecker's ball: The elegant Singer Building, at 612 ft. once the world's tallest, was demolished in 1968." Marshall's book covers other great losses of historic architecture that the city has suffered, particularly the razing of the first Pennsylvania Station, a 1911 Neoclassical-style masterpiece designed by the architects McKim, Mead & White. Just as distressing are the glimpses of the now-lost Roxy Theater and the Astor Hotel on Long Acre Square. Alongside its focus on the construction of the city, Marshall's book also serves as a memorial to these vanished works of art. Happily, he includes some room for hope, and observes that the public's outrage over the annihilation of Penn Station in 1963 – a crime that included the dumping of its columns and statuary into a New Jersey swamp! – led to the formation in 1965 of the city's Landmarks Preservation Commission.

After examining several of the city's lost gems, Marshall concludes, "What all these victims had in common, of course, was modest height. And if profit was to be squeezed out of every inch of dirt on this finite island, taller was better." As land space became scarce, especially on Manhattan, the question of air space became more important, and the great age of skyscraper construction took off in New York.

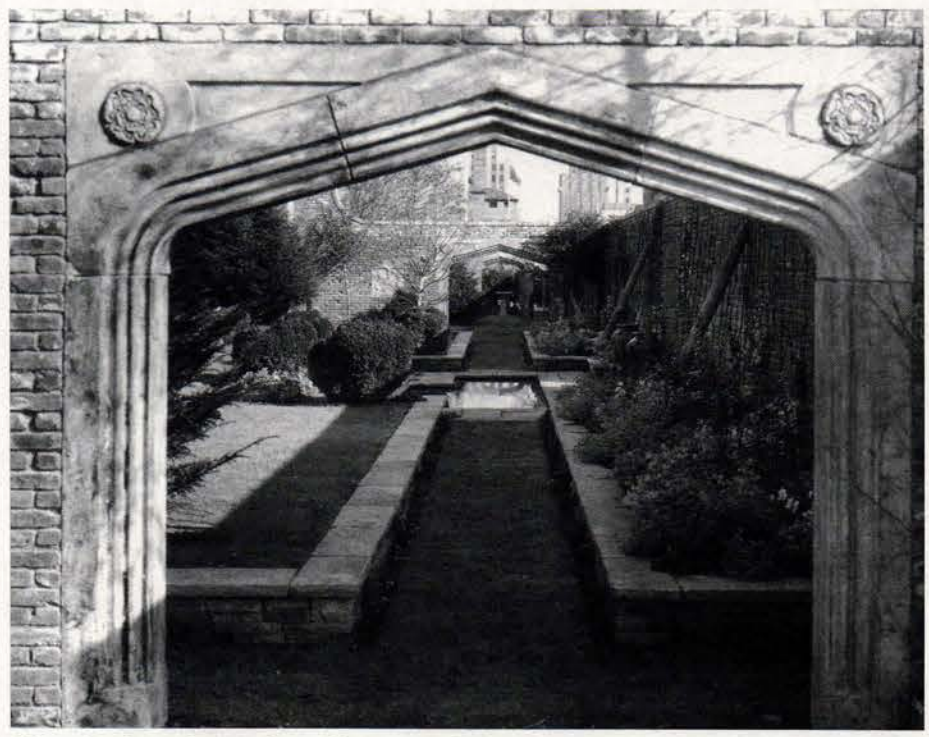

All in a day's work: One of the many construction workers who toiled over the Empire State Building is seen here on the way to his job. To appreciate just how high up he is, note the peak of the nearby Chrysler Building behind him!

This book traces its origins to two technological developments of the 19th century. The first was the construction innovations pioneered in Chicago, where "architects were bolting together columns and crossbeams of wrought iron, soon to be steel, to take the strain in taller buildings." The other breakthrough came when the engineer Elisha Graves Otis "devised a safety device for an elevator so that it would not crash to the bottom of its shaft if the pulley rope broke." Once the buildings could support their own weight and enjoy easy and safe movement from floor to floor, they were able to become much, much taller.

