CHEVY SUBURBAN A LIKE A ROCK

### I'm the designated

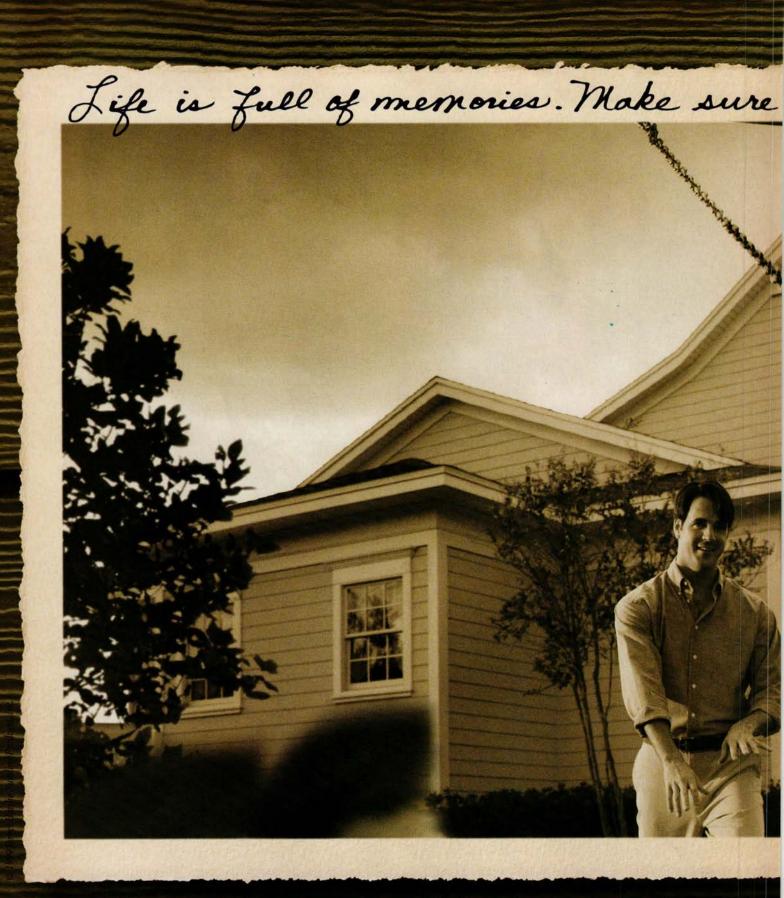

## MILK SMELLER

### in my house.

My husband gets this terrified look on his face, holds out the carton and says: "Honey, do you think it's bad?" I say: "I don't know, dear, smell it." "No, really, do you think it's bad?" This can go on for 20 minutes. Lucky for us the people at Amana invented a special compartment on the inside of the fridge door. It keeps milk 5 degrees colder so it stays fresh longer. It's sort of like a fridge inside a fridge. Now if I can only get him to stop putting back the empty cartons.

If you knew how well Sears HomeCentral trained its repair specialists, you'd know why we stand behind their work. In fact, our team of 14,000 is so well-trained, we'll guarantee their work on any major brand appliance, no matter where you bought it.

So if you have an appliance problem, call someone who knows what they're doing. We'll fix it right, guaranteed.

IULY/AUGUST 1999

JEANNE HUBER ["Stone Steps," page 101], a former senior editor of *This Old House*, became intrigued with stonestep landscaping after noticing that many of the houses she researched for *T.O.H.* were plagued with treacherous backyard slopes and rickety stone stairs. "I've just been on too many unstable steps. I wanted to see a pro at

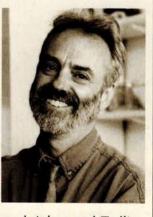

work fixing the problem," she says. Huber studied preservation carpentry at North Bennet Street School in Boston, Massachusetts, and is putting her skills to work by renovating a half-century-old clapboard farmhouse on Bainbridge Island, Washington, with her husband and daughter.

MARTIN MAYO [Poster lettering, page 121; "Ask Norm" bust, page 31] likes to create papiermaché sculptures out of materials that relate to his subject. For the bust of Norm he used *This Old House* magazine pages and invoices from his day job as a wallpaper stripper. (For a similar bust of Steve he made the hair out of sandpaper.) His other works include a Bill Clinton bust for the *National Law Journal*.

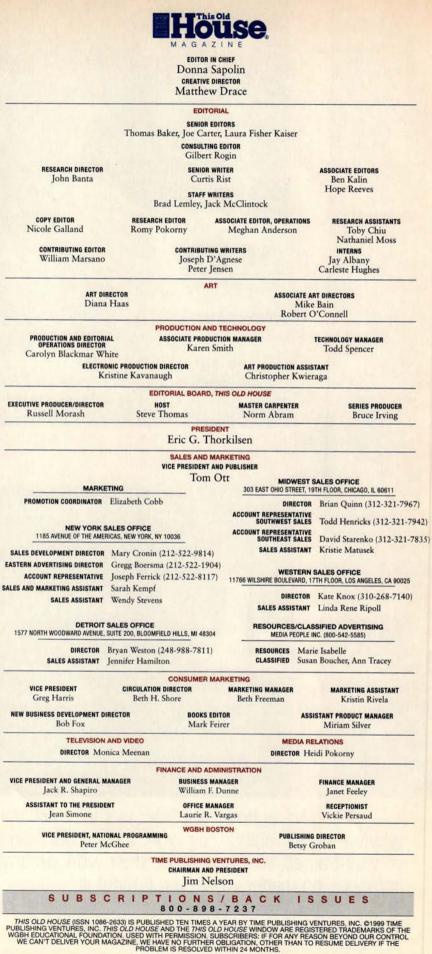

It was Mayo's wallpaper work that inspired his particular "found object" style of art: "Removing wallpaper is such a messy, gooky job, and you have all this usable stuff left when you're done." Mayo lives in Woodbridge, New Jersey. He and his wife are expecting twin Mayos in December.

WARREN SCHULTZ [Poster, page 121; "Turf Questions," page 40], who grew up on a vegetable farm in upstate New York, has 10 gardening books to his credit. Besides *The Chemical Free Lawn* (Rodale Press, 1989) and his most recent, A Man's Turf: *The Perfect Lawn* (Clarkson Potter, 1999), he penned a series called For Your Garden, which includes Walls

and Fences, Shade Gardens, and Arbors and Trellises (Little, Brown and Company). Schultz lives in Essex Junction, Vermont, where he gardens, collects old lawn mowers, and referees basketball games. Love of the sport runs in the family. Both his doughters play "which works out well

the family: Both his daughters play, "which works out well unless I have to referee their games." —*Nicole Galland* 

### This Old House has a solid foundation...

In September, 1979, *This Old House* debuted on PBS and began a how-to home revolution. Now, in our **20th season**, thanks to lots of hard work, unflagging professionalism and a dedication to superior craftsmanship, *This Old House* has become the highest-rated home improvement series on television.

We at *This Old House* couldn't have done it without the ongoing support provided by our national sponsors, State Farm Insurance Companies, Ace Hardware Corporation and The Minwax and Krylon Brands. **Many thanks.** 

Be sure to join us every week on your local PBS station. Check local listings. www.pbs.org

From June 12 – July 18 you can save on select premium products.

Invisible Danger I have just read Curtis Rist's story ["Got Lead?" March 1999]. As the parent of children poisoned during renovations, and an advocate for lead poisoning pre-

vention education, I must clarify a couple of points: More often than not, lead dust cannot be seen. Debris can be cleaned up and an area will still be contaminated with lead dust. Home owners can be dangerously comforted by the fact that they have not seen "clouds or plumes" of dust either during their project or while vacuuming up afterward. Lead paint should only be disturbed using safe work and cleanup practices. But even the most careful and responsible work habits can cause a lead hazard if the person performing the work has not been trained in proper lead abatement techniques.

ANNE M. SHEEHAN, Dover, N.H.

#### **New Details**

This Old House is an excellent magazine and I promote it frequently, but I noticed that one of my favorite sections has been eliminated with your new format. The "Extras" section at the front of the magazine described new and interesting types of tools, provided general tidbits of information and was the "quick and dirty" way to get some new information on construction. Please, please bring back this section. I miss it greatly.

THOMAS BOUNDS, via e-mail

We're glad you enjoyed "Extras" so much. Like any enterprise, magazines are constantly evolving, and while some readers like you enjoyed the section, many others were asking for more information on style and design. So in lieu of "Extras," we've invented a new section called "The Details," where each month we highlight a design element for your house including tips, trends, and styles. You'll still find plenty of information on tools and techniques throughout the rest of the magazine.

#### **Heavy Mettle**

I could not help but feel a bit smug as I read "Muscle Stoves," in the May 1999 issue. The

writers for This Old House are obviously not acquainted with the Magic Chef range-American Stove Company's 1930 flagship model-in gleaming black and white porcelain with chrome trim. We feel privileged to own one made in 1938. With eight burners, two broilers, two ovens, and a warming closet, this gas range combines function and art. Its accuracy is unquestionable and we marvel at its durability and the sheer joy of cooking on it. Although not exactly portable at over 800 pounds, there was never a question of bringing it with us when we moved from San Francisco to the East Coast last year. Current state-of-the-art stoves may be more functional, but vintage versions are more attractive.

PHIL AND ROBIN MCMEEN, Duxbury, Mass.

## OUTTAKES

BEHIND THE SCENES AT THIS OLD HOUSE

### WHO YOU GONNA CALL?

WHAT'S MORE IMPORTANT IN A HOUSE: THE WINDOW DRESSING OR THE WINDOWS? THAT WAS THE CRUX OF A RECENT FEUD BETWEEN TALK-SHOW MAVENS ROSIE O'DONNELL AND SALLY JESSY RAPHAËL, AS THEY CHALLENGED EACH OTHER TO SEE WHO COULD CONTRIBUTE THE MOST TO A HABITAT FOR HUMAN-ITY PROJECT IN PATERSON, NEW JERSEY, THINGS GOT INTERESTING WHEN SALLY REVEALED HER SECRET WEAPON: T.O.H.'S OWN MASTER CAR-PENTER, NORM ABRAM. "WE FACED A CONCRETE RETAINING WALL WITH BRICK, NAILED IN BALUSTERS ON THE BACK PORCH, PUT SHUTTERS ON THE PICTURE WINDOW, AND LAID TILES IN THE KITCHEN," SAYS NORM. "SALLY'S NO CHICKEN WHEN IT

COMES TO BANGING NAILS, LET ME TELL YOU." ROSIE RETALIATED BY HAVING CRAFT-QUEEN MARTHA STEWART SHOW UP TO SET THE TABLE—AND SIP WINE ON THE PATIO.

MAYBE NORM'S BIASED, BUT HE THINKS HE AND SALLY WON THE CONTEST HAMMERS DOWN. "YOU CAN PLAN ALL THE FAUX FINISHES YOU WANT," HE SAYS. "BUT UNLESS YOU HAVE SOMEONE TO BUILD THE HOUSE, YOU'VE GOT NOTHING TO DECORATE."

Norm gives Sally a lift in a skitsteer loader as they rush into battle against TV's decoupaging divas.

This is a car to astonish. A car that is so different, so unexpected, and so completely devoid of the superfluous, it is almost breathtaking in its purity. Every line is simple. Every detail is refined. Everything—inside and out—has a precision and a clarity about it that is riveting. You will look at it. And look at it. And look at it. And then you will want it very badly. But more than being stunning to look at, it is

stunning to drive. Quick, taut and extremely muscular, it is so responsive, it moves almost by thought as much as physical input. The controls are right there, and are uncannily attuned to the driver. All of which makes it a perfect sports car, and a perfect accord between performance and art. So, is it any wonder the roads are waiting nervously, and with great expectations, for the new Audi TT?

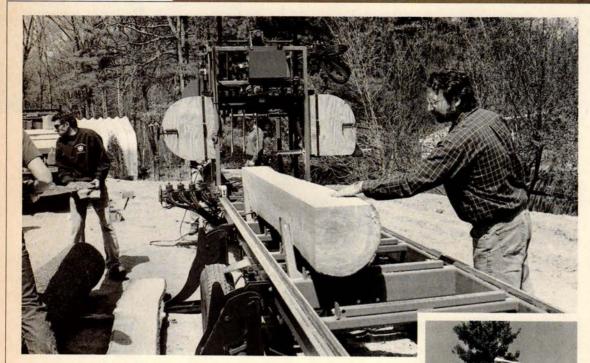

Call 1-800-FOR-AUDI or visit us at: www.audiusa.com for more information. MSRP of 2000 Audi TT Coupe is \$30,500 not including dealer prep., destination charge, taxes, license. Model shown is

ONE RECENT MORNING, ARBORIST MATTHEW FOTI TOWED HIS PORTABLE SAWMILL INTO THE FRONT YARD, THEN FELLED AND MILLED A 60-YEAR-OLD WHITE PINE THAT WAS "CHARRED ON ONE SIDE, BUT STILL

HAD GOOD WOOD IN IT," SAYS DICK, WHO PLANS TO EMPLOY THE 12-FOOT-LONG 1X8 BOARDS IN SIX MONTHS, WHEN THEY DRY OUT.

#### STEVE'S MAINE-STAY

This summer, This Old House host Steve Thomas tests his willpower by resisting the urge to do major improvements on his new Maine retreat. It isn't easy. The 1960s "Capey ranch" comes complete with what Steve dubs "o'rama" details: a walnut-grained laminatedeverything kitchen, "barf-colored" indoor/outdoor carpeting in the living room, and a stuffed pike-the lure still in its mouth-over the fireplace. "Eventually, I'll make improvements, but I don't want to lose that island-cottage feeling, even if it means keeping the funky pink-and-white bathroom," he says of the three-bedroom house near the St. George peninsula. "For now, I'm going slow, just thinning the trees to improve the view. I'll figure out what I want to do with the rest of the place while I'm on my sailboat, exploring the crags and coves of the Maine coastline."

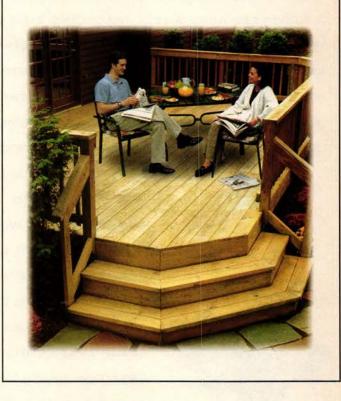

## You can spend your weekend on the deck.

OR

You can spend your weekend on the deck.

### Introducing the New GE WeatherMate.™ The fast and easy way to weatherproof your deck.

When it's time to weatherproof your deck, do you want to spend your whole weekend on it? WeatherMate<sup>™</sup> is the revolutionary new product from GE that is applied in half the time of other brands with twice the coverage! It's the fast, easy way to clean and protect your outdoor deck.

The New GE WeatherMate<sup>™</sup> kit contains everything you need to clean and protect a 500 square foot deck in three safe and easy steps. Just add water from your garden hose, spray to clean, agitate and rinse, spray to protect and you'll have long lasting GE Silicone's technology penetrated deep into your wood to defend against the elements. The WeatherMate<sup>™</sup> system requires no drying time between applications so you can spend your whole weekend on the deck, and love every minute of it.

Look for WeatherMate™ where quality home improvement products are sold.

THIS OLD HOUSE HOST STEVE THOMAS AND PRODUCER BRUCE

IRVING COMBED EVERY INCH OF THIS YEAR'S KITCHEN AND BATH INDUSTRY SHOW IN ORLANDO, FLORIDA, OOHING AND AHHING OVER GLEAMING STAIN-

LESS-STEEL APPLIANCES, DAZZLING ZINC COUN-TERTOPS, ELEGANT GLASS BATHROOM BASINS, AND OVENS THAT BAKE COOKIES IN THREE MINUTES. BOTH WERE BEMUSED BY A NEW TOILET THAT WAS FITTED WITH A CHARCOAL FILTER TO REFRESH BATH-ROOM AIR. "I THINK IT'S A GREAT IDEA," STEVE SAID,

LAUGHING, WHILE BRUCE WAS "HAPPY TO KNOW SOMEONE'S BEEN WORKING ON A PROBLEM I DIDN'T REALIZE MY HOME HAD." A

SINK WITH A BUILT-IN STEAMER MADE BRUCE'S EYES BULGE WHEN HE FIRST SAW "THIS COOL SETUP THAT I COULD SHOW OFF TO MY FRIENDS." EVENTUALLY, THOUGH, HE DECIDED THAT FOR A SMALL KITCHEN HE'D "RATHER TAKE THE SAME MONEY AND PUT IT INTO A TAP OVER THE COOK-

TOP TO FILL CAULDRONS IN SITU." STEVE, HOWEVER, WILL STICK WITH HIS OWN LOW-TECH STEAMING METHOD: "A POT WITH 2 INCHES OF WATER."

#### **REWIND: SWINGING STAIRS**

The quest for an intelligently designed drop-down attic staircase is a curious obsession of *This Old House* fans, judging by the number who've written to ask about the "disappearing" stairs used in *This Old House*'s Savannah project house. Home owners Mills and Marianne Fleming had the southern yellow pine staircase installed in their 1884 Italianate Victorian town house so that they could get into the attic 12 feet above without a ladder. The steps glide down with the tug of a chainstopping at a 53-degree angle. "These stairs have a full-length handrail and feel almost permanent—they are incredibly sturdy," says Mills, right. For details, see Directory, p. 123.

#### WHERE THE GUYS ARE

It's understandable why the President and Vice President never fly on Air Force One together, but what's up with This Old House's host and master carpenter appearing a week apart at a new Villager's Hardware (a division of Home Depot) in East Brunswick, New Jersev? On July 3, Steve Thomas will be on hand. followed by Norm Abram on July 10. "Norm tends to draw the hardcore workshop crowd, while I usually end up talking with people about remodeling their kitchens," says Steve. "Either way, we're kept very busy autographing copies of This Old House magazine." For more information, call 732-257-2800 or 908-222-6067.

## Secure Your Mortgage With Life Insurance...

## E CALLS WITH STEVE

Refreshing a tired, tacked-on kitchen brings harmony to a 1920s Colonial

e want to simplify our lives," Martha Robinson told me, as her husband, Keith Heard, nodded in agreement. "We want to upgrade this kitchen, make the layout easy, optimize space, clean it up." She's an artist who grew up on the coast of Maine, and he's a maritime lawyer from Mississippi. They moved to Greenwich, Connecticut, five vears ago. Old paintings of square-rigged ships adorn the living and dining room walls of their

BY STEVE THOMAS

1924 Colonial, while the back family room and kitchen are given over to the paraphernalia of family life: books, toys, and kiddie collages.

Over coffee, we discussed this drive for simplicity,

LEFT: Home owners Martha Robinson and Keith Heard discuss the fate of their kitchen's center island with Steve Thomas. TOP: Since moving in, they've wanted to update their spacious but plain kitchen with new cabinets and appliances.

admitting that we all share it to one degree or another. For some, the urge to trade it all in for a lobster boat and a beach shack is a sign of midlife crisis; for others, it's millennium fever. In Keith and Martha's case, the desire to streamline is a direct response to a busy life with 7-year-old twins and an inefficient kitchen. The 16-by-23-foot area serves as the hub of the house, the bridge between the dining room, the family room, and, via a rear staircase, the upstairs bedrooms. The problem is that the kitchen occupies an unwieldy bump-out that contrasts sharply with the house's traditional character. Renovated 16 years ago, the space is done in decent, if nondescript, materials and appliances, which are now at the end of their useful life.

If only new appliances were required, we wouldn't have made the house call. But there was more. The entire layout needed rethinking and ironing out. Behind

Got a problematic kitchen or bath? Tell This Old House host Steve Thomas. He'll visit a reader's house in every issue to help work out a renovation plan. Write to "House Calls With Steve," This Old House magazine, 1185 Avenue of the Americas, 27th floor, New York, NY 10036.

a pair of curtained French doors—which, before the kitchen addition, led to the backyard—sat a washer and dryer with space to spare. The stairs entered the kitchen at an awkward angle. The couple wasn't sure they needed the butler's pantry, which con-

tained a sink and shelves that were part of the house's original kitchen. Besides the laundry room and bedroom stair doors, three other entryways opened into the kitchen: from the butler's pantry, basement stairs, and family room. Add to that the fact that every wall needed new paint or paper and it's no wonder Martha yearned for simplification.

Their vision was for a unified great room/kitchen with adjoining laundry, storage area, and butler's pantry. That concept made sense to me, but first we needed to size up the overall structure from the outside.

As we walked around the yard, the survey was not encouraging. The front of the house appeared intact and rather elegant. But several additions in the back looked haphazard and clunky. Were Martha and Keith willing to demolish the back of the house and start from scratch? They exchanged panicked

looks. Restructuring the back would cost more than they wanted to invest. Besides, dwelling in the deeper rings of renovation hell for six months to a year was not a great way to simplify one's life.

So we explored other options: mov-

For Martha and Keith, the key to a less-complicated life was to make the kitchen command central, complete with a home office nook and a multipurpose laundry area. Despite Steve's contention that having the main sink in the island would put cooking messes center stage, the couple decided the set-up provided better traffic flow, a large prep area, proximity between sink and stove, and a perch where people could socialize.

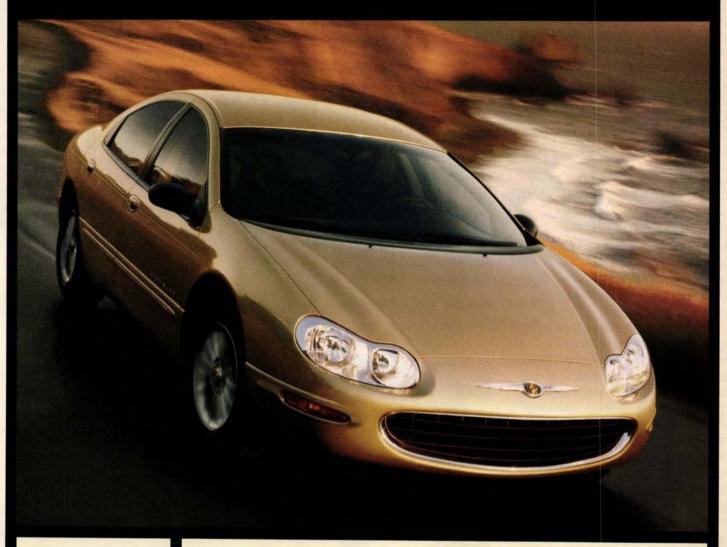

> ing the bathroom, and flipping the kitchen and family room. But such apparently minor re-jiggering of the floor plan could render the project vulnerable to the insidious while-we'reat-it syndrome, causing modest alterations to mushroom into major—and costly—overhauls.

> The biggest concern was the back staircase. Although cramped, the stairs are a major artery of the house. "I use the back stairs three times for every time I go up the front ones," said Keith, who wondered whether the stairs could be redirected into the family room. I pointed out that moving staircases was, in fact, complicated, requiring major structural alterations—and was expensive to boot. Everyone scowled. "This is what makes renovation interesting," I said with a laugh. "Everything is interlocked, which makes it hard when you're trying to unify these spaces."

> In the end, the family decided to stay within the existing footprint and avoid major structural changes. As is so often the case, defining the scope of the project allowed us to go on to the next phase: making the most of what they already had.

### HOUSE CALLS WITH STEVE

Alice Hayes, a designer with Kitchens By Deane in Stamford, Connecticut, who'd been working with the couple, unfurled her preliminary drawings on the center island.