In response, zoning restrictions arose that modified the design and appearance of skyscrapers. Setback regulations, instituted by 1916, were related "to the width of the adjoining streets – usually one-and-a-half times. Then further graduated setbacks were required until the tower was allowed to rise unhindered, but on no more than 25 percent of the area of the plot." The high-style results of these limitations were such architectural triumphs as the Empire State Building and the Chrysler Building.

The later era of modern, International Style skyscrapers – those characterless slabs of steel and glass, which have proliferated since the 1950s – were likewise informed by new restrictions from the ground. "Instead of the 'wedding cake' setback style of earlier skyscrapers," Marshall explains, "these straight-sided monsters brought the 'plaza bonus.' They could rise, sheer, but their size was limited by how much space at ground level was given over to plazas, malls, arcades, and terraces open to the public." Of course, no amount of public space below can adequately compensate for an eyesore above, and Marshall is quick to note that the Pan Am Building (now owned by Metropolitan Life Insurance) "is, by common consent, New York's least-liked building."

But even an unlikable building can be the subject of some remarkable photos, and the book's images of the Pan Am Building are every bit as impressive as the shots of such architectural beauties as Manhattan's Temple Emanu-El or the New York Stock Exchange building. Celebrating the wonders of New York City architecture – and investigating its origins and implications – is the true purpose of Bruce Marshall's *Building New York*, and the author has succeeded admirably. ◆

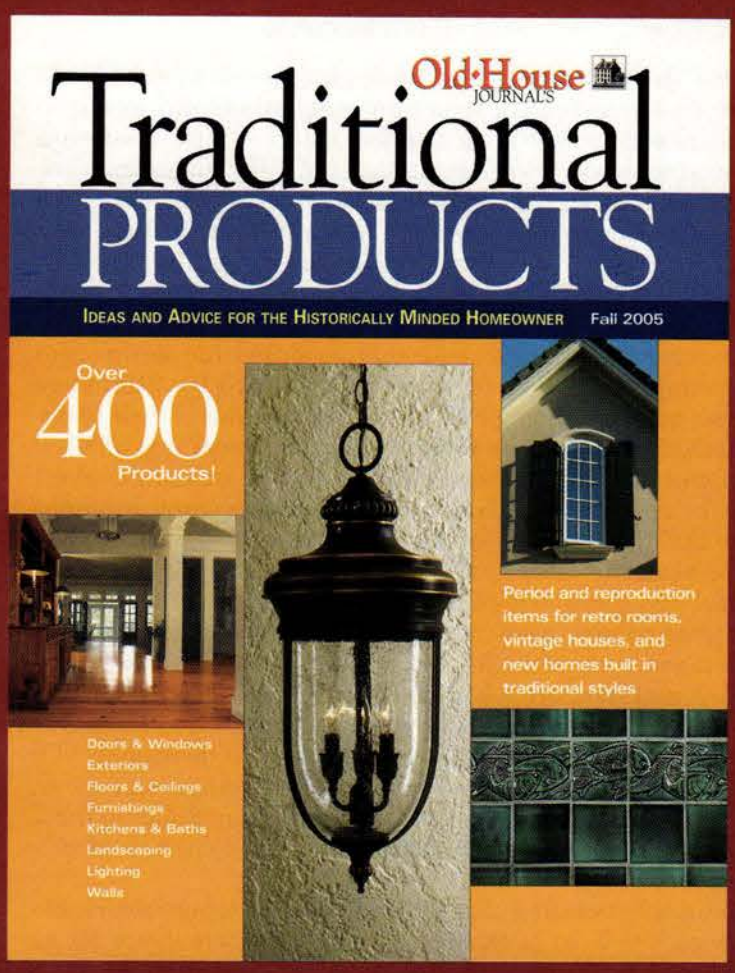

The setback regulations for early New York City skyscrapers resulted in what came to be known as the "wedding cake" look. Instituted to keep Manhattan from becoming a labyrinth of monoliths, the architectural designs developed in response to this legislation could offer unexpected delights. Case in point: the verdant "Twelve Gardens of the Nation," a lovely showcase of different gardening styles, nestled comfortably atop the 11th-floor setback roof of the RCA Building.