First on the list was the space-hogging laundry nook, but I couldn't convince Martha to move it. "Love it," she said. "I can throw in a load for

washing, go back to chopping vegetables and then switch the load when I hear the buzzer." To maximize the space, I suggested installing a stacking washer and dryer, a pull-down ironing board, and counters for folding clothes. Alice scribbled ideas onto her plans.

Next problem was the butler's pantry. Yes, it would be useful as a bar and staging area for the dining room, both Martha and Keith agreed. We decided to spruce it up with fresh paint, paper, lighting, and cabinets while retaining the old sink and the passageway's antique charm.

The third requirement: a baking area. Martha and the twins love to make cookies together, so we designated a space near the butler's pantry

for that purpose. For the working part of the kitchen—sink, cooktop, and refrigerator—I advocated a small, tightly designed galley pushed to the back wall. There would be room for only one cook at a time, but new windows above the sink would make the space seem bigger and less cavelike. Martha and Keith, however, balked at giving up an island where people congregate.

The final item on Keith's "ugly list" was the blank, oppressive wall by the staircase. What about painting a mural? I asked Martha. The challenge intrigued her—and the price was right.

Keith and Martha won't get the vast, sleek, ultra-efficient great room-kitchen they saw in their mind's eye when we began, but they will get much of what they need without having to rebuild the back of their house or re-mortgage their lives. Keith brightened at this thought and, as we shook hands goodbye, he turned to Martha and said, "Maybe we'll get that little cabin on the Maine coast sooner than we think."

### IDEAS NOTEBOOK

Extending the house's historic character into the kitchen is a priority. Steve favored salvaging the porcelain enamel pantry sink, but suggested a stainless-steel basin for the main work area. The refrigerator, however, will be paneled to minimize its high-tech look. "I don't mind a little stainless," Martha says, "but I want the rest to be traditional."

Martha was concerned about aggravating her back with a refrigerator-over-freezer combination. But she wanted an extrawide compartment on top, so she's resigned herself to having to reach down for frozen goods.

"I thought about the way I cook and realized I need only the basics," Martha says of her choice of cooktop, double wall ovens, and hood. "I entertain only a few people at a time—ten at most—so I don't need a huge commercial-style range."

### CABINET/COUNTERTOP MATERIALS

Flat-panel maple doors with an ivory finish will front the cabinets, while the sides are veneered multiple-density fiberboard. Rails and stiles will frame open shelves, and glass doors with mullions on wall cabinets will add depth. A honed green granite surface, verde maritaka, will lend pleasing color to the otherwise neutral space.

HANDCRAFTED IN BEND, OREGON."

Free catalog: 1-800-257-9663 ext. P6. www.pozzi.com So, how often do you get burned? With singed chicken? Half-done roasts? And overdone steaks?

Well, your trial by fire is over.

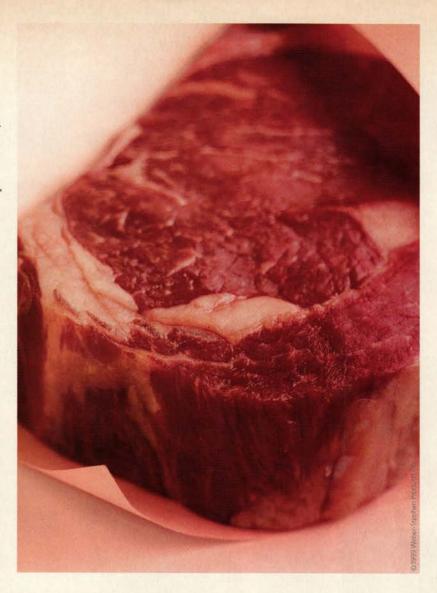

Presenting the Performer\* Charcoal Grill—a revolutionary combination of our gas and charcoal grills.

It's nothing less than the first charcoal grill to offer the convenience of a gas start. No matches. No lighter fluid. No mess. Our patented Touch-N-Go™ Gas Ignition System lights your coals evenly. The first time. Every time.

With our charcoal baskets, or Char-Baskets<sup>™</sup> as we call them, you'll have control, too. For perfect steaks, hamburgers and chops, use Direct Cooking by sliding the baskets together and grilling directly over them. For juicy prime rib, whole chicken and turkey (yes, you can grill a turkey), use Indirect Cooking by sliding the Char-Baskets apart and placing the meat over a drip pan in the middle.

What's more, it's easy to add briquettes to the Char-Baskets, thanks to a hinged cooking grate.

But that's just the beginning. Our patented thermometer not only monitors the grill's internal temperature, but also doubles as a meat probe. The expansive stainless steel work surface lets you keep

### THIS SUMMER, MEN WILL SPEND OVER TWO BILLION Hours grilling. And approximately one Billion Hours making excuses for the results.

everything close by. (There's even a 20-lb. storage bin for charcoal underneath.) And our One-Touch<sup>™</sup> Cleaning System has three aluminized steel blades that scrape and sift ashes into a catcher for easy disposal.

When it comes to durability, our guarantee is strong as steel. We robot-weld heavy-walled steel tubing together for extra strength and stability. Plus, our signature kettle is made from the finest-grade steel and coated with a porcelain enamel that'll never rust, peel or fade. Which is why it's easy for us to offer a 45-day money-back guarantee and five-year limited warranty.

## ASKNORM

### How to fix peeling paint, molding walls, and aging shingles

#### RADIANT-FLOOR WORRIES?

My one-story house, built in 1956, sits on a concrete slab embedded with the copper tubing for a three-zone hydronic heating system. It works well, but I'm concerned about the tubing. Other systems installed in this area at about the same time have gone bad and had to be replaced with hot-water baseboard units.

#### A. DENHOLM, AKRON, OHIO

I thought Richard Trethewey, our plumbing and heating expert, might want to field this one. Here's his advice: "Several variables can threaten old-style (copper- or steel-pipe) radiant floors,

but don't assume yours will fail just because similar ones have. Temperature control is the main issue. Radiant-heat systems need a steady supply of warm water. Sudden "shots" of hot water stress the tubing; so does boosting the temperature above 140 degrees, the maximum for safe operation. And where tubing enters the slab, the metal can chafe due to uneven expansion and contraction. Your heating system may have none of these problems, which could account for its longevity.

"How do you know if your system has failed? If you suddenly discover a cold or hot spot in the floor, or if you see leaking water or hear hissing, you might well be in your neighbors' shoes. Replacement systems using plastic tubing can be installed on top of your old floor,

and they raise the floor level only half an inch. Once you've lived with radiant heat it's hard to switch to another system."

#### ANNOYING NOISE

My furnace has a real drone to it—you can feel vibrations through the floor. Would switching to a gas-fired system help? Also, my present system takes a very long time to heat up. Is this customary? Our electric bills are running high, too, and still we don't have a room in the house that's cozy and warm.

NIGEL MARTIN, MARLTON, N.J.

This is what Richard has to say about your problem: "Fuel really has nothing to do with the sound a furnace makes. Instead, your system might suffer from a combination of poor design, shoddy installation, and wear. You might have blowers that are out-ofround and wobbling, or maybe they're rubbing against something, or maybe there's a loose or broken mounting bracket somewhere. Shimmying sheet-metal ducts are also a source of noise. Have a reputable service company come in and check for the problems I've mentioned. They can also calculate heat-loss figures for your house and determine if your heating system is correctly sized."

#### SHINGLED OUT

My century-old house is weathering badly on the south and west sides, where many shingles are dried-out, warped, and cracked. The shingles on my barn, however, are in fine shape. The main difference seems

> to be that the house is painted and the barn isn't. Should I repaint the house or replace the house shingles? MALCOLM RAY, CANTON, MAINE

> Your barn's shingles are fine partly because they haven't suffered from years of the central heating cycling on and off, which drives moisture through the walls and into the shingles' unpainted backsides. The best solution for your house, I'm afraid, is a complete reshingling on the weathered sides; piecemeal replacement doesn't make sense when more than 25 percent are broken and warping. Leaving shingles unpainted saves a lot of time, money, and maintenance, and I prefer the look-especially near the shore, where white cedar and Alaska yellow cedar turn a pretty silver-gray. But if you paint, dip-prime first, or buy them pre-

primed: Shingles last much longer when all sides are coated.

### GETTING HOMESICK

Friends of mine suffer from multiple chemical sensitivity, which has already driven them out of two houses. Now they've got a piece of land on a hilltop high enough to give them air that's free of pesticides and pollution. They want to build a chemically safe house but don't know where to start.

### PAT SLOWINSKI, KNIGHTSEN, CALIF.

Your friends can start by checking with their doctors. After that, they can head for the Internet. The Healthy House Institute has a Web site, at www.hhinst.com, that covers MCS, as well as topics related to making houses more comfortable for people with asthma or allergies. The site is well organized and easy to use, and includes articles, a bookstore with an annotated list of related publications, and an extensive list of links to other sources.

### ASK NORM

#### **MESSAGE FROM THE PAST**

I found an old scrap of maple attached to a beam in a century-old barn. Dated 1897 and very faded, it seems to have a written message from one of the original builders. Is there a way to make this neat artifact more legible without damaging it?

KEN JANOWSKI, BEACH LAKE, PENN.

Lots of old buildings contain such relics because 19th-century craftsmen often, and quite literally, signed-off on jobs. A colleague once found both the plasterer's and the framer's signatures in his 1888 house in Pennsylvania, and in the March/April 1997 issue of this magazine a reader told of finding a note from a carpenter dated 1889 in the hollow newel post of his staircase. So you have an interesting little project here. The first thing I'd try is photocopying, with the machine adjusted for maximum contrast. If you don't get a legible copy, check with your local police department: someone there might be interested enough to show you how police labs "raise" old or damaged messages and serial numbers.

#### **PROFILES IN SCARCITY**

When I owned an 1886 Victorian (with some rather unique detailing I called "Norwegian Sinister"), I could replace moldings with ease; the same profiles were always available. Now I own a late-1940s house—one that aspires to be a Craftsman-style home, and sometimes succeeds—and I find that replacing molding is not only difficult but nearly impossible. I need new "mopboards" (baseboards) with a stepped profile. Do you know of a source, or are there router bits or shaper heads that can do the job?

BEN LEONARD, RAPID CITY, S. DAK.

The source for just about any molding profile you can imagine is a millwork company. Moldings are their business, and if you need enough to make the setup charges worthwhile, they'll make the necessary knives and charge you a fair price. Fifteen years ago this was a slow and expensive process, but now you can fax them a profile and they'll grind a knife quickly. If you don't need much, you can mill your own molding using a a table saw, a shaper or a router all sorts of router bits and shaper cutters are also available from mail-order catalogs. Just be careful when cutting. And don't forget, it's possible to build complex profiles using layers of stock moldings.

### **RE-SIDING WITH CEMENT**

In the near future, I plan to remove the defective strand-board siding on my house and replace it with fiber-cement clapboards. The current sheathing is a blue foamboard. Because I was told to blind-nail the new siding to solid sheathing, I plan to remove the foamboard and replace it with sheets of half-inch MDO (medium-density overlay)—I have a large supply available to me at no cost. Will it work as sheathing? Will I also need housewrap?

#### ROBERT L. BROOKSHIRE, RICHMOND HILL, GA.

Tom Silva says the MDO should be fine if you use at least 6d nails and put housewrap tape over all the joints—that way, you won't need housewrap or building paper. Fiber-cement claps should be power-nailed, but adjust the nailer so that the nail heads rest on the siding's surface, leaving room for it to expand and contract. Having said that, it might be easier to leave the blue foam in place

PIEDMONT DECORATING 2000 CHAPEL HILL ROAD DURHAM, NC 27707 (919) 489-6230

### ASK NORM

and nail the cement boards to the studs (unless they are more than 16 inches on center); you'll save time and retain the insulating value of the foam. But check with the siding manufacturer first.

#### NO-GOOD ROOF WOOD

Our house has a cedar-shingle roof that's 12 years old and ready for replacement. Should we use red or white cedar? We're also considering asphalt or fiberglass shingles, or even clay tiles.

#### JIM THRASHER, NORTH EASTON, MASS.

I can't see a properly installed cedar roof failing in just 12 years, unless the builder nailed the shingles over plywood sheathing and didn't leave an air space to ventilate their undersides. For replacement roofing, you can use Western red cedar, Alaskan yellow cedar, or redwood. White cedar shingles are suitable only for sidewalls. Sure, you can look at other materials, but I'd forget clay tile. It may last the better part of a century, but it's rarely seen in New England, extremely costly, and so heavy that your rafters may not be able to handle the additional weight.

### POLE PORCH

I want to hang a pole porch on the back of my home, but I can't find any information about pole construction. Do you have any advice? Lou Lassabatere, PALM Desert, CALIF.

Maybe you looked in the wrong place. Pole construction is a simple, quick, and cheap framing system used mainly for build-

ings that house livestock, not people. It's based on large poles fastened with nuts and bolts. At each joint there's usually a grid connector, which is a gadget that resembles a galvanized waffle with spikes on both sides. Tightening the nut squeezes both poles into the spikes, locking them in place. See page 123 for a list of books on this subject.

### MISSING A BASEMENT

We're thrilled with our new house and its historic location: Our township was the site of New Jersey's first Indian reservation and forms the largest part of the Pine Barrens/Wetlands Preservation Area. The house has everything we were looking for—except a basement. We don't know why, but it's the only one in our development that has a crawl space. Is it possible to put in a basement?

#### RYAN AND KAREN STRADLING, SHAMONG, N.J.

Anything's possible, but is it legal and cost-effective? My house has only a partial basement because I decided not to spend a fortune blasting through solid bedrock at one corner of the foundation. Maybe the water table beneath your house is high, or maybe there are restrictions on your lot that relate either to the wetlands or to the former Indian reservation. Perhaps your developer was trying to save a few bucks on a spec house. (Ask him, if he's still around.) If everything checks out okay with the town building and zoning department, get several bids and weigh the expense against the advantages of gaining extra space.

### ASK NORM

#### FOR WHOM THE PAINT PEELS

An 1893 clapboard Victorian has been in our family for five generations. It has ornate woodwork, archways, pocket doors, 10-foot oak entrance doors, and a coal-burning marble fireplace. It's on the edge of Ypsilanti, Michigan, where Preston Tucker lived while designing his innovative but unsuccessful automobile. The structure is sound but the roof and gutters are failing, and paint refuses to stay on the siding—it peeled less than a year after a professional paint job. We need your advice.

### ROBERTA BUSH-TAYLOR, CHERYL AUERBACH, SALINE, MICH.

I have something of a personal interest here: My father fell head over heels for the Tucker, but never had the chance to order one. Anyway, repair the roof and gutters first-leaking water could be damaging the structure and could be part of your paint problem too. Then tackle your siding. The peeling might be due to poor surface prep (the most common cause), new paint that's incompatible with the old, or water vapor moving through the walls. Installing exhaust fans in the kitchen and bathrooms will help remove excess moisture, as will more thorough scraping, sanding, and priming before repainting. Getting back to bare wood is the best way to minimize the chance of peeling, but that leaves you with a lot of scraping. When T.O.H. faced the same situation on the Watertown project, we decided it was cheaper and safer (considering the layers of lead paint) to replace all the siding.

#### MOLDING AWAY

In my 1955 brick house, mold is abundant in closets and on some walls. Covering the windows with plastic sheeting hasn't helped. The house sits on a 2-foot crawl space, which is vented about every 8 feet. No water gets in there, but the space is cool and damp yearround. Two large oaks in the front yard keep the house shaded. What do you suggest?

PAMELA KING, ALEXANDRIA, LA.

The window sheeting is making things worse by trapping moisture in a space that's already too damp. But you could use plastic in the crawlspace to keep ground moisture from working its way into your house. Cover the dirt with 6-mil plastic sheets overlapped at least six inches, then cover them with a couple inches of sand. You didn't say how big those vents are, but in any case, make sure they're never obstructed.

#### LET THE GRAY STAY

My decade-old cedar deck is dark gray where the sun hits it, but I want a true cedar hue to match the shaded part. If I stained the deck, how long would the color last?

PAUL CANGIALOSI, BROOKLYN, N.Y.

Is it in Brooklyn where they say *fugged-aboudit*? That's what you should do. Gray is the natural color of cedar exposed to the elements—sunlight guarantees that. Why fight nature? Leave your deck alone except to apply a penetrating water-repellent sealer each fall, and maybe again each spring, to preserve the wood. Sealer won't restore the original color, however, and may even darken the wood slightly.

#### FAUCET FIX

Hard freezes aren't frequent in this locale, but I want a freeze-proof faucet nevertheless. Trouble is, my brick-faced concrete foundation is 13 inches thick, and I'd have to enlarge the hole for the new faucet's supply pipe to at least 1½ inches. To do that without chipping the brick faces I'll probably need a core bit driven by a rotary-hammer fitted with drill extensions. I need advice on how to achieve the best results.

L.W. LARSON, BIRMINGHAM, ALA.

You've got it figured out right; now you just have to amass the expensive equipment. Why don't you simply use the faucet's shut-off valve inside the house? Down South, that's really all you need. Just leave the faucet open so it drains, and there will be nothing to freeze up. Believe it or not, I still do that in my house, even though I have freeze-proof faucets.

#### LOOKING FOR MONEY

You've inspired me to refurbish my great grandparents' late-1800s homestead in rural

## ASK NORM

South Dakota. This five-room "little house on the prairie" has been vacant for about 50 years and will require much work. My dream is to make the place livable and put some of the original furniture and fixtures back in. The original claim shack is also located on the property. Do you know of any funding available for restoration projects?

### BARBARA RABA, SELBY, S. DAK.

We are currently restoring our third old house. It was nearly destroyed by the previous owners, but it's sitting on 2-1/2 country acres and we couldn't pass up the deal. Do you know of any programs that will help us? On our last fixup we didn't make much of a profit, even though my husband and family members did all of the work.

#### CINDY YOUNG, CLIO, MICH.

These letters seem similar, but the circumstances they describe are actually quite different. Barbara's property in Selby may have historical importance, so the possibility of receiving financial help from local, state, or federal agencies is worth investigating, starting with the county historical society. Cindy's house in Clio, however, involves a standard residence. I'm afraid the outlook for a grant, or even a low- or no-interest loan, is pretty dim. Though Michigan might be among the states granting "energy-saver" rebates for added insulation, it's unlikely that anyone (besides relatives) will give money to fix a house you plan to sell for profit. For your next rehab, however, consider a federal 203(k) mortgage, which combines purchase and renovation funds in one package.

### HERE'S THE DRILL

My wife and I recently moved into a new home and found that no one remembered to secure the dishwasher to the granite countertop. Can I do it myself?

ED DUNK, MARION, IOWA

Yes. It's easy, but a bit tedious. Take the screws supplied by the dishwasher manufacturer to the hardware store and get matching lead expansion shields (mismatched screws and shields could crack granite). Chuck a diamond drill bit (available from companies that supply stone countertop fabricators) into a variablespeed drill at low rpm; cool the bit by pulling it from the hole frequently. Finally, insert the shields and drive the screws. That's the way it's usually done. But modern epoxies are so good that you could probably just glue the mounting clips in place without drilling.

### STRIPPING COLUMNS

I own a lovely one-story 1905 Queen Anne in my city's historic district. Recently, I stripped the white paint off the porch columns and found a layer of black underneath. What is it and how do I get rid of it?

ELISA TRUJILLO, LONG BEACH, CALIF.

It's probably a tough old coat of lead paint; get rid of it the same way you got rid of the white. Try a stripper made to penetrate multiple layers. Be sure to follow the directions exactly (many users remove the stripper too soon, before it can fully penetrate). Just remember to wear gloves, goggles, and a face-mask respirator.

### OIL IT UP

Our house dates to somewhere between 1785 and 1800, and about seven years ago we put on new cedar roofing. How should we maintain it? We've asked six or seven roofers and have not gotten the same answer twice. One says to just clean the roof with a hose; others recommend sealants.

MICHELE AND TOM WEISZ, WILTON, CONN.

I was pretty much intending to ignore the wood shingles on my roof, except to clean off leaves and other debris, until I checked with Tom Silva. He's used linseed oil, with excellent results. The oil flattens out even old shingles that have begun to curl, he says, and adds maybe another five years of life to the roof. It's not an annual task maybe do it when you have your house painted, say every seven years. But for safety reasons, oiling a roof is absolutely not a do-it-yourself project—I can't overemphasize that.

## **Tearing Down the House**

0000

Sometimes the best way to renovate is from the ground up

hree years ago, Christine and John Bowes

learned that a property they'd long had their eye on—a 100-year-old cottage on a 3-acre lot would soon come up for sale. The couple knew the house was too small for their needs, and also felt it was too close to the main road. Worse, a 1960s renovation had stripped the place of most of its charm. But it wasn't the house they were after; it was the land. "We'd admired the view for years," says Christine. So after buying the property, the Boweses demolished the little cottage and built a 12-room Georgian Colonial in its place, joining an increasing number of home owners who are forgoing major renovation for something far more radical: the tear-down.

Once a rarity, the tear-down—the demolition of a house in order to put up a new one—has become a growth industry. Patrick Cunningham of C & C Partners, a design-build firm in Los Angeles, has seen tear-downs literally take over his business. "In 1990, they were about 20

percent of our work. Now it's more like 98 percent." The reasons for the boom are simple: Rising wealth and low interest rates have fueled enormous demand for empty land in metropolitan areas, along coastlines, and in other

### BY CLINT WILLIS

prime, heavily developed areas. But the scarcity of those kinds of properties has made their prices skyrocket, aiming the spotlight on parcels like the one the Boweses bought. "You have relatively modest homes sitting on very valuable land," says Scott Halliday, president of a home-building company in Ocean City, New Jersey. It's that combination—basic house, nice lot—that people are increasingly eyeing, and buying, fully intending to whack the structure and start over. Tear-downs can also make sense for home owners who are happy with their location but utterly dissatisfied with their house.

To be sure, a tear-down may seem drastic and wasteful, but it can nonetheless be an economical way to get the kind of house you want in the place you want it. "Many people who come to us for teardowns are paying less for the house and the land than they'd pay for an undeveloped parcel," says New Canaan, Connecticut, builder-developer Caroline Wheeler.

Besides the potential front-end savings, a tear-down makes sense when extensive remodeling—even when it's coupled with a large addition—simply isn't feasible. Many superb lots are occupied by '50s, '60s, or

36

### THREE WAYS TO MAKE YOURSELF COMFORTABLE.

PowerSaver\*Air Conditioner

High efficiency means lower power bills and low sound ratings mean quiet operation. Made with enhanced coil guards to prevent damage and reduce the possibility of leaks, the PowerSaver comes with a 10-year compressor warranty.

### Elite 14" Air Conditioner

Energy-saving two-speed compressor reduces power bills, while a low sound rating means quiet operation. A 10-year compressor warranty cuts repair costs, while enhanced coil guards prevent damage and reduce the possibility of leaks.

### Elite 14" Heat Pump

Perfect for zoning, the Elite 14 Heat Pump is built to be both energyefficient and quiet. Its enhanced coil guards prevent damage and help prevent leaks, while the compressor's 10-year warranty keeps repair costs low.

### FINANCES

'70s ranch-style or split-level houses that have little appeal to people looking for larger, more traditional designs. In addition to their aesthetic shortcomings, post-war houses often have small kitchens and bathrooms, low ceilings, and inadequate wiring. "It's cheaper to start from scratch than to bring many houses up to today's standards," says Wheeler.

What's more, financing a tear-down isn't all that difficult or exotic. As with any new construction, a lender will use blueprints to appraise the house-to-be and lend an amount based on that value. If you are tearing down a house you own, the bank will use some of the loan proceeds to pay off the existing morthard for owners to visualize what the new house will look like," says Wheeler. "The existing one gets in the way."

Your builder should also find out about zoning requirements (see "Towns vs. Teardowns") and, in areas that are less developed, the likelihood that someone will put up a house on an adjoining lot. This is information a contractor can get from town hall or from other builders. "You want to make sure you'll have that view for a lot longer than just a year or two," says Cunningham.

Your architect/builder duo should also confirm that a tear-down will be more economical than a major renovation. When com-

### TOWNS vs TEAR-DOWNS

When a tear-down involves replacing a modest house with a larger one, home owners should look closely at zoning laws. The new plans could run afoul of ordinances governing a house's maximum height, its distance from property lines, and its overall size, not to mention even pickier rules about architectural features such as windows and porches. "A lot of areas now have laws that limit what can be built on top of a tear-down," says Christopher Senior, staff counsel for the National Association of Homebuilders.

Having a permit application rejected, however, doesn't necessarily end the dream of a new house. The next step is to apply for a variance, which allows exceptions to some laws, although neighbors must agree with any rule-bending. The city zoning board typically notifies nearby residents of the variance request and asks for their opinions at a public hearing or in writing, so it's wise to explain the plan in advance and get them on your side.

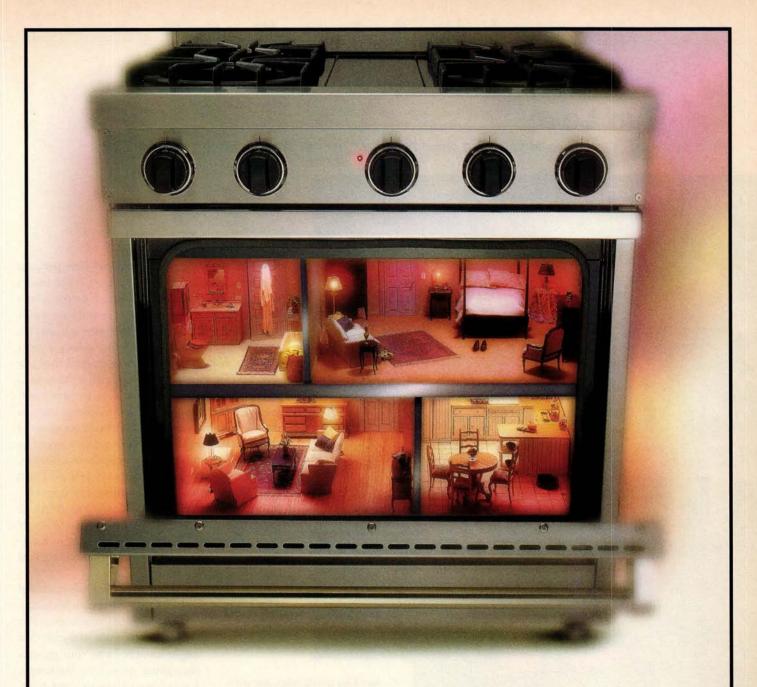

The process typically requires a real estate attorney, whose bill could come to \$1000 if the application is unopposed, and as much as \$10,000 or more if it meets with resistance that leads to litigation. Winning the variance might require some compromise, such as the loss of a couple of hundred square feet. But that might not be much to relinquish when the whole house is at stake.

gage and disburse the remainder over the course of the demolition and construction.

Yet while financing may be relatively simple, tear-downs can be anything but, starting with finding a suitable property. Ideally, you want a great piece of land with a wreck of a house so you won't end up paying a lot for a dwelling that has no future. In particular, avoid a place that's been freshly remodeled, since it'll likely come on the market at a premium price. Before you buy, have an architect and a builder—preferably with tear-down experience—assess not only opportunities, but also potential problems of building on the site. "Putting up a larger house on a relatively small lot can pose significant design and construction challenges," says Cunningham.

Professionals who've worked on teardown projects can tell how much new construction will fit on the property, how to take advantage of views, and which trees and other landscaping can be saved. "It's paring cost projections, the tear-down numbers should include a realistic amount for demolition. Taking down a one-story ranch, for example, might cost between \$5,000 and \$10,000, but a two-story Colonial with, say, a concrete terrace and a detached garage could run from \$10,000 to \$20,000.

If remodeling still seems likely to be cheaper than demolition, give careful thought to the compromises that a renovation could require. Would you end up with the same low ceilings? Can the old walls accept windows big enough to brighten dark rooms? Will there ever be enough storage? The more you want from a renovation, the more likely it is that a new house will be better able to provide it. Also bear in mind that a new house can maintain a higher resale value than one that's been extensively remodeled, especially when paired with that most desirable of real estate features: location, location, location.

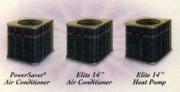

## YOUR HOME IS YOUR OVEN?

Maybe there's something about your living room that brings to mind a

bed of hot lava. Or maybe you have a bedroom that feels more like a stifling dir G are no a steamship. If so, Lennox has air conditioning systems that can make

these problem areas feel nice

and cool again. Take our Elite 14 and PowerSaver air conditioners and our Elite 14 heat pump, for example. They're all quiet, efficient energy savers that will make every room feel

## **Turf Love**

Now's the time to give patchy, weedy lawns a little TLC

n spring, when lawns look their best, our optimism grows along with the burgeoning blades of grass. Surely, we hope, this plush carpet is here to stay. But as spring gives way to summer, weeds intrude, drought and disease take their toll, and the emerald turf begins to show other colors, a paler green or, worse, yellow or brown. And that just won't do for anyone who wants an unblemished expanse of 100-percent grass. The quest for perfection, while rarely consummated, often leads to the application of massive and expensive doses of chemicals. But there are easier, less toxic ways to fix flaws and have a lawn that's virtually trouble-free.

Take weeds, for example. A few of them dotting the turf is little cause for concern, but when they threaten to dominate, think of the lawn as though it were a garden: Flower beds get weeded and so can lawns, and in a surprisingly short time with a long-handled tool that lets you stay on your feet.

To be sure, a lawn overrun with weeds may need a little chemical help from a well-chosen herbicide. Once weeds have been eliminated, new ones can be stopped with an effective non-toxic herbicide that

> might already be in your pantry: corn gluten meal. One application a year (about 10 pounds per 1,000 square feet, in early spring) can stop dandelions, crabgrass, purslane, and other undesirables before they start. Spreading corn gluten in Sep-

start. Spreading corn gluten in September will shut down such fall bloomers as henbit, chickweed, and crabgrass.

Eradicating weeds, however, only treats the symptom of a larger problem: poor soil and other conditions that inhibit turf growth and allow unwanted plants to elbow their way in. Nothing encourages weeds more than compacted soil. To find out if you have it, jam a screwdriver into the turf after a rainstorm; if sinking the shaft up to the handle takes a great deal of effort, the soil

Patches of dead grass with chewedoff blades are a sign that webworm larvae have been feeding. Some newer ryegrasses resist this insect.

needs to be loosened up. For lawns under half an acre, a hand aer-

ator-a couple of hollow tubes on a long handle-will do the job.

When pushed into the ground and then pulled out, the tubes

extract sausages of soil and deposit them on the surface. For larger

lawns, rent a power aerator. Follow the aeration with a top-dress-

ing-covering the lawn with a 1/4-inch layer of sand, topsoil, or

finely ground compost-which will help break up the soil even

patches of grass. Grubs, for example, live underground as white-

colored larvae that cut grass plants off at the roots. In cases of

severe infestation, big mats of turf turn brown and become loose

enough to lift from the soil. To check for these bugs, cut a square-

foot patch of sod, roll it back, and look at the roots. If you find

Other critters that are bigger and far less friendly can kill large

more and reintroduce beneficial microorganisms.

When grass suddenly turns brown, fungus is at work. Control it with a fungicide, then aerate and reduce shade to prevent its reoccurrence.

An invasion of weeds is a sign of soil compaction or poor drainage. After pulling them out, improve the soil to promote healthy turf.

Thin turf may not be getting enough

sun. Over-seed with a shade tolerant variety of fescue in the North or St. Augustinegrass in the South.

patch, dollar spot, fusarium patch, or snow mold. Any of these must be dealt with or they can turn grass into black mush or create brown spots virtually overnight. If you look closely, you may see strands of fungus on the grass, and striped or rust-colored blades. Most diseases can be controlled by fungicides such as iprodione, thiram, and mancozeb-at least temporarily. For the long run it's better to alter the conditions and practices that give rise to disease. These

include too much shade, excessive moisture, poor air circulation, and, ironically, too many applications of chemical herbicides, fungicides, pesticides, and fertilizer, all of which can kill worms, bacteria, and other beneficial soil life and allow diseases to get the upper hand. Preventive measures include watering only when necessary (and never in the evening), fertilizing no more than twice a year,

White grubs

eat roots

41

more than six grubs, treat the entire lawn in late summer or early fall with an insecticide containing carbaryl or neem. Or apply milky spore, a safe bacterial agent that colonizes in the soil and continues killing grubs year after year.

Other insects are usually minor nuisances, but occasionally chinch bugs, sod webworms, and billbugs, to name a few, do enough damage to warrant treatment. You'll

see their handiwork as holes in individual blades and as patches of dying turf. To look for blade-eating billbugs, run your hands over a square yard of grass; if more than 20 insects emerge, treat the lawn with

insecticidal soap or pyrethrum. Crowndwelling insects such as chinch bugs are more difficult to flush out because they spend most of their brief lives deep in the plant. To find them, remove both ends from a two-pound coffee can, sink it into the ground, and fill it with soapy water. If more than 10 insects land in the water after 15 to 30 minutes, the lawn needs a billbug treatment.

If it's not insects making your lawn look ratty, it could be a disease such as brown THE WAY TO MOW

Mowing can be the best or the worst thing you do for your lawn. The right treatment includes cutting oftenup to twice a week-and setting the mower high. How high? Each grass species has an optimum height: 4 inches for tall fescue, 3 inches for bluegrass and St. Augustinegrass, and 21/2 inches for ryegrass. Here are some more tips:

- · Removing more than a third of the blade shocks the plant, which can weaken the turf. If a lawn looks a little brown the day after a mowing, it's been cut too low.
- Cut the grass slightly below its maximum height through most of the season, but raise the mower 1/2 inch during hot or dry periods.
- If the lawn takes on a gray cast after mowing, or the grass has ragged tips, the mower blade needs sharpening.
- Cutting along the same rows week after week can create ruts of compacted soil. Vary the route about once a month.

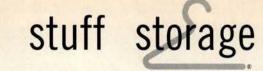

aerating the soil, and pruning shrubs and trees to reduce shade and improve air circulation. In some cases, the turf will have to be completely replaced with a more disease-resistant or shade-tolerant variety. It may even be necessary to give up on grass entirely and put in ground covers or paving stones.

Lawn problems can also be caused by things less sinister than bugs or diseases: For instance, someone may have spilled gasoline, pesticide, or fertilizer; or the neighborhood dog may have been making its rounds. Tree

and shrub roots can also create bare spots, as can poor mowing practices (see "The Way to Mow"). Before attacking bugs and diseases, eliminate all these possibilities.

That's actually good advice for dealing with any problem-question the cause. Get to know your lawn. Find out where shade lingers in the morning or where water puddles after a rain. Keep track of when you mow, water, and fertilize. In the process, you'll discover that lawn problems aren't such a mystery, and that solving them isn't so difficult.

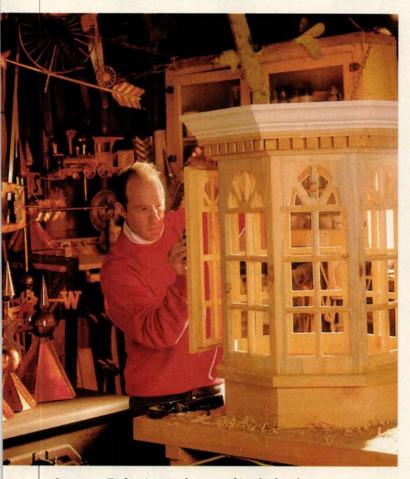

Where do you put the stuff that you're about? All that you are? Tell us. We're listening. And this is how we start to create your custom solution.

## Man at the Top

Lawrence Zechmeister makes everything by hand, even the lumber, which he cuts from white cedar and white pine logs and dries in his shop. To get a completed cupola up on the roof, Zechmeister used to strap the whole unit on his back and climb a ladder, which, he says, "nearly killed me a couple of times." Now he lightens his load by building the structure in three pieces that he can haul up one at a time. Installed, his cupolas cost from \$1,600 for a two-foottall unit to \$10,000 and up for one that's bigger and more elaborate."I never build the same one twice," says Zechmeister. "What would be the thrill in that?"

> PHOTOGRAPHS BY ROBERT NEUMANN

Name: Lawrence Zechmeister Profession: Cupola builder Workshop: St. Clair Shores, Michigan

He soon learned that cupolas have been perched atop barns for centuries, venting away heat and stale air through louvered sides. Their close relative, the widow's walk, gave wives of seafarers a place to watch for ships returning home,

#### BY CURTIS RIST

Today, of course, they're also an icon of traditional residential architecture, adorning house and garage rooftops, though only is original function

sometimes performing their original function.

When passersby saw what Zechmeister did on that barn project, he started getting calls from home owners wanting to give their houses a crowning touch. Eventually, Zechmeister, now 45, dropped carpentry altogether and taught himself how to make everything from the cupola's arched windows to its shaped copper roof and even the weather vane that often twirls on top. For inspiration, he searches out and sketches historic houses and incorporates details from them into his designs.

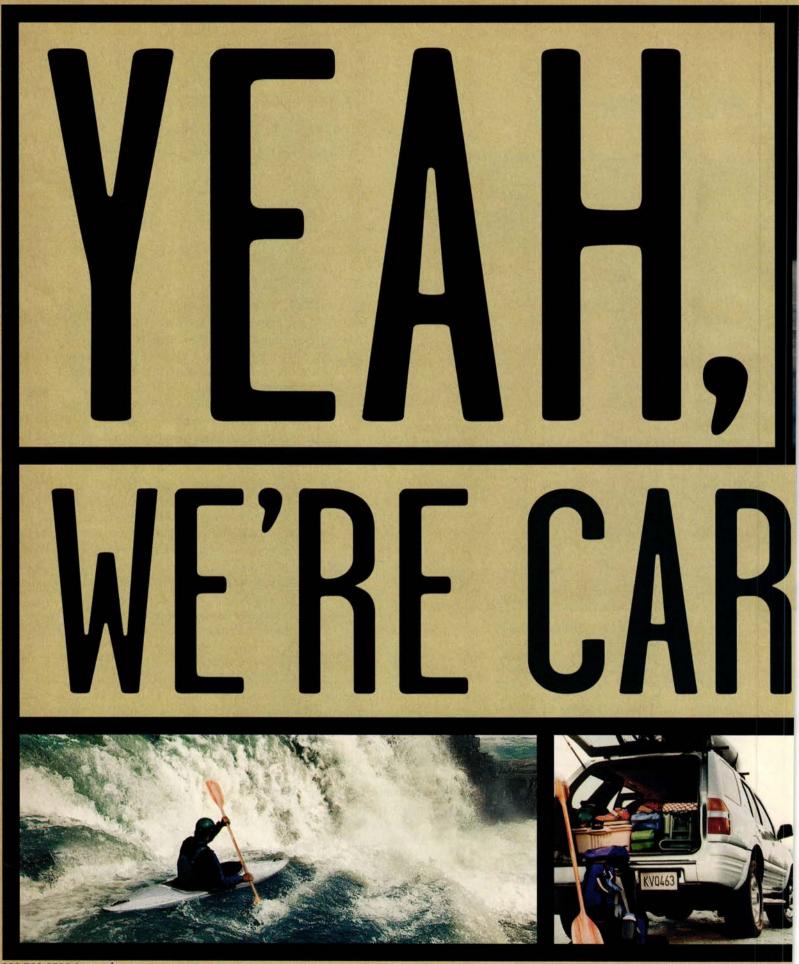

Building one of his eight-sided creations can take a month or more, after which Zechmeister always does the installation, not wanting to leave the critical details of waterproofing to anyone else. "Once it's up,

somebody always seems to bring out a bottle of a champagne," he says. "People really love these things."

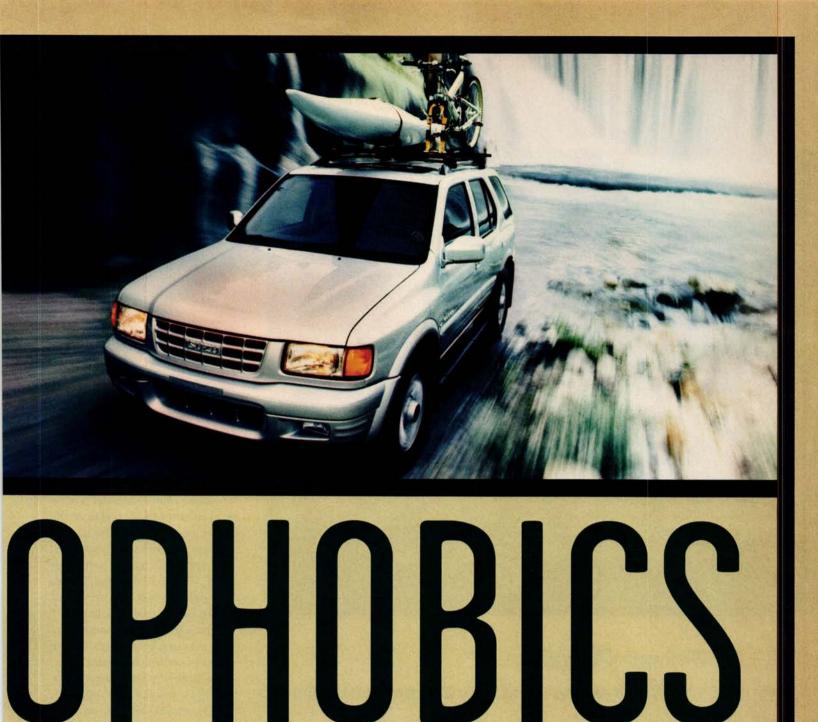

Some owners take their passion to extremes. Zechmeister knows of several who took their cupolas with them when they moved. And before two of his customers headed for the great cupola in the sky, they instructed in their wills to have their ashes stored in the ones they left on Earth. "That's the way it is with cupolas," says Zechmeister. "One day you don't know what they are; the next day they encompass your whole life."

## **Prime Paint**

### A long-lasting job starts with a peek inside the can

than a decorative element. "People put paint on their houses for looks, but what they're really doing is protecting the wood," says Tom Silva,

CURTIS RIST

ew things influence the look of a house exterior more than a new coat of paint. It adds style, freshness, and color-whether it's the wild palette of a Victorian or the sedate tones of a Colonial. It's also a singularly American phenomenon, says architect Robert A.M. Stern. "Other cultures built houses of masonry, but we turned to wood-and, by necessity, to paint." That's because paint is far more

T.O.H. general contractor. Paint

keeps out water, which fosters rot, and blocks the degrading effects of ultraviolet radiation. It may be, in fact, the perfect preservative. The clapboards on the recent T.O.H. project house in Milton, Massachusetts, for instance, survived nearly 300 years before the show stripped them bare. Reprimed, then covered with two topcoats, the old siding is ready for the next century.

If only the paint itself were as durable. Bombarded by weather, baked by the sun, stretched and compressed by wood's continuous swelling and shrinking, a paint skin just five thousandths of an inch thick (think of a sheet of newspaper) can maintain its grip for only so long. If made of the right stuff and applied to a properly prepared surface, that skin should look as good in a decade as the day it was brushed on. But after that, even the best coatings need to be refreshed. Then it's time to pay another visit to the paint store and choose among the myriad options lining the aisles.

Fresh paint puts a new face on this 1870 Victorian and protects its wood exterior from wear and tear.

To make the right choice, first know what's being painted. (Is it trim, siding, or decking? If bare, is it redwood, cedar, or pine? Or is it already painted?) Then turn this page and get acquainted with the ingredients, which will help you create a finish that's as durable as it is beautiful. "Wood's great," says painting contractor Andrew D'Amato of Milton, Massachusetts. "But what's really remarkable is the paint that covers it up." (continued on page 48) Just as an exquisite frame glorifies a work of art, a roof can add great visual impact. And with Celotex<sup>®</sup> Premium Laminated Shake Shingles the beauty is more than just visual. They are made to withstand damaging brute-force winds and wind-blown fiery embers. And

they come with 25 years to lifetime warranties, plus they have earned the Good Housekeeping Seal. All very comforting benefits indeed, but when you see the pronounced shadow effects created by the husky thickness seen only in a cedar shake roof...well, just look for a Celotex Roofing Contractor in the Yellow Pages. They are ready and waiting to show you shakes that

are too beautiful to be called just shingles. They will give your home the Crowning Glory.

### INTRODUCTION TO PAINT TYPES

Most oil-based paints have resins made from chemically modified soy or linseed oils (alkyds) dissolved in mineral spirits. The so-called latexes have vinyl or acrylic resins suspended in water. The oils level out and adhere better, and can be applied in cooler weather (40 degrees instead of 50 for latex), but the latexes are easier to clean up, less polluting, and more breathable, flexible, and durable, depending on the quality of the resins. Painter Andrew D'Amato uses latex for the body of the house and saves oil for the trim, where he wants a glossier sheen, free of brush marks.

PRIME A coat of primer lays the PREP Water-repellent wood preserfoundation for a lasting paint job. Primers are paints formulated with a high proportion of binder in order to adhere tightly to wood and to the next layer of paint. But they are low in sun-blocking pigments and so need two topcoats for full protection. Water-based primers have improved greatly in recent years, but D'Amato still prefers the oil-based varieties for their ability to penetrate and to block the stains that bleed out of redwood and red cedar.

vatives are transparent coatings. When applied to bare wood, they dramatically extend paint life, according to researchers at the U.S. Forest Products Laboratory and elsewhere. "Water vapor migrating in and out of wood is the primary reason paint peels," says Mark Knaebe, a chemist at the Laboratory. "A treatment with a paintable water repellent stabilizes the wood so paint stays stuck." Applying more than one coat, however, may invite peeling.

PAINT Finding quality takes detective work. Look on the label for 100 percent acrylic resins, which are generally recognized as more durable and fade-resistant than the alkyds or the similar-sounding vinyl acrylics. Also, look for high levels of titanium dioxide in light-colored paints. (Iron oxides are the pigments in dark paints.) If the ingredients are not listed on the label, ask the paint store for a material data safety sheet (MSDS). It will list some, though not all, of a paint's constituents.

STAIN Not to be confused with penetrating stains, solid-color stains are actually thin, film-forming paints that allow wood texture to show through. They brush on with ease, have no sheen, and have less buildup (their film thickness is less than half that of paint). But thinness has its downside: a shorter lifespan. Two coats of solid-color stain might last six years before they need recoating, compared to eight or 10 years for paint. Like any paint, solid stains should be applied over a primer.

#### BASIC INGREDIENTS

minerals and synthetic compounds that give paint opacity and color. Binders: resins that hold the pigment to the surface and form a film after the carrier evaporates. Garriers: solvents or water that keep the binders and pigments liquefied and evenly dispersed so they can be brushed, rolled, or sprayed.

### SPECIALTIES OF THE HOUSE

Latex paints claim the lion's share of the paint market in the United States, but several oil-based coatings have staked out some important niches, in part because of their ability to resist moisture, stick to surfaces, level out brushstrokes, and hold a high gloss.