A Source Book Rich With Information on Traditional

Products

Ideas and Advice for the Historically Minded Homeowner

New versions of products from our past have never been more available, or more likable. *Traditional Products* is a new way to find new-old stuff.

For more than 30 years, OLD-HOUSE JOURNAL has supplied homeowners with sturdy advice about the whys, wherefores, and how-tos of coping with the problems and enjoying the pleasures of owning an old home.

- Buying guides
- Complete information on product sources
- Hundreds of full-color product photos
- New alternatives to traditional materials
- Internet information

Order Today! There's never been a better time to enjoy and learn about traditiona American housing styles. *Traditional Products* will help bring the lessons home.

Old-House Journal's Traditional Products covers everything from historically appropriate building mate rials to period pieces to modern substitutes, all in one softbound book. To order ($9.95 plus shipping and sales tax, if applicable), call (202) 339-0744 ext. 101, 9 a.m. to 5 p.m., Eastern Time, Mon-Fri.

THE 2007 PALLADIO AWARDS

THE ANNUAL AWARDS PROGRAM TO HONOR EXCELLENCE IN TRADITIONAL COMMERCIAL & CIVIC DESIGN

co-produced by

TRADITIONAL BUILDING AND **PERIOD HOMES**
AND THE TRADITIONAL BUILDING EXHIBITION AND CONFERENCE

If you didn't get your entry ready in time for the 2006 design competition, it's not too early to start planning your 2007 entry.

THE PALLADIO AWARDS PROGRAM honors outstanding achievement in traditional design. The goal is to recognize project teams whose work enhances the beauty and humane qualities of the built environment through creative interpretation and adaptation of design principles developed through 2,500 years of architectural tradition.

PALLADIO AWARD CATEGORIES

PALLADIO AWARDS FOR COMMERCIAL & CIVIC ARCHITECTURE WILL BE AWARDED IN FIVE CATEGORIES:

- RESTORATION & RENOVATION
- ADAPTIVE REUSE &/OR SYMPATHETIC ADDITIONS
- NEW DESIGN & CONSTRUCTION – LESS THAN 30,000 SQ.FT.
- NEW DESIGN & CONSTRUCTION – MORE THAN 30,000 SQ.FT.
- PUBLIC SPACES: PARKS, PLAZAS, GARDENS, STREETSCAPES

Corresponding awards, co-sponsored by *Period Homes* magazine, will also be made for residential projects.

PANEL OF JUDGES

Judging is by a panel of distinguished design professionals selected by the editors of *Traditional Building* and *Period Homes* magazines.

JUDGING CRITERIA

The Palladio Awards are named in honor of Andrea Palladio, the Renaissance architect who created modern architecture for his time, while using models from the past for inspiration and guidance. The judges will be applying the same criteria that Palladio used in his own work: The projects should meet all the functional needs of contemporary usage, while applying lessons learned from previous generations to create beauty in the built environment.

IF YOU ARE ONE OF THE WINNERS

Winners of the Palladio Awards for 2007 will be announced at the annual Traditional Building Exhibition and Conference. Winners each receive The Palladium – the cast-bronze trophy emblematic of the Palladio Awards, which has been designed, sculpted and cast by the artisans at Historical Arts & Casting, Inc., West Jordan, UT.

Winners will have the opportunity to give an illustrated presentation of their winning projects at the Conference.

Winners are also honored at a special VIP dinner held during the Conference.

Winning projects will receive full-color editorial coverage in the June 2007 issue of *Traditional Building*.

Winning projects will also be highlighted for 12 months in the Palladio Awards section of the *Traditional Building* web site.

DEADLINES & ENTRY REQUIREMENTS

Deadline for receipt of the completed entry package is November 15, 2006. For complete details on the awards program, judging criteria and submission requirements, log onto the *Traditional Building* web site at www.traditional-building.com. Click on the Palladio Awards logo on the front page and download all the relevant forms. For information on the Traditional Building Exhibition and Conference call 800-982-6247.