### WET GLEAM

This Dutch-made marine-grade enamel is a lustrous, oil-based paint suited for boats or houses. It's applied in thin coats, because it contains an abundance of finely ground, highly opaque pigments more than 70 percent by weight. The manufacturer also offers a breathable oil-based house paint designed to solve peeling problems.

### HIT THE DECKS

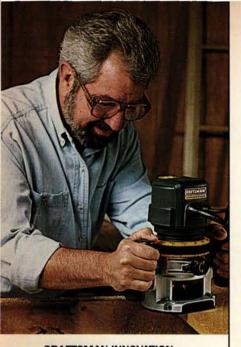

Porch and floor paints have to survive the added burden of gritty foot traffic, so they'reoften urethane-fortified. An antislip aggregate should be added when used on uncovered decks, otherwise this shiny coating gets slick as ice when wet.

#### NATURE'S WAY

Nearly all paints, including latexes, use binders and solvents synthesized from petroleum distillates. A line of non-synthetic paints from Germany contains binders from plant oils (linseed, castor, and pine), and solvents from orange and citron peels. The paints aren't petroleum-free—one of the solvents is an undistilled petrochemical—but the manufacturer says they are biodegradeable, won't cause smog, and don't have to be treated as hazardous waste.

### CRAFTSMAN INNOVATION **OFTEN COMES FROM TALKING** TO PEOPLE WHO USE TOOLS

Your ideas help us develop several power and hand tool innovations each year. For instance, we talked to wet/dry vac users who told us they would like a vac that wouldn't tip over and a hose that wouldn't come loose when you pulled on it. The result? The new Craftsman low profile vac with a Pos-I-Lock hose. But, we went a little further. We gave it a newly designed motor that runs quieter even with more power. Thanks to you, Craftsman tools keep getting better.

### **CRAFTSMAN IS THE #1 RATED QUALITY BRAND IN AMERICA!**

In a major consumer study, American men ranked Craftsman the #1 brand in quality.\* When Craftsman tools were first introduced, the goal was to make the most dependable, innovative and affordable tools ever made. In the last 70 years, we've never strayed from that goal. \*Source: January 1998 Equitrend® Brand Survey conducted by Total Research® Corporation. Top 5 quality brands as rated by American men: 1. ### **Bungalow Bump Out**

More room for the '90s, while retaining a '20s charm

After

apartment in 1988, Michael and Margriet Finnegan reveled in the stuccoed 1925 bungalow they found on a quiet street in Cos Cob, Connecticut. They loved its broad front porch and cozy rooms, as well as the fieldstone wall surrounding the deep backyard. But after 10 years, the two-bedroom house's 1,200 square feet began squeezing them tighter than a bad pair of shoes. There were barely any built-in closets, and Margriet—

Architect Duo Dickinson grafted a dramatic addition onto the back of Margriet and Michael Finnegan's bungalow, which increased their living space by 70 percent. The master bedroom and bath are upstairs. Downstairs, in the family room and expanded kitchen, they now enjoy a view of their backyard through a triptych of 8-foot- high windows. who manages a women's clothing store—had to keep her prodigious wardrobe in the basement. The tiny bathroom made it difficult for them to get ready for work at the same time, and in the kitchen they were jammed elbow to elbow washing and drying dishes at the enameled iron sink. "We were squished," says Michael, a printing salesman. "We couldn't afford to move up, and we also loved this place. We decided it would be better for us to stay and add on."

The first architects the Finnegans talked to proposed building boxy ells with decks in the back—just like the ones on many neighboring

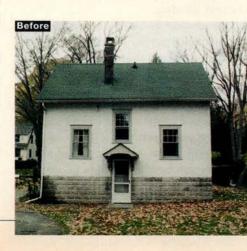

houses. "But I wanted something with some personality," says Michael, and Margriet wanted something that made the most of their beautiful yard. Eventually they found architect Duo Dickinson of Madison, Connecticut and an affordable solution to their dilemma. Dickinson sketched an imaginative 800-square-foot addition to the back of the house that would

give them a new master bedroom and bath, a larger kitchen, and new family room (see "Whimsy on a Budget," p. 55). "It would have been easier to just tear the house down, or add something huge that would stick its tongue out at the original," says Dickinson. "But I thought this was the sweetest little house; I wanted to preserve that feeling."

> He didn't feel as kindly toward the floor plan, a classic four-square with small rooms clustered around a center stairwell. This layout had locked the Finnegans into an antiquated Ozzie-and- **BY CURTIS RIST** Harriet way of life, where every room had a separate function. When they entertained, for instance, it was, "sit down in the living room, eat in the dining room, then wave good-bye," says Dickinson.

At first, he fit the new rooms in a curved addition, but the cost was at odds with the Finnegans' budget. Instead, they agreed on a trapezoidal footprint, partly because the shape looked nice ("Duo's never met an angle he didn't like," jokes Michael), and partly because it would let them sneak the car

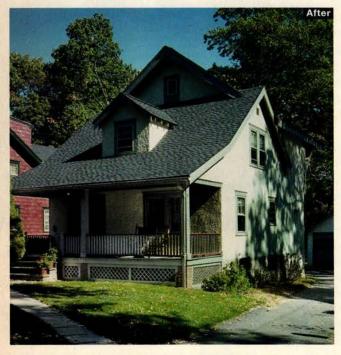

53

AFTER PHOTOS: MICK HALES; BEFORE PHOTOS: DUO DICKINSON

### WHIMSY ON A BUDGET

Michael and Margriet Finnegan had one thing clearly in mind when they expanded their house: "We wanted a family room that stepped down from the rest of the house, and that had windows looking out the back," says Margriet. The twostory addition Duo Dickinson designed for their house gave them just that-complete with a fireplace and a soaring 11-foot ceiling. They also got a new bedroom, a large walk-in closet, an upstairs bath, and a larger kitchen downstairs. By specifying stock cabinets and laminate countertops, Dickinson was able to give them what they needed-more space-at a price they could afford. "The design always came back to the budget," Dickinson says. That didn't stop him from indulging in some architectural whimsy: note the tapered chimney poking out of the roof and the giant brackets supporting the eaves.

From the street, the only sign of Dickinson's two-story addition is a gable peeking over the original roof line. "We kept all the front elements the same," he says. "That way, the house still fits into the neighborhood."

54

past the house and into the garage out back.

While designing the addition went smoothly, the task of building it didn't. The Finnegans hired a contractor recommended by Dickinson, and not long after the back roof was ripped off to begin the framing. Margriet went to stay with her mother, but Michael insisted on staying put, to keep an eye on construction. "He slept on a daybed in the dining room, with his suits on a curtain rod, and the wind howling through," says Margriet.

In retrospect, it's a good thing he did: Midway through construction, he noticed fewer and fewer workers showing up. Construction ground to a halt as the contractor went broke. Rather than get bogged down in a long and costly court battle, Michael jumped into action and made himself contractor. "I went to town hall, put my name on the permits, and that was it," he says. Although he had no experience in construction, with the help of Dickinson and Tim Peterson, the lead carpenter for the original contractor, Michael managed to complete the project only three months behind schedule.

As it was, the Finnegans spent around \$135,000 on their addition, about \$20,000 more than they had originally planned due to their

contractor's untimely bankruptcy. But rather than feeling embittered, they calculate their happiness using a different ledger. They still have the pretty little house they've always loved, only now it has air-conditioning, two bathrooms, three bedrooms, a fireplace, a kitchen that's doubled in size, and a dishwasher, "our first in 10 years," says Margriet happily. Gone are the days of cramped closets—the Finnegans actually get dressed in the same room—and of old-fashioned formality. Now both living room and kitchen flow into the spacious new family room, inviting people to congregate, socialize, and enjoy the backyard. "They can have a bunch of people over in the evenings and sit around, watch TV, eat and talk anywhere and everywhere," says Dickinson. "It's a relaxed, '90s way of living."

# IS IN ENCOURSE (It helps to have a saint doing the work.)

The most important part of any remodeling job is finding a contractor who can nail the details. Enter ImproveNet. We screen over 600,000 contractors, architects and designers and help pair homeowners with the most reliable ones in their

area. We check everything from professional references to licensing, legal and credit history, so you don't have to. And because we're independent, contractors can't pay to get into our matching service. Whether it's for a large project (kitchen, bathroom, deck) or a small repair or maintenance job (painting, plumbing, wiring), we can recommend up to four willing, available and, most important, ImproveNet-certified contractors, usually within 48 hours. So why take a leap of faith on your next home improvement project? Visit us on the Web or over the phone at (800) 638-2929.

### BOWLED OVER

Round vessels reminiscent of old-time washbasinssans pitchers—are turning bathrooms into sculpture galleries. Crafted in durable materials such as stainless steel, far left, and vitreous china, left, these "floating" sinks are attractive both inside and out. Above-counter lavatories are "great for tall or elderly people who can't bend over much," says New York architectural designer Eric Cohler. "Unlike undermounted basins, they become the focal point of a bathroom and work well with virtually any countertop surface, including glass."

## A Fridge in Every Room?

The textures, materials, shapes, and colors coming soon to a kitchen-and-bath showroom near you

### THE NEW NEUTRAL

Pale yellow has always been a cheery alternative to beige. Rather than blanketing a whole kitchen or bath in a lemon hue, designers are using it as an accent in tiles, sinks, toilets, and tubs. Lighter than the ubiquitous harvest gold of the '70s, this splash of sunshine evokes optimism and coordinates with environmentally minded earth tones. Infused with a metallic sheen on kitchen cabinets, yellow also provides a warm complement to cool materials such as granite and stainless steel. "Yellow is a futuristic color," says Margaret Walch, director of the Color Association of the U.S. "It's upbeat and playful. Yellow symbolizes the dawn of a new day."

PHOTOS COURTESY OF: KOHLER (SINKS); KITCHENAID (STAINLESS FRIDGE); SUB-ZERO (PANELED FRIDGE

### BY ROMY POKORNY

### STILL STAINLESS?

Some kitchen designers may find stainless steel passé high-end appliance manufacturers have been using the material for years—but the April Kitchen and Bath Industry Show in Orlando, Florida, was brimming with affordably priced stainless refrigerators, cooktops, dishwashers, and sinks. Although perfectionists may carp that stainless does not mean fingerprintless, most home owners equate the gleaming metal with cleanliness and durability, too. "There's a perception that stainless cooktops are hard-wearing, that you can bang heavy pots down on them and never worry," says kitchen designer Christopher Peacock. "People also like the look of sleek appliances with traditional cabinetry."

"Making appliances look like furniture is the wave of the future," says designer Christopher Peacock.

### DECEPTIVE DRAWERS

Why trudge to the kitchen to raid the fridge? Now, it seems, no room is complete without its own built-in refrigerator. However, don't expect to find a side-byside monolith dispensing ice next to the armoire. As more and more equipment becomes camouflaged behind wood paneling in the kitchen, models that resemble bureau drawers are providing on-the-spot snacks all around the house from deck to den to bedroom.

# 250% more torque should grab your attention.

RABALIN

It has the largest jaw capacity of any other self-adjusting pliers. With 250% more gripping power in both v-notch or straight jaw. Plus, a new patented design for easier use. Not to mention a lifetime warranty. Making RoboGrip II a tool you'll keep a tight hold on for years to come.

## **Bolt Buster**

When lightning strikes, a simple bottle saves the day

jogging on her electric treadmill when suddenly, the machine ground to a halt, and smoke began pouring out of its control panel. "I knew I was working out hard," says Hiniker. "But not *that* hard."

Actually, a lightning bolt had struck a nearby utility pole and sent thousands of volts of electricity racing through the wiring. No one was injured, and the house itself was undamaged, but the additional power zapped the treadmill, blew out some remote-control light switches, and left Hiniker a little shaken. "I never even knew this was something I had to worry about," she says.

Lightning's power is immense. A single bolt contains as much as 100 million volts of electrical potential, with a current of 20,000 amps; the average thunderstorm releases as much energy as an atomic blast. Most disperses in wind and water vapor, but each year in the United States, some 20 million bolts reach the ground, each with enough power to run a small house for a month. Lightning rods are the first line of defense against damage from a direct strike, but they can't stop a surge from entering the house through utility wires. Dr. Martin Uman, a professor of electrical

RIST

TIS

and computer engineering at the University of Florida in Gainesville, says that the tidal wave of electricity unleashed by lightning overwhelms most of the small plug-in protectors that shield many PCs from periodic but minor power fluctuations. "They'll fry, as will the computer," says Uman. To effectively safeguard your equipment, "you need to have a surge protector wired directly into the circuit breaker box."

Utilities and businesses have used lightning surge protectors for

TOM SILVA SAYS:

"I've had two TVs fried by

lightning, but with a surge

protector at my breaker

box, that's not going to

happen anymore."

more than 60 years. But among home owners, the demand for such devices has been nearly nonexistent. "When the most anybody had was a cheap TV and a refrigerator, there wasn't really that much to protect," says Allen Gallant, an electrical contractor who works with *This Old House*. "But today, people have media rooms, mega-sized TV screens, and home offices with all kinds of

high-tech equipment." And that's not all. Many everyday household appliances, from air conditioners to furnaces, now depend on sophisticated solid-state circuitry that is highly vulnerable to power surges.

Although the insurance industry doesn't keep separate records for lightning surge damage, as opposed to direct hits, the number of anecdotes about problems is rising. Richard Cohen, who works for Panamax, one of the largest surge-protector manufacturers in the U.S., recently talked to someone whose entire home automation system was blown out by a lightning surge. "The control panel alone

### EASY WIRING

LEFT: To install a lightning surge protector, Allen Gallant slides its three wires through a hole in the bottom of the circuit breaker panel and bolts the protector in place. Then, he attaches the white ground wire to the ground bar on the left side of the panel. BELOW: Gallant screws each black wire to the back of any two adjacent (top and bottom) circuit breakers. When he reattaches the panel cover, the job's done.

cost \$10,000," he says. "And then an electrician had to come in and replace every wall switch and light dimmer in the house."

Lightning surge protectors are grown-up versions of the plugin models. These bottle-shaped devices, which contain small zinc oxide discs called varistors, spend most of their time doing absolutely nothing. But when a spike of electricity enters a house, the discs become conductive and instantly drain the current into the ground. A good protector should be rated to withstand surges

as high as 50,000 amps, more than enough to defend equipment against lightning.

Still, some excess current may get past the circuit breaker; that's when the small plug-in units come into play. "For computers and sensitive stereo equipment, I'd certainly also recommend plugging in smaller surge protectors at the outlets," says Uman.

To make sure her house would be surgesafe, Sue Hiniker called Gallant. He popped a hole into the side of the circuit breaker box and connected the protector's three wires. "This is literally a two-minute job," says Gal-

lant. "The important thing is to shut off the main breaker so you don't electrocute yourself," he says. Even so, there's always a danger of electrocution when working on a live panel, which may be reason enough to call in a licensed expert, even for two minutes.

Gallant figures he'd charge about \$80 just to put in one of these devices, but he puts them in at cost—\$35 to \$40—if he's already at the house working on another job. Says Gallant: "I have too big a conscience to try and make money off something that's so easy to install—and offers so much protection." ●

### Record the higher quality of S-VHS on standard VHS tapes with JVC's new line of VCRs.

Everything you record will look better when you capture it on JVC's new Super VHS video cassette recorders.

Super VHS ET

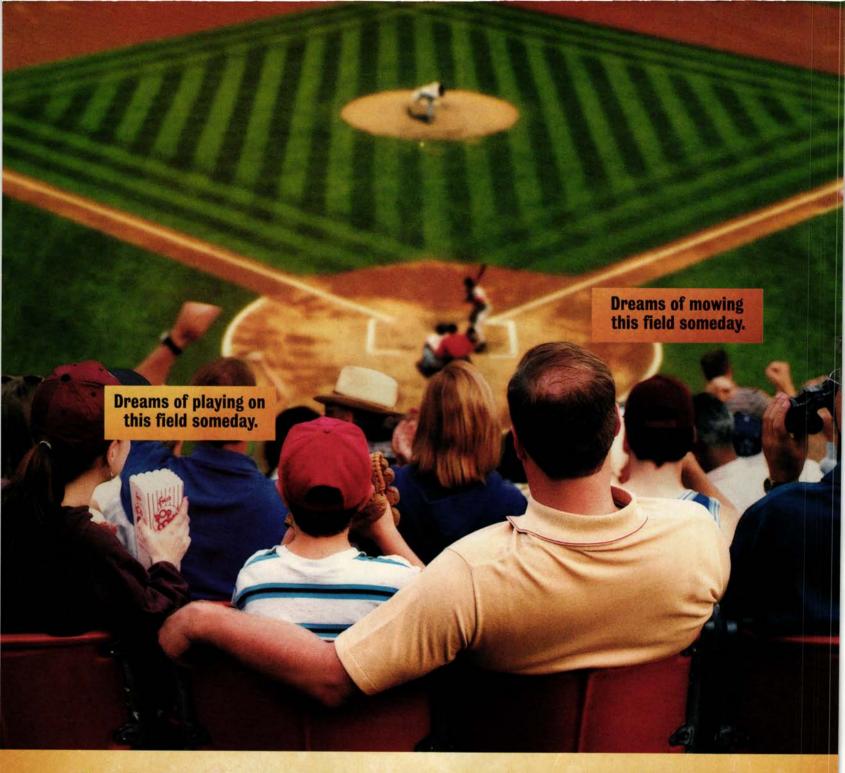

000

000

The company that brought you the original VHS technology now lets you do what you could never do before–make high-resolution recordings on standard VHS tapes. JVC's S-VHS ET (Expansion Technology) delivers over 60% higher resolution than standard VHS recordings, making these new VCRs perfect for capturing the full benefits of high-resolution sources like satellite broadcasts, digital camcorders, cable television and more. And with the choice of recording in S-VHS or regular VHS mode, full compatibility is ensured with even the oldest VCRs. Best of all–JVC gives you this higher quality at a price that's much lower than you'd expect.

JVC's new S-VHS VCRs-the better way to get better recordings. www.jvc.com

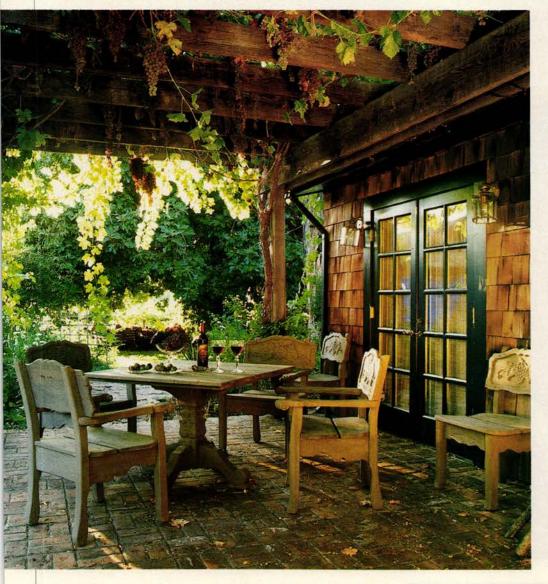

To a Kubota TG owner, mowing the lawn is not a mere chore. It's a pastime, a passion, an obsession. Perhaps that's because the new Kubota TG is more than a mere lawn mower. Built like a sports car, this highly advanced tractor

comes fully loaded with electronic rack-and-pinion steering, Cushion Ride Suspension and an 18-hp liquid-cooled gas or diesel engine. Which all adds up to the smooth, quiet, comfortable ride you've always dreamed of. For more details, and possibly a new fixation, call 1-888-4-Kubota, ext. 115.

## **Shades of Summer**

Cool ways to shield outdoor spaces from a scorching sun

Cooler and more open than a covered porch, a vine-covered pergola creates a shady haven for outdoor living. The simple structure above supports fruit-laden grapevines over a patio in California's Napa Valley.

BY CURTIS RIST

n winter, few things feel cozier than a room filled with the warmth of the sun. Yet in summer the great orb turns from friend to foe, relentlessly pouring heat through windows and turning decks and patios into outdoor frying pans. "A shadeless house can be a misery," says architect Robert A.M. Stern.

But a house shaded by a porch, awning, or vine-draped pergola not only gains an airy outdoor shelter from blazing sunshine, but also a way to stop it from heating up interior rooms. "Shade is one of those things most people give only a passing thought to-unless they don't have any," says Shavaun Towers, a landscape architect in New Haven, Connecticut. "Then they become obsessed with it." Besides improving comfort, shade structures add architectural appeal and-by creating soft, ever-changing patterns of light and shadow-visual relief from the sun's harsh glare. "A little shade turns a static house into something that takes on a different character with every passing hour," says Towers.

Before the advent of central air-conditioning, the need to block the summer sun greatly influenced house design, as architects routinely incorporated porches and wide roof overhangs. "Fortunately," says Stern, "we are again discovering

that we can do better than simply sticking an umbrella into a picnic table." As in the past, the simplest way to make some shade is by adding awnings, which were ubiquitous on American houses before World War II. "I can't imagine a style of house they don't work with," says Stern, who frequently adds manually or electrically operated awnings to his designs. Larger stretches of fabric can also be suspended horizontally over patios and decks, providing instant relief—especially in a yard that has no trees. In addition to the shade, Stern likes the "incredible festiveness" that colorful awnings give to a house, a feeling he compares to the (continued on page 66)

## By the time you react, it already has.

Our unique All-Wheel Driving System automatically transfers power from the wheels that slip to the wheels that grip.

Our engineers have given every Subaru a mind of its own. It's called the All-Wheel Driving System. A combination of three unique components, all working together to react to your every move. The horizontally opposed boxer engine provides

a low center of gravity for better control. The four-wheel fully independent suspension helps smooth out even the roughest of roads. And the full-time All-Wheel Driving System automatcally transfers power from the wheels that slip to the wheels that grip for maximum traction and handling in almost any type of weather. So to get a vehicle that's always thinking, drop by your Subaru dealer for a test-drive, visit www.subaru.com or call 1-800-WANT-AWD. We'll be anxious to see your reaction.

BA

(tet)

The Beauty of All-Wheel Drive.

(continued from page 63) billowing sails of a tall ship. Although awnings need washing and periodic repair, the maintenance is minimal compared to the payoff in service and style. "They give a wonderful sense of the seasons," says Stern.

Another architectural element that's making a comeback is the pergola, which also integrates well with any style of architecture. A relatively simple structure, a pergola (derived from a Latin word meaning "projecting roof") consists of horizontal boards or trelliswork supported by classic columns, plain posts, or even metal poles. "Since the pergola extends from the house, it's a transitional element that's not wholly dependent on the house's style," says Stern. "You can have whatever you want." The shade comes from leafy vines planted at the column bases and allowed to climb up and spread over the top (see "Fine Vines"). Instead of vines, the structure sometimes has a canvas cover that is pulled back and forth across the

Not all shade-makers need to be built in. A simple cloth canopy held up with metal poles, for instance, provides plenty of cover for hours of comfortable lawn cruising, yet it can be quickly disassembled and stored at the end of the day. The holes in the fabric vent hot air and provide glimpses of the sky. top. "You can have lunch out there in the middle of the day and then pull it back in the evening," says Stern. "These covers look great in an Italian restaurant, so why not at home?"

The covered porch—perhaps the most familiar, and American, of all shade-makers—has

long kept the sun from scorching home owners. But while putting a roof onto the side of a house can solve a problem, it sometimes creates one. Earlier this century, architects became too casual about where they placed porches, says Stern, with the result that many living and dining rooms were

kept in perpetual, sunless gloom (see "Porches" on page 114). "A porch shouldn't be placed where it makes so much shade that a room behind it is darkened," he adds. "That's a big reason why people stopped liking porches in the first place."