ON CIVITAS

By His Royal Highness The Prince of Wales

On November, 3 2005, His Royal Highness The Prince of Wales accepted the National Building Museum's Vincent Scully Prize, in Washington DC. The prize was established in 1999 to recognize exemplary practice, scholarship or criticism in architecture, historic preservation and urban design. The following is the complete text of the acceptance speech.

When we came in, my wife and I, we walked round the gallery and looked down on this scene and there's nobody here and lots of chairs and it looked ominously as though it had been set up for my execution. I am so gratified that the reality is slightly different. I really am so deeply grateful for the honor you give me today in adding my name to the distinguished list of recipients of this award. I can only apologize profusely for keeping you waiting for two years to receive this prize. I can't even blame New York traffic for that particular one. I remember coming here years ago and so for me it is a great joy to come back to this truly remarkable building. It becomes even more remarkable the more you see it.

I am also grateful for the National Building Museum's generosity in endowing the award – as you may know, I have asked my Foundation for the Built Environment to put this gift to use in support of its work in helping to rebuild some of the Mississippi communities damaged by Hurricane Katrina.

My wife and I were utterly horrified to see the terrible scenes of destruction wrought by the hurricane across New Orleans and the surrounding area. Tomorrow, we will have the opportunity to meet some of the brave and resilient people now trying to rebuild their lives and to pay tribute to the astonishing efforts of emergency workers. I only hope, ladies and gentlemen, that my foundation can play a small part in the work that is now underway to begin the reconstruction.

Now some of you will no doubt know, the Mississippi Renewal Forum was held last month at the invitation of Governor Haley Barbour and Mississippi Renewal Chair Jim Barksdale. It was led by Andrés Duany and coordinated by the Congress for the New Urbanism, which is chaired by the Chief Executive of my own foundation, Hank Dittmar. My foundation contributed a team of designers to the workshop and I was greatly encouraged to hear that it produced community plans for 11 devastated towns on the Gulf Coast; house plans for both temporary manufactured housing and permanent housing; and plans for the restoration and renewal of basic infrastructure that will, perhaps, be more resistant to both storm surge and flooding. As you can imagine, I shall be following further developments with the keenest of interest....

All in all, the award could not have been more timely and I cannot thank Professor Scully enough for having the courage to put my name forward for it. After all, I seem to be a dangerous commodity in certain circles and receiving such awards is a relatively novel experience for me!

If I may say so, Professor Scully and I agree profoundly on some crucial fundamentals. Three issues strike me in particular: the importance of retaining our connection with the natural world, particularly through the garden; the value of traditional urbanism; and the abiding significance of the sacred.

My own garden surrounding my Gloucestershire home of Highgrove, has long been a labor of love and an attempt, probably rather inadequate, I don't know, to work as much in harmony with nature as possible. Shaping it over the last 25 years has repeatedly given me cause to reflect upon what it is to be part of nature, not apart from it. There is a profound need, I believe, (indeed, I would go so far as to say there has never been a greater need in light of the terrible forces of chaos we are helping to unleash through becoming further and further apart from nature throughout the 20th century. A profound need to move toward architecture and planning which similarly reconnects the human and natural worlds with one another. There is also a pressing need to take up the great human cultural stories. In the same way that our food and the way it is produced can tell a special story so our buildings should tell the irresistible story of human character and idiosyncrasy. We have over industrialized the whole business of food production. We have over industrialized our whole approach to the built environment. We have removed the soul. Surely what the culture is all about at the end of the day and thus lost the balance of things that must lie at the heart of a truly human civilization. Ultimately, as Professor Scully himself has observed this has to become – this has to become a collective effort from us all. To this end, my foundation has begun to engage with cutting-edge scientists; those trying better to understand the natural world through what are known as the "sciences of complexity." One of the central issues we have been discussing with them is nature's way of handling large numbers. Nature offers clues as to how quantity and quality can go hand-in-hand; how a complex order can

Poundbury is a mixed-use, mixed-income neighborhood on the outskirts of Dorchester in Dorset, England. The master plan was designed for The Prince of Wales by noted architect Léon Krier and follows the ten principles laid out in His Royal Highness' book *A Vision of Britain*. *Photo: Commission Air; © the Duchy of Cornwall*

respect diversity; how we can again achieve the fine grain of scale that makes buildings and streetscapes such a delight; and, what's more, how we can be truly sustainable by being adaptive. It is time, I think, for a new approach, informed by such thinking.

Professor Scully's open-mindedness, and his willingness to evaluate things on their own terms, have nowhere been better demonstrated than in his championing of traditional urbanism – something I myself have been trying to do for nearly 20 years now (And look what it's done to me!) When I was first poised, along with Leon Krier, to undertake the development of a new settlement at Poundbury, on the edge of Dorchester in the south of England, I was hugely encouraged by the achievement of Andrés Duany and Elizabeth Plater-Zyberk at Seaside: something I made mention of when I last delivered a speech in this hall 15 years ago. Just as the connection with nature reminds us of matters above and beyond ourselves, and of the need for reverence, so the city – rightly conceived – can remind us of both our dependence upon, and our responsibility for, others; and for the greater good through the simple, but denigrated, business of good manners, courtesy and consideration for others. You remember the old phrase, "Do to others as you'd have them do to you..."

A typical street in Poundbury exhibits a harmony of scale and a close relation to human proportion. The styles of buildings in the neighborhood range from Gothic to Georgian to Arts and Crafts. *Photo: Courtesy of The Prince's Foundation*

I sought at Poundbury, therefore, to create an example of a mixed-use, pedestrian-orientated community that reflected local character and local tradition. My main aim was simply to provide a place that might enhance both the quality of life of the people who would eventually live there and the local environment. The obvious starting point was to analyze the successful places and buildings that people have enjoyed living in for centuries, and to draw out the lessons of why they were still so popular today. Then I wanted to know how these lessons could be developed to make them better suited to contemporary needs.

I rather hope, now that over 1,000 people live there and 600 people work there, that Poundbury has proved the point that it is in fact possible – and I was told it was never possible – to break the conventional mold of zoned development and create a mixed-use community. Its lessons are simple: a network of legible, interconnected streets that accommodate the car while celebrating the pedestrian; the centrality of the walkable neighborhood as a building block, accommodating work, play, shopping and living in a harmonious way; the "pepper-potting" of affordable housing and market rate housing; and, finally, the reliance on traditional urbanism, local vernacular architecture and natural materials to restore a sense of harmony, proportion and, above all, something called "beauty" to day-to-day life.

Incidentally, the Guinness Housing Trust – which is providing the affordable housing, now comprising 30% of the dwellings – in fact I went down the other day to celebrate the 100th affordable house there. The trust tells us that Poundbury is its most successful and trouble-free site. Why? Because of a far higher satisfaction level than anywhere else: and this is due not only to an integrated, mixed approach to housing and work places, but also to the fact that people appreciate living in attractive houses. Crucially, in my view, the affordable housing at Poundbury is indistinguishable from that sold on the open market – a market that has been quite responsive, by the way!

I know that there has been similar innovation in urban planning here in the United States. Indeed, we in the U.K. have been studying progress here and have learned a great deal from exchanges and discussions with U.S. policymakers. This sharing of best practice and lessons learned is an increasingly important aspect of our bilateral relationship and a sign of the deep partnership between the U.S. and U.K. So, today, there is a worldwide groundswell of new interest in this kind of compact, mixed-use, walkable settlement, as a means of addressing the challenges of the future. Incidentally, the demand to visit Poundbury and use it as a teaching laboratory has been so great that my foundation has had to base staff of its own in the town!

You might be interested to know that the work of my Prince's School for Traditional Arts – which is showcased in one of the exhibitions that opens here today – has at its core the search for the sacred; and this search crosses boundaries of cultures and religions. The Visual Islamic and Traditional Arts program at the School was initiated by Professor Keith Critchlow to specialize in the arts and architecture of Islam, as well as the traditional arts of other civilizations. One of the principal aims of the school is to encourage appreciation of the universal values that are fundamental to the arts of the great traditions of the world. You know this, of course. You have also seen fit to give this award to the Aga Khan.