Yet the right porch is a wonderful amenity. It should be roomy no less than 15 feet deep, says Stern, to make a space that's big enough for a sofa and some chairs, or a big table where people can gather on a summer's evening. "Just be careful where you site it," says Stern. "Unlike an awning, you won't be able to roll it up and stow it away at the end of the season."

### FINE VINES

A lush canopy of twining tendrils, verdant foliage, and sweet-smelling blossoms completes a pergola's mission. Planted at the base of each column and given occasional doses of fertilizer and compost, a flowering vine will spread over the structure in two to five years, depending on the climate. And there are dozens of varieties to choose from. No matter what the weather, sunlight levels, and soil type in your area, there are plenty of climbers that will provide the foliage and flowers you'd most like between you and the sun. Here are some popular choices:

**1.**Wisteria (Fabaceae)—In most climates, a fast-grower that produces fragrant, hanging clusters of violet, white, or blue flowers.

2.Bougainvillea (Bougainvillea glabra)—Thorny climber that thrives in warm climates, where it typically blooms year-round. 3.Grape (Vitis)—Needs plenty of sun, but quickly forms a dense mat of leaves in most climates; many varieties yield edible grapes. 4.Honeysuckle (Lonicera)—Produces sweet-smelling white, yellow, pink, purple, coral, rose, or red flowers; thrives in most climates.

TIMELESS CRAFTSMANSHIP I-800-566-1986. BALDWIN

A Masco Company

Every yard looks romantic in the ethereal glow of moonlight. Improving on nature's night lighting calls for a creative assortment of fixtures to accent a flower bed, define a walkway, or bring the dark silhouette of a tree to life. Rough-hewn stone beacons planted in the ground blend into the landscape. Crafted porch lanterns beam a warm welcome. Table lamps, powered by candles, twinkle festively. Practicality is a fine reason to invest in outdoor fixtures; enriching the evening mystique is an even better one.

## the details

A pine bough filigree on iridescent glass brings a woodsy feeling to a brass Mission-style lantern with a verdigris finish.

For Asian flair, a pagoda-shaped castiron lantern ensconcing a votive candle can stand on a table or hang from a hook.

Now electrified and mounted on bouses, brass "onion" lamps evoke New England whaling ships of the 1800s.

> Powered by tealight, a whimsical glass lamp captures a firefly's effulgence in the gloaming of a warm summer night.

This pineapple, a traditional symbol of bospitality, comprises 120 pieces of band-pressed glass set in cast bronze.

With its crenulated edge, the mottled brass bood on a Tudor-style lantern is reminiscent of a quaint thatched roof.

Roger Hopkins finds the per-

fect balance for one of his Shinto-inspired lanterns. INSET:

Hopkins punches a hole in the

chimney with a core drill.

72

#### Rock On

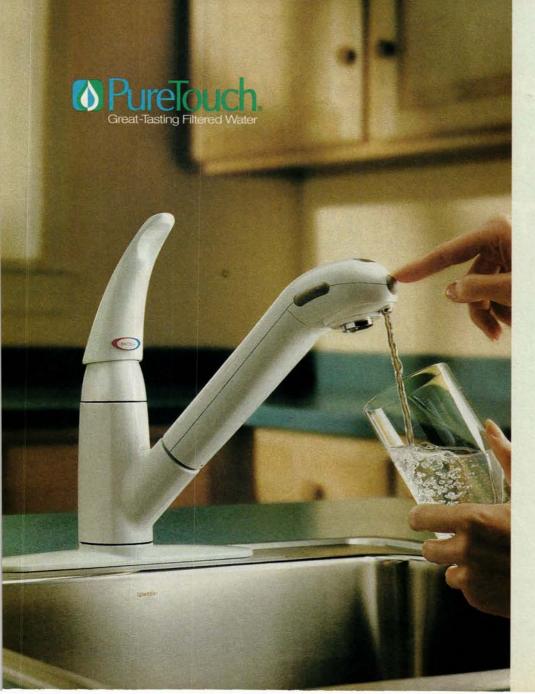

"Something in man has always wanted to conquer stone," says Roger Hopkins, a 52-year-old artist from Sudbury, Massachusetts, and an occasional guest on This Old House. Bored with conventional landscape lights, he began sculpting Japaneseinspired lanterns out of granite, sandstone, and shale 12 years ago. He flattens the capstone and pedestal with an angle grinder, creates a vertical tunnel for wiring with a hammer drill, and punches a window in the center stone (chimney) with a core drill. He then pops in a 12-volt lightbulb to achieve a golden glow, burying the cord under ground. His rustic results look at home even in a manicured garden. "I'm not really trying to emulate the Japanese," he says. "Their lights tend to be formal. Mine are just good-looking, natural rocks. They haven't been messed up too much by the hand of man."

-Joseph D'Agnese

Landscape Lighting Tips Master electrician Allen Gallant, who wired *This Old House's* project house in Watertown, Massachusetts, has installed lighting on some of the most intricately designed landscapes in the Northeast. Here are his three standards for every job.

- Whether uplighting, downlighting, accenting, or shadowing, avoid fixtures made of flimsy plastic, which doesn't hold up to weather sockets corrode and the finish eventually wears down. Instead, look for aluminum or other metals coated with high-quality paint.
- Bury wires so no one trips over them. Low-voltage wires should be 12 inches below ground, and line voltage (120 volts) 18 inches down.
- Installing a timer means never stumbling along a walkway after dark—or having to remember to douse the lights in the morning.

# Tired of having to wait for the great taste of filtered water?

# THIS OLD HOUSE

## **Starting Over**

e all remember where we were when we heard about the fire. Norm Abram was standing in the offices of WGBH. Richard Trethewey was in his office, working on his computer. Tom Silva was on a job site in Lexington, Massachusetts, and got word via the Silva brothers' digital-radio-pager network, which they use to keep in touch with one another. I was at home. It was one of those beautiful late winter days. A front had blown through the Boston area, dropping several inches of snow before passing out to sea, leaving the skies pure blue and the temperature cold. As I slogged away on my treadmill and channel surfed, a helicopter shot of flames dancing wickedly through the roof of a modest white house caught my attention. *Big fire in Billerica*, the announcer was saying. *It's been burning for hours . . . total destruction . . .* 

This Old House host Steve Thomas and contractor Tom Silva inspect the burned-out shell of what was Dick Silva's Cape Cod-style house.

I recalled that Tom's brothers, Bob, Dick, John, and Philip, all lived in Billerica, but a commercial came on before I could identify the house. Then the phone rang. *This Old House* executive producer Russ Morash was calling from Key West, Florida, to say that it *was* Dick's house. I felt shock—a sense of urgency. I wanted to help in some way. But the destruction had been com-

plete; the family was homeless.

The next day producer Bruce Irving, Tom, and I headed over to the grim scene. The sickly sweet odor of charred timber enveloped the entire neighborhood and overpowered us as we approached ground zero. Frozen rivulets clung to the underside of the rafters, dirty ice stalactites hung from the doorways. The sky showed through big holes in the roof, reminding me of the eye sockets in a skull. In a bedroom nook, three Beanie Babies hugged each other like a happy clan. I wondered how they could have survived unscathed when virtually everything else was carbonized. I picked my way through the frozen debris to get a closer look. The stuffed animals were actually singed black and congealed into a grotesque frozen lump.

Over the next few days everyone from the show stopped by to survey the disturbing scene. Finally, Russ confirmed what we all had been thinking: For its 21st season, the team at *This Old House* would rebuild

Dick and Sandy Silva's house. Any day of the week, any week of the year, the Silva brothers have always done whatever it takes to keep our television production on schedule. They have never begged off or made excuses. They always just get it done. Now we have an opportunity to return the favor, putting the weight of the show behind getting a roof back over Dick and his family's heads. It's our turn to just get it done.

BY STEVE THOMAS PHOTOGRAPH BY JOE YUTKINS

## Why are there no monuments to practicality?

There are no holidays set aside to honor the highly efficient. No marble statues standing in tribute to the very reliable. Not even a single collector's meet extraordinarily high standards of efficiency, quality and durability– without sacrificing form for function. The result? A stylish, highly refined and instruments are large, easy to read and placed within your reach. The specially tinted window glass protects the interior from heat and UV rays.

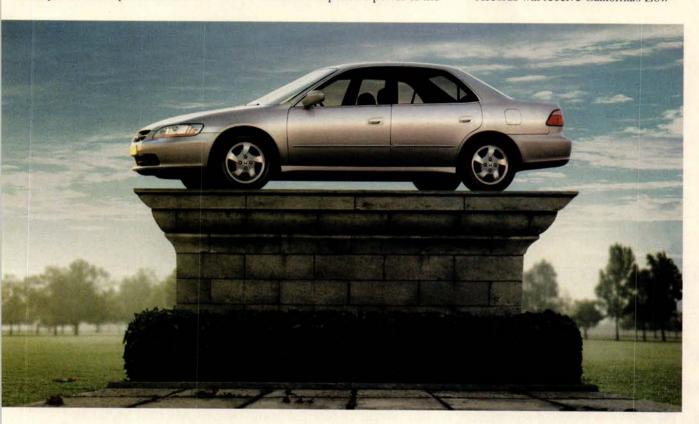

plate commemorating the pragmatic.

But, thankfully, the engineers at Honda have created their own lasting tribute to practicality: It's called, quite simply, the 1999 Accord Sedan.

From its sculptured exterior to its ergonomic interior, every element of the Accord Sedan was designed to testament to the fact that "practical" doesn't necessarily mean "boring." Step inside the well-appointed, spacious cabin, and you've entered a veritable shrine to common sense.

In fact, once seated in the Accord, you'll find practical features just about everywhere you look. The controls And, vibration- and sound-absorbing materials provide for a peaceful ride.

On the luxurious, yet very practical, EX model shown here, the driver's seat features power height adjustment. The electronic remote trunk release offers a helping hand when your arms are full of groceries. And there's even a special place to store your sunglasses. But perhaps the most ingenious feature of the Accord Sedan's cabin is its inspired use of space. Inside the provided for a utilitarian reason: to put you in a better position to enjoy the Accord Sedan's spirited performance. With the responsive power of the to know that Honda is committed to developing technology that will reduce pollution. In fact, nearly 70% of all Accords will receive California's Low-

thoughtfully designed interior, there's an abundance of legroom, headroom and shoulder room. Enough to easily accommodate five adult passengers. Even the backs of the front seats are ergonomically contoured to give your passengers room to stretch their legs.

Of course, all these amenities are

150-horsepower, 16-valve VTEC<sup>™</sup> engine and the agile, smooth handling of the front double wishbone and rear multi-link suspension, this Accord is the automotive equivalent of sensible shoes that are suitable for sprinting.

And, while we're on the topic of monumental tasks, you'll be pleased or Ultra-Low Emission Vehicle ratings, the strictest standards in the nation.

For a closer look at our homage to practical thinking, just give us a call at 1-800-33-HONDA. Or, simply visit us on the Internet at www.honda.com.

**TV PROJECT / KEY WEST** 

# home stretch

#### A CONCH COTTAGE HEADS FOR THE FINISH LINE

When *This Old House*'s crew finished the winter taping season and left Key West, Florida, they took their Yankee-style deadline pressures with them, and the island quickly slipped back into its normal Caribbean tempo. After the weeks of frenzied renovation, no one would've blamed home owners Michael Miller and Helen Colley if they'd just parked themselves on chaises with a pitcher of margaritas for a while, content that their 19th-century conch house now has a carefully shaped and glossily finished living room, dining room, kitchen, master suite, back porch, and pool. But, as tropical breezes stir the scarlet bougainvillea blooms and rattle the palm fronds, much remains on the punch list: Stacks of building materials need to be cleared away, plants that fried in a two-month drought must be yanked and replaced, the library cabinetry needs fine tuning, and, after months in storage, their furniture has yet to be arranged to their satis-

BY JACK MCCLINTOCK PHOTOGRAPHS BY PASCAL BLANCON

TI

"The point in the pyramid-shaped ceiling lets in light and adds drama to the space." —MICHAEL MILLER

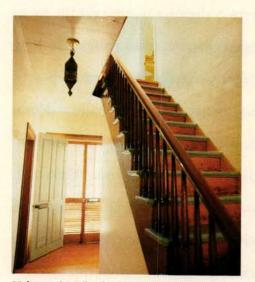

Home owners Michael Miller, left, and Helen Colley put all the pieces back together in their new living room. INSET: Beverly Horlick installs a skylight in the soaring space. Michael chose the cement-surfaced "Cuban" tile (actually made in Mexico) for its uneven, hand-crafted-style patina. "It looks painted," he says.

"The contrasting tile is dramatic like good and evil." —HELEN COLLEY faction. The end is in sight, though, and the couple loves the clean, open, tropical look of white walls, French doors, sunlight, and honey-hued heart pine floors.

Stepping through the freshly painted louver-shuttered doors, visitors are dazzled by the tile pattern in the foyer: 8-by-8-inch black and white squares set diagonally, with a coordinating ribbon border. The design embodies Michael's traditional taste and Helen's love of contemporary style. "A black bor-

der would have been traditional," says Michael, also the project architect. But Helen, a painter whose vibrant abstract works illuminate the walls, "wanted more color," so Michael added a touch of mustard-yellow to the scheme.

Michael has tried to honor the house's origins throughout.

Helen and Michael replaced the original foyer's dated wooden floors but left the smooth-worn, old-growth mahogany banister untouched because it added character to the conch house.

That's why he left the ghostly outlines of the original library doors—now replaced by grand double wood doors—visible on the foyer wall. And why he topped the perfectly square living room with a dramatic pyramid-shaped ceiling, and a skylight that admits enough indirect sun-

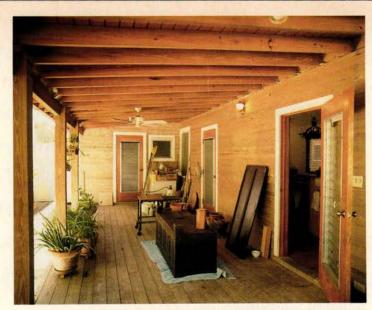

light to balance the harsh light entering the room through its French doors: This unusual structure recalls kitchen outbuildings of the 1800s, whose ceilings sloped to a center chimney.

TOP: Tommy Lapp lays 12-by-12 marble tiles in what Helen calls a "harlequin" pattern in the master bathroom. BOTTOM: Mirrored panels make the 7-by-10-foot space seem bigger than it is.

French doors—three sets of them—connect not only the living room but also the adjacent dining room and kitchen to the rear porch and backyard pool. Gone is the dreary low-roofed deck that wrapped around three sides of the house. Two of those sides are enclosed, one for the kitchen and the other for the dining room. The remaining rear section forms the basis for the new lofty porch, which Michael designed by raising the ceiling and creating a pitched roof. He painted the overhead pale blue-green—or, as

Helen puts it, a hue "between ice and aqua." The refreshing color helps dispel the torrid exterior temperature and enhances the feeling of refuge under the rafters. Tradition says it also repels wasps. The deck flooring is coated in a shiny taupe, and the columns and beams are white. Michael says: "I like the high-gloss look. It reminds me of a freshly painted boat."

A step down from the porch is the pool deck, outfitted with chaise lounges surrounded by col-

A covered deck once wrapped around the back and sides of the cottage. This side, next to the driveway, is now enclosed and contains the kitchen.

orful, shade-giving potted plants. Flowering vines will paint their own abstract picture on the fence that lies beyond a bed of bright yellow-orange bromeliads and red-tinged chambeyronia palms. The long rectangular pool is a lesson in how reality affects the evolution of a design. Michael's first sketches showed a shorter, wider version with a center walk-in next to the deck. This plan necessitated a shallow depth, only 4 feet at most, but "Helen made it clear she wanted something she could dive into." So Michael elon-

Another side of the former deck has been enclosed to serve as the dining room, whose French doors open onto the renovated rear porch and overlook the new pool.

82

gated the pool and placed the walk-in at one end. "Then budget took over," he says, and the pool shrank again. However, the 9-foot depth pleases his wife, and the new form—running from one end of the porch to the other—provides a symmetry that satisfies everyone's aesthetic demands.

Contrasting with this warm, sunny oasis is—or will soon be—the library: a cool, dim, private, gentlemen's club of a room with custom shelving for 4,000 volumes. "It'll be a true library, not a show library—with books on the shelves, not tchotchkes," says Michael. There will be a leather couch, a wing chair, and an Eames chair, a modern classic that he's always wanted.

In a corner formerly inhabited by a dinky bathroom is an insulated, temperature-controlled wine (continued on page 86)

Michael opened up the porch by raising the ceiling and painting the wood in light, neutral shades. The pair of bifold French doors on the living room double-back on each other to enhance the feeling of a giant indoor-outdoor room.

Properly secure all cargo. Always use seat belts. Remember a backseat is the safest place for children. The BEST BUY emblem is a registered trademark of Consumers Digest, Inc., used under license. \*Excluding other DaimlerChrysler Corp. vehicles. *(continued from page 83)* closet with cubbies for up to 400 bottles. The floor is padded to protect its contents from the adjacent laundry room's vibrations.

Across the hall is the couple's cozy new master suite. The "continental bath"—as Helen calls it—is big and bright, with a two-person shower and a bidet. Separating the main bedroom from the bathroom is a dramatic freestanding architectural structure that plays three roles: a room divider shielding the open bathroom door, a closet accessible via sliding doors on one side, and a backdrop for the bed's headboard on the other. The unit stops a foot short of the ceiling, so that the eye passes over it to the room's crown molding. In retrospect, Michael says he would have made it 6 inches lower, liberating the eye to rove even more. But the partition succeeds on a practical level without detracting from the house's period charm.

Preserving an old house is expensive—especially in Key West, where things move slowly and most materials have to be imported from the mainland. Before they've finished, Michael and Helen will have spent \$100,000 more than the \$150,000 they'd budgeted for the job. It might have been cheaper to simply "update" the house, but when you live on this island, Michael says, "you fall in love with the idea of the noble ruin." The hard part—at which he and Helen have remarkably succeeded—is retaining the nobility, honoring the ruin, and turning the old house into a home.

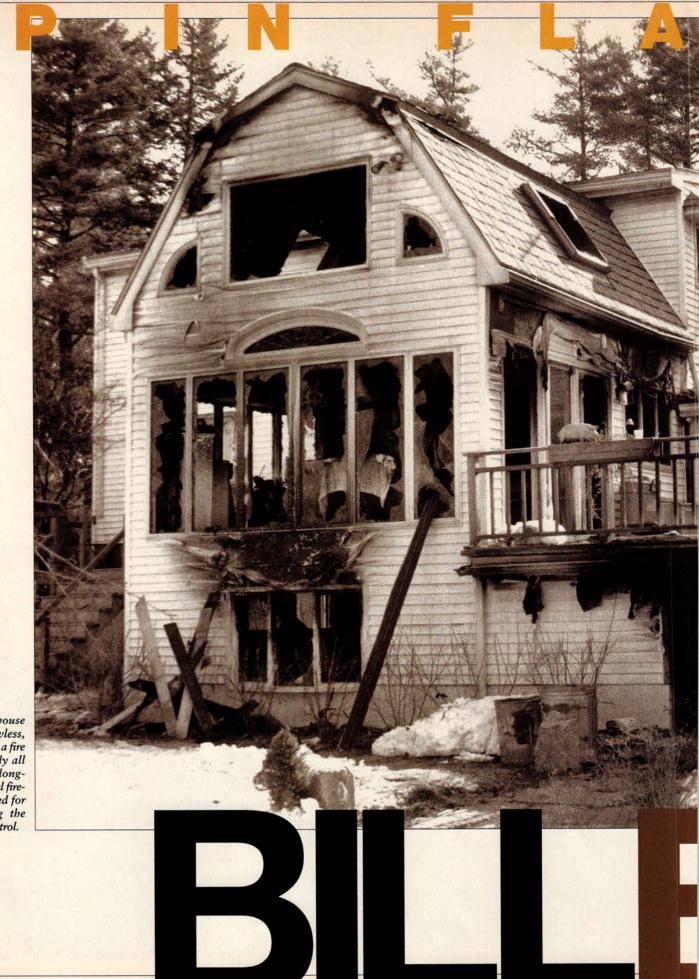

LEFT: Helen folds a sweater in the master bedroom, for which Michael designed a partition to create privacy for the bathroom and dressing area. The unit stops well short of the ceiling to enhance openness and airflow. RIGHT: Components for the closet—as well as for the queensize bed—were manufactured in Italy of cherry-veneered medium-density fiberboard, shipped across the Atlantic, and assembled on site.

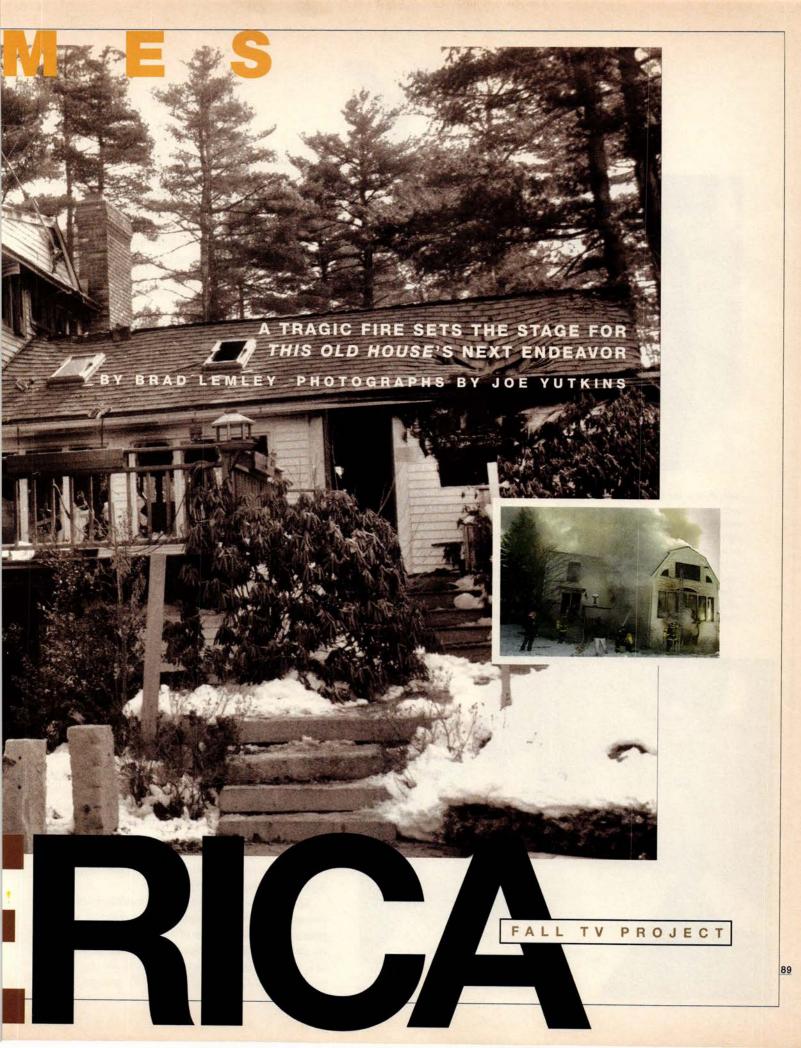

Sliding doors save space and conceal the bedroom closet's sartorial storage compartments, including glass-fronted drawers and shelves for shoes.

"Building a closet into a wall would've made the room smaller. Instead, we have an armoire-divider-headboard in one."