The study of traditional architecture throughout history, and across the world, has revealed the widespread use of certain proportioning principles in designing pleasing, human-scaled buildings and towns. A fundamental understanding of the geometry underlying these proportioning systems – and its relationship to universal principles now being recognized by the sciences of complexity – is as important to architects and planners as learning drawing skills. Sadly, neither topic is well covered in our modern educational system. (This is another example of the way in which the 20th century has seen the deliberate destruction of man's intimate interrelationship with nature.) Architectural proportioning reflects an ancient consensus about the best way to create harmony between people and their environment. An understanding of the use of these proportioning systems throughout history can help us to understand why well-loved places have endured, and also how to make places today that can be as well-loved by future generations. Failure to do so can only result in ever greater alienation and uglification.

Yet this is only one – and, I suspect, not even the most important – of the tools by which societies in the past have been able to create things both beautiful and satisfying, and which appeal to our sense of the sacred (if I am allowed to use such a dangerously old-fashioned concept!). Christopher Alexander – a visionary known to Andrés and Elizabeth, and I'm sure to many others of you too here today – has shown that timeless processes can be every bit as valuable as timeless forms. He has convinced me, certainly, that each and every one of us possesses the means to nurture the sacredness of the places we inhabit, by ensuring that our actions, however small, respect the wholeness of these places. By doing this, ours become healing actions; and for these we are not dependent on any intellectual elite of architects and planners.

Underlying all of this is the much-misunderstood concept of tradition – often derided or neutralized into the term traditionalism. Traditionalism makes us forget how tradition really works; just as Modernism has blinded us to what it means to be truly modern. These terms encourage us to see tradition and modernity as enemies, whereas in any sane society they would be the best of friends. Tradition, in truth, is not about style (nor is it, for that matter, about pastiche): it is about learning from the best of what has gone before. It is something infinitely varied, infinitely adaptable, infinitely changing – a language, even a dialect, that is based on a coherent grammar, allowing infinite flexibility and creativity within a discipline. Why is it, do you think, that the contemporary world recoils so violently from anything involving discipline? We are told ceaselessly – and to the point of boredom, that we need constantly to adapt to rapid change. And yet, paradoxically, the only real way in which you can adapt to change is through a discipline. Civilization itself is surely a discipline of its own, when you think about it...

And why is it, do you imagine, that so many people want to live in the lovely old conservation areas of our towns and cities – the bits that weren't knocked down in the orgies of destruction in the 1950s, '60s and '70s. Why do they, (and so many architects) want to live in such places – or to visit them while abroad on their holidays? Because their essential characteristics of harmonious proportions, of human scale and hierarchy, strike a common chord within our hearts. These are the subtle qualities of architecture that so many people find instinctively beautiful. But their origins lie in shared human psychology; which – as new research is confirming – is intimately connected to human well-being.

So it is certainly not my intention to try to impose any single notion of tradition on people. Mine is a very modest proposal: it is that professionals, policymakers and the media leave room – without prejudice – for people to satisfy their intuitive hunger for traditional things. What I happen to care about is how people live from day to day – how communities can shape their everyday surroundings to fulfil their needs simply, effectively and beautifully. Those needs, after all, have not changed so very much over the centuries. It is out of ordinary things that real traditions are fashioned. I believe we must see each piece of the built environment as part of a living language, connected to a living tradition.

Tradition, rightly understood, is a framework for confronting and responding to the complex problems of urbanization and globalization. Goethe once said we should be "tending the fire, not the ashes" of our past. The only fire we seem obliged to tend today is that invisible yet destructive one that drives the internal combustion engine. Incidentally, if you remember, Goethe also said that "Architecture is frozen music." There you have it

His Royal Highness discussed the techniques of Japanese joinery with Bankoku Sasagawa at the School of Traditional Arts Degree Show in 2004.

again – proportion and rhythm. If we don't keep in time to the music and rhythms of nature we initiate dissonant oscillations that increasingly lead to chaos and confusion, loss of meaning and disconnectedness.