87

Dick Silva's house stood a windowless, gutted shell after a fire destroyed nearly all his family's belongings. INSET: Local firefighters struggled for hours to bring the blaze under control.

TOP: Penny, the family shar-pei and the only one at home when the fire started, exited through a dog door. For days afterward, says Dick, "when she coughed, it smelled like smoke." BELOW: Now living in a trailer parked on their property, the Silva family from left, Danielle, Janneen, Sandra, and Dick—pore over the plans for their new residence. our house is on fire," John Silva said.

Dick Silva, coated with sawdust as he worked a remodeling job in Lexington, Massachusetts, felt his stomach knot. It was 11:15 a.m. on Tuesday, March 9, and his brother's voice on the cell phone lacked any trace of its usual joviality. "John's a big kidder, but I knew he wouldn't kid about something like that," Dick recalls.

So Dick—a skilled carpenter who, along with his brothers John and Tom and his nephew Charlie, has helped on a half-dozen *This Old House* projects—sprinted to his truck. After 20 tense minutes he reached his home in Billerica, 20 miles north of Boston. "There were firemen all over the place," he says, shaking his head. "Flames were shooting out of the windows."

Seven fire trucks from three towns spent the next five hours pouring water on the 70-year-old four-bedroom Cape. As Dick watched helplessly, friends and family, including Tom and John, cried, hugged, and shivered in the late-winter chill. It wasn't until 4:30 p.m. that the last embers were snuffed out.

Fortunately, no one was injured, aside from Penny, the Silvas' 7-year-old shar-pei. Before she escaped via the dog door, the fire singed her fur and filled her lungs with smoke. But the house where Dick and his wife, Sandra, had lived for 32 years and raised their three daughters was a total loss, devastated from cellar to attic.

"That night, we literally had just the clothes on our backs," says Sandra. "We got into the car in a daze. We didn't even know where we were going. We found a motel that would take us and the dog. It felt unreal not to be in our own house."

In the following morning's light, the blackened structure resembled a missile target. Half of the back roof was gone; all the windows were smashed; and the vinyl siding hung in melted strips from the walls. Inside, part of the second floor had collapsed onto the first. Scattered amid the wreckage were the remains of a ceramic carousel horse and some miniature cars fused into briquette-shaped lumps, poignant reminders of a house once stuffed with collections of antique train sets, clocks, toys, and tools.

That same day, sifting through the damp debris in the basement, Billerica Fire Department investigator Al Melaragni concluded that the fire began "in the vicinity of the

heating system," but he couldn't pin down the precise cause. He figured the blaze probably burned for more than an hour before being noticed. *T.O.H.* director Russ Morash says, "The problem is that everyone in this neighborhood works, so there was nobody to hear the smoke detectors or notice anything amiss." Ultimately, a passing motorist, concerned about the cloud of smoke pouring from the chimney, called the fire department.

Luckily, the home and its contents were insured at replacement value. Dick and Sandra hired a public adjuster to tally their losses and represent their interests to the insurance company; they expect to receive full compensation. "It's an exhausting process, but necessary," says Dick. In the cellar workshop alone, "I figure I had \$36,000 in tools." (See "Insuring Against the Worst," p. 92.)

The T.O.H. television crew immediately offered its support. Morash was in Key West, Florida, wrapping up the final episodes of the winter project, when he got the news. "Within 10 minutes of hearing about it, I knew making a new home for the Silvas would be the *This Old House* fall TV project," says

Morash. "Dick and all the Silva brothers have done so much for us over the years," adds show host Steve Thomas. "We just had to return the favor."

Dick and Sandra quickly assented to the T.O.H. proposal, since

they had already decided they would rebuild on the same two-acre parcel. "All of our friends are here. Our life is here," says Sandra, picking through a box of charred and curled photos of her girls' prom dates and Halloween parties. "Whenever it snows, and Dick says he's going out to plow the driveway, I know he'll be gone for three hours, because he plows every driveway on the street. We can't imagine being somewhere else." As if to underscore the Silvas' connection to the area, a constant stream of friends and neighbors helped them in the days after the fire, providing clothes, furnishings, and food. And within a week, a 70-

foot-long double-wide trailer appeared on their driveway. The Silvas rented it so they can stay on the property while their new residence is being built.

For five weeks, the house stood forlorn, cordoned off with yel-

low tape, as fire and insurance investigators picked through the rubble. Sandra followed them, occasionally uncovering buried mementos: a cherished photograph of her mother, miraculously unharmed within its melted plastic frame, and one intact survivor from a

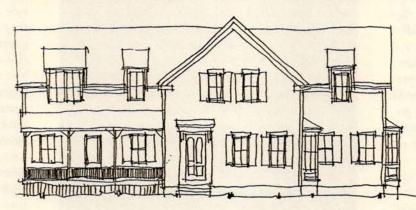

"If anyone I know ever has a fire, I tell you, I will be the first person there to help out." collection of figurines—a tiny ceramic firefighter.

On April 16, a bucket loader toppled the burnedout hulk, pushing and crushing it into four 100cubic-yard Dumpsters. Dick watched, his face an impassive mask. "You try to be light about it, but it gets to you," he said. Known as the quietest of the Silva brothers, he struggled to express his

feelings as he began, at age 56, a new chapter in his life.

"This is hard," he said, wiping his eyes as the loader rumbled and crunched. "But once it's completely gone and we can start building, I'll feel a lot better."

#### OUSE FOR A CARPENTER

A few days after the fire, Dick and Sandra Silva huddled in their trailer with architect Chris Dallmus to begin discussing plans for their new home. In this unlikely setting, it quickly became clear to Dallmus—whose firm, Design Associates Inc., has contributed to many *T.O.H.* projects—just how much the Silvas had loved their old house, with its oversized kitchen and cheery, skylit rooms. All they really wanted, he says, was more space for clothes, a sit-down breakfast area, and a little more distance from a nearby house. After taking a quick tour of the neighborhood, with its modest Capes and ranches, Dallmus concluded that a Colonial or saltbox would be too massive. So he sketched what he terms a "village Victorian," above—a two-story structure with steeply pitched roofs sheltering upstairs bedrooms similar to a couple of houses in Billerica's town center, below. "The design will be elegant without being pretentious," says Dallmus. While still a work in progress, the plan has two other goals, says show producer Bruce Irving. "It should look like it was built over the years rather than all at once. And we'd like to see dormers, porches, bay windows, and decorative brackets—all the things a carpenter would have added to a house." Two weeks after the fire, Dallmus's latest proposal had Dick smiling. "Even though it will look very different from our old house, we think it's going to be great."

# INSURING AGAINST THE WORST

Losing all or part of a home to fire is a distressingly common calamity in this country: In 1997, 406,500 residential fires caused \$4.5 billion in damage. But when the insurance payout is inade-

quate-or nonexistent-trauma can spiral into tragedy. According to Jeanne Salvatore of the Insurance Information Institute, the best protection is guaranteed-replacementcost insurance, which will pay for rebuilding and refurnishing a house, regardless of depreciation. A claimant with this coverage can replace a ruined 15-year-old sofa with a brand new equivalent. (Sorry, you can't get leather if the original was velour.) If the sofa were covered by an actual-cash-value policy, the insurer would subtract depreciation from the replacement cost.

Still, even the best coverage won't help without a complete account of losses. Dick and Sandra Silva got lucky—in a bureau drawer they found a damp but playable videotape in which Dick conducted a tour of the house for an out-of-town friend. "That video has been a huge help," says Dick. "Once we rebuild, I'll make one just for insurance purposes. I'll store copies in my safety deposit box, and encourage my relatives to do the same."

"A taped document of the contents of your home is a great idea," agrees Salvatore. "Walk through the whole house, describing what

92

you see. Be sure to open drawers and narrate what's there onto the tape: 'This is a black Armani suit, here are 20 white T-shirts from the Gap,' that kind of thing." Photographs will also work. These

#### SENTRIES AND COMMON SENSE

Smoke detectors reduce the chance of death in a residential fire by as much as 50 percent—as long as they're working. Batteries must be replaced annually, or when the alarm "chirps"; detectors themselves should be replaced after 10 years. Most states mandate these devices on every level of the house, including the basement, placed either on the ceiling or on a wall within 8 inches of the ceiling.

Dick Silva's house had five detectors, but no one was home to hear them. Monitored smoke detectors solve that problem; when an alarm is triggered, a round-the-clock monitoring service calls the fire department. Installation is about \$50-75 per unit, with a monthly fee of \$25. In many states, such as Florida and California, municipalities mandate residential sprinkler systems. They cost about \$1 per square foot on new construction and twice that for retrofit jobs, but lowered insurance premiums can help defray the cost.

Beyond that, keeping a home fire-safe is largely a matter of common sense. Plan and rehearse house evacuation. Mount fire extinguishers in kitchens, check their pressure monthly, and make sure all adults in the house know how to use them. Indoors, keep anything combustible away from the furnace and stove, and have a chimney sweep inspect all flues at least once a year. Outside, trim back any tree branches within 10 feet of the chimney, and any brush within 100 feet of the house. Finally, always put gasoline in safety cans with flame arresters and pressure-relief valves, and store the cans outside the house. can be supplemented by completing a home-contents inventory form, available from the Institute's Web site: www.iii.org.

Home owners displaced by fire can also recoup normal living expenses. Most policies cover food and housing costs, telephone and utility installation in a temporary residence, extra transportation costs to work or school, and relocation and storage expenses for furniture. Insurance companies will usually advance the money for such expenses, but be sure to keep receipts to support your claims.

A claims adjuster determines just how much money a policy will pay out. Most insurers provide adjusters for no charge, but they have little incentive to be generous. That's why many claimants, including the Silvas, hire a public adjuster, who gets a percentage of the claim. But beware the fire-truck chaser who knocks on your door before the smoke clears. A call to the state insurance department can confirm whether an adjuster is licensed or under investigation. And, Salvatore says, "Never give any adjuster cash up front."

#### FACTS ON FIRE

Cooking is the leading cause of home fires in the U.S., more often from human error than from mechanical failure. Most fire deaths are caused by careless smoking.

Twenty-nine percent of residential fires begin in the kitchen. The percentages for other areas: bedroom, 13; living room, 7; chimney, 5; laundry area, 4.

Men die or are injured in fires twice as often as women.

#### The risk of death from fire among seniors and children under five is approximately double that of the rest of the population.

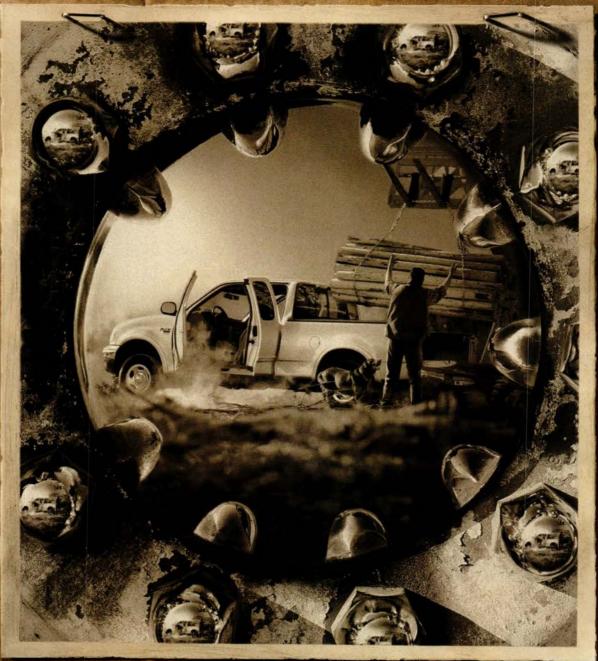

Heating equipment is the second leading cause of residential fires, and arson is the second leading cause of fire deaths.

The U.S. has one of the highest death rates due to fire in the industrialized world—16.5 per million, or an average of 4,500 annually from 1993 to 1997. The South and Northeast have the highest death rate per capita (17.5 per million). In 1995, a resident of Mississippi was nine times more likely to die in a fire than was a resident of California.

Approximately 90 percent of U.S. homes have at least one smoke alarm.

An estimated 60 percent of residential fire fatalities occur in homes with no smoke alarms.

Bit

## a room that speaks volumes

IN A SUPERBLY CRAFTED ADDITION, A PLACE TO SIT BY THE FIRE, PICK UP A BOOK, AND THROW A BIG PARTY

isa Ekus's 200-year-old house in Hatfield, Massachusetts, contains more than a dozen spacious rooms, but from the moment she moved in 16 years ago she knew not one of them was large enough to hold her burgeoning collection of books. "I've loved books all my life, and I had boxes, and boxes, and *boxes* of them," she says. There were more than 5,000 volumes in all, enough to stock a small public library, and so Ekus, a public relations specialist who works with chefs and food writers, built a library of her own. The result, which was three years in the making, is a two-story, cherry-trimmed masterpiece with a high, coffered ceiling, a wraparound balcony that can be reached by a spiral

WRITTEN BY CURTIS RIST PRODUCED BY DONNA PAUL PHOTOGRAPHS BY ANDRE BARANOWSKI staircase, and no fewer than five window seats. But the dominant features in the 20-by-40-foot room are tall bookcases fitted with a quarter mile of shelves, which carry everything from Julia Child's classic *Mastering the Art of French Cooking* to such forgotten gems such 101 Ways to Prepare Macaroni. Upstairs, the shelves lining the balcony walls are filled with 19th-century American literature, contemporary fiction, and modern poetry.

Bookish as it is, this isn't some stuffy library where people walk around saying "Shush!" It's a living room—in the truest sense of

term, one complete with sofas and chairs arranged in front of a fireplace, a dining table, a wet bar, and a stereo system. "Books and entertaining are my passions, and this space had to unite them," she says. Her dream was of a warm, inviting space where people would want to gather and spend time. She also needed a place to do research for the business she runs from the renovated barn next to the house and, not

Dynamic duo: Between them, owner Lisa Ekus and carpenter Henry Walas developed everything from the overall design to the littlest details. Below, with its soapstone sink and countertop, under-counter refrigerator, and icemaker, the wet bar serves big parties and small snacks.

the least of her interests, she wanted the room to be elegant and showy. In fact, before construction had even begun, she'd already bought three large chandeliers—elegant creations in bronze and white glass, decorated with griffins. At once whimsical and serious, the fixtures embody the look she was after.

The most remarkable thing about the room is that Ekus designed most of it herself. Rather than calling in an architect, she relied on her long-time carpenter, Henry Walas of nearby Belchertown, to help her figure out the details during construction. She

> even acted as her own general contractor. "Since I didn't know what the design conventions were for a space like this, I felt like I could do whatever I wanted," she says.

> Ever since Ekus moved in, the two-story house—built on the edge of a tobacco field more than two centuries ago and expanded several times—has been a plan-it-yourself project. From the moment she laid eyes on it, she fell in love, she says, "with its doorknobs, and its hinges, and the way it flowed openly from room to room," which is unusual for such an old house. Its condition, however, held far less appeal. "The whole place was beaten down and old—not old and charming, but old and dirty." She began an ambitious schedule of renovating one room a year,

and found in Walas a patient craftsman. "I can articulate what I want, and he executes it brilliantly," says Ekus. It's been that way since 1987, when Ekus and Walas started collaborating. "He's really like family at this point."

Over the years, Walas has worked on nearly every room in the house. Upstairs, he tore out the 1960s dropped ceilings to reveal a grid of chestnut beams. In some of the bedrooms, he ripped up old maple flooring to expose 12-inch-wide pine planks and replaced damaged pieces with wood salvaged from old barns. Then he headed to the kitchen. "When a whole bank of dented metal cabinets suddenly fell off the wall, we knew it was time to do something," says Ekus. Not that Walas was a kitchen expert. "I'd never done one from scratch

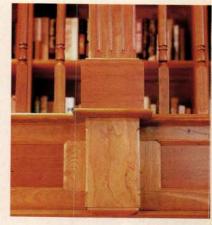

liked that," she says. "It meant he didn't have any preconceived notions of what a kitchen should be." The result was a beautiful marriage of craftsmanship and ingenuity: Cherry cabinets and cupboards line the walls, some of them concealing more than their apparent function. Pull-out chopAlong with many thousands of books, the 800-square-foot room contains a cozy sitting area. Right, Walas's tight joinery produced dozens of beautiful details, such as the connection between a cherry-wrapped post and the 3-foot-wide balcony.

ping blocks disappear under countertops, a bookcase swings open to a storage space for infrequently used baking pans, and an apparently unremarkable spice rack slides out to reveal shelves filled with hundreds of little jars.

The kitchen was ambitious, but the living room/library represented Ekus's and Walas's biggest challenge. Their first decision, however, was easy: figuring out where to put it. All of the house's previous extensions left it with just one side that could grow some more: the front, where the new room would replace a ramshackle, glassed-in porch Ekus had never liked. She also wanted the new facade to be modeled on a 17th-century saltbox she'd seen in nearby Deerfield. So Ekus called Walas, and when they met at the house, he pulled out a ruler and sketched the outline of the addition on bluelined graph paper with one of the pencils he usually tucks behind his ear. "Believe it or

not, that was the extent of the planning," she says.

Walas took the crude designs to a structural engineer, who helped him sort out how to tie in the new rafters to the existing roof framing and then secured a building permit. Work began in Rather than being supported by columns set on the main floor, the balcony's inside edge literally hangs from posts bolted to roof rafters, which, says Ekus, "allows for a more open feeling down below." The five window seats provide far more than mere decoration: Ekus wanted places for people to sit and read as soon as they found a book.

Britain on Count Roads

#### A DOORWAY THAT ISN'T

Newcomers walking up to Lisa Ekus's house will be in for a surprise: The elaborately trimmed doors out front clearly look like the house's main entrance, but they've never swung open and never will. These doors—like the casing that surrounds them—are nailed to the sheathing, which is exactly what Ekus wanted.

"This is a library, not a mudroom," she says. But because of where the addition was being built, she felt it needed at least the illusion of a doorway—an architectural fib bolstered by granite steps and a fieldstone path

leading up to it—to create the facade of a proper Colonial saltbox. After carpenter Henry Walas built and installed the doors, he added a book's worth of fanciful trim work over the top. Using a router, he shaped a piece of pine to make it look like a heavy tome opened to the middle page. "There weren't exactly any models to go on," he says of the unusual pediment. "I had to figure it out for myself."

While the doorway looks quite real and inviting, most visitors head for the side entrance nearest the driveway. "Maybe twice a year, I'll find a FedEx package out front," says Ekus. "This is New England, remember—nobody goes in through the front door."

the winter of 1995, when Walas poured the foundation. The following year, he framed and closed in the shell. "We had to go slowly because it took me a while to pull the money together," says Ekus. But even the raw, empty room had its uses. One night, her daughter Sally, now 14, hosted a dance for several friends, complete with a pulsing strobe light suspended from the ceiling. And for Halloween, Ekus set up a darkened maze that led to the center of the room, where she staged a spooky party for Sally, her younger daughter Amelia, 10, and some neighborhood pals. During a mock séance, someone popped through a hole in the unfinished floor and gave them all a scare.

The pace picked up in 1997. For nine months, Walas and his helper, Brian Plummer, crafted the cherry woodwork, beginning with the false coffered beams that covered the air-conditioning ducts. He made templates for certain repeat elements—such as the posts that attach the balcony to the rafters—then headed back to his shop to produce them in quantity, often disappearing for a month. "The whole room happened in sections," says Ekus. "It would look like nothing was happening, then suddenly a big chunk would be done." While Walas did the woodwork, Ekus attended to other details—such as boning up on the radiant-floor heating system that would warm both the main and balcony floors, and looking into designs for the staircase that would link the two levels. At first she wanted a grand cherry staircase that

would land near the fireplace, but realized it would overwhelm the sitting area. Then she got a good idea from a friend, interior and kitchen designer Deborah Krasner of Putney, Vermont, who suggested putting a space-efficient spiral staircase at the other end of the room where it wouldn't interfere with the sofas and chairs. Perfect, thought Ekus, who ordered one in—what else?—solid cherry from a stairbuilder in Maine.

The one thing she turned over to an expert was the lighting. "I was lost there," says Ekus. She thought the chandeliers would suffice, but Krasner convinced her otherwise. "Most of the rooms in Lisa's house are seriously underlit, and I was afraid this was going to be another one," says Krasner, who drew up a plan to put in 50 recessed lights in the ceiling, under the balcony, and over the window seats. The chandeliers, as it turns out, provide little more than accent lighting.

On New Year's Day 1998, Ekus threw a party to celebrate the room's completion. She invited Walas, all the subcontractors, and some curious neighbors, and prepared a massive feast. Since then, the addition has become a room for all occasions, both business and pleasure, just as Ekus always wanted. "I practically live in here in the winter," she says. And so do her daughters, who often invite their friends to stay overnight and lay their sleeping bags on the heated floors.

Having closed the book on the library, Ekus is once again looking at other rooms that need fixing. She could start any one of several projects, but what really needs attention is the main entry with its drafty, inappropriate jalousie windows and plywood ceiling. "I just haven't decided what to do yet," she says, looking around. Then she glances over at her carpenter standing nearby, pencil behind his ear. "Henry," she says, "we really should talk .... "

99

#### OF ALL THE THINGS THAT CAN KEEP YOU UP NIGHTS, CHEROKEE'S PAYMENTS WON'T BE ONE OF THEM.

Coyotes aside, it's a safe bet that if you own a Jeep Cherokee Sport you'll sleep tight. After all, it's a 4x4 equipped with an affordable price. And just about everything else one could want or need in a 4x4.

For starters, Cherokee Sport comes with a Power Tech I-6 engine to get you up some pretty rugged mountains. Then there's its available Selec-Trac<sup>®</sup> full-time four-wheel drive to see you over most any patch of terrain—no matter how rough and tumble. A Quadra-Link<sup>®</sup> front suspension to carry you over roots and rocks confidently. And, of course, extras like air conditioning, power windows and locks, and Remote Keyless Entry—all at no extra charge.

All of which makes Jeep Cherokee Sport a gutsy four-wheel drive sport utility vehicle with the ability to plow through just about everything, except your savings account. For more information, just call 1-800-925-JEEP or visit www.jeep.com.

A flight of boulders lends drama to a yard near Seattle and provides access to a cabin used for enter-taining and garden tool storage.

# Stepping STONES Natural rock staircases solve the ups and downs of tricky slopes

BY JEANNE HUBER PHOTOGRAPHS BY PAUL SANDERS

BY ANY MEASURE, KACEY DEWEY AND DARRELL UPTEGRAFT Jr. own a spectacular sliver of Washington State. A 150-year-old redwood and century-old Douglas firs tower above the property on a bluff that overlooks Dyes Inlet, a tranquil bay off Puget Sound. Loons glide past daily. Eagles swoop toward their nests. And in certain seasons, killer whales gather to feast on salmon.

But there was a time when all was not perfect in this paradise. A tangle of blackberry vines sprawled across much of the front yard. To the rear of the house, a steep bank cut the couple off from their beach, forcing them to walk through a neighbor's property to reach their dinghy. The lot needed drama in front and a pretty but practical design for the back. While visiting Seattle's Northwest Flower and Garden Show, Dewey and Uptegraft spotted an exhibit that presented the perfect landscaping scenario: an idyllic mountaintop, complete with granite boulders, wispy conifers, and a stream cascading into a pool. Crowning the display was a quaint trapper's cabin and the solution most relevant to their situation—a path formed with chunks of stone.