One of the greatest challenges we face today is that of "sustainability." The Bruntland commission definition of sustainability says that we should act without compromising future generations, which is rather difficult without a crystal ball. We obviously can't literally look forwards, but we can look back in order to see what we have built around the world that has been proved to adapt well to change and that still functions efficiently. The Royal Society for the encouragement of Arts, Manufactures and Commerce recently previewed the 2005 State of the Future report, outlining what it considers to be the 15 greatest challenges facing humanity over the next 50 years.

First on the list is "How sustainable development can be achieved for all." It notes that humanity may have consumed more natural resources since the Second World War than in all of history prior to that time. Next to the proliferation of weapons of mass destruction, unsustainable growth may well be the greatest threat to the future of humanity. Yet without sustainable growth, billions of people will be condemned to poverty, and much of civilization will collapse. Further vital issues on the RSA's list include how we can bring population growth and resources, including clean water, into balance. The world's population has grown to 6.5 billion, with more than 4 billion being added since 1950. It may grow another 2.6 billion before beginning to fall according to the UN's lower forecast. Today's 3.2-billion city dwellers are likely to increase to 6 billion by 2050. Once thought a problem, urbanization (and I should stress the right kind of urbanization) could now be part of the solution, through imaginative, innovative localization, to poverty, ignorance, disease and malnutrition due to its efficiencies and economies of scale.

It was, I confess, with slight frustration therefore that I read the fifth challenge on the list: "How can policymaking be made more sensitive to global long-term perspectives?" which states that "Those who guide the world into its future need to adopt a more future-oriented mindset themselves.... Unfortunately the daily complexities of politics leave little time to consider the bigger picture. Corporate stakeholders want quick profits.... NGO leaders looking at the longer term often do so only from the perspective of a single issue; and news executives are driven by the need to keep people's attention by emphasizing the drama of the moment. As a result, decision makers feel little pressure to consider global long-term perspectives." You may not be surprised to hear, ladies and gentlemen, that I believe it is only by looking at building for the longer term, building tomorrow's heritage, that the right decisions are likely to be made. From funding mechanisms that allow for patient money, to buildings that can easily last for 300 years, we must be sure that we can look at what is actually cheaper over the long term. This is why some New Urban projects, my own ventures at Poundbury and a number of new developments my Foundation for the Built Environment has designed are planning compact, efficient and beautiful places that are built to stand the test of time. This is not always easy, or course, but there is a growing body of evidence being collected that financial returns can be healthier in the long term, and the people who live in these places can be happier as a result of the way these developments are laid out.

Recent work by Professor David Strong of our Building Research Establishment has found that "vernacular architecture offers a form and a function that enables comfortable conditions to be achieved, optimum and sustainable use of indigenous materials, and low environmental impact." For example, the use of passive heating and cooling systems found in vernacular buildings made of natural materials is increasingly favored over steel and glass structures that are dependent upon complex technological solutions that often fail to deliver on early promises. U.K. building regulations are set to require a 25% reduction in carbon emissions, and this will largely come through greater use of the thermal properties of natural materials and passive ventilation.

For those countries that have enjoyed a wonderful quality of life over the past century, it is surely time to focus on putting our own houses in order to provide the solutions to convince the developing nations, which are rapidly growing in wealth and demanding the same quality of life we have all enjoyed, that more appropriate layouts of settlement ultimately give a better quality of life. To find new solutions for these major global issues it is essential that we combine a thorough understanding of how past civilizations ordered themselves, using minimal resources, together with new science and technologies so that we really can have our "cake and eat it."

Modernism has led us to seek answers in a host of technical "fixes." Traditionalism often only pays it lip service. Real traditional thinking has always tried to see the whole picture. You only have to spend time in great buildings like the Alhambra, or the Alcazar, in Andalusia, to understand how – with a total absence of flashy tricks – climate, temperature, light can all be controlled at once, with minimum impact on the earth. We see in such masterpieces of tradition a comprehension of natural and human systems as complementary and intertwined.