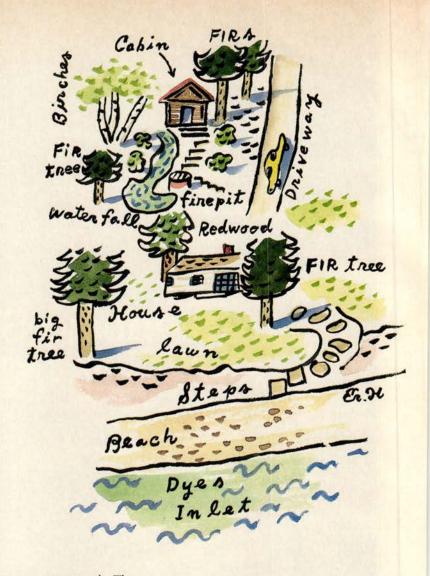

Dewey's first thought was that the cabin would make an ideal garden shed and imbue her flat front yard with character. She struck a deal with the exhibit's builder, Robin Rodgers, to buy the structure for \$2,500. But the cabin's quirky two-story design required a sloped setting to give exterior access to both floors. To create the incline, Dewey and Uptegraft splurged on constructing a 14-foot hill, which necessitated the installation of stone steps. Since the landscaping crew would already be on site, they thought, what better time to resolve the issue of beach access? They added another set of rock stairs to the plan.

Wanting the look of a natural solid-rock outcropping, the couple chose thick slabs for the steps leading up to the cabin. Although Rodgers had used weathered granite in his exhibit, Uptegraft and Dewey picked quarried basalt, which was about half the price. They economized further by using rocks at only the head of the beach

stairs and constructing the rest of the run out of wood anchored to two concrete pads. The cost: \$45,000, which included plumbing for an in-ground sprinkler system, small pond, and waterfall.

At 9 a.m. on a sparkling spring day, Rodgers climbed up into the seat of his John Deere Heavylift backhoe, twiddled with the control sticks, and set out to build the front staircase. After putting in a  $1\frac{1}{2}$ -ton block of basalt at the foot, he had only to insert the rest of the stones into the

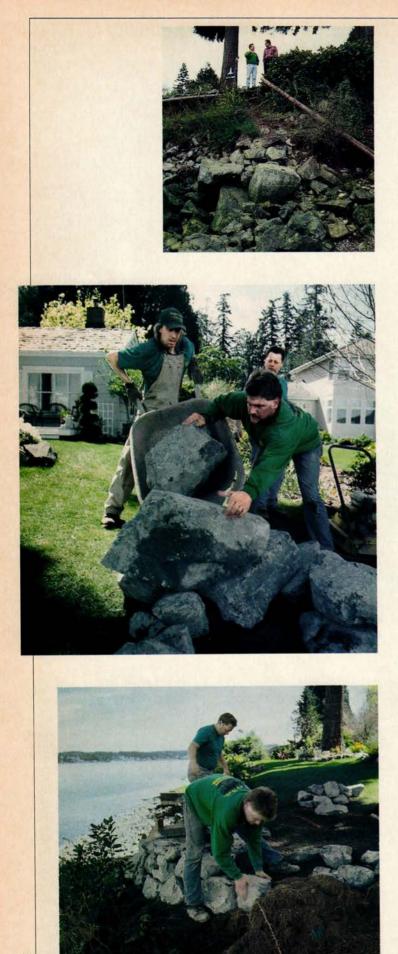

FAR LEFT: The backhoe does the heavy lifting. To keep the step from tipping, James E. Knode, left, and Ernie Harrell then shovel in dirt underneath it, using sandy loam because it packs well.

Most natural outcroppings are composed of a single rock that fractured over the centuries into numerous pieces. To mimic the look, landscaper Robin Rodgers places boulders around the hill and stuffs gaps with smaller fragments.

A-waterfall spills over the rocks alongside the path, recirculating through a pool that Rodgers dug and lined with polypropylene. With the flip of a switch, the home owners can drain the pond whenever it needs cleaning.

By 9:20 a.m., the first run was complete."Got the coffee on?" Rodgers hollered.

260-cubic-yard dirt mound his crew had dumped in the yard. Using a claw attachment like chopsticks, Rodgers lifted a slab and set it down

The old beach steps consisted of thin concrete pavers so wobbly that home owner Darrell Uptegraft, right, had to grab at bushes to get up the bank. just above the first step. The new piece jiggled when landscape architect James E. Knode stomped on it, so Rodgers maneuvered the claw to push down on the front edge while Knode and foreman Ernie Harrell tamped dirt into the space behind with shovels. Knode then signaled Rodgers to back up toward the

rock pile, and picked out the next piece. Thus the staircase ascended, step by step. By 9:20 a.m., the first run was complete. "Got the coffee on?" Rodgers hollered.

Knode prefers to put no more than four or five steps in a stretch, followed by a landing at least 4 feet square. This gives climbers a place to catch their breath. Once the first landing was installed, he discovered that it offered a peek of the bay, so he and Rodgers decided to expand the area and made a note to later add a rock-lined firepit. But that could wait until they were finished with the backhoe (which was due over at another work site). Rodgers clambered aboard and

Although sold as a "oneman" stone, a single piece often requires team effort to move. Isaac Treibel dumps out a chunk of basalt while Wally Zwieg guides it to a position where he can inspect it. hoisted the final steps into position. By 10:30, the cabin staircase was set.

Rodgers's crew then began building the beach steps by pounding iron bars into the bluff and stirring up 75 bags of concrete mix. Constructing the wood staircase then took several days. When it was ready, four stoneworkers spent a morning laying five stone steps with gravel treads to link the wooden run with

the lawn. They strained to control their rock-filled wheelbarrows. Although the stones weighed more than 100 pounds apiece, they were smaller than ideal, so the crew supported them with a stone retaining wall that was angled into the bank and flared at the foot. Instead of filling in behind each stone with sandy loam, they placed the pieces in a base of crushed gravel and sand. To ensure that these petite pieces wouldn't come loose with erosion, they used a motorized tamper, which made bystanders' toes vibrate as it packed down the material.

Building the rear stairs was a complex process that involved trial and error—each riser consisted of at least three rocks that needed to interlock, forming a relatively flat step. Ideal chunks have at least one wide, flat side (to create part of the tread) and another side almost at a right angle (to become the vertical part of the step). Bulges and gaps on other faces get buried.

Zwieg builds a retaining wall for the beach stairs, following the route on the lawn that Robin Rodgers, rear, mapped out earlier with orange spray paint. As the crew finished, Uptegraft mowed the lawn, tidied up the flowerbeds, even cleaned the house. Then he got on the phone: An outdoor party was brewing. Within a few hours, 21 people had showed up for dinner. For the first time since moving into their 1,000-square-foot cottage, Dewey and

Uptegraft had plenty of room in which to entertain. One group of guests strolled down to the beach. Others gathered in the cabin. Many just lingered on the stone steps. A breeze rustled the redwood branches. The bay glimmered in the distance. Smoke curled up from the firepit. This paradise was now perfect.

104

"We're more conscious of our footing in a natural setting," says landscaper James E. Knode.

Because there wasn't enough room for the backhoe to lift slabs into place for the rear beach stairs, the crew bad to build the steps by hand. They pieced together small stones and filled in with crushed gravel.

#### OCK HARD CHOICES

When it comes to steps, the choice of which stone is critical. Sawn stone is best for uniform steps. Garden paths, however, can be uneven yet safe. "We're more conscious of our footing in a natural setting," says Puget Sound-based landscape architect James E. Knode. "You don't expect every riser to be exactly 6 or 7 inches high." Depending on the stone and the setting, he recommends steps be 14 to 16 inches deep, 5 to 7 inches high, and at least 3 feet wide. A step can comprise several stones, but a single slab is better. However, such pieces are usually too heavy to lift without a backhoe or crane. "People buy small stone because it's what they can move," says Bill Hyde, owner of the Marenakos Rock Center in Issaquah, Washington. "But if you go with a stone that's too short in the rise, it feels like you're pitter-pattering. Too short a tread and there's no place to land your foot."

# HOT STUFF WAY COOL

Boiler meets air conditioner in an efficient, state-of-the-art comfort control system

BY BRAD LEMLEY PHOTOGRAPHS BY ERIC AXENE

dreamhouse

USE COPPER CONDUCTORS Though little more than half-finished, the *T.O.H.* Dream House in Wilton, Connecticut, already charms visitors with its classic windows, playful octagonal tower, and riot of dormers. But at this stage of construction, owner Walter Cromwell leaves the oohing and aahing to others. As the house's builder, he's focused on the far less attractive matters of ducts, pipes, and wires that snake up from the basement and through upstairs walls and ceilings. "It doesn't matter how great a house looks if it doesn't have great mechanicals," he says. "I'm putting in the same systems here that I've put in dozens of houses, and I've never had an owner complain. These are just a joy to live with."

"Mechanicals" is builder lingo for the heating, cooling, and ventilation systems that can make a house a climatic nirvana or an uncomfortable purgatory. *This Old House's* Richard Trethewey often grouses that most home owners don't know—and don't care—about the quality of their house's mechanicals until it's too late, though virtually no other aspect of a home is so crucial to their long-term satisfaction. Cromwell is a notable, and instructive, exception. As a result of years building highend houses for demanding clients, he knows

how to keep them comfortable and has mandated climate-control components for his house that are every bit as impressive as its architectural flourishes.

#### HEATING

Some 60 percent of American houses are heated with hot air that blows from a furnace through ducts. Most of the rest are warmed by hot water that flows from a boiler through pipes to baseboard or cast-iron radiators. Furnace systems dominate because they're cheaper to install and integrate more easily with central air-conditioning, but they can also generate noise, dust, and drafts, and they tend to

#### FUZZ-FREE BLANKET

The world's finest heating and cooling hardware would be worthless in a house without an energy-efficient shell. At the Dream House, installers meticulously tucked 6-inch (R-21) fiberglass insulation into the walls and 10-inch (R-30) insulation behind the roof rafters and between the ceiling joists.

As with all insulation installations, details matter. The installers took care to persuade, but never compress, the batts into every square inch of exterior wall, and to staple continuous courses of polystyrene air-channels in each rafter bay—helping to keep the roof cold in winter and forestalling ice dams.

Installing insulation is typically an itchy ordeal, but as Rob Romano of Fairfield Insulation points out, many of the batts blan-

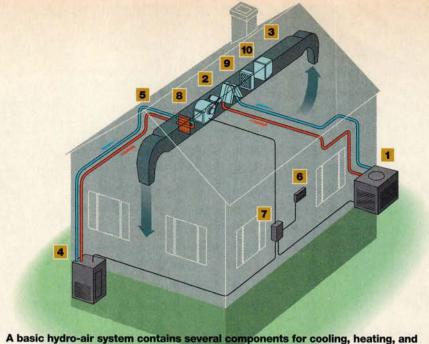

keting the Dream House are wrapped in a plastic sheath, which keeps most of the fibers from flying about. "Actually, professional installers find this material a little harder to work with, but do-it-yourselfers love it," he says.

take nearly all the humidity out of the air. Boiler-fired hot water heating is free of drafts and relatively quiet, and it doesn't depress humidity levels, but the hardware is more expensive, especially if it must be constructed alongside air-conditioning ducts. Now, however, there's a way to capitalize on the advantages of hot air and hot water while minimizing their drawbacks: hydro-air.

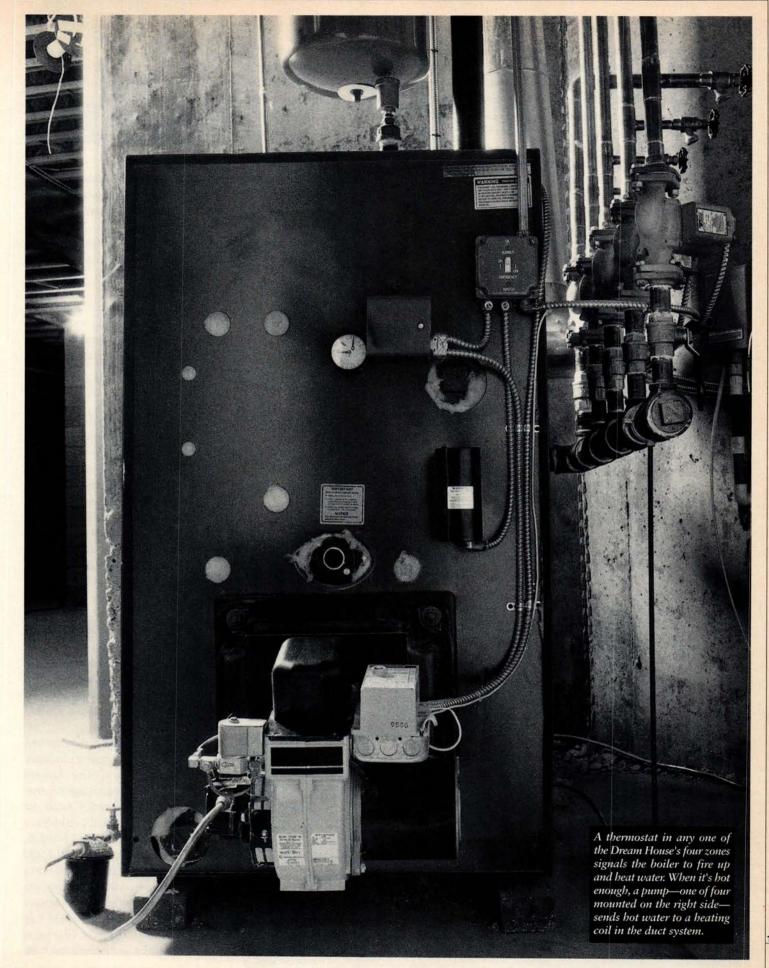

"It's really the system of choice in this area, particularly for larger houses," says Lee Seward, the Dream House's heating contractor. In fact, in any climate that resembles Connecticut's, with its humid summers and cold, dry winters, hydro-air is worth consideration.

Seward begins a tour of the Cromwells' installation in the

basement, jerking a thumb at the \$7,000, German-made, 350,000- Btu boiler. "The hot water made here flows through copper pipes to four coils inside the ductwork," he says, tracing the pipes' path beneath the floor joists. "Two coils are down here in the cellar, two are in the attic." Each of those four duct sections also contains a blower-known in the trade as an air-handler-that switches on in response to a thermostat's command, and blows air warmed by the coil to one of the house's heating and cooling zones: the kitchen, dining room, and family room; the entry hall,

maintaining good indoor air quality. Air-conditioning hardware consists of an outdoor condenser (1) and a cooling coil (2) mounted in the air handler (3). Heating starts with hot water pumped from a boiler (4) to a heating coil (5) also inside the air handler. A thermostat (6) controls both systems, sending a signal to a relay (7), which turns on the blower (8) and either the condenser or the boiler. Back in the air handler, a filter (9) collects airborne dust, and a humidifier (10) keeps the air from over-drying.

#### CUSTOMIZED COMFORT

The round, gold-toned thermostat that dots the walls in millions of houses is a virtual icon of home comfort control, but it also has a telling nickname: the martyr thermostat. On cold mornings, warming up the house requires a virtuous soul—having turned down the heat the night before—to give up a cozy bed and turn the dial to get the furnace going. But the classic controller has given way to a new generation of programmable thermostats that not only make heating and cooling systems run more efficiently, but also eliminate martyrdom: With one of these, a house will always be at the desired temperature, and no one need ever again suffer that chilly walk in the dark.

Though specific brands offer different functions, all programmable thermostats do essentially the

same thing: They let you decide when a house will be heated or cooled, and automatically carry out your wishes. Some units allow four program periods per day and different schedules for each day of the week, plus a manual override. Top-of-the-line models sometimes include a thermidistat, which controls and coordinates the furnace, air conditioner, blower, and humidifier. You'll also find thermostats that can program individual zones, giving you a way to customize temperature levels by the floor or wing.

Along with their convenience, these units can also save hundreds of dollars a year in energy bills and pay back their cost in a few months. After that, the savings just keep mounting, all for punching a few buttons and letting a computer chip keep you comfortable.

living room, and den; the master bedroom suite; and the four other bedrooms and three bathrooms upstairs.

The zoning setup may seem a bit Byzantine, and it does require more hardware and controls, but it makes sense, especially for the 6,000-square-foot Dream House. Since the Cromwells wanted central air-conditioning, the house had to have ductwork—about 400 feet of it. Seward could have run hot-water pipes alongside those ducts, but such a duplicate effort would have been "just through the roof, really expensive," he says. And if he'd installed a standard hot-air system, he would have had to install as many as four furnaces. With each one constantly cycling on and off—losing heat between every warmup and cool-down—efficiency would've suffered. Seward believes that one boiler sending its heat to the four distant coils (technically known as water-to-air heat exchangers) is the

A major advantage of using coils is that they "don't cook all of the humidthe over these green hills during the doldrums that hit any time from With each June to September. The Dream House cools off in much the same way that it warms up: Blowers push air through a second set of coils inside the ductwork. The blowers and ducts are the same ones

entire interior from ever getting too dry.

ity out of the air, the way a furnace does," says Seward. "These heating coils take out maybe half the humidity." Even that loss is com-

pensated for in this system: Fresh water, piped to a humidifier built

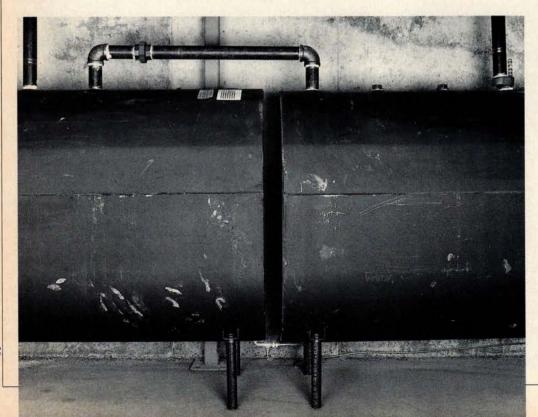

into the return-air duct and controlled by a humidistat, keeps the

Western Connecticut isn't West Texas, but sticky weather does set-

used by the heating system, but the cooling coils-positioned right

A pair of 250-gallon tanks store fuel for the oil-fired boiler. To avoid future problems with rust-out and leakage, installers put the tanks in the basement, not in the ground.

COOLING

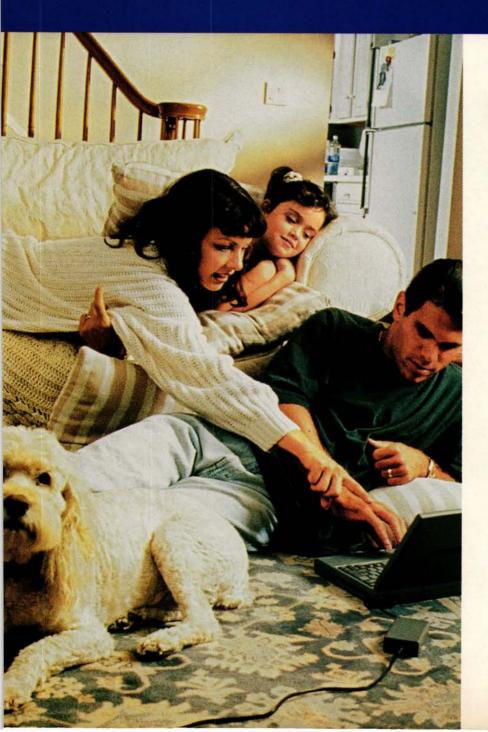

next to the heating coils—are filled with freon, not water, and connected to an outdoor central air conditioner. At the Dream House, four of these outdoor units, called condensers, cool the same four zones established for the heating system. In a large house like this one, different areas heat up and cool down at different rates, and having a quartet of condensers each of them sized for a particular zone—makes the whole system more energy-efficient.

There are instances, however, when maximizing cooling efficiency can waste money. The Dream House condensers all have a seasonal energy-efficiency ratio, or SEER, of 11. Seward could have installed units rated at 15 SEER, which would have added \$15,000 to the system cost. But, says Seward, in the cooler Northeast, the increased efficiency would only save about \$50 a month. "You'd buy those units in Phoenix," he says, "but up here it just doesn't pay." ●

# Quality YOU CAN

# COUNT ON. Comfort you can feel.

# YES, THIS DEFINITELY feels like home.

An Ideal Choice Home is built better to give you more of what

you want. . . quality and comfort. Each Ideal Choice Home exceeds state building codes with airtight construction, high-efficency heating and air conditioning equipment and leakproof duct systems to maximize energy efficency.

### Surround yourself with year-round

comfort. With a high-efficiency heat pump, your Ideal Choice Home stays warmer in the winter and cooler in the summer. Your heat pump filters the air in your home which may reduce odors, allergens and dust. So in an Ideal Choice Home, you'll feel surrounded in comfort.

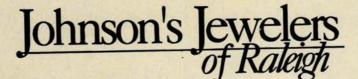

Come home to the quality and comfort you deserve. Quality. Comfort. Home. It's the Ideal Choice

### dreamhouse update

# SEEING

A year and a half ago, architect Robert A.M. Stern made his first Dream House sketches. He wanted the design to be grand, but not ostentatious; prominent, yet properly nestled into the site's gentle slope. Now that his plans have turned into walls, roofs, dormers, and rooms, Stern has come to the jobsite to see how the reality matches his vision. "It's everything I hoped it would be," he says on a walk-through with the owners, Walter and Julie Cromwell, and Caroline

the owners, Walter and Julie Cro Wheeler, Walter's sister and partner in the family housebuilding business. "It takes in the whole hillside

n the whole hillside panorama without overwhelming it." Going from room to

room, Stern directs his perfectionist eye toward a few minor flaws ("Why, may I ask, is that grille off center?" he says, pointing to a heating register in the dining room floor). Yet for the most part, he has nothing but praise for the construction. Walking around the outside, he eyes the field-

ABOVE: From left to right, Julie and Walter Cromwell, Robert A.M. Stern, and Carolyn Wheeler stand in front of the Dream House, now just a couple of months from completion.

stone chimney and pronounces it well done. "You've got a good mason, I'll tell you that," he says, reaching out to pat one of the grey stones.

For the Cromwells, it's nice to hear confirmation of what they've long felt: The home is coming together nicely. Walter and Julie spend just about every weekend roaming through the empty, quiet house to check on hundreds of details and imagine what life will be like once they move

> in. "We picture putting a little table here and having breakfasts outside," says Walter, standing in an alcove on the long covered porch. And, some day, they hope to put their first baby down for a nap in the sun-filled, octagonal tower just off the master bedroom. "It's easier to dream when there are no guys running table saws, no radios blaring, and no one yelling out lunch orders," says Julie, above the workday din. "That's when the place really starts to feel like home." - Curtis Rist

#### NEXT ISSUE: TRIM WORKS

Walls, floor and ceiling may define a room, but it's the trim that truly finishes the space, elegantly masking hard edges and rough transitions. The Dream House is a tour de force of intricate trimwork, fancy paneling, and sweeping arches, and in the October issue you'll see how fine craftsmanship raises every room to the height of style. In the early 1900s, when Florence Foy Strang was growing up in Eufaula, Alabama, porches were a way of life. On summer nights, she'd sit with her family on the portico of their Greek Revival, enjoying the breeze blowing off the Chattahoochee River. A delivery boy from the drugstore in this cotton town would bicycle over to bring her father cigars and to chat a spell. The front porch was an intimate exterior room, allowing the world in while filtering out its undesirable qualities. "We had no air conditioning, no TV, no radio," says Strang, now 91 and a local historian. "We'd sit outside in the rocking chairs, and neighbors would come up and visit. Porches were visiting places."