New analysis techniques, new scientific knowledge, new technologies offer opportunities to reduce energy-use, water-consumption and waste. The development of new techniques and building systems that can be applied within a traditional framework is likely to have a much greater impact than "hi-tech" methods, as most existing buildings are traditional and most consumers seem to prefer traditional architecture. We must surely be striving to create the kind of versatile and attractive environment that can offer an enduring character and serve generations through hundreds of years, rather than the 20-year planning cycles of today which rather tend to lead to a throw away society and throw away world.

Some of those here today may already be aware of the work of my Foundation for the Built Environment. Established in 1999, having grown out of my Institute of Architecture originally formed in 1992, it brought together a number of separate initiatives, dedicated to improving the quality of people's lives by teaching and practicing timeless ways of building. It is now one of 16 charities of which I am president and which, together, comprise an effort to address the fundamental need for interconnectedness between the human and natural worlds. The foundation challenges the architectural, planning and building professions to design in a way that learns from the past, and that enriches, rather than denigrates, human aspirations, while still meeting more basic needs. In no arena is this challenge more pertinent than the urgent environmental agenda. The effort to demonstrate and teach that traditional architecture, building and urbanism can effectively deliver truly sustainable development is an integral part of both our education program and our ongoing practice work.

Our Civitas exhibition, opening here today, and the catalogue that accompanies it, demonstrate both the commonality and the differences in the way the universal principles of good urbanism are formulated in the U.S.A., the U.K. and continental Europe. We can all learn a lot from each other – and that's what I believe this exhibition is all about. Indeed, so strongly do I believe this, that, as you know, I recruited Hank Dittmar as Chief Executive of my foundation last year, and I'm glad to pay tribute to the progress he has made in taking this important work forward – and to the fact that it was to the U.S.A. that I knew we had to turn to find the Chief Executive I was looking for! I might feel that I should apologize to you for depriving you of him were it not for the fact that his work so obviously retains a global dimension!

To achieve the delivery of these principles, an essential factor is, if at all possible, to allow those who will live in the community an opportunity to participate in the planning process. With strong leadership, "many hands" can enrich rather than muddle the design. In the exhibition and catalogue you will find information about Enquiry by Design – a process my Foundation pioneered in the design of the extension to the English Midlands city of Northampton, and has since applied in many other places – designed to ensure that there is active and constructive community participation. In fact where this particular technique has been deployed now we have gathered evidence to show that it can reduce the normal planning process from 2½ years to four or five days.

The exhibition on the work of the School of Traditional Arts will unveil a collection of works crafted in a school, which, so far as we know, is the only one in the world where Traditional Arts can be practiced at the postgraduate M.A. and Ph.D. levels. The School believes that, just as in traditional societies, art is not a luxury, but a part of everyday life; that traditional art invites the viewer to look at it not only as the personal expression of an individual artist, but also as that particular artist's evocation of a universal principle.

Borges wrote of tradition as the "knit-work of centuries of adventure." So why don't we set our sights on a living traditional architecture of this kind, to complement our renewed respect for the sophisticated complexity of traditional urbanism? This is not a matter of personal taste or fragmentary meanings; it is a matter of finding again what is truly sustainable, and sharing once more what is truly human and which tells the great enduring human story.

Increasingly, I feel a new consensus emerging – a new kind of modernity, if you will. It implies that we can find effective ways of dealing with the big problems of our day, which do not oblige us to bury beneath our abstractions the very things that make life worth living. And it requires we build again the types of places we all know strike a chord in our hearts – however "modern" we are; places that convey an everlasting human story of meaning and belonging.

Whatever the case, I am most touched to receive the Vincent Scully Award and take the greatest possible pleasure in opening the exhibitions "A Building Tradition" and "Civitas." ◆

HAND CRAFTED REPRODUCTION LIGHTING
TO COMPLETE YOUR PERIOD HOME

by Ball and Ball Hardware Reproductions

BALL AND BALL manufactures a complete line of reproduction interior and exterior lighting, in 18th, 19th, and 20th century designs. Using period techniques and materials, we faithfully reproduce each fixture with exacting attention to detail. Since 1932, Ball and Ball has been manufacturing the finest quality antique reproduction furniture hardware, builders' hardware, lighting fixtures, and fireplace accessories available.