In Eufaula, as in so many American towns back then, folks conducted much of the business of everyday life on their porches. Airy yet cloistered, shady yet light-filled, these outdoor rooms offered a gentle transition between private and public spheres. They were places to daydream, gossip, court, nap, cool off, grow old. Humble or grand, from the unadorned posts of a French Colonial double-decker to the ornate spindles

# Portfolio PORCHES

on a Queen Anne wraparound, porches were the original welcome mats. As the 1800s brought industrialization, porches became an opportunity for the growing middle class to express itself through elaborate flights of architectural fancy: Mail-order pattern books were filled with machine-made columns, brackets, and cornice details that anyone could use to gussy up their house's most neighborly attribute.

Since ancient times, the porch has also provided shelter, a comfortable lookout perch, and an escape from the smoke of indoor cooking fires. But porches have exacted a price for their comforts—they're high maintenance. "Porches are insurance policies for carpenters," says *This Old House* master carpenter Norm Abram. "With all that exposed wood, porches always need work."

That partly explains their demise during the postwar building boom, although airconditioning and a general retreat to the backyard patio were to blame as well. Yet a nostalgia for the romance of porch life still percolates. Today, an e-mail nation regards the porch as an architectural synonym for relaxation—a way of getting away without going away. Enveloped in a perpetual state of graciousness, porch-sitters can watch the world go by while staying connected to it all.

BY JOSEPH D'AGNESE

#### Shingle Style

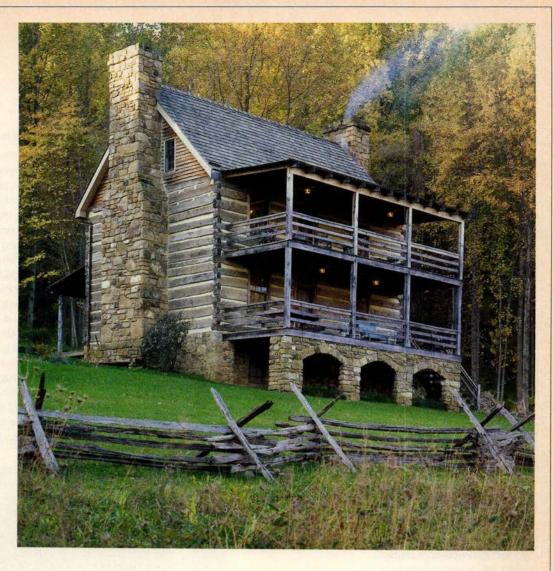

No Shingle Style house is complete without a porch—usually a long one positioned to catch the best views and breezes. In the late 1800s, particularly in New England, these houses combined playful, rambling shapes with American rusticity including columns, railings, and balustrades free of fussy turnery. Some porches were constructed of stone and natural wood, extending the house's textured skin. Others, such as the one on this Long Island hideaway, were classical, spare, and painted white to contrast with the rugged aesthetic. "I have long been convinced that any of mankind's problems could be properly brought to bay on a good porch."

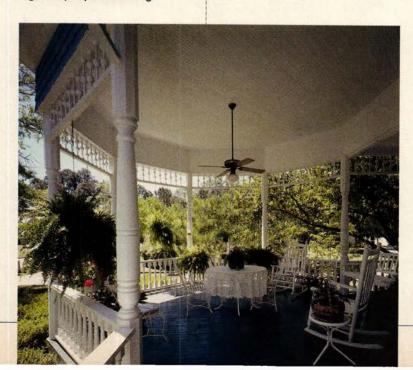

#### Neoclassical

After the 1893 World's Columbian Exposition, held in Chicago, dramatic colonnades enjoyed an architectural vogue. Thanks to new methods of prefabricating molded plaster, which made possible the mass production of ornate capitals, Corinthian columns became a hallmark of Neoclassical architecture. The expansive front portico of the Holleman-Foy House, built in 1907 in Eufaula, Alabama, employs 8 such columns. The entryway is typical in thatdespite its gracefully curved balcony-it serves more to impress than to soothe.

#### Queen Anne

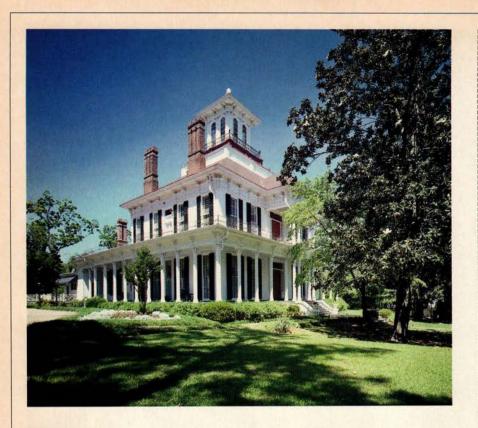

With the introduction of steam-powered lathes, which spit out a dozen posts in the time it took to turn one by hand, 19th-century home owners dressed up their houses with balusters and columns in an infinite variety of patterns. The knobby-spindled frieze on the turret of the Skillman-Sands house, built in 1891 in Eufaula, Alabama, is a prime example. The rectangular porch, which widens into this six-sided gazebo-like structure, hugs the asymmetrical facade and provides a cool refuge for dining, rocking, and people-watching.

#### **Tidewater South**

This hewn-log building is believed to have been a garrison house in a western Virginia fort, most of which was burned by Indians in 1790. In 1989, after the house was moved to Syria, Virginia, and restored, the owners added the rear 32-by-10-foot porch, which sits on a stone foundation and affords a view of the Blue Ridge Mountains from two levels.

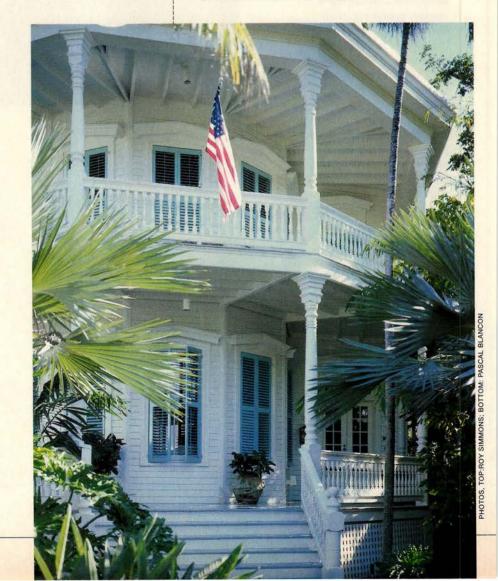

#### Italianate

Like many Italianates built in the mid-19th century, Kendall Manor in Eufaula, Alabama, is a multi-tiered box garnished with fluted classical columns and numerous brackets that support the roofs. Bracketed, in fact, became synonymous with the style. The wraparound porch-called a piazza or loggia after the Renaissance palaces seen by wealthy Americans on the grand tour-was designed not only to keep the house cool but also to recall a glorious era before the scourge of industrialization.

#### Conch

After a fire destroyed much of Key West, Florida, in 1886, wealthy residents took the opportunity to build grand wooden houses that defied architectural conventions by combining aspects from several styles. In the 1890s, the town's banker and grocer, Richard Peacon, built this house, which, like many other conchs, is a melange-Bahamian shutters, French Colonial balcony, and Queen Anne columns and balusters, all dominated by a six-sided tower with a double veranda. Its island charm was enough to entice Calvin Klein to pay \$1 million for it in the 1980s.

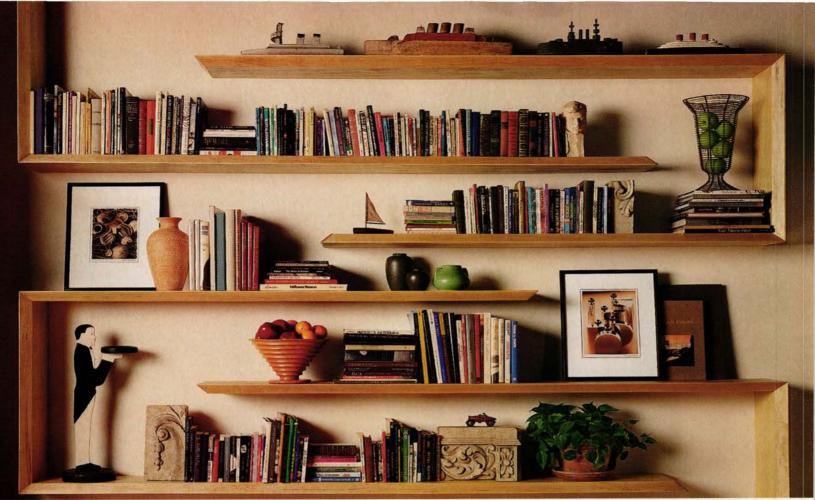

"The porch promotes good conversation simply by virtue of the fact that on a porch there is no need for it." —GARRISON KEILLOR

#### Adirondack

HOTO: BRUCE KATZ

Because Gilded Age tycoons building their country houses in upstate New York aimed to escape the grimy heat of the city and connect with nature, airy porches were a key part Fevery retreat. William West Durant, who designed many such summer homes in the Adirondacks, built Sagamore Lodge in 1893, combining the rough-hewn look of log cabins and the timber-frame construction of Alpine chalets. The selfcontained camp comprises several buildings-main lodge, greenhouse, service buildings, even a school-all connected by verandas and walkways.

This Old House is a production of WGBH Boston

SPARTANBURG

In April, 1961, President John F. Kennedy announced that by the end of the 1960s,

the USA would put a man on the moon. Just two problems: No one in NASA had a clue about how to get someone there... or back.

The first American had flown into space (for just a few minutes) only two weeks earlier. The Russians had shot the first man into space a few weeks before we did. The Space Race was on in a big way.

Everything in the new arena of space travel

Flash forward to July, 1969: The world stands still as Americans walk on the moon. Tens of

millions of people on Earth watch it happen on blurry black-and-white television screens with lousy reception from a quarter of a million miles across the heavens. It's the greatest science and engineering adventure of all time.

This month, NOVA marks the 30th anniversary of Apollo 11 by going behind the scenes to show who did

# IF THEY GOT LOST, THEY STOP AND ASK (NOT THAT A SPACESHIP FULL

was unknown. (Even the word "astronaut" was just being used.) Everything needed to be invented. Then tested. And there were no computers (or rockets or even batteries!) capable of making such a trip. Where do you start in on something like this? what to get us from here to there... and back.

MAJOR FUNDING IS PROVIDED BY THE PARK FOUNDATION

# COULDN'T VERY WE FOR DIRECTIONS OF MEN WOULD ASK ANYWAY)

NOVA—living, breathing proof that turning your brain on at the end of the day can actually be more rejuvenating than turning it off.

Tuesday, July 13 at 8pm ET on PBS Check local listings

www.pbs.org/nova/tothemoon

## HE NORTHWESTERN MUTUAL LIFE FOUNDATION AND IOMEGA.

Before: Dennis Duffy thought the only area of his house that needed some TLC from T.O.H. was his kitchen. How wrong he was...

Norm and Steve help mount the front doorway. After getting a tour of the new kitchen from designer Glenn Berger, Steve visits a custom-kitchen showroom in Bath, Maine.

Watch and learn: Installing a toilet. Resources: Pneumatic fastener: Senco Products Inc., 513-388-2000. Restaurant-style range and hood: Viking Range Corp., 601-455-1200. Sprayer-roller: Titan Tool Inc., 800-526-5362, supplied by Natick Airless Inc., 508-653-0808. Lavatory: Heritage 2piece, American Standard Inc., 732-980-3000.

#### Week 17 (July 10-11)

Carpeting made of recycled plastic bottles is cut and installed. Richard Trethewey and Norm put in the stainless-steel kitchen sink, review the environmentally friendly features of the new dishwasher, and connect the iceand-water service for the new refrigerator.

Watch and learn: Texturizing, antiquing, and painting interior walls. Resources: Carpet installer: Michael J. Griffiths, 781-933-0441. Carpet: Caladium Carpets (Beaulieu of America), 706-295-5621. Foldout ironing board: Ironfix by Hafele America Co., 336-889-2322. Laundry room cabinets: Haas Cabinet Co., 800-457-6458. Laminate countertops: Wilsonart International, 254-207-7000. Granite countertops: Art in Stone Inc., 781-938-1820. Kitchen sink: Gourmet by Elkay Manufacturing Co., 630-574-8484. Appliances: Kitchen Aid, 800-422-1230 or 800-541-6390. Interior design: Domain, 781-769-9130. Fire and security system: East Coast Security Services Inc., 800-639-2086 or 603-898-6823.

#### Week 18 (July 17-18)

Steve tours the many final touches in the house: flooring contractor Jeff Hosking works nights on the old pine floors; lighting designer Melissa Guenet

#### Days of Wine and Rooftops

This Old House's Norm and Steve find much to their taste in Napa Valley

BY NICOLE GALLAND

demonstrates a variety of lighting solutions; interior designer Judy George strolls through the furnished rooms; Richard Trethewey makes a final plumber's tour. Outside, Tom Silva and Norm examine the problems the Maitlands still need to tackle.

### Watch and learn: Installing ceiling fans.

**Resources:** Landscape architect: Thomas Wirth Associates, 508-651-3643. Urethane floor finish: BonaKemi U.S.A. Inc., 800-872-5515. Light fixtures and switches: Standard Electric Supply Co., 781-890-1050. Lighting designer: Melissa

Guenet, formerly with Standard Electric Supply Co. Bath fixtures: American Standard Inc (see week 16). Seamless acrylic shower stall: Lasco Bathware, 714-993-1220. Fiberglass shower surround: Swan Corp., 800-325-7008. Manifolds, tubing, and baseboard: R.S.T. Inc., 781-320-9910. Master heating control: Stadler Corp., 800-370-3122. Copper and PVC piping: Charlotte Pipe & Foundry Co., 800-438-6091.

#### Week 1 (July 24-25)

Steve and Norm head to beautiful Napa Valley, California, to take a look at Dennis Duffy's 1906 farmhouse. Although Dennis's main interest is renovating the kitchen and mudroom, Norm's evaluation makes it clear there's a lot more to be done. Steve meets with architect Jon Lail, who recommends expanding the footprint and adding windows.

Watch and learn: The functional layout of commercial wineries. **Resources:** Architect: Lail-Livingston Design Group, 707-963-1565. General contractor: James Nolan Construction Inc., 707-963-3222.

#### Week 2 (July 31-August 1)

Jon Lail and "synthetic-environment designer" David Munson take Norm on a computer-generated virtual-reality tour of what the project house and kitchen will look like when they are completed. Back at the house, things are not looking up. The back porch is pulled away from the house with a backhoe, which rolls over the septic tank, rupturing it. Extensive termite damage is discovered, and the foundation looks worse every day. **Watch and learn:** Removing a porch.

**Resources:** Virtual-reality computer design: David Munson, HOK Architects, 314-421-2000. Computer equipment: Silicon Graphics (now S.G.I.), 925-277-1940.

#### Week 3 (August 7-8)

In the aftermath of a deadly storm, Norm and foreman Jeff Castille discuss the new foundation work. Roofing contractor Mike McDermott examines the woebegone roof with Steve. Norm checks out the construction of a nearby rammed-earth house.

Watch and learn: Using a water level. Resources: Miscellaneous building supplies: Orchard Supply Hardware, 408-281-3500. Water level: Versa-Level by Price Brothers Tool Co., 415-897-3153. Roofing contractor: Mike McDermott, Raneri & Long Roofing Co., 925-944-7059. Remote: Cal-Steam Bath showroom, 415-861-3071. Bath and kitchen fixtures: Kohler Co., 414-457-4441. Aerial lift: Wilkinson Equipment Corp (now Prime Equipment Corp.), 800-843-1662.

#### Week 4 (August 14-15)

Plumbing contractor George Biter shows Norm the plumbing and ventwork that he has placed around the framing for the new foundation. An expanded ceiling beam replaces the need for an awkward column. Doors and windows arrive and are hung. **Watch and learn:** Installing French doors.

**Resources:** Southwall Technologies Inc., 650-962-9115. Laminated veneer and conventional framing lumber: Georgia-Pacific Corp., 800-284-5347. Doors and windows: Hurd Millwork Co., 715-748-2011.

#### Week 5 (August 21-22)

As new roof and foundation problems come to light, Dennis tackles several of them himself to keep the project within budget. Steve discusses what's left to do with Jeff, then talks lights with electrical contractor Al Curtice. Dennis and kitchen designer Paul Price lay out the cabinet footprint and discuss materials and finishes. **Watch and learn:** Bracing a sagging

roof. **Resources:** Roofing: Elk Prestique I shingles and Z-Ridge shingles, Elk Corp., 800-879-4355. Hoseless nailer: ITW Paslode, 847-634-1900. Electrician: Curtice Electric, 707-963-9342. Incandescent light fixtures: Genlyte Thomas, supplied by Associated Lighting Representatives Inc., 510-638-3800. Kitchen designer: Novato Kitchens & Baths, 415-897-3153. Cabinets: American Cabinet Concepts Inc., 360-577-6364. Countertops: Avonite, 505-864-3800.

#### Week 6 (August 28-29)

The new deck and foundation are in place, much of the work on the front porch has been completed, and a new chimney is going up. Steve reviews the kitchen cabinetry going in, as well as the trim and door casings.

Watch and learn: Laying in-laid hardwood floors.

**Resources:** Water-based floor finish: Pacific Strong by BonaKemi U.S.A. (see week 18). Flooring contractor: Spiteri Brothers Hardware Floor Co., 707-226-7543. Synthetic stone for foundation and chimney: Cultured Stone Corp., 800-255-1727. Moldings and oak flooring: Saroyan Lumber Co., 323-589-5704. V-groove siding: California Redwood Assn., 415-382-0662. Kitchen cabinets: American Cabinet Concepts (see week 5). Kitchen designers and installers: Novato Kitchens & Baths (see week 5).

After: Dennis's kitchen turned out beautifully. The infrastructure of the house, however, provided a long sequence of surprises for the enterprising workers and home owner.

No one likes to think about catastrophes, especially when it concerns family and home. We all want a beautiful, worry-free environment for ourselves and belongings. The Guardian, by Generac

Power Systems is designed with this in mind.

Natural gas or LP fueled, these generator sets wire directly into your electrical service, sensing when the power is interrupted and automatically supplying your electrical needs until utility power is restored.

Pure electricity. On demand. Automatically.

For more information fax: (414)544-0770 or write: P.O.Box 8 • Waukesha, WI • 53187 Proudly serving industry since 1959 - www.generac.com

#### INTRODUCING THE ULTIMATE IN SUPPORT

OUR SEALY POSTUREPEDIC® CROWN JEWEL® SLEEP SYSTEM

NOW FEATURES THE REVOLUTIONARY DUAL SUPPORT SYSTEM."

THIS TOOK YEARS OF INNOVATIVE RESEARCH RESULTING IN A

NEW DIMENSION OF SUPPORT, NOT JUST FOR THE BACK, BUT FOR

THE WHOLE BODY. THE SYSTEM IS FURTHER ENHANCED WITH THE

CONVENIENCE OF THE REDUCED-HEIGHT DESIGN OF THE MICROTEK"

FOUNDATION, OUR MOST DURABLE FOUNDATION EVER. TOGETHER,

# oh my what a mattress

THEY CREATE A UNIQUE SYNERGY BETWEEN BED AND BODY.

FOR A DEALER NEAR YOU, CALL 1-800-95-SEALY

First, the Syner-Flax<sup>®</sup> surface micro-adjusts to cradie every curve and contour of your body

While the PostureTech™ inner core gives you correct support for your back.

> These MicroSpan" support elements supply ten times the durability at nearly half the halpht of a conventional foundation.

## WATER BEADS ON DECKS ARE FINE.

### OF COURSE, YOU'RE NOT PLANNING TO WALK ON IT EVER AGAIN, ARE YOU?

Any waxy sealant on a deck will make water bead. Only problem is, the coating scuffs right off when you

.

PRICES SHOWN ARE MANUFACTURERS' SUGGESTED RETAIL PRICES AT PRESS TIME OR THE AMOUNT THIS OLD HOUSE ACTUALLY PAID AT RETAIL. PRICES, PRODUCT NUMBERS, AND AVAILABILITY MAY CHANGE AT ANY TIME.

# We need your help.

On January 25, 1999, Colombia's western coffee region was devastated by one of the deadliest earthquakes to hit the country in over a century. Affecting over 30 municipalities in six states, this natural disaster has left 55% of the population homeless. Towns have been reduced to rubble. Local businesses destroyed. And more than 250,000 people are currently destitute.

In order to provide humanitarian and social assistance in this time of need, the National Federation of Coffee Growers of Colombia has created the "Colombian Relief Fund." All contributions to this fund will be used to provide immediate shelter, food and medical care, and to aid in the reconstruction of this region's homes, infrastructure and livelihood.

Please send your donation to:

#### THIS OLD HOUSE

BY BEN KALIN

PRICE \$1 LOCATION New Canaan, Connecticut

When John Betts Jr., the great grandson of one of New Canaan's first settlers, built a modest one-and-a-halfstory farmhouse in the mid-18th century, it had such necessities as wideplank floors and a massive central chimney with three working fireplaces.

0

.

÷

10

0

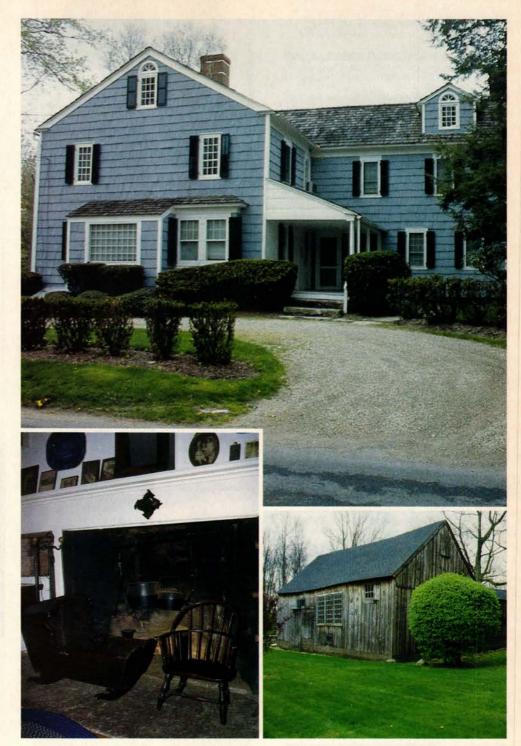

10

-

15

After the Revolution, the house was rotated 90 degrees around the chimney and another story was added, along with such amenities as carved mantelpieces and paneled doors hung on hammer-forged H-hinges. These early features are still in place, giving the well-preserved five-bedroom house a warm and cozy look. In fact, except for its three-and-a-half bathrooms and a poorly matched ranch-style addition from 1976, the original 2,900-squarefoot house seems to have changed little in the last 200 years.

The same cannot be said of the surrounding community, where 2-acre plots now sell for \$700,000 or more. With the 4-acre Betts property soon to go on the market, there will be a strong financial incentive to demolish the old structure and build something bigger. To forestall its destruction, the owners hope to find a buyer who can relocate the house and commit to its restoration, although they reserve the right to reject any offer for any reason. Two outlying barns and a tool shed, all in good condition, could be included in a separate transaction.

#### CONTACT

Janet Reddock (203) 972-1933 The Betts-Ogden-Morris House, with its shingle siding and unusual 9-over-6 double-hung windows, top, retains an early New England charm. Inside, the original kitchen fireplace has a beehive oven and 12-foot-long stone hearth, bottom left, which lends an authentic colonial character to what is now the dining room. A simple barn, now empty, sits on the back of the property, bottom right.
